PREFACE.

I T will perhaps be thought necessary to say a sew words in excuse for the delay, in our annual publication, which appears somewhat later than the usual time. The reader will be pleased to observe, that the papers relative to the rupture with Spain, which furnish a considerable and important part of our work, were not published until March 1762, though the events which they elucidate, properly belonged to the year 1761, which we were to treat. So that there was a necessary delay, in order not only to supply the unavoidable defect, which want of early information had left in our history, but also to make some material changes in the plan of the whole, in confequence of the new lights that were afforded in those papers.

PREFACE.

We heartily wish that to our apology for this delay, we could add that the work has derived from it a superior degree of accuracy and correctness. But the public is sufficiently apprised of our disadvantages and defects; and we have sufficiently experienced an indulgence due, not to our abilities, but to the pains we have taken. They may be assured that this indulgence will not tempt us to an ungrateful negligence, or the least relaxation of our best endeavours.

THE

HISTORY

OFTHE

PRESENT WAR.

CHAP. I.

Preliminary remarks. Treaty proposed and entered into by the belligerent powers. Mr. Stanley sent to Paris, and Mr. Bussy to London. French machinations in Spain. Difficulties in the negotiation. Design of the campaign in Hesse, and of the expedition to Belleisse.

FTER a general war of five years, carried on with the greatest essuain of blood, and the most extraordinary expence ever known to attend a war of that continuance, it was hoped that, if the animosity of the belligerent powers was not abated, at least a great part of the suel of discord had been consumed; and that the time was arrived for giving peace to Europe. Some propositions for that purpose had been made in the close of the year 1759. Those, who

rather wished for peace, than very attentively considered the probability of effecting it, seemed to think it might then have been expected. But whilst the public was flattered with these hopes, the situation of affairs would not suffer us to believe that they had any solid soundation. We accordingly ventured to point out the difficulties which then obstructed any scheme for peace*. And as these difficulties were such, as did not attend that particular conjuncture only, but must subsist

as long as the fortune of war continued in the fame train, we were from the beginning apprehensive that the new negotiation which we have fince feen opened, and for fome time carried on with such pleasing appearances, might in the issue be attended with no better success.

There are indeed but two fituations in which peace can be very rationally expected. The first fituation is that of equality; and this is, either where nothing is gained on any fide; fo that whenever mutual weariness, and unprofitable hostilities have calmed the ardor of the warring powers, no intricate points intervene to frustrate the first pacific disposition; or it may be where the losses are so equal, that exchanges may eafily be made, or the parties may rest mutually satisfied with their advantage over each other.

The fecond fituation is that of necessity; where one of the parties is fo entirely broken and reduced, as to submit to receive conditions on the footing of conquest, and to purchase repose by humiliating and enfeebling concessions. A peace upon this latter basis is always the grand popular object. In every war we flatter ourselves with the hope of it, against an experience almost uniform. In fact, it is to the last degree difficult to reduce any of the great powers of Europe to this difgraceful necessity. For to reduce any one of them to this state of submission, you must, in a manner, reduce all of them to it. The war, if it continues, draws state after state into its vortex, until all Europe is involved. A fort of ballance is then produced, and the peace of conquest becomes impracticable.

It would prove of the utmost moment to the tranquility of mankind that this point were sufficiently regarded, and that they would willingly adopt that fystem of equality, to which fooner or later, with more or fewer struggles, they are so often compelled to submit. When, seldom, a treaty is concluded on other terms, as the king of Prussia has found by fevere experience, and as we observed on a former occasion, is only a fhort ceffation, and not a perfect peace. But it must be acknowledged that this fituation, the most coincident with their true interest, is at the same time the most contradictory to the passions and prejudices of nations. It appears hard to lofe upon every fide every object of the war. A peace on this foundation will be censured, but it is the best, on the same principle that the shortest follies are the best: and that no injured pride is left to brood over a future war. Contrary to the opinion of the warm patriots on all fides, we therefore imagined that the year seventeen hundred and fifty-eight, in the close of the third campaign, was the happy moment for negotiation. At this time, however, no propositions had been made. The propositions of feventeen hundred and fifty-nine were but flightly regarded, and obviously could end in nothing. But in the beginning of the year, of which we are now going to treat, the scene of negotiation was opened with far greater folemnity and parade; and as it was carried on with great diligence, it necessarily makes a principal part of the history of this year. It is indeed somewhat fortunate both for the writers and the readers of these events that this treaty has intervened. The narnarrative otherwise had proved extremely barren and unentertaining. For though the animofity of the belligerent powers was not, as we observed, abated, their efforts, however, had confiderably flackened, and their operations began gradually to degenerate into the Petite-Those vast events that aftonish the mind, or hold it in a pleasing suspence; those important battles and fieges; those rapid and well-conducted marches, and those lively enterprizes which distinguish the former years, except in a very few instances, scarce make any part of the history before us. But tho' the operations of the field had fallen into a state of languor, the cabinet became full of business, and negotiation flourished. In this fituation candour obliges us to acquaint our readers that we are still more liable to mistakes, than when we attempt to describe the transactions of the campaign. It very frequently happens, that the accounts of the military operations come authenticated from the hands of those great generals who have conducted them, and when we have allowed for the partiality of the account, there is nothing to be detracted from them for want of sufficient information. Even in the cafe of partiality, we are often able to correct the mifreprefentation or overcharge of one of the parties by that of the other. These things are done in the eye of the world. But the motives either to peace or war, and the steps taken in a negotiation, are all behind the curtain. They do not appear for a long time, and fometimes they never appear completely. There is however, an advantage in the prefent conjuncture. For one of the powers at war, in order to justify to its subjects and to the world, its part in the continuance of a war fo fatal to both, has published an account of the late negotiation; artful indeed, and probably in some respects unfair; but containing at the same time many valuable and illustrating pieces, the authenticity of which is not disputed. The point in such cases to be dreaded is not the publication of false pieces, but the concealment of feveral that are real and important. The public information is probably rather incompleat, than untrue. We wait with impatience for that full and authentic narrative of fo important a negotiation, which undoubtedly our court proposes to publish. have delayed the fetting out our work the longer, in hopes of its appearance, by which we might have been able to perfect and correct our account of this transaction. The account of the Spanish negotiation has appeared late, but we have not failed to make use of it. At present we engage in our work, under those difficulties, which it is just, the reader should know and allow for. " In the succeeding year we shall take care to profit of whatever further lights may be imparted.

Verly early in this year 1761, the the courts of Petersburg, Vienna, France, Sweden and Poland, agreed severally and jointly to offer proposals towards renewing that negotiation for peace, which had abruptly been broken off in the close of the year 1759. France was the principal and first mover; for as it was her ambition which had made the war so general, and her revenue which in a great measure supported it; the former being now humbled by a series of unfortunate events, and the latter reduced by most enor-

[B] 2 mou

mous expences, she began at length to relent, and apparently to defire peace in earnest. The other members of the grand alliance could not decently, nor fafely oppose these dispositions of France. court of Sweden in particular was given to understand, that the exhautled condition of France was the true motive of her moderation: that in fact, she was not able any longer to furnish the stipulated subsidies, nor to adhere to the letter of her engagements with her allies. These circumstances, which she was neither able, nor feemed disposed to conceal, formed the furest guaranty of her fincerity.

The five parties to the war on that fide, made as many declarations, which were figned at Paris on the 25th of March, and delivered at London on the 31st of the fame month. The counter declaration of Great Britain and Prussia appeared on the 3d of April. Augsburg, as the situation most commodious for the powers at war, was appointed for the congress.

Lord Egremont, Lord Stormont ambassador in Poland, and general Yorke our ambassador in Holland, were nominated as the English plenipotentiaries. On the part of France, the count de Choiseul was appointed. Augsburg now became the center of attention to all Europe, and each court prepared every thing towards this important meeting which it could furnish of splendor for the display of its dignity, and cf ability for the support of its interest. The public conversation was for a while diverted from scenes of horror, bloodshed, and pillage; and every mind was employed more agreeably on the public scene of magnificence,

and the private game of policy, which was to ensue.

In the first place, it was unanimously agreed, in order that a negotiation, in itself sufficiently intricate, should be the less embarrassed, to admit to the treaty none but the parties principally concerned, to-

gether with their allies.

Although this exclusion of the neutral interests tended greatly to disembarrass and simplify the negotiation, yet such was the variety of separate and independent matters, which still remained to be discussed, that it became adviseable to make a further separation, if they hoped to treat upon them with any tolerable ease, or with any prospect of coming to a speedy decision.

For this purpose it was necessary to bring back the motives to the war to their first principles; and to disengage those several interests which originally, and in their own nature had no connection, from that mass, in which mutual injuries and a common animosity had blended and confounded them. This proposition came first from France, and it was an early and happy omen of

her inclination to peace. The war, which was

The war, which was truly and originally German, evidently had but a fingle, though this a very difficult object, to determine the fate of the king of Prussia. So many powers were concerned in this determination, and their views of aggrandisement, indemnification, and revenge, so various and difficult to be reconciled, that this alone seemed matter enough for a separate and very arduous negotiation. In effect all the powers of the north were concerned in it. For this reason, the other great object of the

general

peneral war, the limits of America, which by that strange chain of hostile connections, which even unites the various independent quarrels and enmitties of Europe, had been mixed with the German disputes, was again set upon its proper and peculiar basis; and whilst the truly German interests were handled at Augsburg, it was proposed to treat on this head separately in London and in Paris. For this purpose, ministers were mutually fent from those courts; Mr. Stanley on the part of England; and Mr. Buffy on that of France.

This proposition was also exceedlying prudent: for there is no doubt that if these potentates could settle their claims to their mutual satisfaction, and should carry to Augsburg the same candour and good faith, and the same sincere defire of peace, their influence must necessarily tend to inspire principles of moderation into the rest, and must contribute largely to accelerate the great work of pacification.

Things were thus fet upon the

best footing possible, and the negotiation feemed to be in the happiest train that could be wished. unfortunately the plan and dispofition of the treaty was much more eafily adjusted, than the matter and the substance. It was very obvious, that France, if she was willing even to pretend to a defire of peace, could scarce avoid making concesfions, which to her were fufficiently mortifying. The moment her proper quarrel came to be separated from the general cause, she had every disadvantage in the negotiation, because she had suffered every

disaster in the war. On the side of

Germany indeed the had acted with

fuccess; but even there the advan-

tages she had acquired were still

precarious, as the chance of war was still open: no proposition for a cessation of arms having been admitted. As she knew therefore, that great sacrifices might be expected from her, she did not so finally rest her hopes upon the negotiation, as not to look out for another resource; and this rendered on her part the whole proceeding less effective and less sincere.

The resource she, sought was in Spain, who she hoped could not look with indifference on the humiliation of the principal branch of the house of Bourbon. Hitherto indeed the king of Spain had obferved a tolerably exact neutrality in his conduct, and in his declarations had fpared no expressions of good will and friendship to our court. He feemed to be wholly intent on the internal economy of his dominions, on the improvement of their long neglected police, on the advancement of their commerce. and the regulation of the finances. But notwithstanding these domestic attentions, the French ministry did not despair of drawing his regards abroad. They thought that the offers which France in her present circumstances would find herself obliged to make, must extremely alarm all good Spaniards, who could not fee without the most ferious apprehensions, the French power wholly annihilated in America. By this event, their colonies, though fo much fuperior to all others in opulence and extent, must in a manner lie at the mercy of England: no power being in any fort able to afford them affiftance, or to hold the ballance between them and the power of England. At this time indeed, the French court had not absolutely succeeded in her de-[B] 3 figns figns at Madrid: but the was in hopes, that every step she took in the treaty, and every concession she should make, would prove a fresh incentive to the jealoufies and apprehenfions of Spain. Thus in effect all the motions which France feemingly made towards peace were in reality fo many steps towards a new war; and whilft at London she breathed nothing but moderation, and the most earnest defire of putting a period to the calamities of Europe, at Madrid she was taking the most vigorous measures for spreading them further, and

continuing them longer.

On the fide of England, though there was far more good faith in the public procedure, there were also, it must be admitted, many circumstances which co-operated to retard the peace. The great and almost unparallelled success which attended our arms in this war, had raised a proportionable expectation, and inspired very high thoughts into the minds of the people. They thought it unreasonable to make almost any concessions to a nation whose ambition and violence they had always found to correspond with its power, and whom they now confidered as lying at their mercy. That this was the time for reducing France, which if we let pass, we could never hope again to recover. In these sentiments it must have fared ill with that administration, who should make a facrifice of any of those objects on which the people had fet their hearts.

On the other hand, it could not have escaped them, that the situation of affairs in Germany, however they might be artiscially separated in the discussion, must necessarily have an influence on the

final determination of the treaty. They faw, that after a fevere struggle of five years, the affairs of our nearest allies were only not ruined. To fay nothing of the condition of the king of Prussia, the whole country of Hesse was in the actual possession of France: they likewise held the county of Hanau; and by their occupation of Gottingen, the Hanoverian territory lay open to their arms. If this quarrel should be confidered as a cause not strictly English (though the French in their memorials contended it was), yet certainly the Hessians, and principally the Hanoverians, were allies of fo near a connection, and had done and fuffered fo much in the common cause, that it must have appeared shocking to all Europe, if folely attentive to our own peculiar advantages, we should patch up a peace without any provision in their favour: and it was very evident, that this provision could not be made in the fituation in which the last campaign had left them, unless our government purchased it at a price that would be very grudgingly paid by the English subjects.

The ministry, perplexed between the natural expectations of their country, and the reasonable expectations of their allies, must have found it not a little difficult to know what party they ought to take. In order to reconcile, as much as possible, these contradictory defires, the only folution which could be found was to push the war with the utmost vigour; and in the mean time not to hurry the negotiation; in hopes that during its progress things might take such a turn, as to enable them to purchase peace for their allies out of the acquifitions they should have made

after

after the commencement of the treaty, and without being obliged to have recourse to their conquests, previous to that æra. On this footing they proposed to satisfy the demands of the public faith, and at the same time to preserve the reputation which was so necessary to their affairs at home. Accordingly the duke of Brunswick was to profecute with the utmost vigour, the operations which he had begun in the depth of winter; and an expedition, the object of which was then fecret, was prepared with equal diligence in England.

In these equivocal dispositions,

and in this odd mixture of hostile and pacific measures, began theyear 1761, a year more remarkable, perhaps, than any of those we have hitherto described, for events which will be radically decisive of the future profperity or misery of Europe, but less for those matters by which the imagination of the reader is commonly affected. Having in this chapter laid down, as far as we can conjecture, the political motives for the uncommon effort which was made in Germany, in our next chapter we shall give an account of the military plan of this effort, the execution and the success of it.

CHAP. II.

Prince Ferdinand's plan. Allies enter into Heffe and Thuringia. French retire. Hereditary Prince repulsed at Fritzlar. Fritzlar taken. Several magazines taken. Blockade of Marpurg and Ziegenhayn. Siege of Cassel. Battle of Langensaltze. Broglio reinforced from the Loquer Rhine. Hereditary Prince defeated at Stangerode. Siege of Cassel, Sc. raised. Allies retire behind the Dymel.

T the close of the last cam-A paign, the French had the entire and undisturbed possession of the whole territory of Hesse: a country tolerably provided, and which contains many tenable places. Some of these they had strengthened with additional works; and they had amaffed immense magazines in the most convenient situations. This was their condition in the front of their winter cantonments. On their left they had driven the allies from the Lower Rhine, where they kept a confiderable body of troops, which streightened our quarters, and checked our efforts on that side. On their right they possessed the town of Gottingen, in which they had placed a very strong garrison; and thus they shut us-up on

this quarter also, whilst the king's German dominions lay entirely

open to their enterprizes.

If we confider the fituation of the French armies, they will prefent us with the idea of an immense crescent, the two advanced points of which were at Gottingen and Wefel and the body extended in Hesse: so that being perfectly well provided with magazines, and, master of all the proper communications necesfary for their current subsistence, with strong places in their rear, and in both their flanks; in the next campaign they had only to advance their feveral posts in a manner to enclose the allied army, which, without some fignal success (from their numbers and atuation, hardly to be expected) would and it-[B] 4

felf entirely incapable of making

any stand against them.

Prince Ferdinand was very fenfible of these inconveniencies of his fituation, and of the advantages the enemy had over him. It was extremely difficult to fettle a plan for action; but no action could be attended with much worse consequences, than inactivity in a bad condition. He knew from experience, that the French were ill qualified for winter operations in Germany, and that his own foldiers, besides their superior hardiness, and their being inured to the rigour of the climate, could fuffer but little more from field fervice, especially if attended with fuccess, than they must endure from the badness of their winter quarters. It is true that there was something discouraging in the attack of a very superior body of the enemy, possessed of every advantage against him; but it was clear that this superiority, and these advantages would not lessen as the fummer approached. It was clear, that every step the enemy gained on him, would render his defence weaker and his resources more scanty; and that if the enemy found themselves in a condition to commence this campaign where they had concluded the last, and that nothing should hinder their proceeding in the earliest season, he could never reasonably hope to protract the war to another year. For to speak the truth, this was the utmost, which in his circumstances he could promile himself from the most judicious scheme of conduct.

Having therefore refolved to act, he lost no time to act with vigour. He appointed three places of rendezvous on the Dymel, the Rhume, and in Saverland. His army af-

fembled on the 9th of February, without fuffering the enemy to have any previous notice of their intentions. The next day the troops halted, and the duke communicated to his generals the disposition he had made for the motions of the whole.

The center was led by his ferene highness in person; it penetrated directly into Hesse, and marching by Zierenberg and Durenberg, made its way towards Cassel. The right and left of the army were each at a very confiderable diftance from this body; but they were fo disposed as fully to co-operate in the general plan of operation, which was very extensive. The hereditary prince commanded on the right: he marched by Stadbergen for Mengeringhausen; and leaving the country of Hesse to the Eastward, as the alarm was to be as fudden, and as widely diffused as possible, he pushed forward with the utmost expedition into heart of the French quarters. Gen. Sporken commanded a corps at a greater distance to the left, and penetrated into Thuringia, by Duderstadt and Heiligenstadt. defign of this movement was to break the communication of the French with the army of the empire, to open one for ourselves with the Prussians, and to cut off all intercourse between the grand army of the enemy, and their garrison at Gottingen.

By this sudden, extensive, and vigorous attack, the French were thrown into the utmost consternation: they retreated, or rather fled upon every side. It could scarcely have been imagined, that this was the same army which had but just closed the campaign with so much

fuccess.

fuccefs. Such has been the fport of fortune in this war, even beyond all former examples of her caprice, that the instances are numerous of inferior and beaten armies, without any apparent change in their circumstances, driving the conquerors before them. So remarkable was the revolution of fortune at this time, that it is highly credible if the French had had their quarters in an open country, their army had been totally destroyed: but happily for them, they had very sufficient means of securing their retreat. For as the allies advanced, they were obliged to leave Cassel and Gottingen at their backs; into the former of which the enemy had thrown a garrison equal to a moderate army; and in the latter they had feven or eight thousand men. Beyond these again were Fritzlar, Ziegenhayn, and Marpurg, places of a tolerable -degree of strength and well garrisoned, besides some other inferior posts.

The hereditary prince, whose party was the most advanced, struck the first blow, by an attempt to surprize Fritzlar. He had received advice that it was not prepared to receive him. He accordingly took only a few battalions and no cannon, in hopes of being able to carry that place at once. But unfortunately he was deceived in his The garrison was intelligence. prepared and resolute, and though the hereditary prince attacked it with his usual spirit, he was obliged for that time to defist, and to draw off with no inconfiderable lofs.

About this time, Marpurg was attempted in the fame manner, and with no better fuccefs. General Breidenback, an Hanoverian officer, of great bravery, experience

and reputation, who commanded there, lost his life in the attack. These two severe checks at the en'trance into action, did not, however, discourage either the parties that suffered them, or the rest of the army. They advanced as expeditiously, and with more caution. Cannon and mertar were brought before Fritzlar, which, after a defence that was rather made for the credit of the commander, than from any 15 Feb. hope of faving the place, furrendered on honourable terms. A large magazine was found here. The marquis of Granby was employed with fuccess in reducing the forts and castles in this neighbourhood. The allied army refolutely advanced, and as they advanced, the French continually retired, abandoning post after post, and fell back almost to the Maine. They fired their magazines as they retreated; but the allies purfued with fo much rapidity, that they faved five capital stores; one of which contained no less than eighty thousand sacks of meal, fifty thousand sacks of oats, and a million of rations of hay, a very fmall part of which had been destroyed. These were acquifitions of the utmost advantage, as they wonderfully facilitated the progress of the army; which as it advanced, still found its subfistence; provision was also thereby made for the cavalry, which otherwise it could never have been supplied with in fuch a feafon, and at fuch a vast distance from our original quarters.

Notwithstanding this fuccess in front, it was not here the grand object of our operations lay. Cassel was to be reduced. The French had in that town a garrison of

seventeen.

Leventeen battalions, besides some other corps, under the command of the count de Broglio; and there was no doubt, that he would defend the place to the utmost. The fortifications of Cassel are mostly in the old manner; they confift of very high, but strong walls. Some works indeed had been newly added; but the great hope of the enemy was in the strength of the garrison and the rigour of the season. The fiege of this place was not to be delayed; however it was neceffary previously to clear all the adjacent country of the enemy, and to cut off the communication of the garrison with their grand army.

Therefore when marshal Broglio had been driven quite out of Hesse, and had retreated towards Frankfort, prince Ferdinand ceased to advance; and having ordered two bodies to the blockade of Marpurg and Ziegenhayn, which still obstinately held out, he formed that part of the army which was with him, into a chain of cantonments, making a front towards the enemy which extended from the river Lahn to the river Ohm, and from the Ohm to the Fulda; thus he proposed to watch the motions of marshal Broglio's army, to cover the slege of Cassel, and the blockades of the two fortresses just mentioned. The fiege of Cassel was carried on by the count of Lippe Schaumburg, a lovereign prince of the empire, reputed one the ablest engineers in Europe. His management of the artillery at Thornhausen was a principal cause in the acquisition of that great victory; and it was not doubted that his abilities would be exerted as effectively at Cassel. Trenches were opened on the first of March. All eyes were now directed

to this point; for on the success of this stroke depended the whole fortune of the campaign. It was very apparent that if Cassel and its garrison should fall into the hands of the allies, Gottingen and the inferior places must inevitably fall along with it; and this misfortune would be more than equivalent to to the loss of a great battle.

Whilst the war was thus carried on in Hesse, M. Sporken who commanded the detachment to the left, on the fide of Saxony, advanced with an intrepidity equal to the rest; he was soon joined by a corps of Prussians, and the united army lost no time to clear the Werra and the Unstrut of the bodies of French and Saxons which occupied the most important posts upon these rivers. As these bodies were advantageously posted, and could be supported on one side by the garrison of Gottingen, and on the other, as they promised themselves, by the army of the empire, they maintained their ground; and this foon brought on a sharp action. The allies attacked a 14th Feb. large body advantageoully posted at Langensaltze upon the Unstrut; the event was entirely favourable. Three whole battalions of Saxons were made prifoners by the Prussians; M. de Sporken took two battalions. The enemy's loss was computed at five thousand men; several pieces of cannon were also taken, and a large magazine was abandoned. This blow was well followed; one body of the combined army pushed to Eisenach and Gotha, whilst another by forced marches got forward to Fulda; the French gave way on their right, and the army of the empire on the left; the latter fell back to Bamberg, Bamberg, totally abandoning a very

large tract of country.

Hitherto the affairs of the allies proceeded almost in an uninterrupted course of prosperity. It was indeed a degree of prosperity altogether aftonishing, and which as at first it could scarcely have been expected, fo there was no reason to imagine it would have any long continuance. For the allies on the fide of Saxony, where M. Sporken acted, in proportion as their activity and fuccess carried them forward, left the countries on their rear more and more uncovered, and exposed, without any or with a very infufficient defence, to the attempts of the powerful garrison of Gottingen. The count de Vaux, who commanded that garrison, is a very able and enterprifing officer. And he no fooner perceived, that the allies were wholly intent upon driving their enemies from the Werra and Unftrut, and on pushing the advantages they had acquired to the utmost, than he marched out of Gottingen with a strong detachment, attacked and routed an Hanoverian convoy, fell upon the town of Duderstadt with the utmost violence; and though he failed in his first attempt, he repeated it with fo much spirit that at length he carried that town, and afterwards some of the most considerable places near it. By these successes he prevented M. de Sporken's corps from returning by the way they had advanced, and indeed absolutely disqualified them from acting seperately from their main army; to which foon after these events, they were obliged to join themselves. This junction now became necessary on another account.

Marshal Broglio toward the close of the last campaign had been obliged, by the enterprises of the hereditary prince, to detach from his army in Hesse a large body to the Lower Rhine. He now found it equally proper to recall this body together with further reinforcements, in order to maintain his ground in the country northward of the Maine, where he was closely pressed by the allies, and which he must be compelled shamefully to relinquish, if Cassel was not relieved in time. Senfible of this. with whatever difficulty, he called in his most distant posts, embodied his army, inspired them with new spirit, and made them capable, by a more exact order in their discipline and a great superiority in their numbers, of attempting fomething confiderable.

On the other hand, the hopes of the allies depended on the effect of their first impression; they were obliged to attempt too many objects at the same time, and these too arduous for the number of which their army confisted. For it was necessary that they should keep one army, and that no small one, employed on the fiege of Cassel; another was occupied in the blockade of Ziegenhayn; a third was employed to the eastward of the Fulda; and still a fourth was necessary to cover and fustain all these various operations, and to oppose itself to the attempts of marshal Broglio. It was but too plain, that when the whole of the French force was collected in one point, it could never be resisted by a part only of the allied army; if they should attempt to draw away any of the separate corps from the critical service upon which it was employed, the entire

purpose

purpose of their labours was given up. In a word, prince Ferdinand had three strong posts of the enemy on his rear, and their grand army now perfectly united on his front, and his fituation, which was far from advantageous, obliged him to call in M. Sporken's body which had effected its purpose and could best be spared. However the prince kept his position as long as possible; and the fiege was carried on with as much vigour as a winter operation, and the spirited defence of a great garrison ably commanded, would admit.

But marshal Broglio, as soon as he had collected his army, advanced without delay. He caused the troops under the hereditary prince to be attacked near the village of Stangerode in the neighbourhood of Grunberg, where he was advanced in front of the beforementioned line of the allied army. The attack was made by the enemies dragoons, the very first shock of which broke the whole foot, confifting of nine regiments, Hanoverians, Hessians, and Brunswickers. The French on this occasion made two thousand prisoners, and possessed themselves of several trophies of victory; few were killed or wounded on either fide.

After this blow the allied army could no longer think of making head against the French, or of maintaining their ground in Hesse. They broke up the blockade of Zie-

genhayn; and foon after raifed the fiege of Cassel, after twenty-seven days open trenches. They evacuated the whole country of Hesse, retiring behind the Dymel, and falling back nearly to the quarters they possessed before this undertaking.

Thus ended an expedition which was carried on against many difficulties, with much spirit, and which at first excited great hopes. It failed indeed in some of its objects: but it produced its effect in the total of the operations of the year. The French, by the destruction or feizure of so many of their principal magazines, were for a long time disabled from taking any advantage of their fuccesses in the preceding campaign, or from their late victory. It was not until the feafon was a good deal advanced that they were in a condition to act. This cessation was not dearly bought even by the loss we sustained at Stangerode, and the extreme hardships the troops had endured during the whole service; for circumstanced as both armies were at their quitting the field, without this feaionable check it is probable we should have at this day no footing in Germany. Both armies as it were by confent lay quiet in their winter quarters. During their inaction, the negotiation at London and Paris, whose commencement we have related in the first chapter, was pursued without interruption.

CHAP. III.

The negotiation continued. Proposition of uti possidetis. Debate concerning the periods. Belleisle described. English repulsed at Lochmaria bay. They make good their landing. Palais besieged. Town abandoned. Citadel capitulates.

T must be observed, that after the judicious separations which had been made of the interests of the feveral powers at war, there still remained a sufficient fund of intricacy and altercation in each particular discussion. In order therefore to make the way to peace as fmooth as possible, it was resolved previously to establish some certain and fimple points that might ferve to direct and keep steady the whole negotiation. These points were but two; indeed they were so inseparably connected with each other, that they feem rather members of the fame proposition than separate articles. The first was "that the two crowns shall remain in possession of what they have conquered one from the other. The fecond imported that, the fituation in which they shall stand at certain periods, shall be the position to serve as a basis for the treaty which may be negotiated between the two powers.

As France was known to have had the worst in the war, a proposition of fatu quo, coming from her, must have appeared an instance of moderation, altogether surprizing to our ministers. It is certain, that had peace been concluded at that instant, and upon the sole foundation of this article, England would then have possessed all the conquests she had made, every one of which was in a very high degree advantageous to her commerce and her power, and none of which could be considered as a subject of suture dis-

discussion. On the other hand France, continuing in possession of the places she had conquered, would have acquired no advantage that could at all countervail the expence of keeping them; at the same time that she would be exposed to endless altercations, and would afford matter of the highest jealoufy, indignation and discontent, even to her nearest allies. This basis being therefore fettled, although it was evident, that the treaty could not rest upon this basis solely, England had certainly a great fuperiority in the negotiation, and might rationally expect (when they should come to talk of restitutions) to purchase the evacuation of the French conquests in Germany, at a much smaller price than their apparent magnitude might feem to demand. However these were still a matter of so much anxiety, and the nature of the precife stipulations were still so uncertain, that the negotiation, though it proceeded with strong appearance of a defire for peace, met with very frequent checks and delays. parties were indeed unanimous in the article of uti possidetis; than which, it must be admitted, there could not be a better ground to treat upon. But as the war still continued, and whilst it continued might make a daily alteration in the fortune of the contracting powers, it was necessary to fix upon some epochas to which this possesfory article should refer. The

The French on this head proposed, that the situation in which they shall stand on the first of September in the year 1761 in the East Indies, on the first of July in the same year in the West Indies and in Africa and on the first of May following in Europe, should be the position, aubich should serve as a basis to the treaty which may be negotiated between the two powers. They added further, that as these epochas might feem too near or too distant for the interest of Great Britain, they were extremely willing to enter into a negotiation upon

that object. The English ministry received this proposition with less satisfaction than its apparent fairness deferved. They entirely rejected the French epochas; and declared that they could not admit, without prejudice to themselves, any other epochas than those which bave reference to the day of signing the treaty of peace. Had this resolution been strictly adhered to, it was evident that the negotiation was that moment at an end. For though what was afferted in the French memorial in reply to this declaration, (that the basis of the proposition of uti possidetis was necessarily connected with the particular epochas proposed) is by no means to be admitted; it is on the other hand not easy to deny the validity of their subsequent affertion, " that if not thefe, at least Some certain periods during the war ought to be fixed; and that the uti possidetis could not reafonably have reference only to the time of figning the treaty of peace." For if the contrary principle were once admitted, it would become

difficult to know, or even with pro-

bability to guess, at the fias ture or the value of the possessions which by fuch an article should be mutually given away. And if these difficulties occurred in the fimplicity of a possessory article, they must be increased tenfold upon every other, and must come to fuch an height as to preclude all possibility of negotiation on things of fo intricate a nature as exchanges and equivalents. The French in their memorial infifted fo strongly on the propriety of establishing these periods, that they threatened to recall the whole proposition if they

were not agreed to.

It must doubtless appear at first view furprizing, to fee France, whose actual situation was very indifferent, contending for a near period, and England, whose affairs were at that time apparently in a prosperous situation, postponing the uti possidetis to one more remote. But the truth is, that inthat particular neither party confulted their present condition. They acted wholly on forefight. For though the English, on the 25th of March when this proposition was made, were carrying on the fiege of Caffel, and the other strong places in Hesse, and the enemy had no army in that country to oppose them, it was notwithstanding evident that from the flow progress of those sieges, and from the alacrity of marshal Broglio in collecting his troops, they must be shortly obliged to abandon the enterprise; it was evident that France must be reinstated in the absolute posfession of her former conquests long before the epocha of the first of May, the period which they fixed for Europe. Both courts were fully apprized of this. It was therefore the interest of France to offer and of England to reject this near period; especially as the fate of the design on the coast of France was then depending, and our administration seemed to have conceived no mean hopes of its success, and no small opinion of its importance in the negotiation.

The fleet employed in this expedition failed, from Spithead on the 29th of March, and it was foon discovered that Belleisle was

the object.

Belleisle, the largest of all the European islands belonging to the French king, is between 12 and 13 leagues in circumference.

The island originally belonged to the earl of Cornouaille, but has been fince yielded to the king: it contains only one little city, called Le Palais, three country towns, 103 villages, and about 5000 inhabitants.

The town of Palais takes its name from a castle, belonging to the duke de Belleisle, in its neighbourhood, which is now converted into a citadel, which is a regular and strong fortification, fronting the fea, composed principally of hornwork, and is provided with two dry ditches, the one next the counterscarp, and the other fo contrived as to secure the interior fortifications. This citadel is divided from the largest part of the town by an inlet of the sea, over which there is a bridge of communication; from the other part of the town, and which is most inhabited, it is only divided by its own fortifications, and a glacis, There are three nominal harbours in this island, Palais, Sauzon and Goulfard. Every one of which labours under some capital defect,

either in being exposed, shallow, or dangerous at the entrance. The only branch of trade carried on here is the curing pilchards.

From this state of the island, poor in itself, capable of little improvement, and fo ill circum-stanced in point of harbours, a fort of a diflike to the expedition began to arife. Several did not fee of what confiderable fervice fuch a conquest could be of to England in time of peace, or of what prejudice to the enemy in time of war. They forefaw that it could not be taken without confiderable lofs, or kept without confiderable expence; and on the whole they apprehended that when exchanges came to be made, France would lay no great stress upon it. On the other hand it was urged, that though the harbours were bad, yet fmall privateers might? iffue from thence, greatly to the molestation of the French coasting trade; and that the fleet of England might ride between it and the continent in a well protected road. They imagined the possession of this island, if not of great detriment to the interest of France. would be a grievous wound to her pride; and that those circumstances which had formerly induced her to expend money on the fortifications here, and on the apprehension of an invasion to fill them with a powerful garrison, would likewise persuade her to fet a value on the place when it came to be estimated in the treaty.

Whilst they reasoned in this manner in England, the fleet under the command of commodore Keppel, and the land forces under general Hodgson, arrived before Belleisse

on the 7th of April, and on the 8th agreed to attempt a landing on the fouth-east of the island in a fandy bay near Lochmaria point. Here the enemy were in possesfion of a little fort; they had moreover entrenched themselves on an hill excessively steep, and the foot of which was scarped away. The attempt was made in three places with great resolution; a few grenadiers got on fhore, formed themselves; but as they were not supported they were for the greater part made prisoners. The rest of the army, after several very brave and repeated efforts, being wholly unable to force the enemies lines or make good their landing, were obliged to retire with lofs; what added to the difafter was, that several of the flat bottomed vessels were destroyed or damaged in an hard gale which followed on our retiring from the shore. This made the prospect of any future attempt more unpleafing even than the first. In this attack we lost in killed, wounded and prisoners, near five hundred

Neither commanders nor foldiers were however dispirited by this mortifying repulse. They refolved if possible not to return without effect, and then determined diligently to search the whole coast in order to find a place more favourable for another attack. The view indeed was not encouraging. The island is naturally a fortification; and what nature had left undone to make it such, had been amply supplied by art.

It was a long time after this first failure before the weather would give our commanders an

opportunity of a fecond trial; however they perfifted with the utmost steadiness, and found at length a convenient fituation. " Not that it was a part of the coast less strong than the rest; on the contrary they built their principal hopes on the excessive steepness and difficulty of the rocks, which had rendered the enemy rather less attentive on this quarter. This arduous attempt was made at a bold rocky shore near the abovementioned point of Lochmaria. Besides the principal attack, two feints were made at the fame time to diffract the enemy, whilst the men of war directed their fire with great judgment and effect on the These manœuvres brigadier general Lambert with an handfull of men an opportunity of climbing up a very steep rock without molestation. This little body having thus profperoufly gained the top of the hill, formed themselves in good order and with- April 25. out delay. They were immediately attacked by three hundred of the French, but they maintained their advantage with resolution until the whole corps of brigadier Lambert, which now had ascended in the fame manner, arrived to their assistance, and repulsed the enemy.

The landing of all the forces was made good in a fhort time after. The loss in this daring and fuccessful attempt was inconfiderable. In one or two places the enemy seemed disposed to make some stand; but the body of light horse, which was embarked in this expedition, soon drove them to the town, and laid all quite open to the intrenchments before it. The great difficulty

difficulty now confifted in bringing forward the cannon, which were first to be dragged up the rocks, and afterwards, for two leagues, along a very rugged and broken road. This necessarily took up some time. However the siege was commenced with vigour: and the garrison, commanded by the chevalier de St. Croix, a brave and experienced officer, 'threatened on their fide a long and obstined defence. Nothing in fact was deficient on either part. The enemy made some fallies; one of them with confiderable effect. Major gen. Crawford was made prisoner on this occafion. But our troops were only animated by these checks. A furious attack was made upon the enemies lines which covered the town; and they were carried without much loss; principally by the uncommon intrepidity of a corps of marines which had been but newly raifed. No action of greater spirit and gallantry had been performed during the whole war.

The town was now entirely abandoned, and the defence confined to the citadel. It was obvious, that as our fleet prevented all communication with the continent, and thereby cut off all hope of relief, the place must necessarily be reduced; but the chevalier de St. Croix was refolved to provide for his own honour, when he could not for the preservation of the place entrusted to him, and, fince he could not maintain it, to fell it as dear as possible. cordingly there was no mention of yielding, until the 7th of June, when there was no longer the flightest prospect of succour, and the place was by no means fafely

VOL. IV.

tenable. Then he capitulated, and the garrison marched out with the honours of war.

Thus was the island of Belleisle reduced under the English government, after a defence of two months. In this expedition we had about eighteen hundred men killed and wounded, The loss most regretted was that Sir W. Peere Williams, a young gentleman of great talents and expectations, and who had made a distinguished sigure in parliament. He had but newly entered into the service. He was shot in the night by having carelessly approached too near a centinel of the enemy. He was the third gentleman of fashion whom in this war, the love of enterprise had brought to an honourable death in these expeditions to the coast of France.

Whatever difference of opinion might have been entertained concerning the value of this conquest, or the price which was paid for it, the rejoicing in London was great and fincere. The general and the land and sea officers employed in the expedition were the subject of very just applause, who with so noble a perseverance had struggled with, and had overcome fuch great difficulties, and who had the spirit, after such a disaster on their outfet, to renew an attack under circumstances nearly as unfavourable as those by which they had been at first foiled. The city of London addressed the king on the occafion. And it was generally expected that this new proof of our fuperiority must influence the negotiation in our favour. Some however were of opinion that it would

would rather exasperate the French, and irritate their pride to renew these efforts which their misfortunes had flackened, when they faw us in the midst of a treaty making attempts and carrying places in Old France, and as it were in

18]

the presence of that haughty court. However as there was nothing done that was not strictly justifiable, no complaint was made, and the treaty proceeded, to all appearance with as much good humour as before.

CHAP. IV.

England and France agree to treat of a separate peace. Epochas proposed by England. Court of Vienna agrees. Objects of the negotiation. Proposals of France with regard to Europe, Asia, Africa, and America. French memorial concerning Spain. Indignation of the English minister. English answer to the French memorial.

TT must be observed that though the courts of London and Ver-. failles treated separately, it was hitherto by no means proposed, that this separate discussion should lead to a separate peace. It was no more than a previous arrangement for the removal of those difficulties, which might prevent the peace of France with England from being united with the general peace of Europe. But in proportion as the treaty advanced, it became obvious that the fettling of any terms, which had no reference to the fignature of fomething obligatory between the two crowns, could at best be only void and illusory, and might in the end even prove the fource of dangerous and, captions altercations. The English minister therefore, before he would agree to treat definitively upon any point, and particularly upon the epochas, infiifted upon two preliminary conditions.

First, that every thing, which should be happily adjusted between the two crowns in relation to their particular war, shall be made obligatory fnal, and conclusive, independent of the fate of the negotiation of Augsburg.

Secondly, that the definitive treaty of peace between Great Britain and France, or preliminary articles to that end, shall be figured and ratified between the date of that memorial and the first of the fol-

lowing August.

If these conditions were accepted, then England on her part confented to name determinate epochas to which the uti possidetis should refer; the first of July for Europe; the first of September for Africa and America; and the first of November for the East Indies. The French ministry without contesting the epochas themselves, complained of the conditions; of the first, because they said it departed from the letter and spirit of the memorial of the 26th of March, which was the foundation of the whole treaty; of the fecond, on account of the extreme shortness of the time allotted for the discussion of fuch difficult and momentous points; and the adjustment of matters which regarded a war extended over the four quarters of the globe;

globe; for the memorial which contained those conditions, was dated on the 17th, and was not received at Paris until the end of June, so that little more than a month was left to obtain the confent of the court of Vienna to a separate treaty, to settle the terms of this treaty, and finally, to ratify it.

If a very uncommon good understanding had not subsisted between her imperial majesty and the king of France, it must have been very difficult to have received this confent. But in fact it was immediately received, and upon one very fhort and apparently reasonable condition, "That nothing might be stipulated to the prejudice of the house of Austria." But when this condition came to be explained, as we shall see presently, it was so far from facilitating, that it created new obstacles to the peace. However, this acquiescence of the principal of her allies enabled France to accept of the first condition without referve; and to the last she verbally, though not in the clearest terms, agreed also.

Things feemed for the present in the best situation, which in this flage of the treaty could be expected. The basis of the negotiation was folidly established. The article uti possidetis, fince the taking Bellisle, was a matter of less difficulty, and the epochas were in general fettled in fuch a manner, as to coincide with the defigns and defires of both parties. The treaty was confined to the two powers, and it was to be perfectly definitive as to them. A time for concluding it, was also in a great measure settled; a circumstance, which if it did not admit sufficient leisure for accurate discussion, cut off however the opportunities of chicane, and seemed to be the most suitable to a candid proceeding, and a sincere

desire of peace.

The foundation being thus laid, the superstructure was the next confideration. This superstructure confidered in the adjustment of those compensations which were to be made for the reciprocal conquests (and here the difficulty lay) of the two powers; a puncilio of honour might have intervened at the very first setting out, extremely pernicious to the salutary work in hand; from which party the first proposition should proceed? But in this respect France gave way, and that concession afforded no inconsiderable proof of

her pacific intentions,

We must apprize the reader that we do not mean to enter exactly into the whole detail of this negotiation, nor undertake precifely to describe all the turns that were taken in it. This, we imagine, would prove a tedious and unacceptable performance. We shall attach ourselves to the capital objects which were contended for in this game of policy: we shall endeavour to point out the matters which first obstructed, and then finally broke off the treaty; and we shall rest on these things in such a manner, as feems to us fittest for marking out the true spirit of the negotiating powers. Our own obfervations shall be very sparingly interposed. We are historians, and not advocates.

The usi possible treaty, nothing could reasonably be claimed by either party, that was not to be counterpossed by some equivalent from the other; and consequently

it was necessary to adjust and value their feveral possessions, pretensions There were fix and demands. principal objects in this negotiation. First, the limits of the two crowns in North America. condly, the conquests of Great Britain in the West-Indies, (together with the Neutral Islands there.) Thirdly, our conquests in Africa and in India. Fourthly, the adjustment of the particular affair between the English and French in Germany. Fifthly, the conduct which the two crowns were to hold with regard to their respective allies in Germany. And laftly, the restitution of the captures made by England, previous to the declaration of war.

On the first of these articles, France proposed to cede and guaranty all Canada to England; flipulating only that the free and publick exercise of the Roman Catholick religion should be permitted under the English government, and that those of the old French colonists who chose to retire might have leave to transport themselves from thence, and take away or difpase of their effects. In compenfation for this, they required a confirmation of the privilege of what fishing they enjoyed on the coast of Newfoundland, under the treaty of Utrecht; and that this fishery might be carried on with advantage, they likewise required the restitution of the ifle of Cape Breton, excluding themselves in return from erecting on that island any kind of fortification whatfoever.

The affairs in the West Indies, which makes the fecond capital obect, they proposed to settle in this manner they offered to exchange Minorca for Guadaloupe and Mari-

galante; and as to the four Neutral Islands, they infisted that two of them, Dominica and St. Vincent, were held by their natural inhabitants the Carribees, under the protection of France, and that they ought still to remain in the same condition. With regard to the two others; they proposed to make a fair division; that St. Lucia should remain to France, and that England should enter into possession of Tobago. On this head it is fufficient to observe, that in the opinion of fome people, our ministry did not, in this treaty, fet the just value on the acquisition they had made; when they looked upon Canada as the great and leading object, and only confidered Guadaloupe and Marigalante in a fecondary and subordinate light. This is a question of difficulty, and has been much agitated. Those who dread a fresh American war from the ambition of France, and were flruck with the idea of extended empire, preferred the former conquest; these who folely considered our interest as a commercial people, were generally in favour of the latter.

On the fide of Africa, France fatisfied herfelf with demanding either the settlement at Senegal, or the ifle of Goree: for which (together with the reftoration of Belleifle) they confented to evacuate Gottingen, Hesse and Hanau, and to draw off their army to the Maine and the Rhine. This was certainly a full equivalent. But with regard to the East Indies, they had no tolerable equivalent to offer. They expatiated much in their memorial upon the disadvantages which must arise to the companies of the two nations, from their entertaining

views

views of conquests, so contrary to the true spirit, and the real interest of these trading establishments; and they concluded by proposing the treaty, formerly fettled between the fieurs Godcheau and Saunders as a basis for the re-establishment of peace in Afia. It must be remarked, that this treaty had been concluded at a time when the affairs of France in the East Indies made a figure very different from their present situation; and therefore it feemed unfair to make this treaty a standard under circumstances altogether inapplicable.

The war, which has been fo long, with so much bloodshed and fo fruitlessly carried on in Westphalia, the French strenuously contended, was from the time of (what they called) the breach of capitulation of Closter-Seven, a war purely English; and therefore that their conquests in that part of Germany, formed a proper compensation for the English conquests in the other quarters of the world. Our ministers did not attempt formally to refute this affertion; they rather feemed to admit it; and they agreed accordingly to receive the evacuation of these places as an equivalent for cessions to be made on the footing we have already mentioned. On this point there was little difficulty.

was on what we have stated as the fifth object; the conduct of the two crowns with regard to their allies. Here was a real, a capital difficulty. From the beginning of the negotiation, England had declared that they would inviolably preserve their faith to the king of Prussia, and would act strenuously in his support. This picqued the French ministers;

who, in their turn, thought themselves bound to make a declaration equally strong in favour of the empress; and they had, moreover, recently conditioned with the court of Vienna, to admit nothing in the treaty to her difadvantage; words of great latitude. However, in this difficulty; they found out a folution, which, it must be confessed, had a very fair and captivating appearance. They proposed that both armies in Germany should observe an exact neutrality; and should be reciprocally bound to afford no fort of affiftance, nor to give no fort of offence to the allies of either of the parties. And they proposed further, that as armies in this state of inert neutrality must be a dead and useless expence to the power who maintains them, the French king, from the time his Britannic majesty recalled the English forces from Germany, would cause double the number of French forces from the armies of the Upper and Lower Rhine to return into France; and that no French troops should remain in Germany but in proportion to those which the king of England should keep in his pay. It might certainly be urged in confirmation of the propriety of this offer, that in reality these armies, whilst they continued in action, though they worried each other abundantly, afforded no kind of affiltance to their allies, and therefore, when they came mutually to entertain pacific fentiments concerning their own particular quarrel, and were to give an example of moderation to the rest of Europe, there feemed to be no reason why they should make efforts in favour of any ally which they had not made, or been able to [C] 3 make make

The last article had its difficulties also. The French insisted, as a point from which they were refolved never to recede, upon the restitution of the captures made before the declaration of war. This demand, they were of opinion, was grounded on the clearest principles of the law of nations, and the most express stipulation of treaties. Without entering into those various arguments with which this position might be maintained and attacked, it appeared to many that the honour of both nations was almost equally concerned, the one to claim, the other as resolutely to resuse this restitution.

On the whole, these proposals, which the French fent to London in a memorial of the 15th of July, formed, though in some respects undoubtedly, exceptionable, a very agreeable plan for a treaty of peace. A better could not have been expected in the first project of an enemy, and it might be hoped, that a negotiation thus favourably begun, could not fail of adjusting eafily whatever appeared wrong, or supplying whatever was defective in this first draught of the propositions. But fatally for the repole of mankind, in the very inflant that this fair proposal was made, at the very moment when these strong demonfirations were given, an act was done which blew up at one explofion, the whole basis of the treaty that had been long and carefully laying, scattered the materials which had been to industriously collected, and so cautiously arranged, and instead of extinguishing, spread the flames of war more widely, and made them rage with new fury.

make in the hottest time of hosti-, From this time forward all the transaction was full of animosity, resentment and mistrust. The reader has been apprized of the meafures which France had been invariably pursuing at the court of Madrid, and the arguments she employed to infuse a jealousy into that court. Hitherto however, there was no appearance that these meafures had any effect; but to the infinite furprize and indignation of the British minister, together with the memorial which contained the above recited propositions, Buffy, the French agent, delivered a private memorial, fignifying, that in order to establish the peace upon solid foundations, not to be shaken by the contested interests of a third power, the king of Spain might be invited to accede to guaranty the treaty, and that to prevent the differences which subsisted between Great Britain and this monarchy from being a means of producing a fresh war in Europe, with the confent and communication of his Catholic majesty, he proposes, that in this negotiation, the three points which had been disputed between the crowns of England and Spain, might be finally fettled. First, the restitution of some captures made upon the Spanish flag. Secondly, the privilege of the Spanish nation to fish on the banks of Newfoundland. Thirdly, the demolition of the English fettlements made on the Spanish territories in the bay of Honduras.

> It may be easily imagined, from the character of the then fecretary of state, in what manner he received these proposals: he rejected with the utmost fcorn, the offer of negotiating, through an enemy humbled, and almost at his feet, the disputes

of his nation, with a power actually in friendship with us. He called upon the Spanish minister to disavow the propositions, which had been said to be made with the knowledge of his court. He returned as wholly inadmissible this offensive memorial, declaring, that it would be looked upon as an affront to the dignity of his master, and incompatible with the sincerity of the negotiation, to make any further mention of such a circumstance.

And now he prepared, without delay, an answer to the principal memorial, in a stile rather dictated by the circumstances which accompanied that paper, and which fufficiently indicated the defigns of France, than what the propositions themselves strictly deserved. Indeed, as he had by this time conceived an incurable suspicion of the fincerity of France in the whole proceeding, it would not have been prudent to have made those advances, which on a supposition of good faith and pacific intentions, might possibly have been adviseable; for though both powers had over and over declared, that their respective propositions, if the treaty should by any accident be broken off, would be considered as retracted or never made; yet it is certain, that things once fettled and agreed to, unavoidably flamp their own impression upon any future nepotiation, relative to the same subject.

Mt, Pitt's answer, which is dated on the 29th of July, agrees to the restitution of Guadaloupe, Marigalante and Belleisle, on the compensations proposed by France. It agrees also to receive Canada, but without any new limits or any exception whatsoever; and it adds

to the French offer of all Canada, " its appurtenances." It admits the proposal of the partition of the Neutral Islands. It rejects the French demand of Cape Breton, or of any other island in the gulph or river of St. Lawrence; or of any power of fishing in that river, in that gulph, or on those coasts; and it allows the privilege of fishing on the banks of Newfoundland, only on confideration of the demolition of Dunkirk. But the proposed restitution either of Senegal or Goree is utterly refused. The German neutrality is rejected with disdain; and it is declared that Great Britain is unalterably refolved to support the king of Prussia with efficacy and good faith. In addition to the offer made to evacuate Hesse, &c. it is infifted that the French shall make a general evacuation of all her conquests in Westphalia, and all its countries; including its conquests from the king of Prussia on the Rhine, though France had before declared, that they were conquered for the queen of Hungary, that they were actually governed in her name, and that she could not, confistently with good faith, agree to deliver them to the king of Prussia. The treaty between Saunders and Godcheau was not admitted as a proper basis for a treaty relative to the East Indies. But it was agreed, that the two companies should negotiate concerning their respective interests, as the king of Great Britain could not dispose of the rights of the English East India company without their consent. As to the restitution of the captures before the war, this was most positively refused.

In this period we leave the ne-[C] 4 gotiation gotiation to follow the motions of the armies in Germany. It is certain, that the dispositions of the two courts grew daily more unfavourable: their confidence in each other, and their mutual good-will wore away; and it was to be fear-

ed, that this negotiation, if it broke off in an unfatisfactory manner, must leave impressions on the minds of the two nations of such a nature, as might cause them to wish they had never engaged in it.

CHAP. V.

Motions of the French and allied armies. General Sporken attacked. French pass the Dymel. Skirmishes. Position of prince Ferdinand. Junction of Broglio and Soubise. Battle of Kirch Denkern. French defeated. French threaten Hanower. Prince Henry of Brunswick killed. Taking of Dorsten. Various movements of the armies. Destruction of Schartsfeltscasse. Prince Xavier of Saxony takes Wolfenbuttle, and invests Brunswick. Detachments from prince Soubise take and abandon Embden. Attempt on Bremen. Sufferings of Lower Westphalia.

Lthough the great purpose of In the early and strenuous effort made by the allies was not fully answered, it nevertheless produced, as we have before observed, a very confiderable and useful effect. The destruction of the French magazines retarded their operations in fuch a manner, that the greatest part of the month of June was spent before their armies found themselves in a condition to act. But as foon as they had taken proper measures for their subfistence, the prince of Soubife caused his troops to pass the Rhine, and to advance on the fide of Munster, not far from which city the hereditary prince of Brunfwick was posted to oppose him. Marshal Broglio assembled the forces under his command at Cassel, and moved towards the Dymel, in order to effect a junction with the body under the prince of Soubife. They made no doubt that their conjoined strength would soon attain a decided superiority over the allies, who had ended their late enterprize with a lofs which was

confiderable, and which in their circumstances, they could not well

bear, nor easily supply.

These hopes were supported by the fuccess of their first encounter. General Sporken with a strong detachment had been posted in an advantageous fituation on the Dymel, and in the front of the allied army. On the approach of Marshal Broglio, he attempted to retire with all that expedition which his inferiority made necessary. But the French came upon him 29th June. with fuch rapidity, that they overtook and attacked his rear, which was instantly routed; they took eight hundred prisoners, nineteen pieces of cannon, four hundred horses, and upwards of an an hundred and feventy waggons. The same day they passed the Dymel; and whilst prince Ferdinand, discouraged by this check, fell back to the Lippe, they made ad July. burg, Dringleburg and Paderborn.

The allies, however, foon recocovered their spirit; and the main

body

body of their army being well fecured, they fent out ieveral detachments. Their small bodies were conducted by general Luckner, and other able partizans, who undertook several bold and very distant enterprizes, attacked the enemy where they were least upon their guard, routed their convoys, destroyed several of their magazines, carriages and horses, and carried off their prey even from the gates of Cassel. These lively actions seemed a prelude to some more important and decisive attempt.

The French became fensible that a stroke of some importance was expected from the greatness of their force, and that it was not for the credit of their arms only, but for their security from the minute, but continual and galling attempts of parties from the allied army.

For fome time prince Ferdinand had been posted to the fouth of the Lippe, between Ham and Lipstad. This position he took, in all probability, because M. Broglio had, by occupying the places on the Dymel, got between him and Hano-Therefore he judged it expe-· dient for him in his turn to get between the prince de Soubise and the In this fituation, if the Rhine. enemy attempted any movement towards the king's dominions, he was ready to fall directly on the places they occupied by that river, which, in the prefent circumstances, were full as important to them as the Hanoverian territory was to us. -Thus whilft he feemed to retire from that territory, and in a manner to abandon it, he in reality provided with the greater effect for its fecurity.

Marshal Broglio, when he had refolved on the attack of the allied

army, united his troops to those of the prince de Soubise, at a place called Soest, between Lipstadt and Ham. On the other hand, as soon as the general of the allies was apprized of their intention, he posted his army in a very strong and advantageous manner.

The river Aest runs for a considerable way, almost parallel to the Lippe, from which it is not distant in fome places, much more than half a mile. The high road from Lipstadt to Ham passes between these rivers; and it was of the utmost moment to prince Ferdinand to fecure that important communication, by which alone he could hope an advantageous retreat, or in any degree propole to command the adjacent country. With a view therefore to protect that communication, he established his left wing on the Ishmus between the rivers. The left extremity of that wing under general Wutgenau, leaning to the Lippe, by which it was perfectly fecured, as the right was supported by the village of Kirch Denkern, fituated immediately on the Aest. The marquis of Granby commanded in that wing, with the assistance of lieutenant gen. Howard and the prince of Anhalt, who were posted towards the abovementioned village.

At that village, another river called the Saltzbach, small, but very deep, joins the Aest almost in a right angle. Behind this river on a considerable eminence was placed the center, commanded by general Conway; and on a continuation of the same eminence, the right wing, under the hereditary prince, thretched out towards the village of Werle, and it was well defended on the slank by

rugged,

rugged, bushy, and almost impracticable ground. Nothing could be more advantageous than this difposition of the army, by which the whole center and right wing were covered in front by a river, and the left supported by rivers on both its flanks. In the left indeed, was the strength and flower of the army; the count of Lippe had placed also in this wing, the greatest part of the artillery, as he knew that it defended the most important fituation, was the most exposed in front, and confequently would be the object of the enemy's most considerable efforts.

He was not mistaken in his conjecture. On the 15th of July in the evening, a very furious attack was made on lord Granby's posts, which was fustained for a long time with all the intrepidity and firmness, which British troops always exert, and which that gallant officer knows fo well how to inspire. The disposition we have just mentioned, was not then compleated; fo that they had the whole torrent of that impetuofity, which diftinguishes the French in their first attacks, to refift for fome hours, until Wutgenau, according to the plan originally projected, arrived to their affiftance, and then with efforts united and redoubled in a long and obstinate combat, which continued until it was quite dark, they repulsed the French, and drove them into the woods.

July 16th. By the next morning, the disposition of the allies was perfected; and it was evident that the French, far from being dismayed by their misfortune, were prepared for a more general and better sustained attack than the former. M. Broglio commanded

against our left, which, as on the preceding day, was the principal object of the enemy. The prince de Soubife led their center and their left. The engagement began at three in the morning, and it was a fevere and continued fire for upwards of five hours, before the least effect could be perceived on either fide. The weight of the attack this day lay on Wutgenau's corps, which supported it with a degree of bravery, that rivalled the stand which had been lately made by the British forces. But about nine, the prince discovered that the enemy were preparing to erect batteries on an eminence, in the front of the marquis of Granby's camp, which he had not been able to enclose within his lines. Senfible of the pressing necessity there was of preventing the enemy from feizing on an eminence, from whence they might cruelly gall his army, he called in a referve, which had been placed at the other fide of the Lippe under general Sporken. Strengthened by this fupply, and encouraged by the irrefolution which now began to appear in the motions of the enemy, he commanded the troops which were nearest at hand to advance upon them.

This movement was decifive, the enemy gave way, fell into diforder, and retired with precipitation. Their center and left, which had not been able to pass the Saltzbach, after a long and ineffectual cannonade, retired with the rest, and covered their retreat; so that favoured by this circumstance, and the closeness of the country, which was full of hedges, they marched off in tolerable order, and were pursued but a little way. However, their loss was considerable;

the regiment of Rouge, confisting of four battalions, with its cannon and colours, was entirely taken by the fingle battalion of Maxwell. Their whole loss in killed, wounded, and prisoners, has been estimated at five thousand. The allies had about three hundred killed, a thousand wounded, and about two hundred prisoners. This, action was the climax of the campaign of 1761, in Westphalia; it did the greatest honour to the wisdom of the accomplished commander in the disposition, and to the bravery of the troops in the combat; but it was far from decifive. Notwithstanding the loss the French suffered, they were fill much superior in their numbers. On this misfortune the old ill understanding between Sou. bise and Broglio broke out with fresh animosity. Narratives, memorials, and replies, conceived with great bitterness, were mutually remitted from both marshals to their court. Marshal Broglio alledged, that his misfortune was owing to the prince de Soubise's delay, who did not begin the attack till it was too late for him to continue it; the prince de Soubife, on the other hand, suggested, that Broglio began his attack earlier than the time that had been fixed, in hopes of forcing the allies without Soubise's affistance; and when he found that point lost, obliged Soubife to retreat, that he might not have the honour of recovering it.

The allies after this battle kept their ground for fome time, whilst the French retreated. It is impossible regularly to account for all the unexpected turns which have happened, perhaps, more in this campaign, than in any of the forther. It is enough to know that the original superiority of the French, together with their opportunity of continual reinforcement, may very tolerably explain the reafon of the advantages which they fo often obtained after very confiderable defeats. This is a point which it is necessary the reader should continually keep in his mind during the whole narration of this strange war. After their late loss and retreat, the French foon advanced again. The party under the prince de Soubise passed the Lippe, and made dispositions for the fiege of Munster, whilst marshal Broglio's army turned off on the other fide, croffed the Weser, and threatened to fall in upon Hanover.

This division of the enemy compelled prince Ferdinand, though little in a condition for it, to divide his army also. The hereditary prince posted himself to cover Munster; whilst prince Ferdmand continued in the country towards the Weser, to observe the motions

of marshal Broglio.

Whilst these various positions were mutually taken, as the armies were continually moving near each other, a number of very sharp skirmishes ensued. Marshal Broglio cautiously avoided a battle whenever he faw that the duke of Brunfwick, by calling together his troops, had prepared for, and was defirous of it; so that there was no way left, but, if possible, to check his motions, and wear down his force, by reiterated lesser actions. These actions were almost always to the advantage of our troops. In one of them, however, the young prince Henry of Brunswick was mortally wounded; and July 20th. regret, the disappointment of such great great hopes as were formed from the rifing gallantry of a prince, who so nobly supported the martial spirit of his family, and had fallen whilst he was emulating the heroic actions of his brother the hereditary prince and his uncle Ferdinand.

On the fide of Westphalia, the prince de Soubise persevered, notwithstanding some checks, in his design of laying siege to Munster; there was great reason to apprehend that he might succeed in that enterprize, as it was always in marshal Broglio's power, by taking some steps on the side of Hanover, to make it necessary to draw away the greatest part of the force destined to the succour of Munster. therefore began to make the previous arrangements at Dorsten. The hereditary prince, who knew that he was continually liable to be called off, took the first opportunity Aug. 30th of attacking this place.
A battalion of French troops formed its garrison, and made a brave defence, but it was affaulted with fo much resolution and perseverance, that they were obliged to furrender prisoners of war. The prince totally destroyed the ovens which were established here, and by this means not only frustrated their design of besieging Muniter, but compelled them for a time, to retire from the Lippe.

As to prince Ferdinand, he faw clearly, that the intentions of marfhal Broglio were to make himfelf mafter of his majesty's, and the duke of Brunswick's territories. To attempt to follow him, and to beat him from thence, would only be irrecoverably to transfer the seat of war into those countries, and wholly to abandon Westphalia to the enemy. Diversion therefore, and

not direct opposition, became his He resolved, that often as he perceived Marshal Broglio's making any progress on the suspected quarter, he should throw himself as far into Hesse as the enemy had advanced towards Hanover, and by stopping their fubfistence, oblige them to quit their enterprize. This plan at first fucceeded to his wishes, and drew back marshal Broglio into Hesse, upon whose approach prince Ferdinand retired to his old quarters at Paderborn, and was ready 19th Oct. foon as Broglio should return to the execution of his former defign.

Accordingly he foon returned to the Weser. Then the hereditary prince, who had by this time rejoined the grand army, advanced into Hesse, and pushed to the farthest extremities of that country, even as far as Fritzlar; but though he succeeded so far in his attempts as to destroy all the lesser magazines which he found in the open country; yet as all the fortresses were in the hands of the enemy, as the garrisons had been newly reinforced and the grand magazines were well secured in those places, he kept his ground in his advanced pofition.

It was on this occasion principally that prince Ferdinand found the disadvantage of not being able to form two armies, which might act separately. For on one hand, marshal Broglio, when he had perfectly secured his posts in Hesse, took a situation in which he watched all the motions of prince Ferdinand, and kept himself in readiness to fall back into Hesse, or to advance into Hanover, as might best agree with his designs. From hence he

tent

fent out some powerful detachments which acted with great effect. One of these detachments entered the Harts Forest (the remains of the oreat Hercynian, fo famous among the ancients) and besieved the strong castle of Schartsfelts, which they took and demolished. Then they laid the whole tract of country under severe contribution. Another, and still more powerful detachment under prince Xavier of Saxony appeared before Wolfenbuttel, a confiderable city, and Oct. 5th. strongly situated, as it is wholly surrounded by the Ocker. But the French, as they knew that the town is mostly built of wood, commenced their operations with a very fierce bombardment. This had fuch an effect, that the resistance of the place was not proportioned to its strength; in five days it furrendered, and was fubject, like the rest, to a grievous contribution.

Flushed with this success, the French followed their blow, and advanced, keeping still the course of the Ocker, to Brunswick; and began also to invest that city. The reigning prince, unable to protect his subjects, or to secure his person in his dominions, fled to Hamburgh, where he met the landgrave of Hesse, whom the rage of war had in the same manner driven from his territories. This free city now became a place of general refuge, and enriched itself by the calamities, as it had in better times done by the prosperity of Germany. It was lately computed, that the strangers there had increased to forty thoufand, amongst whom they could reckon two fovereign princes, and several other persons of the first diflinction.

This rapid and unrefifted prooress of the French to the eastward of the Weser, was to the highest degree alarming. Prince Ferdinand with all the expedition in his power, detached the hereditary prince to the relief of Brunswick. This measure fortunately saved that very important place. This active commander compelled the enemy not only to raise the siege of Brunfwick, but to abandon Wolfenbuttel. and to make a precipitate retreat with the loss of some of their cannon, and upwards of a thousand men.

Whilf Broglio's detachments proceeded thus in distressing the country to the eastward of the Wefer, the prince of Soubife, who by the removal of the hereditary prince of Brunswick to another quarter, faw no longer any thing capable of opposing him, spread his army by detachments over all Westphalia, and ravaged it in the most cruel manner. They took Osnabrug; and because the contributions were not immediately paid, they gave up the place to be pillaged by their troops, who rifled the miserable inhabitants without mercy. Another body pushed as far as Embden. This important town was immediately furrendered by the garrison (two English companies of invalids) at the defire of the timid inhabitants, and the promife of favourable treatment: notwithstanding this capitulation, and the merit of fo easy a furrender, the town, as well as the whole country of East-Friesland, was laid under a ruinous contribution. But their exorbitances grew to fuch an extremity, that the boors were at length compelled to rife, and with

fuch arms as a fudden rage fupplied them, to drive these oppressors out

of their country.

A more confiderable corps commanded by the prince de Conde, Oct. 3d. laid fiege to Meppen, a place on the Ems, of some consequence, and where we had some magazines. In three days it was reduced, and the garrison of five hundred men were made prisoners of war.

The city of Bremen was defended by a weak garrifon. This was a place of far greater moment than Meppen, the allies having amassed there immense magazines, as it was a great and trading town, advantageously situated on the river Wefer; and the possession of this place must undoubtedly have given to the French the command of that river, through which the allies derived all their subsistence. If the English had lost Bremen, they must have seen themselves invested and locked up in a barren country, in the heart of Germany, furrounded by their enemies, and deprived of every refource. Fortunately the inhabitants of this city proved as brave as those of Embden were timid. They were exasperated by the example of the French rigour, which they had feen on every fide of them. They therefore joined the garrison, instead of discouraging them in the defence of the place. The French were obliged to retire precipitately; and a strong reinforcement was thrown into Bremen, to fecure that very important city from the like enterprizes for the future.

Whilst the two French armies in this manner ravaged all the country held by the allies, prince Ferdinand, who faw the rage of war spread all around him, with his usual firmness, kept that central position which he had taken foon after the battle of Kirch Denkern; no movements of the enemy could terrify or allure him from it. He had settled his head quarters at Buhne, and his army extended from thence towards Hammelen. Posted in this manner, he fecured the course of the Weser, by preventing the enemy from making themselves masters either of Hammelen or Minden; he lay in the best situation in which it was possible to place a single army, that was to act against two; and knowing that he could not follow their movements with the body of his army, without hazarding the king's electoral dominions, and indeed every object of the war, he contented himself with sending out fuch detachments as he could spare, fuccessively to the relief of the places which were attacked. He faw that the winter approached, which had always been a circumstance favourable to him; and it was evident that whilst he continued with his main body immoveably fixed as it was, and his detachments active on every fide, it was impossible for the enemy to keep any of those places, they had seized in their incursions.

CHAP. VI.

Condition of the king of Prussia. His inaction. Motions of the Russians and of Laudohn. Breslau cannonaded. Tottleben removed. Colberg besteged. Russian magazines in Poland destroyed. War transferred to Pomerania. King of Prussia quits his strong camp. Schweidnitz taken by a coup de main. General Platen repulsed. General Knoblock made prisoner at Treptow. Prince Wurtenburg retreats. Colberg taken. Russians winter in Pomerania.

INTIL this year the operations of the Prussian armies took the lead in interest and importance before all the other events of the war. The firmness and activity of their illustrious monarch, the number and animofity of his enemies, the blows that he gave, and those that he suffered, his distreffing and terrible falls, his amazing and almost miraculous recoveries, kept all eyes fixed on his motions, as the great center of public atten-Undoubtedly nothing that has ever been acted on the scene of human affairs, attracted the minds of men to it with greater justice; none perhaps afforded at once more entertainment to the imagination, and furnished more copious materials for political and military instruction; and probably, therefore, this part of all our modern history, will be the most carefully studied by posterity, when it comes to be properly known, and worthily written.

To judge of the importance of this branch of the general war, it will be proper to recollect that, besides a number of sieges which were prosecuted, together with innumerable and bloody skirmishes, no less than nineteen pitched battles, or capital actions, have been fought on his part since the close of the year 1756, when the king of Prussia first seized upon Saxony, and made an irruption into Bohemia. In

eleven of these battles, the king or his generals were deseated. He was victorious only in eight. Ten of them were fought under his own command; and seven out of the eight victories which were gained, were obtained by himself in person; of the eleven deseats, he was present only at three.

From these circumstances some judgment may be formed of the active and enterprizing character of this monarch, and of the amazing refources he had prepared, or formed, or feized, and in fome instances, one may fay, almost created. We have observed that the last campaign had ended more to his advantage, than the one preceding had done; for for those two great victories of Lignitz, and Torgau, with which he then ended his operations, had not only refcued his affairs in Silefia and Saxony from impending destruction, but had enlarged his field for recruiting, and prepared him, to all appearance, for more early and vigorous action, than could have been expected in most of the preceding campaigns. But every one was furprized to observe, that this year he had totally altered the fystem of his conduct. An inactivity and langour was diffused over all his proceedings. He feemed to have adopted the caution and flowness which had been fo long opposed to

his vivacity by M. Daun. fummer was almost wholly spent, and the king of Prussia had scarcely been mentioned.

It was not suspected that the proposed negotiation at Augsburg could have had much if any influence upon his method of proceeding. No particular propofals had been made concerning his affairs, nor indeed any other marks of a pacific disposition towards him shewn, except what were contained in those general declarations, which a regard to common decency had exacted. It must have added to the anxiety of his fituation, that Great Britain and France were at that time engaged in a separate treaty, in which the latter power was in a condition to make fo many flattering offers in relation to Germany, that he might well have dreaded the withdrawing of that affiftance which had hitherto been his great support against all attacks, and his final resource in all his distresses. Perhaps he was well affured, that the faith of Great Britain was proof against every offer however alluring; in fact it proved to be so; for in rejecting the German neutrality, which the French proposed in the late negotiation, our country afforded as convincing a proof of an unshakeable public faith, as any people had ever given to their allies.

However, whilst this point remained in any degree of suspence, it would have appeared natural, that the king of Prussia should make fome uncommon exertions to confirm the faith of his allies, as well as to put himself upon a more respectable footing at the ensuing congress. It is notwithstanding certain, that he contented himself with acting wholly upon the defenfive : a conduct, which perhaps his circumstances had rendered absolutely unavoidable. Prince Henry commanded an army in Saxony, which entrenched itself strongly under Leipsic. M. Daun continued near Dresden; and these two armies did no more than watch each other during the campaign. The king was also entrenched in a very strong position in Upper Silesia, not far from Schweidnitz, whilst the fortreffes in the lower part of that country were filed with fuch garrisons, as put them out of the reach of any fudden infult.

This position was pointed out by the motions and apparent defigns of his enemies. The Russian army was this year, as well as in the former, divided into two strong bodies; one of which, led by Tottleben, directed its march towards Pomerania: and the other under M. Butterlin, entered into the Upper Silefia, advancing towards Breflau. Baron Laudohn entered that province in the part opposite to them, and they proposed to unite their armies, in order to attack the king, or to take Breslau or Schweidnitz in his presence. The remarkable drought in the beginning of the season, which had greatly lowered the Oder, facilitated their junction. The Russians spread themselves over all the open country of Silefia, and exacted heavy contributions. A body of Aug. r. them appeared before Bre- Aug. r. flau, and began to cannonade the town from feven batteries. Laudohn exerted the whole of his skill to draw the king from his post, and to engage him in a disadvantageous action. Sometimes he advanced, as if he meant to join the Russians: fometimes his motions indicated

indicated a design on Schweidnitz; these attempts failing, he turned off and made a feint as if he proposed to fall upon the Lower Silefia, in hopes that he might at least oblige the king of Prussia to detach and divide his forces; but the king continued immoveable in his post.

Whilst these various movements were making with little effect, on the fide of Silesia, the other grand division of the Russians advanced without opposition into Pomerania; and it was expected that their proceedings would be attended with greater effect fince the removal of Tottleben, and the appointment of general Romanzow to that command. Tottleben had been long fuspected; and, it is said, at length convicted, of a fecret correspondence with the king of Prussia. The fituation of this monarch obliged him to fight with every fort of weapon; and Tottleben, a foldier of fortune,, without any national attachment or particular allegiance, was a fit object for the king of Pruffia's pecuniary stratagems. did not fucceed fo well in the attempts of the fame kind which he is faid to have made upon Laudohn, Every circumstance concurred to render the method of corruption less successful in that quarter.

Colberg, regularly befreged, or closely streightened every campaign; fince the Moscovites made themfelves masters of the kingdom of Prussia, was now affaulted with greater and more determined force than ever. A strong sleet, consisting of forty fail of all kinds, blockaded it by sea, whilst the army of general Romanzow formed the fiege by land. On the other hand, the place threatened a defence worthy of its former efforts. This city was VOL. IV.

from the beginning of the war of greater strength than it had commonly been represented; every attempt of the Russians, by demonstrating where any weakness lay, taught the Prussians, who were fully fensible of its importance, in what part and in what manner it was necessary to add to its works; and they had omitted no opportunity. In addition to this defence, the prince of Wurtenburg was strongly entrenched under the cannon of the town, with a body of fix or feven thousand men.

The king of Prussia was extremely alarmed at the danger of this momentous post, the key of his dominions to the north, from the relief of which he was removed, and, as it were, chained down, at fuch an immense distance. Though Laudohn and Butturlin found abundant employment for all his forces, he resolved to send a considerable detachment under general Platen to the affiftance of Colberg. The fertility of his genius proposed two ends from this fingle expedient. He ordered Platen to direct his march through Poland, and to destroy the Russian magazines, which had been amassed on the frontiers of that kingdom, and from which their army in Silesia drew its whole subfistence. This service might, he hoped, be performed without any confiderable interruption to the progress of the detachment towards Colberg. The event was entirely answerable to his wishes. General Platen ruined three principal magazines of the enemy. He attacked a great convoy of their waggons; destroyed 500, and burned or difperfed the provisions they carried. Four thouland men who protected this convoy were, for the greater

part, killed or made prisoners. General Platen, after this useful and brilliant exploit, pursued his march with the usmost diligence to Pomerania.

Intelligence of this blow was no no fooner received by the Russians in Silefia, than they were struck with the utmost consternation. They had lately effected one of their pur-Aug. 25th, poses by their junction this stroke compelled them at once to fever this union, so lately and with fuch difficulty compassed, to drop all their defigns upon Breslau, to repass the Oder, and to retire without delay into Poland, left their remaining magazines should share the fame fate with the three abovementioned, and their future subsistence be thereby rendered wholly

precarious.

So unfortunately circumstanced were the affairs of the king of Prussia, that his wifest schemes and happiest successes could hardly anfwer any other end than to vary the scene of his distress. The storm which had been diverted from Silefia by general Platen's expedition, was only removed from thence to be discharged with irreliable fury on Colberg. The Ruffians, when they faw that the measures the king had taken rendered the completion of both their designs impracticable, resolved at all adventures to secure one of them. Colberg was the object of their choice, not only as the place furthest from succour, but as the possession of it would be an advantage fitteft for answering those ends which were more nearly and properly Russian. M. Butturlin, therefore, as foon as he had established his convoys, directed his course towards Pomerania, and being mafter of Lansperg, he fent detachments from thence, that cruelly wasted all the adjoining Marche of Brandenburg, without at the same time diverting himself by these ravages from his main intention.

A force of Russians was by this time assembled in Pomerania, to which it was impossible for the king of Prussia to oppose any thing that was in any degree able to contend with them in the field; of course he could not promise himself that the immediate raising the siege could be the effect of these succours. All he could do was to fend another detachment to that part, under general Knoblock; and hoped that by the union of these several small corps, and by their intercepting or at least distresfing the Russian convoys of provifion, the place might be enabled to hold out, until the fevere fetting in of winter should render the operations of a flege impracticable.

He was providing in this manner, and studying new methods for the relief of Colberg, to the danger of which place his whole attention was drawn, when an event happened just by him, and, as it were, under his eye, almost as distressing as the taking of Colberg would have proved, and so much the more distressing, as it was entirely unex-

pected.

On the retreat of the Russians under Butturlin, the king of Prussia imagined himself at liberty. He found a want of provisions in his strong camp near Schweidnitz, and to be the more easily supplied, he approached nearer to the Oder. He was so little in fear of the enemy, that on making this movement, he drasted 4000 men from the garrison of Schweidnitz: he thought that the preparations necessary to a

fiege

fiege would give him fufficient notice, and sufficient leisure to provide for the fafety of that important place, from which after all, he had removed but to a very small diftance. Laudohn, who through the whole campaign had watched the king with a most diligent and penetrating assiduity, and hitherto had found no part open and unguarded, thought in this instant he perceived an advantage. It was indeed an advantage which would never have appeared as fuch, but to a general as resolute as sagacious. He refolved to attempt this strong place, by a coup de main. On the ist of October at three in the morning, the affault began. An attack was made at the same time on all the four outworks, which the troops, ordered on this important enterprize, approached with fo much precaution, that they were not perceived by the garrison. They scaled all the four at the same time; and the troops which defended them had scarce time to fire a few cannon shot. On the side of the assailants, not a gun was discharged: but in one of those out-works the fire of the small-arms set fire to a powder magazine, which blew up, and on this occasion about 300 of the Auftrians, and about the fame number of the Prussians were killed. foon as the outworks were carried, they prepared to affault the body of the place, which they entered by bursting open the gates, and at daybreak they found themselves masters of the town, after firing a few shot. Five battalions, making about 3000 men, and lieutenant-general Zaftrow, governor of the fortrefs, were made prisoners. The conquerors found here a great number of cannon, and a large magazine of meal.

Their loss in the whole of this bold and fortunate undertaking, amounted, by their accounts, to no more than 600 men.

In a manner so unexpected, and, considering the nature of the fortifications, so unprecedented, Schweidnitz fell for a second time in this war into the hands of the Austrians; and that city, which in the year 1758 had cost the Prussians a blockade of some months, and a siege of thirteen days open trenches to recover it, was again lost in a few hours, and with a very inconsiderable damage to those who undertook

this daring enterprize.

The king of Pruffix felt this grievous blow to the quick. By their possession of Schweidnitz he saw the Austrians enabled to winter in Silesia; he saw that, whilst they held this place, he could possibly make no motion for the relief of any other part of his dominions without exposing Breslau, and along with it the whole of Upper Silefia, to a certain and irrecoverable conquest. In the first agitations produced by fo extraordinary and affecting a difafter, he was disposed to attribute this misfortune to the treachery of the governor, but he was too generous to harbour fuch a fuspicion, for any time, against an officer who had hitherto ferved him with fidelity, and who might have been furprized with an attack of fo uncommon a nature, and which the king himself had as little suspected as the governor. He immediately recovered his temper, and faid with a smile, " It is a fatal " blow; we must endeavour to re-" medy, it." He wrote to general Zastrow who commanded there, "We may now fay, what Francis I. " of France wrote to his mother " after the battle of Pavia, We have [D] zon, with observer see loft

" lost all except our honour. As-I cannot comprehend what hath

"happened to you, I shall suspend "my judgment; the thing is very

" extraordinary."

Schweidnitz was lost suddenly: but Colberg made a most obstinate and noble defence. At length, however, the garrison began to be forely diffressed for provisions. General Platen quitted the entrenchments, which he had maintained in conjunction with the prince of Wurtenburg, in order to cover the reinforcements, which the numerous and strong detachments of the Russians, who overspread the whole country, had hitherto kept at a diftance. But he had the misfortune to meet an infinitely superior body of the enemy, to be beaten, and to lose part of his convoy; and it was with difficulty he escaped with the remainder to Stetin.

The other (general Knoblock) had established himself at Treptow, which was to serve as a resting place for the convoys; but as general Platen had been repulsed, in the manner we have just seen, Romanzow advanced with a large force to Treptow. Knoblock, hopeless of assistance in a town which had scarcely any walls, and invested by a body so vastly superior, yet made a vigorous and gallant defence for sive days; he was at length compelled to surrender himself and his body of about 2000 men prisoners of war.

These successive disasters were occasioned by the necessity there was for revictualling Colberg, cost what it would, and, for that end, of dispersing the Prussian troops in the face of a Russian army of 50,000 men. This revictualling in these circumstances could not be effected without a singular piece of good fortune; and, in order to get into the way of this good fortune, every rifque was to be run.

These advantages over Platen and Knoblock raised the spirits of the Russians, and enabled them to contend with the extreme rigour of the season in that northern latitude; they pushed the siege with redoubled efforts. All hope of a fupply from the land was absolutely at an end; and though the Russian sleet had been by a violent florm driven off the coast, the succeur from the fea was too precarious to be depended on. In this desperate situation the prince of Wurtenburg became apprehensive, lest his army, which had been unable to relieve the town, by delaying any longer under its walls would only share its fate, and that famine might also oblige him to a surrender. He therefore refolved, whilst his men retained their vigour, to break through a part of the Russian army, and to leave Colberg to make the best terms its circumstances would admit. This defign he accomplished happily, and with little or no lofs.

And now Colberg, hope Dec. 16th. less of all relief, the garrifon exhausted, provision low, the fortifications in many places battered to pieces, after a fiege of near fix months, furrendered to the Russians. The governor and the garrison were made prisoners of war. This place was defended by the gallant Heyde, who to this time had maintained it successfully against all the efforts of the Russians during the war; and as he was diftinguished by the king his master for his merit in the fucceisful defence of it, he had likewise as full assurances of his favours after having on the late occasion conducted himself with his former bravery, though it was

not

not with the former good for-

The loss of two fuch places as Schweidnitz and Colberg, at the two extremities of his dominions, were decifive against the king of Prussia. It was now impossible for him to make any movement by which the enemy could not profit to his almost certain destruction. To form fieges, with an army like his, inferior in the field, was impossible. The Russians, by possessing Colberg, possessed every thing. They were masters of the Baltick; and they now acquired a port, by which their armies could be well provided, without the necessity of tedious, uncertain, and expensive convoys from Poland. The road lay almost open into the heart of Brandenburg. Stetin alone stood in their way; but it was obvious that nothing but the advanced feafon could fave Stetin from the fate of Colberg. The Muscovites, now for the first time, took up their winter quarters in Pomerania.

It is remarkable, that this whole year past without a regular battle between the king of Prussia and any of his enemies, yet none of the most unfortunate of his campaigns had been fo ruinous to him. He had fuffered four terrible defeats, without having ballanced them with a fingle advantage of consequence in the campaign of 1759. Yet in these circumstances it is almost incredible how little he really loft. He was able to take the field again the ensuing year in a very respectable manner, and to make head against his enemies. In that year he loft a whole army near Landshut; still he was far from broken. Afterwards in that same campaign, he gave his enemies two fignal defeats, and ended his operations advantageonfly, and with great glory. But in the year, of which we now write, without fuffering any confiderable blow in the field, without any firiking efforts on any fide, his power has gradually crumbled away. The most calamitous defeats could not fink him lower. And in the fituation in which he flood after the taking of Colberg, we may fafely far, that there was fearcely a possibility that he could be preserved from destruction by any thing that lay within the reach of human endeavours.

CHAP. VII.

The negotiation resumed. French concessions. Difference concerning the German alliance. Difference concerning the captures antecedent to the declaration of war. Treaty breaks off. Messeurs Stanley and Bussy recalled.

FTER having been fo long detained on the theatre of war, it is time we should return to take a view of the negotiation for putting an end to the miscries it occasioned. In reality the view, even of this scene, was very gloomy and unpromising. The confidence and good humour of the two courts

being subverted, all that followed was rather an altercation than a treaty. It is true, that papers pass backward and forward; and the pretensions of each party, the points they agreed to cede, and those which they were determined to adhere to, grew more distinct and explicit. But all that cordiality was [D] 3

vanished, which is so necessary towards smoothing and clearing a road, which a long hostility had broken up, and so many intricate topics had contributed to embarrass.

Without involving ourselves in the detail of the several memorials which were delivered in, and without referring numerically to the several articles, it will be sufficient that we briefly state those points which were, or seemed to be, in a fair way of adjustment between England and France; and afterwards those on which it should appear that the negotiation broke off.

After fome discussions concerning its proper limits, it was agreed, that all Canada should be ceded to the English. This cession comprehended, on one side, all the islands and countries adjoining to the gulph of St. Laurence. On the other, it took in all the great lakes, and the whole course of the Ohio, to its discharge into the Missisppi. A territory sufficient for

the basis of a great empire. In drawing this line of division, another question arose concerning the bounds of Louisiana; and the state of the intermediate Indian nations between the lakes and the Missippi, who inhabit, or are rather fcattered over an immense country, that lies along the back of our co-Ionies all the way from Pensylvania to Georgia. It was therefore very proper that fomething definitive should be settled on this article, as it might otherwise easily be made productive of a new war. England proposed that all those nations thould continue, as the contended they had heretofore been, under the protection of Great Britain, without faving any thing precise as to the dominion of the foil.

France : controverted this proposition; she on her part proposed to divide these nations: that those to the northward of the line drawn to ascertain the limits of Canada should be independent, under the protection of England, but that those, who were to the southward, should enjoy the same independence, under the protection of France. Nothing was perfectly fettled in relation to this point; but it does not feem as if there could have been any material disagreement upon it, had the other matters in debate been adjusted to their mutual fatisfaction.

The African contest feemed to have been attended with still less difficulty. The French consented to give up both Senegal and Goree, provided Anamaboo and Acra were guarantied to them.

The momentous question of the fishery was likewise determined. The French gave up their claim to Cape Breton and St. John's, and were fatisfied to receive the little island of St. Pierre on the coast of Newfoundland; but even this they were to receive on conditions fufficiently humiliating. They were to erect no fort of fortification, nor to keep up any military establishment there. An English commissary was to refide on the island, in order to see that these stipulations were adhered to. As to the rest, the French were to have the same privileges on the coast of Newfoundland, checked with the same restrictions, which before the war they had enjoyed under the 15th article of the treaty of Utrecht. Inconformity to another article of that treaty, and in compensation for the privilege of the fishery, they consented that Dunkirk should be demolished.

Con-

Concerning the islands of Guadaloupe, Marigalante, Minorca, and Belleisle, no great controversy had fublisted from the beginning. It had all along been agreed, that these conquests should be recipro. cally restored. Neither did the French scruple to adopt our propo. fal concerning the affairs of the East Indies, nor to make fatisfactory declarations concerning Oftend and Neuport.

So many delicate and interesting points were fettled, that it does not at first appear what it was that could have retarded the peace. A discussion of the separate interests of two powers only, that are in earnest to agree, may be settled without any very confiderable-difficul-The hard and almost inextricable part of the knot, is that wherein the cross concerns and interests of allies intervene. were two points upon which, if we may form a judgment from appearances, this negotiation unfortunately broke off. The first was upon the manner in which England and France might be at liberty to affift their respective allies; and on the restitution of Wesel. Gueldres, and fuch other places as the French had conquered from his Prussian majesty.

On the first member of this principal point, the repeated proposals of France for a neutrality in Germany had been uniformly and pofitively rejected by our administration. They considered therefore as so many attacks upon national integrity. This scheme therefore not being admitted, they would or could come to no agreement, and scarcely to an intelligible explanation either of the mode or the quantity of the affistance which they should be at li-

berty mutually to impart to their German allies, or of the place in which fuch fuccours should be employed. As to Wefel and Gueldres, the French obstinately refused to restore those places. They declared that fuch a cession would be directly against the faith by which they they were bound to the empress queen of Hungary, for whom they infifted that these places had been conquered, and in whose name alone they were governed, though they had been reduced by the French arms, and were at that moment

held by French garrisons.

As to the second point, namely, the restitution of the captures made previous to the declaration of war, the negotiating powers were equally positive, the one to demand, the other to refuse it. The English argued. that this claim had no fort of foundation in the law of nations, neither was it grounded on any particular convention. That the right of all hostile operations results; not from a formal declaration of war. but from the hostilities which the aggressor has first offered; that the contrary of this proposition is at least extremely contestible; and fince it can by no means be clearly established, it follows that the detainment of those captures must be confidered, on the fide of England, as part of the uti possidetis, originally proposed as the basis of this treaty.

France, on the other hand, feemed as fully convinced of the juffice of her pretenfions, and she deemed the arguments with which she supported them to be so unanswerable, that she offered to submit them to the justice of the English tribunals. They urged that this claim of reftitution was founded on the law of

 $[D]_4$

nations, and upon particular convention; on particular convention; by the 19th article of the peace of Utrecht; and by the fecond article of the treaty of commerce; and that this was ftrengthened by the 3d article of the treaty of Aix la Chapelle, which renews and confirms those articles in the

preceding treaties. By these articles a protection is allowed to the respective subjects who may have ships in the ports of either of the powers, because having no opportunity of knowing that a rupture is fallen out, they failed under the security of peace and under the faith of treaties, By a parity of reasoning, the ships not actually in those ports ought to enjoy the same security; else, as they are included in the same parity of circumstances, it would follow, contrary to the principles of humanity and right reason, that the sovereigns had provided for the prefervation of one part of their subjects from the miseries of a sudden rupture, to which they expose the rest. The particular conventions of these treaties, they faid, had their foundation in general equity and the law of nations; fince, as it is impracticable for belligerent states to agree amongst themselves which is the aggressor, it is proper that the subjects should receive previous notice of the rupture, in order that they may be able distinctly to know when they are, or are not in fecurity, or when they may, or may not rely on the treaties which fubfift between their fovereigns.

These topics were, as usual, bandied to and fro with great heat and little effect; and as in such discussions the arguments on both sides are plausible, and there can be no authorised judge, the weight of the several pretensions commonly depends upon the power of the parties to enforce them. On these two points therefore, the renunciation of German alliances, and the restitution of captures, the negotiation from the beginning was at a stand; and on these at length, to all appearance, it finally broke off.

Not but we are fully fatisfied that the disagreement even on these points might have been only the oftenfible cause of the rupture. The true cause of the breach seems ro have been the unseasonable interposition of the Spanish claims. For could France be supposed in good earnest to desire peace, that is, to defire fuch a reasonable peace as her circumstances might demand, when the officiously mingled with our particular debate, the affairs of a foreign and neutral power, which had not the smallest connection with those that were at this time properly under deliberation. It was ridiculous to urge, that this was done from a prudent forefight, and to prevent a future war which these disputes might possibly occasion. The business was to put an end to the war which then actually subfifted; and nothing could be farther from affifting this defign than to increase the subjects of debate. France must be sensible of the weight of this argument; who herself proposed in the very beginning of this treaty, as a means almost necessary for carrying it on with effect, that their particular dispute should be separated from those of their German allies, with which it certainly had a more natural connection than with those that subsisted between England and Spain; as all the former parties were then engaged directly or indirectly in the war, to which Spain had then no manner of relation.

The English ministry finding the French immoveable on the two capital points above mentioned, and having no opinion of the fincerity of their procedure, fent directions to Mr. Stanley to return to England, and to defire that M. Buffy should, on zoth Sept. the part of his court, receivethe same orders. An end was thus put to this negotiation, (from which Europe had conceived fuch fanguine hopes of the alleviation of her miseries) after it had continued near fix months. So far indeed was it from producing the happy effects that were proposed from it, so far was it from appealing the animolities of the powers originally engaged, or from extinguishing the old war, that the parties feparated with intentions more hostile, and opinions more adverse than ever; and the war was foon foread to a much greater extent by the taking in of a new party, and may possibly spread; till more widely, by laying open new fources of contention which may gradually draw in other powers, and finally involve every part of Europe. It was also a means of producing changes in England, which at a time of less tranquility, and in circumstances of less internal strength, might have been productive of the most fatal consequences. But these matters are referved for the subject of the enfuing chapter.

The leading negotiation in London and Paris being thus broken off, that which was proposed at Augsburg never took place.

CHAP. VIII.

Conduct of Spain during the negotiation. Spanish minister's memorial. Treaty between France and Spain. Difference in the English ministry. Mr. P. refigns. Mr. P. letter. Dispute concerning the resignation. Addresses. Parliament meets. The German avar continued.

A S nothing could have been more unprecedented, fo nothing was more alarming than the proceeding of the court of Spain in the negotiation. It was altogether extraordinary to fee a propofal for accomodating disputes that subsisted between friends, coming through the channel of an enemy. It was extremely fingular to fee points of fuch consequence formally communicated and proposed for deliberation by a French'agent, commissioned only to negotiate a particular and distinct business, when the Spaniards had an ambaffador residing

in London, from whom no fort of intimation had been previously re-

ceived of fuch a defign.

That proposal not only marked out a want of fincerity on the part of France, but it manifested so strange and irregular a partiality on the part of Spain, that it would very little have become the dignity of the king of Great Britain, or his attention to the lafety of his lubjects, to let it pass without a full and fatisfactory explanation. Accordingly the Spanish ambassador was called upon to disavow this itregular procedure; but he returned na siete bas laidn a vera verbal, and foon after was authorised by his court to return, a written answer, in which he openly avowed and justified the step taken by the French agent, as entirely agreeable to the fentiments of his master. He declared that the kings of France and Spain were united not only by the ties of blood, but by a mutual interest. He applauded the humanity and greatness of mind which his most Christian majesty demonstrated in the proposition that was complained of. He infifted much on the fincere defire of peace, the only motive which infuenced the conduct of the two monarchs; and he added, haughtily, that if his master had been governed by any other principles, " his Catholic majesty giving full scope to his greatness, would have spoken from himself, and as became his dignity."

It appeared evidently from the whole of this paper, that the court of Spain was regularly, as a fort of party, apprifed of every step that was taken in the negotiation; that her judgment was appealed to upon every point, and her authority called in aid to force the acceptance of the terms which were offered by France; in a word, that there was a perfect union of affections, interests, and councils between these two courts; and the minister of the former, so far from denying or palliating this conduct, feemed

to glory in it.

Mr P, who then took the lead in the ministry, was fully fatisfied the intentions of Spain were by no means equivocal, and that this partiality, which they strongly avowed not only by declarations, but by facts, would drive them into all the meafures of France. That a war on that

account was absolutely ineviable; and if, for the prefent moment, the Spaniards rather delayed their declaration of war, than laid afide their hossile intentions, it was in order to firike the blow at their own time, and with the greater effect; that therefore their reasons for delaying to act were the very motives, which ought to induce us to act with the utmost speed, and utmost vigour. That we ought to confider the evalions of that court as a refusal of satisfaction, and that refusal, as a declaration of war. That we ought from prudence as well as from spirit to secure to ourfelves the first blow; and to be praclically convinced that the early and effective measures, which had so large a share in reducing France to this dependence upon Spain, would also be the fittest for detering or difabling Spain from affording any protection to France. That, to carry on this war with vigour, it was only necessary to continue our present efforts; no new armament would be necessary; and that, if any war could provide its own refources, it must be a war with Spain. That their flota had not yet arrived, and that the taking of it, would at once disable theirs and strengthen our hands. This procedure so suited to the dignity of the nation, and the infults it had received, would be a lesson to Spain, and to every other power, how they fhould presume to dictate in our affairs, and to intermeddle with a menacing mediation, and an officiousness as infidious as it was audacious. he would allow our enemies, whether fedret or declared, no time to think and recollect themselves.

These sentiments, so agreeable to the resolute and enterprising character of this minister, appeared fhocking to almost all the rest of his collegues. They admitted that we ought not to be terrified from the affertion of our just demands, by the menances of any power. They owned that Spain had token a very extraordinary and very unjuftifiable step: but that we ought to admit, and even to wish for, an explanation; this court, upon a fober yet spirited remonstrance, might recall that rash proposition into which they had been perhaps unwarily feduced by the artifices of France; that to thun war upon a just occasion was cowardice, but to provoke or court it was madness. And, if to court a war was not in general a very wife meafure, to defire it with Spain, if possibly it could be avoided, was to overturn the most fundamental principles of the policy of both nations. That this defire of adding war to war, and enemy to enemy, whilst we had our hands already as full as they could hold, and whilst all our faculties were strained to the utmost pitch, was ill to calculate the national strength of ourcountry, which, however great, had its limits, and was not able to contend with all the world; that whilst we were calling for new enemies, no mention was made of new allies, nor indeed of any new resource whatsoever. To plunge into fuch measures, in the manner proposed, and upon no better grounds, could not fail to fcandalize and to alarm all Europe; and we could possibly derive no advantage from this precipitate conduct, which would not be more than counter-balanced by the jealoufy and terror it would necessarily create in every nation near us. As to the feizure of the flota, it was not to be reckoned upon, as at the very time of that deliberation it might be expected to be fafe in its harbour; and perhaps if we could fucceed in seizing it, we might perform a service not very agreeable to neutral nations, and as little advantageous to our own commerce. If Spain, blind to her true interests, and misled by French councils, should give in a more decifive manner into the defigns of that court, and obstinately resule a reasonable satisfaction, it would be then the true time to declare war, when all the neighbouring and impartial powers were convinced that we acted with as much temper as resolution, and when every thinking man at home should be satisfied that he was not hurried into the hazards and expences of war, from an idea of chimerical heroism, but from inevitable necessity; and that in such a case we might depend upon the utmost fupport which the nation could give to an administration that depended upon its strength, and yet dreaded to waste it wantonly, or to employ it unjustly. The minister, warmed by this opposition, declared that, "This was the time for humbling " the whole house of Bourbon; that " if this opportunity were let flip, " it might never be recovered; and " if he could not prevail in this in-" flance, he was resolved that this " was the last time he should sit in " that council.' He thanked the " ministers of the late king for their support; said he was himself " called to the ministry by the " voice of the people, to whom he " confidered himself as accounta-" ble for his conduct; and that he " would no longer remain in a fitu-" ation which made him responsi-" ble for measures he was no " longer allowed to guide." The

The noble lord, who prefided in this council, to whom years have added the wisdom of experience, without abating the vigour and fire of youth; and who was himself as bold a minister as ever directed the affairs of this nation, made him this reply. " I find the gentleman " is determined to leave us, nor can I fay I am forry for it, fince " he would otherwise have certain-" ly compelled us to leave him; but, if he be resolved to assume " the right of advising his majesty, " and directing the operations of the war, to what purpose are we called to this council? When he et talks of being responsible to the of people, he talks the language of the house of commons, and foree gets, that at this board, he is only er responsible to the king. How-" ever, though he may possibly have convinced himself of his infallibiet lity, still it remains that we should 64 be equally convinced before we can refign our understandings to his direction, or join with him in " the measure he proposes."

On the division, the minister himself, and a noble lord closely connected with him, were the only woices in favour of the immediate declaration of war; the rest of the board were unanimously against

The reader will observe that together with those matters, which have been published, relative to this very important deliberation, with some appearance of authenticity, we have added such arguments as have been agitated among the prople; a liberty necessary to place the matter in its full light.

Mr. Pitt and lord Temple, adhering to their first opinion, and having delivered their reasons in writing, resigned their employ-

This resignation seemed equal to a revolution in the state. An universal alarm was spread; a thousand rumours flew abroad, and the first suggestions were, that this great minister, endeavouring to avail himself by his firmness in negotia-, tion of the advantages he had acquired by his vigour in war, was opposed by the whole council, who were resolved to have a peace at any rate, and that this opposition had driven him to refign the feals. But the true cause of the resignation very foon came out; and on this point a violent conflict enfued, in which the popular cause was worse suftained, and the ministerial better, (that is, with greater effect) than is usual in such discussions. Some circumstances contributed not a little to this success.

When Mr. Pitt refigned the feals, the great person to whom they were delivered received them with ease and firmnels, without requesting that he should resume his office. His majesty expressed his concern for the loss of so able a servant: and to shew the favourable sense he entertained of his fervices, he made him a most gracious and unlimited offer of any rewards in the power of the crown to bestow. His majesty at the fame time expressed himself not only fatisfied with the opinion of the majority of his council, but declared he would have found himfelf under the greatest difficulty how to have acted, had that council concurred as fully in supporting the measure proposed by Mr. Pitt. as they had done in rejecting it. A fentiment (in the light in which his majesty considered this measure) grounded upon the firmest principles of integrity and honour, and which must raise the highest veneration for his royal character not only among his own subjects, but amongst all nations, when they see a power which has so little to fear from any human effort, so very fearful of the least infringement of the strictest and most critical rules of justice.

Mr. Pitt was fenfibly touched with the grandeur and condescenfron of this proceeding. I confess, Sir, I had but too much reason to expect your majesty's displeasure. I did not come prepared for this exceeding goodness. Pardon me, Sir, —it overpowers, it oppresses me.' He burst into tears.

We are far from an attempt to add any colouring to fo exquisitely affecting a picture. We are indeed far from being able to do justice to perhaps one of the most pathetic and elevated scenes which could possibly be displayed, the parting of such a prince, and such a minister.

The next day a pension of three thousand pounds a year was settled on Mr. Pitt for three lives, and at the same time a title was conferred upon his lady and her iffue; a penfion the best bestowed, and a nobibility the most honourably acquired, and most truly merited. Immediately the Gazette gave notice to the public of all these transac-The refignation made the the first article; 'the honours and rewards the next; and they were followed by a letter from our ambaffador in Spain, containing an account of the favourable and pacific language of that court, and of the strong assurance they gave of a defire to accommodate all differences in an amicable manner.

It must be owned that this manœuvre was very skilfully executed. For itat once gave the people to un-

derstand the true motive to the refignation: the infufficiency of that motive, and the graciousness of the k. notwithstanding the abrupt departure of his minister. If after this the late minister should chuse to enter into opposition, he must go into it loaded and oppressed with the imputation of the blackest ingratitude: if on the other hand he should retire from business, or should concur in support of that administration which he had left, because he disapproved its measures. his acquiescence would be attributed by the multitude to a bargain for his forfaking the public, and that the title and his pension were the confiderations.

These were the barriers that were opposed against that torrent of popular rage, which it was apprehended would proceed from this refignation. And the truth is, they answered their end perfectly: this torrent for some time was beaten back, almost diverted into an opposite course; and when afterwards it returned to those objects, against which it was originally directed. and where it was most dreaded, it was no longer that impetuous and irrefishible tide, which in the year 1757 had borne down every thing before it; it was weakened, divided, and ineffective.

On this occasion the clamorous and inferior members of each party went lengths, which undoubtedly were neither authorised nor approved by their leaders. The friends of Mr. Pitr raised the most violent clamours for displacing a minister, whose measures had raised the nation from the most abject state, to the highest pinacle of glory. They said, that is he was in a fact displaced, when he was com-

"pelled

" pelled to refign, by not being " fuffered to carry into execution "those measures which he knew to " be necessary to the honour and " fafety of his country. That the "check which this minister had " received, would most unseason-" ably revive the drooping hopes of " France, funk by the vigour of our " military operations, and the firm-" ness of our councils under his ad-" ministration, and would shew Spain " with what impunity she might " infult the honour of the British " crown, and violate the property " of its subjects. They reckoned up the difgraces which the nation had " suffered before 1 ... Pitt had enter-" ed into the management of affairs, and the victories and conquests " which were the fruit of his coun-« cils."

In confequence of these reasons ings, addresses, resolutions and instructions were set on foot in the great corporations; and it was believed, that the example would be followed, 23 on a former occasion of the same kind, by all the other cities and boroughs of the kingdomes But the progress of this measure, though commenced with much alacrity, was flow and languid; a few only of the corporations entered into it, and some even of those few in a manner less warm than was expected. A strenuous defence was made on the part of the remaining ministry.

"Was it ever heard, faid they, "that a fovereign has been censured " for listening to the whole body " of his council, in preference to " the particular opinions of a fingle "man? On the contrary, this un-" controuled fway of a fingle mini-" ster has been often thought daner gerous, and was always odious in

" our free constitution; and is the

" narchy, or of limited government. "Let the merit of this minister be " what it will, shall his master " therefore be forced to receive " him upon any terms? Must his " prince, to gratify his ambitious " views, or, if you please, his virtu-" ous intentions, dismiss his whole " council, and annihilate his pre-66 rogative as a king, his reason " and judgment as a man? Was it ever heard before, that a coun-" fellor has professed without any " referve or any mask, that because " he could not guide in government, " he would not co-operate? This " has unquestionably been the true " motive for the conduct of many " ministers, but never was the avow-" ed motive until this occasion. Mr. " Pitt has had the freest scope for the exertion of his genius; he "was, perhaps, the only English " minister that never met with the flightest opposition; he has had " the treasures and the forces of " the nation at his most absolute " command: let him, in his turn, do that justice that has been done to him; let him, if the favours of the crown constitute no obligation, be bound at least by the rules of equity; and if he will " not partake in the conduct of the " present most intricate and dissicult " business of administration, let " him not render it still more in-" tricate and more difficult by his opposition; and let him not study " to find a justification of his " measures, from the ill success of those whom he has left, when that ill fuccess will be owing to his own devices." Thus far the points feem to have been urged with propriety and

weight.

"I more justly to be disliked, as per-

" haps inconfistent with the true

" spirit, either of absolute mo-

weight. A torrent, however, of low and illiberal abuse was also poured out on this occasion. His whole life, public and private, was scrutinized with the utmost malignity, to furnish matter of calumny against him. The successes of his administration were depreciated; his faults were monstrously exaggerated; and the rewards and honours so justly conferred on him by his sovereign, were by every trick of wit, ridicule, and bussionery, converted into matter of degradation and disgrace.

Without presuming to take any part in a controverfy; which (however unequally) divided the royal council, or without entering into the fentiments of any faction, which we have always shunned, we may affirm with truth and impartiality, that no man was ever better fitted than Mr. Pitt, to be the minister in a great and powerful nation, or better qualified to carry that power and greatness to their utmost limits. There was in all his defigns a magnitude, and even a vattness, which was not eafily comprehended by every mind, and which nothing but fuccess could have made to appear reasonable. If he was sometimes incorrect, he was never vulgar,

His power, as it was not acquired, fo neither was it exercised in an ordinary manner. With very little parliamentary, and with less court influence, he swaved both at court and in parliament with an authority unknown before, to the best supported ministers. He was called to the ministry by the voice of the people; and what is more rare, he held it with that approbation; and under him for the first time, administration and popularity were seen united. Under him Great Britain carried on the most important war

in which she ever was engaged, alone and unassisted, with greater splendour, and with more success than she had ever enjoyed at the head of the most powerful alliances. Alone this island seemed to balance the rest of Europe.

In the conduct of the war he never fuffered the enemy to breathe, but overwhelmed them with reiterated blows, and kept up the alarm in every quarter. If one of his expeditions was not fo well calculated or so successfully executed, amends was made by another, and by a third. The fpirit of the nation once roused, was not suffered for a moment to subside; and the French. dazzled, as it were, by the multitude and celerity of his enterprizes. feemed to have lost all power of resistance. In short, he revived the military genius of our people; he supported our allies; he extended our trade; he raised our reputation; he augmented our dominions; and on his departure from administration, left the nation in no other danger than that which ever must attend exorbitant power, and the temptation which may be, to the invidious exertion of it. Happy it had been for him, for his fovereign, and his country, if a temper less austere, and a disposition more practicable, more compliant, and conciliating, had been joined to his other great virtues. The want of these qualities disabled him from acting any otherwise than alone: it prevented our enjoying the joint fruit of the wisdom of many able men, who might mutually have tempered, and mutually forwarded each other; and finally, which was not the meanest loss, it deprived us of his own immediate fervices.

Those

Those who censured his political conduct the most severely, could raise but sew exceptions to it; none of them singly, and perhaps, the whole united, of no great weight against a person long engaged in so great a scene of action.

Whether the part, which under his administration we rather continued to act than newly took, with regard to the affairs of Germany, be for the real interest of Great Britain, is a question of the utmost difficulty, and which perhaps will never admit a fatisfactory folution. To condemn him on this head we must be fure of this solution. It has been observed in favour of that contested measure, that France demonstrated, through the whole progress of the late treaty, the most garnest desire, that we should abandon that German connection; no trifling argument, that our enemy did not look upon it to be extremely prejudicial to our interests. If he has carried on that war at a vaft expence, a prodigious stand has been made against the entire power of France; had less been expended, the whole expence might have been loft. How fanthis part of his conduct was agreeable to his former declarations, is a discussion which can avail but little. He found the nation engaged in these affairs; it was more easy to push them forward, than to extricate himself from them; as he proceeded, he discovered by experience the advantages of that plan of action, and his opinion was changed.

But even admitting, that, to at-

tain the ends of opposition, he had once fallen upon popular topics, which even then he knew were not tenable, it can form but a very small blemish in a public character, however wrong it may be by application to the strict rules of morality. Ill would it fare with statesmen if this fort of consistency were to be expected from the most consistent of them.

With regard to the pension and title, it is a shame that any defence should be necessary. What eye cannot diffinguish, at the first glance, the difference between this and the exceptionable case of titles and pensions? What Briton, with the smallest sense of honour and gratitude, but must blush for his country, if such a man retired unrewarded from the public service, let the motives to that retirement be what they would? It was not possible that his fovereign could let his eminent fervices pass unrequited; the fum that was given was undoubtedly inadequate to his merits; and the quantum was rather regulated by the moderation of the great mind that received it, than by the liberality of that which bestowed it.

The conduct of Mr. Pitt when the parliament met, in which he made his own justification, without impeaching the conduct of any of his collegues, or taking one measure that might feem to arise from difgust or opposition, has set a seal upon his character.

Lord Egremont was appointed to fucceed him as fecretary for the fouthern department.

CHAP. IX.

Dispute with Spain. Representation of the earl of Bristol. Disposition of the court of Madrid. Treaty between France and Spain. England desires a communication. Court of Spain refuses. The ministers mutually withdraw. A rupture.

H E unfortunate intervention of Spain in the late negotiation, raifed so many difficulties, and created so much mischief both abroad and home, that it becomes an era in this history, and it is necessary we should pursue that object from the point at which we lest it to its final and satal determination.

The answer which had been received from the Spanish minister in London was far from being satisfactory to our court. Orders were immediately given to the earl of Bristol, our ambassador in Spain, to remonstrate with energy and firmness on fo extraordinary a proceeding; to adhere to the negative put upon the Spanish pretentions to fish at Newfoundland; to rest the article of disputed captures, on the justice of our tribunals; to continue the former professions of our desire of an amicable adjustment of the log-, wood dispute; and of our willingness to cause the settlements on the coast of Honduras to be evacuated, as foon as ever his Catholick majesty should suggest a method for our enforment of that traffick to which we had a right by treaty, and which was further confirmed to us by repeated promises from that court.

At the fame time that the earl of Bristol was authorised to proceed with that spirit, which the offended dignity of our court required, and to bring Spain to a categorical and satisfactory declaration, concerning her final intentions; yet if he per-Vol. 4V.

ceived on her part any intention to difavow or even to explain away this offensive transaction, he was readily to accept it, and to afford to that court as handsome a retreat as possible. The letter which conveyed these instructions was written by Mr. Pitt, and dated on the 28th of July, a few days after the fatal memorial had been delivered by Mr. Busty.

The earl of Bristol punctually obeyed those orders. He found general Wall, the Spanish minister, much in cold blood, and in very equivocal dispositions. He heard with great patience the proper and energetic representation that had been very ably made by the earl of Bristol. He applauded the king of Great Britain's magnanimity in not fuffering France as a tribunal, to be appealed to in his disputes with Spain; and declared, that in the proposition which had been made with the confent of his court, things were not confidered in that light; asked whether it could be imagined in England, that the Catholick king was feeking to provoke us in our prefent most flourishing and most exalted fituation, and after fuch a feries of prosperous events as no single nationhad ever met with? He valued, and reciprocally returned, our frequent professions of friendship, and our defire of amicable adjustment. But these favourable demonstrations were accompanied with fome circumstances, that had a very menac-

[E]

ing appearance. For, in the first place, he declared, that at that time the utmost harmony subsisted between the courts of France and Spain; that in confequence of their perfect agreement, there was a mutual unreserved communication of every step taken in their several negotiations with England; that France had even offered to affift Spain, in case the discussions she had with us should grow into a rupture; and that this offer was confidered in a friendly light. Such an intimate union of a third power with one of the parties at war, forebodes no long duration to its friendship, or even to its neutrality with the other. If Spain justified the proceedings of France, and owned herfelf concerned in them, it was but one, and that a short, step, to a junction with her.

As to the three matters in dispute, the Spanish minister resolutely adhered to them all; and as to the last (that of the logwood) he obferved, that Great Britain had offered them nothing, but what they had long fince been tired of, treaty and negotiation; that this matter had been already fully discussed; and that on this head Spain had given the most convincing proofs of her defire to be on the best terms with England; for in the beginning of this war, before England had grown terrible by her fuccesses, when their American governors had . endeavoured to dislodge the Englith from fome new establishments on the coast of Honduras, they had at the complaint of our court, in order to take away all cause of mistruft, ordered the governors to defift from so justifiable an enterprize. That on the offer of England on this occasion to fettle matters in an amicable manner, they chearfully

agreed to that method. But that fix years had elapsed without their receiving the least fatisfaction. They even alledged that the English encroachments on their coasts in that time increased.

In this manner the Spaniards vindicated the form and the matter of their proceeding: they shewed no fort of disposition to relax from their claims; but at the fame time they no longer infifted on blending together the feveral discussions; and they professed, in general, though not in very warm terms, a desire of continuing in amity with us. With regard to the matters in dispute, the pretentions of both powers flood in this posture throughout this whole discussion; except that they were urged with more or less asperity, according to the fluctuating disposition of the court of Spain, which feemed to rest upon no sure and settled principles. There were probably two factions in her councils, who as they alternately prevailed, changed the language and countenance of the Spanish minister. However, for some time the aspect of things continued on the whole to be rather favourable; and even an express declaration was at length made, that Spain had been, at no time, more intent on cultivating a good correspondence with us. But still the French interest silently gained ground at Madrid; the confidential communications of that court with Spain; her affected moderation in the treaty; the dangerous greatness of England: the common interest of the house of Bourbon, every part of which must suffer, both in its dignity, and fafety, by allowing the principal of its branches to be pruned to the quick; these points were urged with continual follicitation :

tation; and they affured the Spaniards that even the figning an alliance between the fovereigns of the two nations, would intimidate England, already exhausted by the war, and apprehensive of losing the valuable commerce she carried on

with Spain.

These arguments and suggestions at length prevailed, and a treaty was figned between the two courts, the purpose of which was to preferve from oppression and to maintain the interests of the house of Bourbon. This alliance was of a nature the more dangerous, as it turned upon family not national interests, and because not stating exactly its objects, it might might be made just of what extent they pleafed. We make no mention of any other treaty than this, of itself sufficiently alarming, because whatever fuspicions may be entertained, there is no certainty that any other has been concluded between those powers.

France had obtained in this treaty almost all that she aimed at; by it the entered into the closestconnection with Spain; this connection did not indeed feem directly and of necesfity to include a breach with England; it led to it however, almost inevitably. At first the whole transaction was kept a profound secret; the inferiority of the marine of Spain, and the precariousness of their supplies from America, in case they came to a present rupture with England, obliged them to this temporary referve. France took care that this treaty should not transpire until the negotiation was broken off; and Spain, whilst she was under these apprehensions, exhibited those occasional proofs of a pacific dispofition, which we have just now seen.

But as foon as France had lost all hopes of concluding the negotiation in the manner she had wished, and had failed in the use she made of the intervention of the claims of Spain, she circulated with great industry a report, that Spain would immediately declare against Great Britain, in consequence of a treaty lately concluded among the Bourbon courts.

England' found that those boasts of the French were too confidently made, and too generally believed, to be altogether without foundation. In confequence of these apprehenfions, orders were fent to Spain, to demand in the most moderate terms, but in a manner not to be evaded. a communication of this treaty, or at least a disavowal that it contained any thing to the prejudice of Great Britain. But before these orders could reach Spain, lord Briftol had himself received intelligence of the treaty, and of the hopes, which the French made no secret of their deriving from that fource. He therefore thought himself under a necesfity of defiring fatisfaction from the Spanish secretary of state concerning

Upon this application there appeared on a sudden such a change in the countenance, language, and fentiments of that minister, as indicated but too fully the justness of the fuspicions that were entertained. The Spanish flota was now safely arrived with a very rich cargo; the French arms had made a confiderable progress in the king's electoral dominions; the fuccess of the imperial arms was no less striking; the reasons for their former shew of moderation no longer existed. They therefore gave a loofe to those inovements which they had hitherto concealed. M. Wall, evading a

[E] 2 direct

direct'answer, entered into a long and bitter complaint, not only of the treatment which Spain had received from us, but of the haughtiness of our late proceedings with France; that it was time for them to open their eyes, and not to fuffer a neighbour, an ally, a relation, and a friend, any longer to run the risque of receiving fuch rigid laws as were prescribed by an insulting conqueror; that we were intoxicated with our fuccesses; and a continued series of victories had elated us fo far, as to make us reject the reasonable conditions offered by France. This refusal made it evident, that our defign in ruining the French power, was the more eafily to crush Spain; that we proposed entirely to chase the French from all their colonies in America, to have the easier task in feizing on the Spanish dominions in those parts, thereby to fatisfy to the utmost our ambition, and to gratify our boudless thirst of conquest; therefore he would himself be the man to advise the king of Spain, that fince his dominions were to be overwhelmed, at least that they should be seized with arms in his lubjects hands, and not to continue the passive victim he had hitherto appeared in the eyes of the world.

The English ambaffador, though aftonished at so extraordinary a change of file, replied with coolness to the invectives, and with firmness to the menaces of the Spanish minister; he obviated the objections which had been made, and supported our pretensions; after answering in the best manner to what Wall had urged, he returned to his first demand, an explanation concerning the treaty; as often as a direct answer was evaded, the same question was again put; and atlength the only reply was, that the king of Spain had thought proper to renew his family compacts; and then Mr. Wall, as if he had gone farther than he was authorifed, suddenly turned the discourse, and no farther fatisfaction could be obtained.

This revolution in the appearances of things in Spain, was too interesting not to be immediately communicated. Our ministry saw evidently, that the moderation they had hitherto displayed, might be attributed to fear, and that the language of the court of Spain would permit no doubt of their hostile intentions. Orders were therefore given to the earl of Bristol, conformable to the dignity of the nation, and the justice of our claim. He was ordered to renew his inflances concerning the treaty; to demand an explanation with a proper firmness, but without the mixture of any thing which might irritate; and to fignify, that a peremptory refusal to communicate the treaty, or to disavow an intention to take part with our enemies, would be confidered as an aggreffion on the part of Spain, and an abfolute declaration of war.

Things were now brought to a fingle and precise point. The demand was made in the terms of the order. Then it was that the pride of Spain entirely threw off the remainder of that mask, which her policy had perfuaded her to assume; the secretary, M. Wall, replied, "That the spirit of haughtiness and of Dec. 10th.

"difcord, which dic-

"tated this inconfiderate step, and "which for the misfortune of " mankind ftill reigns so much in

" the

"the British government, is what has made the declaration of war, and attacked the king's dignity; and that the earl of Bristol might return when and in what manner was convenient to him."

The earl of Bristol parted from Madrid the 17th of December; and thus was brought on a rupture which has prodigiously extended the operations, and confequently the miferies of war, and threatens to protract them to a very long duration. Europe unfortunately found herfelf plunged into the gulph of a new war, at the time fhe hoped to emerge from the old one, and by the very means which were used to draw her out of it. A point of honour alone feemed to have been the last and immediate cause of the breach: but whoever has diligently attended to the Spanish affairs from the memorial presented by Bussy to the final answer delivered by Wall, will see that the motives were, however ill understood, of a much more serious and important nature.

As the two powers had now come to extremities and the English ambassador had departed from Madrid, the Spanish minister also quitted London; but before his departure he left a paper, in the nature of a manifesto, of very little importance in point of argument, but filled with invectives, charging

the war on the haughtiness of the late English minister, and on the little management with which his court had been treated, both during the administration of that minister, and fince his refignation. That had the purport of the treaty been defired in a manner less offensive to the dignity of his mafter, it might as easily have been obtained, as it could have been justified; for the treaty, which was believed to have been figned on the 15th of August, contained only a re-ciprocal guaranty of the domi-nions of the several branches of the house of Bourbon, but with this particular restriction, that it should only extend to the dominions which shall remain to France after the prefent war.

It must be remarked that, this paper, whilst it pretends to let forth the purport of a treaty dated the 15th of August, does not deny the existence of any other treaty, which might more offensively concern the interests of Great Britain. It was however answered in every article with the utmost moderation, perspicuity and force, in a memorial of lord Egremont. Here we close the Spanish transaction; as this is the whole of what belongs properly to the year we treat of. All that remains to fulfil our annual task is to touch upon the affairs of the East Indies and America.

CHAP. X.

Blockade of Pondicherry. Diffress of the French. Fleet dispersed in a form. Fleet returns. Town surrenders, Mahie taken. Enterprises of Mr. Law. Mogul army deseated by major Carnac. Nabob of Bengal deposed. Coast of Sumatra rawaged by the count d'Estaing. Dominica taken by lord Rollo and Sir James Douglas.

FTER the defeat of the French near Wandewash, the taking of the city of Arcot, and the reduction of the fortresses of Chitteput and Carrical, Pondicherry was the only place of confequence which remained to our enemies in India. This town, beautifully built, strongly fortified, and four leagues in circuit, feemed rather the capital of a kingdom, than a trading establishment. It is situated on the coast of Malaban, about forty miles from our fettlement at Madrass, which in the days of its prosperity it rivalled, if not exceeded in trade, opulence and splendor; and it still remained the depositary of whatever wealth was left to the French, after the reverse of their fortune in

As foon as the fortresses adjacent to this important place, had been reduced, and the inland country brought perfectly to our interests by the total expulsion of the French, the blockade of Pondicherry was commenced by the land forces under colonel Coote, and the marine under admiral Stevens. A regular fiege was at that time impracticable on account of the periodical rains, which were daily expected; and even under more favourable circumstances it would have proved a talk of infinite difficulty to attempt by any army that could be fupported in India, the taking of a place to strongly fortified, defended by a good garrison, and by an

officer able and refolute, and whose pride and obstinacy, so prejudicial on all other occasions, would have made him, as in effect they did make him, persevere to the very last moment in the defence of the last stake, which the French had left in India.

The blockade being therefore chofen as the most eligible for the time, was continued with the best dispositions, and the most extraordinary patience on both sides, for full seven months. In this time the garrison and inhabitants suffered forely by famine. Colonel Coote, in order to augment their distress, erected batteries at a distance, not with a view of ruining the walls, but to harrass the enemy by an increase of garrison duty.

At length when the weather appeared fettled, four batteries were raised at some distance to enfilade the streets of Pondicherry, whilst others were advanced nearer in order to play upon the works. The e operations, though the fiege was not yet formally undertaken, commenced on the 26th of November. 1760, but as the feafon of the rains and winds was not yet quite over, much was fuffered from storms. which ruined the batteries and approaches. They were however always repaired with the utmost alacrity and speed, and the siege suffered no intermission. So that the besieged, who eagerly expected the arrival of their fleet to their relief, were reduced

duced to the most extreme distress. They lived on camels, elephants, dogs, and cats. The extreme scarcity and dearness even of this wretched provision, increased their misery. Sixteen roupies (half crowns) had been paid for the flesh of a dog.

In the midst of this distress their hopes were suddenly revived, and those of the besiegers, notwithstanding the progress they had made, almost totally depressed. On the first of January 1761, one of those terrible storms, so frequent in the Indian sea, and so ruinous, drove the English squadron from before Pondicherry. Two ships of the line were wrecked, and their crews, with the exception of two or three men, entirely perished. Two others of the same class were driven ashore, and beat to pieces. The men fortunately escaped. The real damage which our fleet fuffained on this occasion, together with the idea of a far greater, fuggested by their own defires, and justified by the violence of the storm, elevated to the highest pitch the spirits of the garrison, funk by disease, famine, fatigue, and an uninterrupted train of adverse fortune. General Lally seeing the port clear, sent an express with-out delay to the French agent in the neighbouring neutral settlements, that this was the time to throw in succours; he seemed sanguine and full of vigour. The letter, which was intercepted, is printed below *, as it may tend to furnish some idea of the character of this singular man.

But admiral Stevens, and those who commanded under him, exerting themselves with unparalleled diligence and celerity, appeared again before Pondicherry in less than four days after the storm, with eleven ships of the line and one frigate, and the blockade was as compleat as ever. No fuccours had been thrown in, and admiral Stevens in order to prevent the ill impresfion which the late difaster might have occasioned, sent a message to the neighbouring Dutch and Danish fettlements, of the good condition and strength of the remainder of his fleet, and affured them he would make prize of fuch vessels as he found infringing the neutrality by attempting to supply the enemy. 18

Mr. RAYMOND,

The English squadron is no more, Sir; out of the twelve ships they had in our road, seven are lost, crews and all; the four others difinalted; and it appears there is no more than one frigate that hath escaped; therefore don't lose an instant to tend us chelingoes upon chelingoes loaded with rice: the Dutch have nothing to fear now; besides (according to the law of nations) they are only to send us no provisions themselves, and we are no more blocked up by sea.

The fiving of Pondicherry hath been in your power once already; if you miss the present opportunity, it will be entirely your fault: do not forget also some small chelingoes: oner great rewards: I expect seventeen thousand a some roes within these four days. In short, risque all, attempt all, force all, and send

us some nee, should it be but half a garle at a time.

Signed, IALLY,"

^{*} Translation of an intercepted letter from general Lally to M. Raymond, French resident at Pullicat, dated Pondicherry the 2d. of January 1761.

Notwithstanding this mortifying disappointment, M. Lally made no proposal to surrender. The siege was carried on with redoubled alacrity; and at length a large battery being advanced within four hundred and fifty yards of the rampart, a breach being effected, and not more than one day's provision of any kind remaining, a figual was made for a ceffation; the principal of the jefuits, together with two civilians came out, and offered terms of capitulation. The governor preferving all his haughtiness, which neither his errors nor misfortunes could in the least abate, declined to offer Jan. 15th. any terms; he fent out a paper full of invectives against the English, for the breach of treaties relative to India; he alledged that those breaches disqualified him from proposing any terms; and in consequence he rather suffered our troops to take posfession of the place, than formally furrendered it. As the governor refuled to capitulate, the proposal of the inhabitants was little regarded. and the city of Pondicherry, with a garrison of about fourteen hundred European foldiers, a vast quantity of military flores, and great riches; was given up at discretion to our victorious arms.

Nothing can be faid too highly of the conduct, perfeverance, and unanimity of the land and fea fervices during a tedious fiege and blockade of eight months, in a climate fo unfavourable to all military operations. Colonel Coote gave the final blow to the French power in India; he was now undifputed mafter of the rich coaft of Colomandel; the French power was wholly extirpated; the neutral nations were contemptible; the prin-

ces of the country confidered us with an aweful regard, and nothing but a little French fettlement on the coast of Malabar, called Mahie, (and which was soon after reduced) opposed our commanding the whole trade of the vast peninsula of India, from the Ganges to the Indies, the most extensive and profitable sphere of commerce in the world.

Whilst every thing was giving way to our arms in the fouthern parts of this peninfula, the affairs of France, which in Bengal had been to all appearance totally suppressed, rose up again for a moment from a quarter, and in a manner, which was little expected. After the taking of Chandenagore by admiral Watson in the year 1757, Mr. Law, (nephew to that Law who had made himself so well known by the Missisppi scheme) put himself at the head of a party of French fugitives, which was augmented from time to time to about two hundred men. With this small party he threw himself into the heart of the country, and joining himself sometimes to one, fometimes to another of the native princes, as his interest led him; he rendered himself, considerable by feveral striking fervices, and supported the credit of his little corps with a very high reputation.

The Great Mogul having sometime since been deposed by an irruption of the Marattas, and dying soon after, one of his sons, Sha Zaddah, assumed the title, and was supported by some of the provinces of that extensive and disunited empire; he was opposed by others; and though he was at the head of a royal army of his native subjects, such is the state of the military in that part of the world, that he con-

fidered

fidered an handful of European fugitives, as an acquisition of the greatest importance, and such as might turn the ballance against any weight of Indians, which might be thrown into the opposite scale. In fact, it was to Mr. Law he attributed the reduction of feveral confiderable provinces to his obedience.

Elated with these successes, Law persuaded him to turn his arms against Bengal, which had not acknowledged him; it was a rich and flourishing country, and the posfession of it, would undoubtedly contribute more than all the rest to fet him on the throne of the Moguls. Here, unfortunately for him, the evil genius of Law impelled him to encounter again with those arms, by which the interest of his country had been before ruined in this part of the world, and which indeed were those only, from which he had a great deal to fear. Sha Zaddah entered the kingdom of Bengal at the head of an army of 80,000 Indians, and fomething more than 200 French.

The French support was more prejudicial to his title in the eyes of the English, than any other objection, and as they were now become the arbiters of crowns in the East, they joined the Nabob of Bengal to oppose his progress. About 20,000 blacks, supported by 500 English soldiers, formed the army against him. ' A major (major Carnac) commanded that body, which engaged, and totally routed an army of fourscore thousand men, commanded by the Mogul in perfon. That prince was taken prifoner; Mr. Law was also taken, and the party of French adventurers dispersed for ever. It is

not yet known with certainty, in what manner they mean to dispose of their captive monarch. fome heightening to the fatisfaction of this great event, that it happened on the same day in which the French agreed to the furrender of Pondicherry.

A little before this, Jaffier Ali Cawn, the Nabob who, in 1757, had been placed in that dignity by general Clive, notwithstanding the terrifying example of his predeceffor, by his weakness and misgovernment, drew on himself the hatred of his subjects, and lost the protection of the English. But as his ambition was the feeblest of his passions, he consented quietly to quit the throne. The revolution was effected without bloodshed, his fonin-law was appointed in his room; and as the whole transaction was with the confent and co-operation of the English governor Vansittart, the old privileges of the company were confirmed, and new were acquired: the English in Bengal were become necessary to the government of that country, and every change produces fomething to their advantage.

It is certain, that the period of this war in the East Indies, has been marked by as many striking events, uncommon circumstances, and fingular reverses of fortune, as any that have happened from the time of our knowledge of this part of the world. We are forry that the accounts we have hitherto had are so broken and imperfect, that it is impossible to treat of them in a manner in the least suitable to their dignity and importance. Here we

only touch them flightly.

It can hardly be faid, that this feries of prosperity was interrupted by the successful attempts of the count d'Estaign. This lively adventurer, with the command of no more than two ordinary frigates, had, in October 1759, taken and destroyed the English settlement of Render-Abassi, on the Persian pulph; he then struck over to the island of Sumatra, where we carry on our most considerable commerce in pepper: and before the end of the following April, reduced Bencoolen, the principal fettlement, and all the rest of our forts and factories on that island, which made a defence altogether as unworthy of the rest of our conduct in India, as that of the count d' Estaign was superior to the efforts of his countrymen in that quarter. This bold adventurer, however, could not derive fo much

honour from the vigour of his enterprize, as diffrace from having made them against the most sacred laws of arms: if what is said is true, that he was at the very time

a prisoner upon parole.

In America the island of Dominica, one of those islands called Neutral, but which the French had fortified and settled, was reduced by a small armament under lord Rollo and Sir James Douglas. North America was persectly quieted by a peace with the Cherokees. Colonel Grant reduced them to this necessity, by penetrating with great courage and perseverance into their country, and destroying sisteen of their towns, and almost their whole harvest.

THE

CHRONICLE.

JANUARY.

HE London bill of mortality for last year, by the society of parish-clerks, comes pretty near the calculation of thirteen males to twelve females, the numbers being 7778 males, and 7173 females; an observation long since made by Dr. Davenant, Sir William Petty, and other political arithmeticians.

Christenings in Stockholm last year, 2120. Burials, 3378. Wed-

dings, 804.

Births in the city of Cassel last

year, 567. Burials, 805.

Christenings at Francfort last year, 816. Burials, 1781. Weddings, 240.

Births at Koningsberg last year, 1649. Burials, 2014. Marriages, 726. Ships arrived there, 478. Ships failed from thence, 515.

It has been computed by the French that the number of their ships taken by us last year, amounted to 944; and the number of our ships taken by them, to 2539.

During last year the following ships arrived at Cadiz, viz. 157 Spanish, 26 of which were men of war; 11 Neapolitan; 9 French; 19 Portugueze; 29 Swedes, 13 of which were ships of war; 6 Genoese; 8 Imperial; 2 Venetian; 6 Ragusan; 6 Maltese; 42 Danes;

103 Dutch, 16 of which were men of war; 100 English, 18 of which were ships of war, and 3 English

prizes.

During last year 370 sail of ships of several nations arrived at Gottenburg, and 355 sailed from thence, carrying away 8866 shippound of iron, 1118 shippound of steel, 1436 barrels of tar, 320 barrels of pitch, 102,525 barrels of herrings; and goods, the product of the East Indies, to the value of 2,554,961 dollars.

According to an account taken in Holland, the number of veffels which were loft by florms from Michaelmas last, to the first of Jan. amounted to upwards of 300.

There are now in and near London, a breed of bulls and cows, brought from some of the countries bordering on the gulph of Persia, whose stature, although at their full growth, is inferior to a Lincolnshire sheep. They have a large camel-like protuberance of fat on the top of their shoulders.

The learned and ingenious Stephen Hales, D. D. F. R. S. 5th. clerk of the closet to the princess dowager of Wales, departed this life, See a short character of this excellent man in our article under that title for this year, p. 46.

that title for this year, p. 46.

Letters from the East Indies,
by the way of Holland, advise,

that

that Goa, the capital of the Portuguese settlements in that quarter of the world, had been attacked and taken by the Blacks, who inhabit the circumjacent countries.—It was this affair which gave rise to the story about the Jesuits making themselves masters of it, which was currently re-

ported fome time ago.

A contagious distemper having broke out at the town of Sarlata, in the island of Cephalonia, and the quarantine upon ships coming from the islands of the Levant, subject to Venice, having thereupon been increased to forty days: — it was ordered in council, that the quarantine at present subsisting upon all ships and vessels coming from those parts, and from, or through the Mediterranean, be duly and punctually complied with.

oth. chapel royal, and offered gold, myrrh, and frankincenfe, as usual. On account of the mourning, there was no playing at hazard at night,

nor any ball.

The wind having shifted to the east, upwards of 4,0 sail of ships, outward bound, which had been detained by the westerly winds many weeks, sailed from the Downs.

Sailed from Spithead, the Sea-horse frigate, capt, Smith for Bencoolen, with the astronomers, named by the Royal Society, to observe the transit of Venus over the sun. See our last volume, p. [143.

Leeds, Jan, 6. On Thursday night last the wind blew a perfect hurricane at N. N. E. by which a great number of our chimnies, corn and hay-stacks, were blown down, and states torn off houses; but the greatest damage was done to strawthatch'd buildings. A poor man at Holbeck in this parish, sinding his house ready to fall, immediately stept out of bed, and setting his shoulder to the beam that solely supported the roof, held up the house till his wife and children crept out between his legs (having no other way) and he had but just time to get off himself before the whole fabrick fell to the ground.

This day died the right hon. Edward Boscawen, a lord of the admiralty, admiral of the blue, general of marines, &c.

A man being lately detected in cutting people's cloaths in the gallery of Covent-garden playhouse, was taken before a magistrate, and obliged to pay seventeen guineas for the damage he had done several women, who appeared against him.

The following inflance of a feries of repeated acts of compassion and benevolence reflects great honour on every person concerned in it. The wife of an honest tar. whose husband was on board the late intended expedition, being obliged to take her leave of him at Portimouth, on the supposition of their immediate failing, (no wo-man being allowed to go with them) came up to London, in order to proceed from thence to Northamptonshire, where her friends refided. - Being reduced very low, and not in a condition to walk it, she applied to the master of the Northampton stage, which fets out from the Bull in Bishopsgate-street, intreating him to give her credit for an outfide passage, till she could get down to her friends, and be enabled to repay him. Perceiving her to be very big with child, he made her an offer of an infide place in the coach,

gratis,

gratis, which was to fet out the next day. - That very night, however, the poor woman, who lay at the inn, was delivered of a fine child. - Thus disappointed of her passage, and in this critical circumstance, her distress was much greater than before; but the affair coming to the ears of fome gentlemen who happened then to be in the inn, they formed a collection among them, to the amount of between 13 and 141. Not fatisfied with this, they fent for the churchwardens of the parish, who contributed 40 s. towards conveying the mother and child home. - Added to this; two worthy failors, who happened to come into the inn, hearing that the wife of a brother tar was in diffress, threw in their mite of all they had about them, which amounted to about 3 s. 6 d. This money having been deposited in the landlord's hands, every necessary both for the woman and infant were with discretion and œconomy purchased out of it; her lodging for the whole time was beflowed on her by the house; the mafter of the coach fcorned to withdraw his former promise; and with a fum of money in her pocket, the and her child fet out on Monday morning last at free cost for her own country.

The regulations that have been lately made in that miferable manfion of mifery, Newgate in Bristol, mult sensibly affect every breast with pleasure that has the least spark of humanity unextinguished in it. Filth, stench, and wickedness, that have so long insested these doleful regions, have, by the unprecedented diligence of the present keeper, been entirely eradicated; even the very pit, where the selons are con-

fined at night, may vie with the decency and cleanliness that is preferved in a gentleman's house; no fighting or brawling, no lewdnefs or drunkenness is now permitted to add to the crimes of the unfortunate inhabitants; nay, idleness itself, the usual concomitant of these vices, is likewife banished, nor is the want of tools or materials made any excuse to indulge it, as they are provided partly by the keeper at a very moderate profit; partly by the alms occasionally given, and which are divided with the utmost prudence and impartiality; the greatest care is also taken in their religious concerns, nor are they ever permitted to infringe the duties of the fabbath.

In an address lately presented to the king of Sweden, by the fpeaker of the house of Peasants, affembled in diet, we find the following passage . A fincere and substantial proof of your majesty's love to your subjects, and of your majesty's zeal to promote their happiness, for which we cannot sufficiently express our gratitude, is to fee the northern countries, which have fain hitherto wild, uncultivated, and uninhabited, known by the name of the Lappmarcken, wear at present a quite different face. They are now covered with dwellings, the lands are cultivated, and, for the first time fince the creation of the world, this new people appear in the diet with us by their representatives. How agreeable would it be to us, how would it rejoice our hearts to fee our dear country extend its bounds more and more, by the draining off moraffes and other lands covered with water, and the peopling of deferts." The young prince, fon to the prince of Nassau Weilbourg, was baptized with the utmost magnificence in the great a church at the Hague, by the name of George William Belgicus. The sponsors were, Gen, Yorke for the king, and count Bentinck for the princes dowager of Orange; the prince Stadholder and the prince of Nassau Weilbourg were represented by the deputies of Guelderland, Holland, Zealand, and Groninguen.

The committee of city lands contracted with Mr. Blagden, the carpenter, (who lately purchased several of the city gates) for the ground from Moorgate, on the south side of Fore-street, to Cripplegate, 1000 feet in length, at 7s. per foot, on which he is to build an uniform row of houses, the fronts to stand 9 feet backwarder than the fronts of the present houses, and he is to give 10,000l. security, to complete the same in four years from Midsummer next.

A few days ago Mr. Thornley, a wealthy farmer, near Cerne Abbey, in Dorsetshire, was cut a fourth time for the stone, and is likely to do well.

Extract of a letter from Notting-

On Tuesday sen'night Mr. Hall's servant of Beckingham, returning from market, and finding the boat at Gainsborough putting off from shore, full of people, was so rash and imprudent, (to say no worse of it) as to leap his horse into the boat, and with the violence of the fall, drove the poor people and their horses to the farther side, which instantly carried the boat into the middle of the stream, and overset it.

Imagine you fee the unfortunate fufferers all plunging in a deep and rapid river, calling out for help, and struggling for life. It was all horror and confusion; and during this fituation the first account was dispatched, which assured us, that out of eighty fouls, only five or fix were faved. By a fecond account we were told, that there were only thirty on board, but that out of these above twenty had been drowned. This was for some time believed to be the truest account: but I have the pleasure to hear by a third account, that many of those who were supposed to be lost, have been taken up alive; some of them at a great distance from the ferry. and that no more than fix are missing. though numbers were brought to life with difficulty. It was happy for them that so many horses were on board, as all who had time to lay hold of a stirrup, or a horse's tail, were brought fafe to shore. A poor man, who had a large bafket of fowls on his arm, was providentially buoyed up till affiftance could be had, and he, after many fruitless attempts, was at last taken up alive, though fenfeless, at the distance of four hundred yards from the ferry. A poor woman who had bought a pig, and had tied one end of a string round its foot, and the other round her wrift, was dragged to land in this providential man-

All countries have their empiricks, who vend their pernicious noftrums under fwelling titles.—
In Holland, a perfon of condition, about the age of forty, and grievoufly tormented with the gout, had recourse to what is called the duke of Mirandola's powder, and escaped having any fit, for more than a

year.

year. He was then feized with a difficulty in breathing, with other fymptoms, which induced the professor Gaubius to think he had a dropfy in the stomach, or breast: but the gentleman dying fuddenly, the professor caused his body to be opened, when it appeared two thirds of his lungs were vitiated, and full of little tubercles, of the fize of fmall peas, filled with a glutinous fubstance, which was in some converted into a kind of lime, or chalk; which plainly shewed, that the gout being repelled, had feated itself there.

Mr. Richard Dixon, and Mr. John Spencer, agreed with the committee for building the bridge from Black-Friars, to perform the carpenter's work for 21,612l. 55. 7d.

About one this morning a fire broke out at Mr. Baker's, bookfeller, at Tunbridge-Wells, which confumed the house, furniture, and

circulating library.

In a letter from Scotland, we have the agreeable news, that there is the greatest herring fishing that ever was seen in the highlands since the memory of man, in a loch called Loch-Slapan, near Kilmorie, in Strath, in the isle of Sky; but that there were not vessels, falt, or cask to cure them, which would be a general loss to the country.

The right hon. Robert Henley, baron of Grange, lord keeper of the great feal of Great Britain, having this day delivered to his majefty, in council, the great feal of Great Britain, his majefty was graciously pleased to restore the said feal to him again, with the title of lord high chancellor of Great Britain; whereupon

his lordship took the oaths appointed to be taken, instead of the oaths of allegiance and supremacy, as also the oath of lord high chancellor of Great Britain.

His majesty has been pleased by an order in council to declare and signify his pleasure, that his servants shall have and enjoy all ancient liberties, rights, and privileges; and that none of his servants in ordinary, with fee, shall be obliged to bear any publick office, serve on juries or inquests, or be subjected to any mulct or sine for not submitting thereunto; agreeable to the practice of his majesty's royal predecessors.

'Tis said, that by the death of a Scots nobleman, who died lately a Roman Catholick priest, the title descends to a man cook, that lived with a general officer in England, who, in regard to his cook's present dignity, could not think of employing him any longer in that station, but very generously raised a subfcription for his support; and that on the affair being represented to his majesty, he had ordered him a pension of 2001. per annum.

Last Wednesday the following threat'ning letter was sent to the master of the Red Cow, in Cowlane, West-Smithsield, viz.

Mr. BRAY, London, Jan. 16, 1761.

You are hereby defired to difpatch yourself; I have heard a very good character of you, and therefore leave it to yourself whether you will die by dagger, sword, or poison; if you outlive this order above one hour, I have given directions to put you to death by torture. From your friend,

J. LANGDON."

Newcastle,

Newcassle, January 10. Tuesday a boy, about hix years old, sell off a key in the close into the river, and was got out without any hopes of recovery; but on laying him upon a barrel, and rolling it, a great quantity of water ran from him, and some signs of life appeared; on which further affistance was got, and he happily recovered.

Admiralty-Office, Lieut. 17th. John Symons, of his majesty's ship the Unicorn, of 28 guns and 200 men, gives an account in a letter dated at Plymouth the 11th infrant, that on the 8th. Captain Hunt, his (predecessor in the command of that thip) being cruizing off the Penmarks, discovered, at eight in the morning, a fail to the northward; to which he gave chace, and found to be a French frigate. At half past ten, the Unicorn came up with, and begun to engage her, and continued in close action with her, till near half past twelve: at which time the enemy firuck, and proved to be the Vestal, a frigate of the French king's, commanded by M. Boisbertelot, mounting 26 twelve and nine pounders open her lower deck, and 4 fix pounders on the quarter deck and forecastle, with 220 men She escaped (as the prifoners declared) from the river Villaine on the 2d instant, under cover of a very thick fog, in company with two ships of 64, leGrand of 34, and Calypso of 16 guns, and was bound to Breft.

Capt. Hunt received a gun-shot wound the third broadside, in his right thigh, of which he died an hour after the action was over.

The Vestal had many killed and wounded; and among the latter M.

Boilbertelot, who loft his leg, and died of the wound next day.

The Unicorn had five men killed and ten wounded, fix of whom

dangeroufly.

Lieut. Symons adds, that the day after the action, he faw a fail to windward, which had greatly the appearance of a French ship, and bore down upon him for about half an hour, then hauled her wind, and stood in for the land. That on the 10th in the morning, he faw two thips engaging, which proved to be his majesty's thip Sea-horse, and the le Grand frigate above mentioned, the latter of which made all the fail she could from the other. upon the Unicorn's coming within two gun-shot of them, and escaped, notwithstanding he chased her till evening, having greatly the advantage in failing, the Unicorn having got a mizen top-mast up for a fore top-maft, to ease the fore-mast; and a main-top-gallant-mast for a mizen top-mast, and her fails and rigging much damaged in the action with the Vestal.

Capt. James Smith, of his majesty's ship Sea-horse, of 20 guns and 160 men, by letter dated at Plymouth the 17th instant, gives the following account of the abovementioned action with the le Grand frigate, which happened 24 leagues S. W. from the Start, viz. That he faw her in the morning, about eight o'clock, in the S. W. quarter, crowding down upon him; that he continued his course and prepared to engage. At a quarter before eleven the enemy came within piffol fhot, and an action began, which lasted an hour and quarter, with great warmth, during which the ships were board and board three different times, which occasioned great flaughter

flaughter on both fides. The enemy then left the Sea-horse (as beforementioned in Mr. Symons's letter) notwithstanding his utmost endeavours to bring her to action a second time.

The Sea-horse had 11 men killed, and 38 wounded, many of the latter, Capt Smith sears, cannot recover.

Lieut, Symons is preferred to the command of the Mortar floop.

And another captain is appointed to the Sea-horse (which is to proceed, the moment she is resitted, on her outward-bound voyage) that Capt Smith may be at home, in the way to be preferred the first opportunity,

Both these gentlemen give the officers and seamen of their respective ships the greatest encomiums for their brayery during the above

engagements.

18th. The arch-duke Charles, fecond fon of their imperial majesties, died at Vienna, aged

fixteen years.

Ended the fessions at the Old-Bailey, when two perfons convicted of forgery, and one of a highway robbery, received sentence of death: twenty-one were sentenced to seven years transportation, one for sourteen years, two were burnt in the hand, and three ordered to be whipped.

20th house of peers, and gave the

royal affent to

An act for granting to his majefty an additional duty upon strong beer and ale, and for raising 12 millions by way of annuities, and a lottery to be charged on the said duty; and for further encouraging the exportation of strong beer and ale.

An act for regulating his majesty's

marine forces while on thore.

By the above beer act, which takes place the 24th instant, an additional duty of 3s. per barrel is laid on all beer or ale, above 6s. the barrel, brewed for fale in England. A proportionable duty is to be paid for every barrel of two-penny ale, brewed for fale in Scotland. Beer brewed before the faid 24th instant, if any time thereafter mixed with any fresh guile or brewing, is to pay the additional duty. A drawback of es. a barrel is to be allowed by the commissioners of excise, on all beer and ale brewed after the faid 24th instant; and exported to foreign parts; deducting 3d. a ton for charges of the officers. Even a bounty of in a barrel is to be paid by the commissioners of excise, on all strong beer and ale exported, for which duties have been paid. brewed after the faid 24th instant, from malted corn, when barley is at 24s. a quarter or under.

The profits arifing from this act, supposing the consumption to be (which is a very moderate computation, if the number of people in England and Wales is considered) 2,000,000 quarts per diem, will be

as follows.

Admiralty-Office. His majesty's ship the Venus, of 36 guns and 240 men, commanded by captain · Harrison, arrived the 16th instant at Plymouth, and brought in thither the Brune, a French frigate of 32 guns and 316 men, and a Frence privateer of St. Maloes, of fix carriage and fix swivel guns and 30 men. The Venus was in company with the Juno, of 32 guns and 220 men, commanded by captain Philips, when they fell in with the Brune, on the 10th instant, 50 leagues to the westward of Scilly. After a chace for fome hours, the Venus came up with her, and engaged her upwards of two hours, when the Juno coming up, and firing a few guns, the Brune struck. The Venus had 4 men killed and 18 wounded; among the latter were Capt. Harrison, his first lieutenant, and master; and the Juno had 2 men wounded. The Brune had 19 killed and 39 wounded.

An elderly gentlewoman, at Newington-Green, being left alone, fell into the fire, and was fo terribly burnt that the foon ex-

pired.

This day the kingdom went into fecond mourning for his late majefty of bleffed memory; his present majefty out of his tender regard to the working and trading part of his subjects, having been graciously pleased to abridge the usual duration of that ceremony.

The following melancholy accident happened lately in Grace-church-street: an officer who had come to the Cross-Keys, in a stage coach, and had brought with him a gun loaded with slugs, for his fecurity on the road, having ordered a coach to carry him from

thence home, bid one of the porters of the inn put his gun into the hackney coach, in doing which the gun went off, and shattered the leg of a Camberwell stage coachman, who was on the opposite side of the street, waiting to turn into the inn. Another slug is lodged in the poor man's thigh, and two in the buttock of one of the horses, The man was carried to St. Thomas's hospital.

The late earl Marshal of Scotland, took the oaths at the court of King's-bench.

Died at Versailles, the marshal de Belleisle, minister and secretary of state to the French king for the war department, aged 78. was knight of the orders of the Holy Ghost, and Golden Fleece. prince of the empire, and governor of the bishopricks of Metz, Toul, and Verdun. It is faid he has left to the French king his whole fortune, about 600,000 livres a year, except 40,000 livres to his domesticks; a large fum to the royal military school; and to his succesfors in the war department, magnificent house in the Rue de Bourbon, near Pont-Royal, which for the future is to be named the hotel of the minister at war: the king hath given leave to bury his body at St. Denis, where the royal family are interred.

Fowey, January 20. The feans are all taken out of the water, and it is generally thought, that the pilchards taken out of them is about 8000 hogsheads; the number of hogsheads taken out of the Fowey alone exceeds 2000, and it is thought would have tursed out much greater, had they not lost a good deal of fish out of her during the strong easterly winds, which blow directly upon

one

our coasts, and are very prejudicial

to the feans in general.

An ordonance was issued at Copenhagen, on the last day of December, prohibiting the importation of foreign tobacco or snuff of any fort; and the use of tobacco in smoaking is forbid throughout the whole kingdom.

The following letter hath been received from Weyloe, in the

diocese of Copenhagen.

"On the 26th of December last. about ten at night, there arose a great storm. I did not go to bed; and about four minutes past two in the morning, I observed a sudden light across my windows, which I took for lightning: the florm at this time increased not a little. kept my eye fixed at my window; and at four o'clock I perceived a ray of light which feemed to come in a horizontal direction from the moon, to appearance about a toise and half (nine feet) in length; and about the thickness of a man's arm. Rays darted from it on each fide. Running into my garden, I faw a ball of fire, about the fize of a common ball, running gently from fouth to north. At first the ball was of a pale colour, like the fun covered with clouds, and threw out many rays. It grew more and more red, and fmaller, and in two minutes disappeared without noise or smoke. My aftonishment was the greater, as the tempest ceased foon after, though it had been accompanied with fuch violent blafts of wind, that many imagined they felt the shock of an earthquake. I have spoken to a dozen of people, who also faw it. Of all the phænomena I have feen in Norway, I remember none equal to this, nor attended with like circumstances."

Dresden, 3d. The Jews having clandeslinely sent away a large quantity of effects, which were stolen during the late bombardment of this place, one of their rabbis has been sent for, who is to swear all the Jews in this city, in presence of the magistrates, to make restitution of those essentials.

Madrid, Dec. 16th. The king has thought proper to adopt in his troops the evolutions brought from Germany, by a Spanish officer, who hath served under M.

Daun.

The duke d'Alva hath refigned the place of fleward of the household, as too fatiguing. — The Jesuits have obtained leave to send a supply of fixty missionaries to Paraguay, which shews that the Catholick king thinks differently of them, from his most faithful maiesty.

Hague, Dec. 10. M. Berkenrode, our ambassador at Paris, has informed the States-general, that he had a long conference with the duke de Choiseuil, who declared to him, in the king his mafter's name, in relation to the 10,000l. sterling, found on board the English packet boat lately taken, which money their high mightinesses had stopt, "That if they did not immediately restore the money to the captors, his majesty would make reprisals, by stopping the interest of the money placed by the Dutch in the French funds." This menance hath had the defired effect. The affair is terminated to the satisfaction of the most Christian king; and we are fince told from Dunkirk, that the gold and other valuable effects taken on board the faid packet-boat, have

[F] 2

heen

been re-purchased by one of the head-clerks of Mr. H. an eminent merchant at Rotterdam, who went thither for that end. These effects, or at least the money, actually belonged to Dutch merchants; but being taken on board an enemy's ship, the French insisted upon its being a lawful prize; and yet they feize all English manufactures found on board Dutch ships, or at least they have by their edict declared that they will.

His majesty has been pleased to renew the patents of the twelve

judges.

Admiralty-Office, January 30th. Captain Elphinston, commander of his majesty's ship the Richmond, of 32 guns and 22c men, being on a cruise upon the coast of Flanders, received intelligence, the 23d. instant, of a French frigate, which had, the day before, taken and ransomed the Dorothy and Effher, William Benson, master. Captain Elphinston immediately went in quest of her, and fell in with her about eleven o'clock the fame night. She bore down upon the Richmond for a short time after being in fight, but then, fuddealy hauling her wind, endeavoured to get away. Captain Elphinston pursued, and came up with her about half past ten o'clock the next morning, when they began to engage, standing towards the land; and at half past twelve both ships run ashore, along-side of each other, ffill continuing the engagement for a fhort time, when the enemy fled from their quarters. The Richmond foon afterwards got on float; and being drove by the tide a little to leeward, the enemy quitted their ship, and escaped; but the ship is entirely destroyed. The French

frigate was called the Felicité, and carried 32 guns; was bound to Martinico, with a cargo valued at 30,000l. fterling. Her confort the Hermionie, another French frigate, of the same force and value, was loft coming out of Dunkirk. Capt. Donell, commander of the Felicité, was killed in the engagement; and near 100 others of the enemy were killed or wounded. The Richmond had only three men killed, and 13 wounded.

This brave action was near S' Gravesande, about eight miles from the Hague, the young prince of Orange, Gen. Yorke, Count d'Affry, and great numbers of other persons, were spectators of a fight which added fuch reputation to our

See the memorial presented by the count d'Affry, on the above occasion, to the States-general, in our

article of State Papers.

Seventy-two English seamen, prisoners of war in France, on their being lately removed from Cherbourg, (where another wifit from the English was lately expected) to St. Maloes, overcame their guard, escaped to the sea-coast, and at a place called D'Ell Santz, feized a fmall fishing vessel, and arrived safe upon the coast of Wales, near Milford-haven, near which place the pilot was bred and lived.

The feafon is fo forward, that on the 14th instant there was in Comb-wood; between Wimbledon and Streatham, in Surry, a thrush's nest with four eggs in it, some of which were laid ten days before, and the hen thrush sitting very close upon it. Primroses and daisses have appeared in great plenty, and at a place near Ryegate, a plate of strawberries were produced a few

days.

days fince at a gentlemans table. And from Swanfey, in South-Wales, we have the following letter, dated the 23d instant. " Last week several flocks of fwallows, and other fummer birds. were feen here, occasioned by the mildness of the season; but 'tis thought the prefent frost (which came pretty sudden and severe) must have destroyed the greatest part of them, as many have been fince found frozen to death .-- A few days fince there was a peartree in full bloffom, in a gentleman's garden not far from this town; and a goofeberry-bush, which flood under a wall and was fenced from the north wind, had goofeberries as large as cherry-stones; and 'twas thought, had the mild weather continued, several forts of fummer fruit would have been ripe before Easter."

We likewise hear from near Alfton in Cum-Eshgill, berland, that on Christmas-day last, a gentleman there had morigolds, and ten other different kinds of flowers, in full bloom the same as in the months of May or June) and all the trees in his garden in bud, owing to the mildness of the season: a circumstance never known before in the memory of man, so far north.

Died lately. General Huske, whose remarkable will fee amongst our Characters. ..

At Bononia in Italy dame Jane Wilks, an English lady, aged 101 years. She went over from England at the age of fifteen years and four months. It is faid she has died very rich, and has left great part of her fortune to convents, and ten thousand pounds to one John Wilks, a distant relation, who went was a common foldier to the East Indies twelve years ago. fo 1 a too is a say)

At Camentz in Upper Lufatia; George Lehman, an inhabitant of that place, aged 111 years; he never had a fit of fickness, and retained his fenses till the last, except his fight, which he loft three years before he died.

At Koningsberg, in Prussia; capt. Bromfish, aged 112; 93 years of which he had been in the fervice

of Prussia.

At Philadelphia, Mr. Charles Cottrel, aged 120 years; and three days after, his wife, aged 115. This couple lived together in the marriage-state 98 years, in great union and harmony.

FEBRUARY,

The Seahorse frigate being refitted failed from Plymouth 4th. for the East-Indies, with the Dorfetshire of feventy guns, captain Campbell, who was to escort her fome leagues to the westward. The aftronomers, being too late for their intended destination, are to be landed in the most convenient part of the fonthern hemifphere, fo as to fave the day of observation: was borning to laide

The stationers company gave 50l. to the marine fociety, being their third donation.

Between 11 and 12 at night, 6th a shock of an earthquake, attended with a rumbling noise, was felt at Sturminster and several adjacent towns in that neighbour-

Died at Ebrenbriestein, in his way to Munich, Clement Augustus, elector and archbishop of Cologn, bishop of Munster, Paderborn, Ofnaburg

[F] 3

and Hildesheim, and grand master

of the Teutonick order.

The bishoprick of Osnaburg, by the treaty of Westphalia, in 1648, was made an alternative between the roman catholics and lutherans; and in consideration that the house of Brunswick had, for the sake of a general peace, made several valuable facrisices, the lutherans that were to have the alternative, were to be the younger princes of the house of Brunswick-Lunenburg.

Last week, as some workmen were making a plantation in Shawdon. in Northumberland, they found two Roman urns with hubones in them; the shapes of them were globular, but a little oblong. and were made of a blueish earth, abouth eighteen inches in diameter. This way of burial was practifed among the Romans, and deemed a grand manner of interment. They must have lain at least 1400 years in the earth. Near these urns was also found an area lapidea, or stone chest, which, it is supposed, there had been more urns in. Whis they also made use of for the preservation of the urns. Just by this there was likewife found an entire foundation of a triangular stone building, with three rows of steps, and also a Roman causeway.

A gentleman at the court end of the town has laid a wager of a thousand gnineas, that he will produce 29 horses that will run 2900 miles in 29 days successively; that each horse shall run 100 miles in each day, and the whole to be ridden by one man.

Letters from Ratisbon of the 20th ult. Jan. advise, that the frost was set in the there very excessive and sudden; that the river Danube was froze over, and fast, in 24 hours, which was hardly ever known before, the swiftness of the current of that river being

very great.

Came on in the court of King's-bench a hearing in regard to an information against capt: Holland, for publishing a libel on Mr. Sutton, in the account of Miss Bell's death (See our last volume p. 133.) when the court, upon examining evidence, ordered Mr. Sutton to be tried at the next sessions at the old bailey.

Advice was received at the Admiralty, that capt. Alexander Wood in his majesty's ship the Minerva of 32 guns and 220 men was arrived at Spithead, after taking the Warwick, formerly belonging to his majesty, pierced for 60 guns, but now carrying but 34, and 295 men, 74 of them soldiers, bound with ammunition, stores and provisions, to the French settlements in the East Indies. Both ships had about 14 men killed and 30 wounded.

An account was received from rear admiral Holmes at Jamaica, dated November 11, that being informed that five French frigates were preparing to fail from cape Francois to old France, he made a proper disposition of his fleet to intercept them: that the enemy failed from the cape Oct. 16, and the next day were difcovered and purfued by the Hampshire, Boreas, and Lively. The commodore, after two smart engagements, was taken off the east end of Cuba by the Boreas, as was also the Valeur, after an action of an hour and a half, by the Lively. The three other frigates were purfued and attacked by the Hampfhire. One of them having the

wind,

wind, escaped into Port au Paix, and the two others being run on shore, on the Hampshire's approach, were blown up. The Syrenne, Fleur de Lys, and Valeur, were king's frigates, and landed 643 veteran troops, with a brigadier gen. in their way from France. They were all loaden with indigo and fugar. The admiral gives the highest commendation of the conduct and spirit of the three commanders, &c. who were engaged, and of the diligence and attention of those who were not, and has annexed the following account?

The Sirenne, 32 guns, and 128 men, was taken by the Boreas, capt. Uvedale, of 28 guns, and

170 men. ...

Duke de Choiseuil, of 32 guns,

and 180 men, escaped.

Prince Edward, of 32 guns, and 180 men, and the Fleur de Lys of 32 guns, and 180 men men, were destroyed by the Hampshire, capt. Norbury, of 50 guns, and 350 men.

The Valeur, of 20 guns, and 160 men, was taken by the Lively, hon. capt. Maitland, of 20 guns,

and 160 men.

In the morning, between one and two o'clock, a dreadful fire broke out at Mr. Cope's, baker, in Thames-street, opposite College-hill; which confumed the fame, and his dwelling-house adjoining, with many houses and ware-houses between that and Joiners-hall, which was full of whalebone, the property of several merchants in London, and of exceeding great value; and communicated to Sir Charles Blunt's, Bart, where it was got under. It is computed to have done 60,000l. damage. Several persons buried in

the ruins were all happily dug out.

Two usurers were cast at Guildhall by the same plaintist; one in 300 l. for exacting six guineas to discount 100 l. for fix weeks; the other for exacting two guineas to discount a 50 l. note for fix days, being treble the sums discounted, besides treble costs, ac-

cording to the statute

This day died Richard Nash, Esq; generally called beau Nash, master of the ceremonies at, and the friend and patron of Bath, where he was interred in the abbey church with grateful solemnity. This gentleman had a warm and a generous heart, and selt for, and relieved, the distresses of his fellow creatures. He was in the 87th year of his age. See his character more at large in an Epitaph on him attributed to doctor K.—— g of Oxford, among our Characters for this year.

The sheriffs of London waited on the king with a 12th petition from the court of common-council, paying his majesty to grant a commission for the mayor, aldermen, and common-council men, and their successors, to be the commissioners of the lieutenancy for the city of London. His majesty was pleased to receive the sheriffs very graciously, and they had the honour to kis his majesty's hand,

Being the day appointed by authority for a general fast, 3th. the same was duly observed as usual; the collections made at Mr. Whitfield's tabernacle, for the sufferers by the fire at Boston, in New-England, and the plundered protestants in the New Marche of Brandenburgh, amounted to upwards of 5001.

There are letters from Stock-

holm, that fince the return of Mr. Schultz, who, on the recommendation of the board of health, was fent to England in 1754. to inform himself of every thing relating to the inoculation of the small pox, that operation gains ground daily; the free masons liave erected an hospital for inoculation at Gothenbourg, and another will foon be established at Stockholm---The board of health is distinct from the royal college of physicians. It was established in 1719. The bufinels of the commissioners is, in times of contagion, to take the properest methods for stopping the progress of epidemical diseases. All projects and establishments that have any relation to medicine fall under their cognizance. Those which they approve of, they support with all their influence, and procure for them the king's protection and patronage.

There are letters from Salamanca in Spain, that an English gentleman on his travels was married there the 24th of December to a Spanish lady, aged 14 years, daughter to don John Byde Colo, with a fortune of two hundred thousand Spanish dollars; and that he had embraced the Roman ca-

zholic religion.

We may form a judgment of the immense trade the Dutch have acquired during the war, from the following lift of the fleet which failed from the Texel the 26th ult. which confided of 72 fail for France, 20 for Lisbon, 22 for Cadiz, 30 for the Streights, 12 for England, 8 for Curacoa, 17 for Eustatia, 17 for Surinam, and to for East-India, all under convoy of men of war.

Died the right hon. Sir Rich. Annesley, Bart. earl of Angle-14th. fey, baron Altham, in Ireland, aged 75. Mr. M'Kercher, foon after his decease, took possession of the manor of Newport-Pagnel, and the toll of the market, for the young lord Anglesey, fon to the unfortunate James Annesley, who died last year; and also of the Anglesea estates in the counties of Warwick. Caermarthen, and Pembroke.

The wife of a labouring man, near Kingston, in Surry 15th

was delivered of three girls.

At a court of commoncouncil, part of the London work-house was agreed to be applied for, and fitted up, for the reception of the prisoners in Lud-

Letters from Bristol mention, that there is arrived there in a fhip lately come from America, an Indian woman about 21 years old, taken at Lake Champlain; that for fine features and shape few in England can equal her. She is very curious in painting, and is configned to an officer's lady in Scotland, whose husband has a command now in America, under the

brave general Amherit.

Winbourn, Dorfet, Feb. 7. Friday night, between eight and nine o'clock, when it was extremely dark, as I was returning home in my coach with the canvales up, I was fuddently furprized with the most extraordinary appearance of light I ever beheld; which rendered every object fo visible (not only on the spot where we were, but for miles round) that my fervants, who, but just before, could fcarce perceive the heads of the horses they rode on, could now

fee to take a pin from the ground; and, what rendered it the more alarming, it happened when I was but two fields diffance from my house, and appeared as if rising from the top of it, in two large pillars of about feven feet high; from whence I conjectured the roof was on fire, and ordered my fervant to drive on as fast as posfible ; in the interim, fo light was every thing round the house, that I could plainly see into the rooms, thro' every window in view, and when I came near, I jumped out of the coach, expecting to find the whole building in flames; but, in an instant, to my second great surprize, the light vanished, without leaving a spark behind, or doing the least damage. I fince hear this furpizing phanomenon, or meteor, or whatever the naralists please to call it, was seen at fix miles distance, and lasted for only half a minute; but its continuation over the house, I judge to be near five minutes, and when it disappeared, it feemed to move forward, and fink down below the roof.

The following very melancholy accident lately happened at Elgin in Scotland: One Harvie, a journeyman dyer, having bought of William Fraser, merchant, some gunpowder. Harvie, to try the powder, loaded a piftol in the shop, with an intention to fire it. At the very instant he was about to fire, one James Finlay came into the shop, and called out to him to stop, as he knew a barrel of gun-powder was just by them; but his alarm unhappily came too late; the pistol flashed in the pan, and a spark flew into the cask, which contained about forty pounds weight, and which instantly blew up, and brought down

the wlo'e tenement. Finlay and Harvie were miraculously preserved, but Fraser, the owner of the shop, was killed by the explosion, which burst out at the door and windows. and carried the lintel stones of both to the opposite side of the street. The most shocking part of this fatal affair was, that Laurence Calder, merchant, James Bowie, maltman, James Grant, taylor, John Adam, and James Ross, being in the shade at the door of the shop, were carried off with such impetuofity, that Bowie and Grant were dashed to pieces, and killed against the walls of the houses on the oppolite fide of the street. They were found quite dead, and almost naked, their cloaths being almost eniirely burnt off them. Calder was found alive, in the most dismal condition, his head terribly bruifed, one of his legs cut quite open, and the foot hanging by a ligament only; he expired in a few hours. Ross is yet alive, but his recovery uncertain. It can hardly be accounted for, how Finlay and Harvie were preferred within the shop; but certain it is, they too likewife must have perished, had not the town's people, at the hazard of their lives, from the broken and tottering walls, dug them from beneath the rubbish, and in that manner faved their lives. There is no other damage done to the adjoining or opposite houses, but some of the windows and casements broken.

A grant has passed the great feal to John Wood, of Wednesbury in Staffordshire, for his new invented method of making malleable iron from pig or sow mettal.

Also to Jonathan Greenal of Parr in the county of Lancaster, for his new-invented fire engine for drain-

ing mines, coal-pits, and lands from water.

Private letters from Prague mention an adventurer, who keeps himfelf concealed in that city, who, after living by his wits for many years, endeavours to impose himself upon some zealous and credulous Jews for their Messiah. There has been a strict, tho' fecret, fearch after him, and there is no doubt that if he falls into the hands of justice, he will be treated as he deferves.

The prize offered by the Imperial academy of sciences at Petersburg for the best differtation on the question they had proposed on the fexes of plants, has been unanimoufly adjudged to the cclebrated M. Lineæus, who confirms the difference of fex in plants by folid rea-

foning.

The following tragi-comical occurrence is faid to have happened to a Spanish gentleman lately arrived in London. Being greatly enamoured with the London demoifelles, he visited a house in Hedgelane near the Haymarket, but had the caution before he retired with his lady to confider the substance of his pocket, where was 31 thirtyfix shilling pieces, which according to the custom in some foreign countries, where of two evils they chuse the least, and as it were, tolerate fuch houses under certain regulations, he very wifely gave to the old lady of the house to take care of; but before he returned, her ladyship was moved to another part of the town, and he not having a farthing left, was most severely treated by his lady, who tore his cloaths almost off his back; and what heightened the confusion of the whole was,

he could not speak a word of Englifh.

The following uncommon accident is faid to have happened at a place near Appledore in Devonshire, to the surprize of the inhabitants: a shoemaker's wife being in labour, there were in the room with her a midwife, nurse, and two affiftants: a little after the good woman was delivered, she fell down as in a fit. One of the assistants. who was supporting her, immediately followed: next the midwife fell, and then the nurse, after dropping the unclad infant on the floor, The only person remaining ran hastily down stairs to call a doctor, and she broke her thigh. The mystery is explained thus: there being no chimney in the room, a pan with charcoal was introduced. and from the fuffocating fumes of the charcoal, these disorders are supposed to have rifen; but, however, the amazing fits foon were off, and no hurt is like to accrue, unless to the poor woman whose thigh was broke.

A late justice of the peace for the county of Norfolk, who lived to upwards of ninety, has ordered it in his will, to be buried in his wedding shirt, with his cloaths and wig; his filver buckles in his shoes, a cane in his hand, and black ribbands round

his wrift.

Naples, January 20. The 8th instant at night, Mount Vefuvius began to throw up in the the air, with uncommon violence, trees, stones, and bituminous matter. In the morning of the 9th, this eruption ceafed. On the 12th, a very terrible noise proceeded from the mountain, and foon after it was discovered, that the whole top was

fallen

fallen in. At present, it sends out neither lawa, fire, nor smoke: and instead of a vulcano, one would take it for a cultivated hill. The owners of the lands on it are labouring there with the same unconcern, as if there had never been an eruption; yet the damage caused by the last, amounts to a million of ducats. The proprietors of the lands on it propose to raise a fund to indemnify fuch as shall hereafter fuffer by eruptions. They reckon that the cultivated lands amount to 200,000 square toises; and they compute that twenty fous yearly for each toife will be fufficient, This matter is at present before the ministry.

Boston, Jan. 19. We have had an extreme cold feafon, whereby our harbour has been for two or three days almost filled with ice. We have, within that time, had feveral alarms by fire, which were foon extinguished; but Tuefday evening last, a violent fire broke out in one of the shops opposite the north side of Fa neuil Hall Market, on Dock-square, which entirely confumed all the row of wooden buildings from the flore-house, occupied by the hon. Thomas Hubbard, Efq; to the Swing-bridge. These buildings belonged to the town, and were leafed to a number of tradesmen, some of whom had their whole stock therein, most of which was either confumed or loft. There were feveral schooners in the dock, but they received little damage; nor did the fire proceed to the north fide of the dock : on the contrary, it communicated itself to that stately edifice, Faneuil Hall Market, the whole of which was foon entirely confumed, excepting the brick walls, which are left flanding. The fire then

proceeded to a number of shops occupied by fome tradelmen, on the fouth fide of the market, and confumed them also. The wind rifing about this time, carried the flakes of fire over the houses towards King-street, and the warehouses and stores on the Towndock, and Long-wharf, wherein were the greatest quantities of the richest merchandize in the town. Although the flames and flakes of fire fell on many houses and stores. yet no dwelling-house was confumed; though one or two near the market were confiderably damaged. Never were flates on houses discovered to be of so much advantage as at this time; for when great flakes of fire fell thereon, they immediately ran off without doing any damage. The loss of Faneuil market must be great to this town: it was built near twenty years ago, at the fole expence of the late generous Peter Faneuil, Efq. This capacious hall, which bore the founder's name, could contain 1000 of the inhabitants at a meeting. There were convenient apartments for the officers of the town to transact their respective bufinesses therein; besides two offices at the east end of the lower floor, one of which was occupied as a naval office, the other as a notary public's, the other part was very commodious for a market. records, papers, &c. with such other things as could be removed, were mostly saved.

There were near twenty tradefmen deprived of shops by this fire, which must make it extremely difficult in this winter season, especially when it is considered that many of those, who lost their shops in March last, are not yet supplied

with

with proper places to carry on their

respective businesses.

The two gold medals given 23d. annually by his grace the duke of Newcastle, chancellor of the university of Cambridge, for the best classical learning, were adjudged to Mr. Post, of Queen's-college, and Mr. Maddison, of St. Peter's College, batchelors of arts.

A gentleman, who had undertaken to ride one horse too miles in 13 hours, for 200 guineas, started from Whitechapel church, and rode twice to Market End and back again (which is 100 miles) in 12

hours.

There lately appeared a most shocking instance of the bad use often made of private mad-houses; in a cause brought before a supreme court of justice, where it was most clearly proved, that an unnatural father, in order to gratify his cruel disposition, and to cut off his only daughter from her birth-right, caufed her to be conveyed to one of these infernal mansions, and to be kept under the strictest confinement (though in her perfect senses) and where she would have, no doubt, foon ended her days, had not her friends, by a most providential accident, discovered the place of her confinement, and ftirred in her be-

They write from Amsterdam, that the Dutch governor of Surinam, finding himself unable to reduce the rebellious negroes of that colony by force, hath wifely followed the example of governor Trelawney, at Jamaica, and concluded an amicable treaty with them; in confequence of which all the negroes of the woods are acknowledged to be free, and all that is past is buried in oblivion. Six-

teen negro captains swore to the observance of this treaty in the Christian manner: but the negroes infifted, in their turn, that the other should swear in their manner: accordingly each of them had a fmall incision made in his arm, and blood being received in a kind of cup, in which was a little water and earth, the Dutch christians, as well as the heathens, drank of the strange mixture; after which a negro priest pronounced a solemn imprecation against the breakers of the treaty.

A highwayman having committed feveral robberies on the Highgate road, the north stages, to protect their passengers, have employed a guard to attend them till daylight, when they generally think themselves safe; but this day two thieftakers, in hopes of entrapping the highwayman and apprehending him for the fake of the reward, fet out early in the morning in a post-chaise like travellers, upon the fame road, with a view of being attacked by the highwayman at the usual place. When they had got to the bottom of Highgate-hill, they pass'd one of the stages already mentioned, and observing the guard riding towards the coach with fire-arms, concluded him to be the highwayman of whom they were in purfuit, and firing a blunderbus at him, shattered his arm in a terrible manner, and killed a fervant who rode upon the top of the stage. Information of this affair being given to a proper magistrate, warrants were issued out for apprehending the thief-takers, one of whom is already committed to Newgate, and the other is faid to have abfconded.

26th, Deptford, with a quantity of flour, &c. was confumed by fire, damage 20001. it was occasioned by the violence of the wind, which drove the mill with such velocity that it could not be stopped.

They write from Milan of 27th, the 27th ult. that the farmer general at Mantua endeavouring to rife feveral duties, especially on flesh, the citizens got to their arms, and shot nine excisemen dead upon the spot; upon which all the rest of the collectors fled immediately to the monastery of St. Francis for refuge.

Mr. Willy Sutton, after a trial of nine hours, for the murder of Miss Bell, was acquitted at the OldBailey.

The fessions ended at the Old-Bailey, when one received fentence of transportation for 14 years, 14 for 7 years, and one was

ordered to be whipped.

His excellency Mark Milbanke, Efg: his late majesty's ambassador to the emperor of Morocco, and commodore of the fquadron employed all last fummer upon the coast of Barbary, is arrived at Portsmouth in his majesty's ship Guernsey, with the Leghorn convoy under his command, after having compleated the redemption of captain Barton, and the crew of the Litchfield man of war, and his majesty's other fubjects, flaves in those dominions, and establishing a peace with the aforesaid monarch, infinitely more advantageous than ever subfifted with his ancestors.

The Grand Signior has peremptorily demanded reflitution of the Turkish man of war mastered by the christian slaves on board, and brought into Malta the 6th of Nov. last; (See our Chronicle for last year, (p. [152]) and the knights of

Malta, who are always at war with the Turks, have as peremptorily refused to restore her; on which account the Ottoman court are preparing a sleet, and threaten to attack the island of Malta; in which case the court of Spain will probably send their fleet to defend it, as the Turks have always protected the pirate-towns of Barbary against the Spaniards.

The following letter has been wrote to Sir Walter Blackett, Bart. in Charles-street, St. James's square,

viz.

SIR. Febry 26th, 1761, I as your Mos herty well withar take this Liberty to Acquaint you with the Dark difine's Laid against your Honour's Person as I Viery Strangely heard of it by great Accedent I think it my Duty to tell you your Life is ABfalutly agreed upon to Bee taken away upon the Account you have taken the Vails from your Sarvts thair is A Cartin Earl or Tow that is to Share the same fate I find when A Convenient OPertunity Sarves thair is Likewile Sr James Lowther & C. in the Lift which I am Much Affraid will End in Evel Concider your honours Life & Fortunes is All at Stake Drop that wrong Profieding & So Advise you'r Friedds I must Concl'd with Telling you I have no interest in it my Celfe But interle for your honr Person & the wellfare of the Englush Nation

I am with All Dutifull Respects yours

For the discovering the persons concerned in the threats mentioned in the said letter, the king has promised his pardon, and Sir Walter Blackett offers a reward of an hundred pounds.

The

The following threatening letter has been wrote to Mr. William Goddard, of Watford, in the county of Hertford, viz.

"December 4, 1760. Mr. Gorrord if you intend to go

Mr. Gorrord if you intend to go an in the maner as you go an you may gefs watt I mean you shall shorley have a brase of Boilots thru your head or your Body, as ever you are borne for if I cant have you by Night I will have you by Day you shant tell hu aurt you you damd onder minden Roge that is no Ways to manage you But that I think you have run your Raie long anuff in this Toune but now you have got in to good Hands to dae your Jobb."

His majerty's pardon, and a reward of 20 l. is offered to any person that shall discover the author

of the above letter.

Letters from Guadalupe, dated the end of September lait, and conarmed by others to the admiraltyoffice, mencion, that his majery's thirs the Temple, capt. O' Bryen, and Griffin, capt. Taylor, being forme there time before on a cruite, in concert of the Grenades, received intelligence that his mafelty's sloop of war the Virgin (which had been formerly taken by the enemy, her commander, care, St. Loo, being killed in the engagement) was then lying, together with three privateers of 12 guns and 10; men each, under protection of three forts, in a bay belonging to Martinico, and were propering so that in company together on a craise. Upon which cant. O'Bryen resolved to go in cach or them; accordingly both the this commanders got close with their ships in there, and came no with the title forts, one of eight as and the pounders, another of

nx 18 and 24 pounders, and a third, hanking the entrance into the bay, of two batteries of two guns each, twelve and fix pounders; that the attack was carried on so briskly from both ships, that notwithstanding a vigorous defence of feveral hours, they filenced all the enemy's guns, demolithed, and beat down into the fea. both forts and batteries, and cut out and carried off all the faid four prices: that afterwards they atsacked another fort on the faid itland of fix 24 pounders, and after beating down and demolishing the same, entered the harbour, where they lay four days, firing morning and evening guns all the time; and at their departure, out out and carried off with them three more of the enemy's thips: that in their ie emil attacks, tho' the enemy made a hout defence, the Temple had but one man killed and two wounded, bendes the first lieutenant, who had lost his thigh by a cannot thet. On board the Grifin the cockiwain of the Temple was killed, and only five men. wounded.

Died Istely. At Munich in Bavaria, one John O Farrel in the 99th year of his age, seventy seven of which he was a foldier in the services of several foreign princes, and died in the elector of Bavaria's.

In France, madame Clifton, an English lady, dame of honour to the queen of James II. aged 103.

At Nancy in Lorrain, Dr. Cha. Broomgood, an able physician, aged 103. He practited till within ten years of his death

ten years of his death.

In the parish of Chaldon, near Goddione in Surry, Hamphry Saunders, aged 100; he had followed the farming business, man and coy, upwards of 90 years. It is remark-

20.0

able, that in the parish where he died, there is neither a tradesman nor an alchouse.

George Lehman, of Camentz, in

Upper Silefia, aged 113.

M A R C H.

ad. little, that the starlings of London-bridge were not covered at highwater, a thing not known in the memory of man. Probably owing to an earthquake in some distant part of the globe.

Theodore Gardelle, was committed to Newgate for the murder of Mrs. King, who kept a lodging-house in Leicester Fields. For an account of this murder and the murderer, see our article of

Characters for this year.

It is faid that numbers of persons have been immediately relieved in apoplectic sits, by slashing, with a launcet or penknise, the temporary artery; the common practice of bleeding in the arm, frequently, not reaching the cause time enough to save life.

Extract of a letter from Newry.

"Last week our gabbards and lighters began to navigate the new canal from this town to Fadam Point, where the large ships lie, and it is allowed by all people to be compleatly sinished. It was began about two years ago, and executed by Mr. Golborne of Chester, with the money granted by parliament for that purpose."

3d. His majesty went to the

royal affent to

An act for the better fecuring and encouraging the trade of his majefty's fugar colonies in America.

An act to discontinue, for a li-

mited time, the duties payable on tallow, hogs lard and greafe imported from Ireland.

And, to 40 other public and pri-

vate acts.

After which his majefty was pleafed to make a most gracious speech to both houses, recommending a law for making the commissions of the judges perpetual, during their good behaviour, notwithstanding any future demise of the crown; which speech, with the addresses of both houses thereupon, and his majesty's most gracious answers, the reader will find in the article of State Papers.

The next day the judges, having waited on his majesty with their address upon this occasion, were most graciously received. And on the 5th, the house of commons came to the following resolutions, nem. com.

viz.

That provision be made for continuing the commissions of judges, notwithstanding the demise of his majesty, or of any of his heirs and fuccesfors. That his majesty shall be enabled to grant, and establish, the falaries of judges, in fuch manner, as to be absolutely secured to them during the continuance of their commissions. And, that such part of the salaries of judges, as is now payable out of the yearly rent, or fum, granted for the support of his majesty's houshold, and for the honour and dignity of the crown, be, from, and after, the demise of his present majesty, (whom God long preserve) charged upon and payable out of, all, or any, fuch duties or revenues, granted for the uses of his majesty's civil government, as shall subfift after the demise of his majefty, or any of his heirs and fucceffors; and a bill pursuant to these resolutions was ordered to be pre-

pared immediately.

At a previous meeting of 4th. the livery held at Guildhall, for the nomination of candidates at the general election of members to represent the city of London in the ensuing parliament: it was unanimoully agreed," That the grateful and respectful thanks of the livery of London be given to Sir John Barnard, knight, for his eminent and difinterested services to this city, both as a magistrate and as one of their representatives in parliament, during a course of eight and thirty years: for the dignity, justice and humanity with which he supported his former station; and for the honour, weight and influence derived to his constituents from his conduct in the latter; where the integrity of his heart, his moderation, and gentleness of manners, were no less conspicuous and persuasive than the folidity of his judgment and the powers of his natural eloquence."

Mr. Paterson having waited on Sir John with the above resolution, he returned the following compli-

ment.

of the citizens of London, undeferved, that raifed me to any dignity.—In my endeavours to promote their interest to the utmost of my abilities, I only did my duty.—This their last kind acceptance of my services, does me particular honour, for which I return them my last thanks."

A poor woman at Topsham in Devonshire, was delivered 5th.

of four children.

 Last Saturday four Welsh women walked from the foot of Westminster-bridge to the Baot and Crown over Deptford bridge, and back again, in an hour and three quarters, for a wager of 20 l. They were allowed two hours and a half. The wager was between a gardener and a farmer; the gardener laying they performed it.

Three persons were killed, 6th. and others bruised, by the fall

of a wall at Old-Windfor.

At the affizes at Oxford, Ifaac Darkin, alias Dumas, 7th. &c. was capitally convicted, for robbing Mr. Robert Gammon on the king's highway, near Nettlebed, of his watch and money. See an account of him among our Characters for this year.

The court went into third mourning for his late majesty 8th.

of bleffed memory.

Being the anniversary seast 12th. of the Magdalen charity, a sermon was preached before the governors, &c. at St. Bride's, by the Bp. of Ossory, and the collection at church and dinner amounted to

440 l. 2 s. 3 d.

A pretended ghost, which has lately appeared in the cloisters of Westminster Abbey, St. John's church-yard, Milbank, Mashamftreet, &c. was feized on Wednefday evening, and found to be a fervant to one of the gentlemen belonging to the abbey, wrapped up in a large white sheet, with the corners hanging over his head, in imitation of feathers. He had struck fuch a terror into the credulous inhabitants thereabouts, that those who could not be brought, to believe it a ghost, entered in to a fubscription, to give five guineas to the person who would seize him, in order to remove the superstitious error adopted by their weakminded neighbours.

The

The following odd affair lately happened at a church near town; a couple presented themselves to be married, and producing their licence, the parson observed it to be dated eight years ago, and upon expressing his surprize, the man acquainted him, that the night before he was to have been married, he was obliged to go abroad, which had prevented his being married for the above space of time, but was then come to finish the affair.

Corfe Caftle, Dorfet, March 4. On Saturday last a remarkable accident happened at Mr. H. Stickland's, at Chalwell-Farm near this town; as he and his family, confifting of a wife and five children, were drinking tea in the afternoon, he observed, after drinking two or three dishes, that the tea looked of a darker colour than usual, and had no flavour in it, upon which, after various furmifes of what should be the reason, the kettle was examined, wherein, to their great aftonishment, they found a large toad, boiled to that degree, that the legs were separated from the body; upon this alarming circumstance, they all seemed greatly indisposed, concluding themselves poisoned, and fent directly for an apothecary, who very prudently gave each of them a large dole of falad oil, which both purged and vomited them plentifully, and thereby, 'tis prefumed, happily recovered them, as they all feem out of danger.,

Extract of a letter from the minister of Glencairn, dated March 4.

"Last week a farmer's wife in this neighbourhood was delivered of four boys at a birth; one of them died soon after he was born, the other three I baptized on Sunday last. The farmer is about 70 years Vot. IV. of age, and was formerly married; his wife is about 44, and was never married till June last: she is a little woman, and of a slender make."

The following proposal is under consideration, viz. that Epping-Forest be cantoned into enclosures, (and those enclosures planted with oak, the chief bulwark of this nation) for the benefit of fattening lean cattle for the use of his majesty's navy; the expence would be but small, if any; for the underwood and other timber would partly, if not quite, pay the charges; or it might be burned into charcoal for the use of his majesty's powder-mills.

It is faid that in a house at Amflerdam, occupied by some merchants lately become bankrupts, there was a most elegant and wellfurnished room, the floor of which was in-laid with Euglish crownpieces, and which has been only used on extraordinary occasions, and

for the fight of strangers.

Three men and three women having taken a whim into their heads to divert themselves gratis, during the carnival at Paris, affumed the titles of dukes and ducheffes, and thereby obtained many things necessary to their pleasures; but the fraud being at length difcovered, they have been exposed on the pillory for three days; and on the 14th ult. the last day of their public shame, they were conducted to the Greve with two papers fixed to each, proclaiming them sharpers and impostors. The men were afterwards whipped and branded, and fent to the gallies for nine years; and the women were condemned to the hospital for the fame term. The most distinguished person of the band was a fludent in furgery.

[G]. The

The fieur de Mirabeau, a member of the French academy, and author of several learned and ingenious pieces, was taken up lately by order of the French king, and fent to the castle of Vincennes, for a book which he lately published, entitled. The theory of the finances: written on the principles of the great Fenelon, archbishop of Cambray, and author of Telemachus; a work penned with too much spirit and freedom for a country, where ministers can with impunity sacrifice the real happiness of the subject to the imaginary grandeur of the fovereign,

They write from Naples, that early in the morning of the 7th past, twenty-four nuns of the monaftery of the Holy Ghoft, after beating the porter and forcing the keys from him, marched out with a crucifix carried before them, and proceeded directly to the palace to complain to the king, that they were almost starved for want of victuals: the officer on duty admitted them into the court-yard, and taking their memorial, carried it to the prince de San Necandro, who, upon reading it, ordered the nuns to be reconducted with a proper guard to their convent, and reprimanded their superior. The young king waking foon after, and being informed of what happened, was fo much chagrined that he had missed seeing the young ladies, that he ordered his guards to be put under arrest for not informing him; however, in about three hours it was taken off, and orders issued, that the numery should not be molested, but a strict enquiry should be made into the management of that monastery.

16th. Hexham, Northumberland, March 9, 1761.

The deputy-l'eutenants and jus-

tices held their meeting here this day about the militia: and as many of the fellows, who lately made a disturbance at Newcastle, threatened to be here, four companies of the Yorkshire militia came to town last night to prevent any mischief. This morning thousands came into town in the most desperate manner: we heard them say, as they went by the windows, they did not regard the militia; they were forty of them to one foldier, and if they dared to fire, they would not leave a man of them alive. At the fame time the cryer was going about the town, by order of the justices, to defire all the inhabitants to keep within doors; for in case any person entered the town in a riotous manner, the militia should be ordered to fire. This desperateness on one hand, and refolution on the other, gave us a prefage of what we were to expect.

About ten the gentlemen were conducted by the militia from the Globe to the Moot-hall, and the men were drawn up before the gate, to prevent any of the mob going into the hall. The major told them all their complaints should be heard. if they would be peaceable. And they remained pretty orderly, till a large body of pitmen came into the town about twelve o'clock, who were refolved to break through to the hall: The commanding officer was very patient for a long time, even though one of those villains knocked down one of the militiamen, who is fince dead. But at last the rioters forced the line of the militia, shot enfign Hart, a very amiable young gentleman about twenty, dead, and killed two private men. Upon this the commanding officer, ordered his men to fire over the heads of the rioters; but they, exasperated by the death of

one of their officers, and two of their fellow militia-men, when once they began, were not to be kept within bounds. Think what a shocking found! for near ten minutes, fellow subjects firing upon another! and what a horrible scene did I behold afterwards. fome carried by dead in carts, others on horses; and many were led along just dying of their wounds, and covered with blood! and to hear the dreadful shrieks of the women, whose husbands or sons were among the rioters, was enough to pierce a heart of stone. A poor widow, with eight children, and big with another, going into the market, to look after her fon, was shot dead, and her fon was shot through the thigh, and they fay cannot live. Another woman who was with child, was fhot through the belly, as she was standing at a window. Besides these I have mentioned, there are feveral ill who came from Britley, Gungerton, Acton, Wall, and some from the Shire. There are fixteen also now lying dead in the church-yard to be owned, most of whom are pitmen. Many have been found upon the road, who had been wounded, and were making their escape. Among the militia there is only one grenadier killed, besides those I mentioned. They reckon in all above 100 killed and wounded, but I am afraid the number will be greater, for they are continually finding more and more, who had run away after being wounded, and had died by themselves in the holes where they lived.

The first firing difpersed the mob, when hundreds ran into the river, being fo terrified they would not wait for the boat. But the miffortune was, the militia kept a continual fire, 'till I believe there was not a creature left in the market-

place."

By other letters dated the next day, there is an account, that the rioters were quelled without doing any more mischief; but a letter of the 12th from Berwick favs, that after they dispersed, all the coalworkers gave over their labour, and it was supposed that a body of many thousands were formed by that time: where it will end, God knows: so variable is the multitude, that a measure brought about a few years ago by their clamour, appears now to them the most oppressive that ever a free nation was subject to! Forty-two persons were killed on this occasion, and forty-eight wounded, feveral of them men of confiderable property.

The number of the rioters were between 6 and 7000, armed with clubs with fix or feven inches of pointed iron at the end of them. and the number of the militia only

about two hundred.

Lord Ligonier has ordered fome light horse to go immediately to Hexham, to prevent any further mischief. And Sir Walter Blacket, Sir Bellingham Grayham, and feveral other gentlemen, immediately fet out for the same place, to quiet the minds of the people, and to endeavour to bring the ringleaders to justice; but there suffered but one man on the occasion, who was executed at Newcastle the beginning of October.

St. James's. His majesty 17th. having this day thought fit to dissolve the privy-council, and, at the same time, to appoint a new one, confishing of the fame members with the former council, together with Anthony earl of Shaftef-, bury, all the lords and others pre-[G] 2

fent were thereupon sworn of his majesty's most hon, privy-council, and took their places at the board accordingly.

Several shops were consumed by

fire at Newcastle.

The house of commons unanimously resolved, "That the thanks of this house be given to Mr. Speaker, (who, on account of his age, has declined any further fervices in parliament) for his conthant and unwearied attendance in the chair, during the course of above thirty-three years, in five fuccoffive parliaments; for the unshaken integrity and steady impartiality of his conduct there; and for the indefatigable pains he had, with uncommon abilities, constantly taken to promote the real interest of his King and country, to maintain the honour and dignity of parliament, and to preferve inviolably the rights and privileges of the commons of Great Britain." Upon which Mr.

"I was never under fo great a difficulty in my life to know what to fay in this place, as I am at prefent. - Indeed it is almost too much for me. - I can fland against misfortunes and distresses; I have stood against misfortunes and diftreffes; and may do fo again; but .I am not able to stand this overflow of good-will and honour to me. It overpowers me; and had I all strength of language, I could never express the full sentiments of my heart on this occasion of thanks and gratitude. If I have been happy enough to perform any fervices here, that are acceptable to the house, I am fure I now receive the noblest reward for them, the noblest that any u.an can receive for any merit; far superior in my estimarion to all the other emoluments of this world. I owe every thing to

this house; I not only owe to this house, that I am in this place, but that I have had their constant support in it; and to their good-will and affiliance, their tenderness and indulgence towards me in my errors, it is that I have been able to perform my duty here to any degree of approbation: thanks therefore are not so much due to me for these fervices, as to the house itself, who made them to be fervices to them.

When I began my duty here, I fet out with a resolution and promise to the house, to be impartial in every thing, and to shew respect to every body: the first I know I have done, it is the only merit I can assume; if I have failed in the other, it was unwillingly, it was inadvertently; and I affe pardon, most fincerely, to whomsoever it may have happened. - I can truly fay the giving fatisfaction to all, has been my conflant aim, my fludy,

and my pride.

And now, Sirs, I am to take my last leave of you. It is, I confess, with regret, because the being within these walls has ever been the chief pleasure of my life: but my advanced age and infirmities, and fome other reasons, call for retirement and obscurity, There I shall fpend the remainder of my days; and shall only have power to hope and to pray, and my hopes and prayers, my daily prayer will be for the continuance of the constitution in general, and that the freedom; the dignity, and authority of this house may be perpetual."

It was immediately refolved. nem. con. " That the thanks of the house be given to Mr. Speaker, for what he has now faid to the house; and that the same be printed in the

votes."

Burger Commence

It was also resolved, nem. con. That an humble address be prefented to his majesty, humbly to befeech his majesty, that he will be graciously pleased to confer some fignal mark of his royal favour upon the right hon. Arthur Onflow, Efg: speaker of this house, for his great and eminent services performed to his country, for the space of thirtythree years and upwards, during which, he has with fuch diftinguished ability and integrity, presided in the chair of this house: and to asfure his majesty, that whatever expence his majesty shall think proper to be incurred upon that account, this house will make good the fame to his majesty."

To this address his majesty was pleased to give the following most

gracious answer, viz.

"That he has the justest sense of the long services and great merit of Mr. Onslow, present speaker of the house of commons; and has already taken the same into his consideration; and that he would do therein what should appear to be most proper, agreeable to the desire of his faithful commons."

His majesty went to the 19th, house of Peers, and gave the royal affent to the following bills. -The bill for granting to his majesty one million for the uses therein mentioned, and for exempting any annuity, or fums of money granted or to be granted to the royal family, from the payment of taxes .--- The bill to enable his majesty to raise a certain fum of money towards difcharging the debt of the navy. The bill for the better preservation of the game, in that part of Great-Britain called Scotland .--- The bill for the relief of infolvent debtors .---The bill for enlarging the harbour of Whitehaven, in the county of

Cumberland .--- The bill for granting to his majesty a certain sum out of the finking fund .--- The bill to render more effectual an act for the limitation of the crown, and better fecuring the rights of the fubject relating to commissions and falaries of judges, and for the payment of judges falaries out of all or any of the revenues which shall be applicable to the uses of the civil government .--- The bill for defraying the charge of pay of the militia of that part of Great Britain called England, when unembodied, and for cloathing of the militia now unembodied .--- The bill for granting to his majesty the sum of fifteen thousand pounds per annum, for defraying the charges of his majesty's mints, and coinage of gold and filver monies, and the duties of ten shillings per tun upon all wines, vinegar, cyder, and beer, imported into Great Britain .--- And to several private bills. And then his majesty put an end to the fession by a most gracious speech, which the reader will find in our collection of State Papers.

As' to the above infolvent act, no person can take the benefit of it, that was not actually in custody before the 25th of October last, except those who were arrested before the faid 25th of October, and furrendered themselves before the 28th. of November. Likewise debtors who were beyond the feas on the fame 25th of October, furrendering themfelves, may have the same benefit. No persons, discharged by this act, are liable to be arrested for debts contracted before the 25th of October. - Bankrupts not obtaining their certificates in due time, are excluded in this act. ---- All attornies embezzling their clients money, are also excluded. The fu-

 $[G]_3$

ture

ture effects and estates of prisoners discharged, liable to their creditors. - Debtors to the crown, and prisoners who owe above 1000l. to one person, unless the creditors consent, are excluded in this act; and creditors opposing the prifoner's discharge, to allow him 2s. 6d. per week; on non-payment to be discharged. - All persons entitled to the benefit of this act, are to obtain their discharges before the 31st of March, 1763. Likewise by a clause never inserted in any former act of infolvency, creditors may compel any prisoner, already or hereafter charged in execution, to appear at the quarterfession, with the copy of his detainer, and deliver in a schedule of his estate, and on his subscribing the same, and making a discovery of his estate, he is to be discharged; on refusing so to do, or concealing to the amount of zol. fuffers as a felon. - Prisoners upon process out of the courts of conscience, are included in this act; and all who took the benefit of the act 28th George II. to be excluded. --- Mariners, and those who have been in the fea or land fervice, are upon their discharge, if under fifty years of age, and approved of, to ferve during the present war; and if they defert, may be arrested and imprisoned at the fuit of their creditors.

It is computed that there will not be less than 600 persons cleared by the above infolvent act, from the prisons in and near this metropolis. who have been in the land and feafervice, and who by the act will be obliged to go again.

The compulsive clause in this infolvent act, may be taken advantage of, and a prisoner discharged, in virtue of it, without any debt at all being subsisting, any oath or proof made of one; as thus : . The prisoner may confess a judgment to his friend for a sham debt, execution may be taken out thereon, and the prifoner charged therewith. In this case, the prisoner will stand charged in execution, just in the same manner as if it was a real debt; and upon notice in the Gazette, from the sham creditor, (and in other refpects also pursuing the act) the prifoner must be discharged; and, as no oath of a debt previous to the confessing such judgment is necesfary; fo neither have the justices any the least authority to enquire into the reality of it, nor to call the creditor before them to make proof of it. The remedy (if it is thought to want one) must be left to those only, who have the power to apply it.

The city of Chester hath a peculiar court, called a court of Exchequer, (the only one of the kind in England) out of which all or most of the writs in that county are issued; and when any person is arrested by a writ out of that court, he is kept confined (unless he can find bail) till the next day of appearance, and then brought to the bar, where it is demanded of him. to pay down the fum due to his creditor, with costs, or give immediate fecurity to the court for it: neither of which demands it is in the power of the unhappy debtor to comply with, or he certainly would not have been brought before that court, nor fuffered the discredit of an arrest. Upon his involuntary refusal, he is committed to jail, not as a debtor, but for disobeying an order which is impossible for him to obey.

By this means no person arrested by a Chester Exchequer writ can reap any benefit from this act, though every way a proper object of it.

A caution to charitable persons.

I had, for feveral years, the care of a large parish in the suburbs of London, in which was a prison for debt. Somewhat more than twenty years ago, I received a letter from one Dr. Burnet, who lived fomewhere near Briftol, defiring me to fend him an account of the num. ber and circumstances of the prifoners in our jail. I accordingly made the strictest enquiry in my power, and wrote back word, that at one of my visits. I found the number of persons confined to be eleven, and at another, thirteen.; that they were in for very trifling fums, and that, if he pleased to authorise me, I was consident, I could discharge them all for a very little money. To make my story short, several letters passed between us, when at last he wrote me word, that his fellow trustee, a lady of rank, did not chuse any one should do the business, but himself; and that he would call upon me in a little time to thank me in person, for the trouble he had given me in this affair. In a few days afterwards he did call upon me, and informed me, he had been down at the prison, and released five and thirty of the most miserable objects that could be conceived.

Being greatly assonished at so great and so sudden an increase of prisoners, it not being two months since I took an account of them, I immediately went to work, with all my might, in order to satisfy myself about it. And in this I met with no trouble at all, it being well known in the neighbourhood, that

as the jailor had always notice of the doctor's coming, in order to get the discharges ready, so in the morning before he came, he (the jailor) got between twenty and thirty poor neighbours to be shut up in the prison, for which trouble they had usually a crown a piece, and who were discharged three or four hours afterwards in great form.

I was moreover informed, that the jailor's mother was always one of these sictious prisoners, and that she had been discharged by Dr. Burnet a great many times.

Thus the best things are sometimes abused; and to what sad purposes one of the noblest legacies was perverted, in the instance be-

fore us.

R. F.

A proclamation was iffued for diffolving the present parliament, and declaring the calling of another, the writs to bear teste this day, and to be returnable May 19th; and two others, one for the election of the fixteen peers for Scotland, on May 5th, and another for continuing all officers, not already removed or discharged, for the space of four months, &c. His majesty also ordered writs to be issued for the election of the members for the convocation of the clergy.

His majefty was pleased to declare the right hon, the earl of Hallifax, lieut. gen. and general governor of his majesty's kingdom

of Ireland.

To appoint the duke of Newcastle, Wm. visc. Barrington, [in the room of Mr. Legge] lord North, James Oswald, Elq; and Gilbert Elliot, Esq; [in the room of

[G] 4. James

James Grenville, Esq;] to be com-

missioners of the treasury.

To grant to visc. Barrington, the office of chancellor of the Exchequer, [in the room of H. B.

Legge, Efq;]

To appoint lord Anson, Dr. Hay, John Forbes, and Hans Stanley, Esqrs; lord visc. Villiers, [in the room of admiral Boscawen, deceas'd] and Tho. Pelham, Esq; [in the room of G. Elliot, Esq;] commissioners of the Admiralty.

To appoint lord Sandys, [in the room of the earl of Halifax] Andrew Stone, Soame Jenyns, Edw. Elliot, and Edw. Bacon, Efqrs; together with John Yorke, Efq; Sir Edmund Thomas, Bart. and George Rice, Efq; [in the room of Thomas Pelham, W. G. Hamilton, and Wm. Sloper, Efqrs;] commiffioners for trade and plantations.

Tregoney in Cornwall, Mar. 15th. As some of our tinners were lately employed on a new mine. one of them accidently struck his pick-axe on a stone. The earth being removed, they imagined, from its fize, that it was a rock: but fome characters being perceived on a more close inspection, together with its shape and hollow found, when struck, made them conclude it to be (what on opening it proved) a coffin. On removal of the lid. they discovered the skeleton of a man of gigantic fize, which, on the admission of the air, mouldered into dust. One entire tooth remained whole, which was two inches and a half long, and thick in proportion. The length of the coffin was eleven feet three inches, and depth three feet nine inches.

Whitehall. His majesty point the right hon. William Pitt, Efq; to be one of his majesty's principal fecretaries of state, the oath of fecretary of state was this day, by his majesty's command, administered to him in council.

Wednesday se'nnight came ashore. about ten miles from Swansea, a whale; the country people observing the approach of it, concluded it to be the hull of some very large vessel; but when the tide left it, the fands being uncommonly shallow, they perceived it to move, which strange and unexpected fight induced them to come nearer, and then they were convinced it was a fish; which with very little difficulty they deprived of life. When entire the measured 62 feet in length and 16 feet in breadth: the fan of the the tail was 18 feet, and the jawbones is feet: the country being strangers to fuch a thing, it is thought the profit will not exceed 30l. but if among people of underflanding, would undoubtedly yield rocol.

Being Easter-sunday, his majesty and the royal family went 22d. to the chapel-royal, and heard a sermon preached by the Rev. Dr. Newton. After which his majesty received the holy communion from the bishop of Durham, assisted by the sub deen.

Died at Verfailles the duke of Burgundy, eldelt fon of the 23d.

dauphin, aged 9.

Ifaac Darking, alias Dumas, (fee Characters, p. 51.) was executed at Oxford. Having declared that he valued not death, but only the thoughts of being anatomized, a large body of bargemen attended on the occasion, carried off his body in triumph, and conveyed it to the next parish church, where, while fome rung the bells, others open-

cd

ed the belly, filled it with unflack'd lime, and then buried the body. From the report of the state of the

from the report of the state of the city hospitals which was read this day in St. Bride's Church, before the governors, it appears that the numbers were as follows:

A beautiful monument of alabafter and marble is finished in West-

260

minster-abbey, to the memory of the late worthy Dr. Joseph Wilcox, bishop of Rochester and dean of Westminster. It is ornamented on each fide of the base with the figures of Piety and Hope; and above the base, in relief, is a north view of the abbey: on a fcroll held by two cherubims, is a Latin inscription. fetting forth his feveral ecclefiaftical employments during the freigns of the two last kings: on one side is the mitre, and higher is his coat of arms. In order to cast the greater lustre on this monument, the Gothic pillars of the abbey, on each fide of it, are coloured black.

The Ajax Indiaman, of 26 guns, and 100 men, commanded by Capt. Lindsey, very richly laden, is taken by one of the French king's ships of

St. James's. His majesty having been pleased to appoint the Right Hon. John earl of Bute to be one of the principal secretaries of state; his lordship was this day by his majesty's command, sworn one of his principal secretaries of state, and took his place at the council board accordingly.

Cambridge, March 21. On Wednesday night the 24th inst. upwards of 300 persons asfembled in a barn of Laurence Cooke's, at Bottisham Load, a hamlet belonging to Bottisham, in this county, to hear one Broun, a methodift preacher, who was fome time About nine fince a shepherd. o'clock in the evening fire was cried; the hurry and confusion were fo great, that many were trampled under foot, who were pulled out of the barn for dead, but some time after recovered; great numbers were hurt and bruised, and carried home in carts the next day; they lay

near fix foot deep one upon another. The men lost hats, wigs, and shoes; the women their short cloaks, part of their gowns, pockets, stockings, and shoes, and were used with many other indecencies. — The author of this fright, some say, was a person on the outside of the barn, who broke a hole in the clay wall behind the preacher, through which he put a pipe, filled with tobacco lighted, and pussing it, the smoke was perceived, which occasioned the alarm of fire.

27th. Admiralty-office. His ma-jesty's ship the Vengeance, of 26 guns, (9 and 4 pounders) and 200 men, commanded by captain Nightingale, is arrived at Plymouth with a prizes, named the Entreprenant, pierced for forty-four, but now carrying only 26 guns, (12 and 6 pounders) with 203 men, being equipped for war and merchandize, and loaded with various kinds of goods for St. Domingo, with which she failed from Bourdeaux on the .8th instant. Captain Nightingale gives the following relation, of his engagement with the Entreprenant: That he got up close along fide of her at five o'clock in the afternoon of the 13th, when the action immediately began, and continued for three quarters of an hour, in which time the Vengeance was five times on fire, (twice, as was imagined, from the enemy's wads fetting fire to the main rigging,) that the Vengeance's rigging and fails being then so much shattered, that the ship was not under command, the enemy ran his bowsprit over her taffarel for boarding; that he was therein prevented, and the Vengeance sheered off, to repair her rigging and fails. As foon as the ship was in condition, captain Nightingale got

up again close to the enemy, when the engagement was renewed for an hour, when the Entreprenant sheered off, and bore away: that the Vengeance being a fecond time difabled in her masts and rigging, was fome time in wearing: that at length she wore, and captain Nightingale got again within pistol shot of the enemy, and renewed the engagement, which continued for an hour and a half, when the enemy called for quarter. The Entreprenant had 5 men killed, and 24 The Vengeance had fix wounded. killed and 27 wounded, most of of them dangeroufly, and two of them are fince dead.

His majesty's ship the Bedford of 64 guns, commanded by captain Deane, has taken and sent into Plymouth the Comete French frigate of war, of 32 guns and 250 men, which the Bedford sell in with on the 16th instant, 30 leagues S. W. from Ushant, and, after a chase of nine hours, took her. She sailed from Brest on the

9th instant.

A letter from Hampshire, in New Jersey, dated the 10th ultimo, contains the following remarkable piece of intelligence: " A few days ago seven or eight men dug out of the fide of a hill, from whence issued a fine spring, 76 large rattlefnakes, and 36 black fnakes, all twined together in one bunch or knot. The cold weather prevented their making any resistance, though the rattle-fnakes were so lively as to be able to rattle pretty brifkly. They cut the heads of the rattlefnakes off, and then skinned them. The digging was purposely after them, as great numbers had been feen near the spring the summer before, and feveral men, women, and

chal-

children received their death by being bit by these venomous and destructive creatures."

All the French in Canada, of any distinction, went into mourning for the late king; and governor Gage received the following address from the officers of the militia, and of Montreal, on the loss of our sovereign.

The address of the officers of the militia, and the merchants of Montreal, to general Gage,

governor of that place.

Cruel destiny then has cut short the glorious days of so great and magnanimous a monarch. We are come to pour out our grief into the paternal bosom of your excellency; the fole tribute of gratitude of a people who will never cease to exalt the mildness and moderation of their new masters. The general who conquered us has treated us more like victors, than vanquished, and has left us a precious Pledge *, by name and deed, of his goodness to us. What acknowledgements are we not bound to make for so many favours? They shall be for ever engraved on our hearts in indelible characters. We intreat your excellency to continue to us the honour of your protection. We will endeavour to deserve it by our zeal, and by the earnest prayers we shall offer up to the Almighty Being for your health and prefervation.

Leghorn, Feb. 18. By letters from Corfica we learn, that the male-contents have lately made themselves masters of several forts, and bid sair to drive the Genoese out of their island.

30th. Court of Admiralty was held

at the Old Bailey, when there were only two persons brought before the court, viz. Martin Alexander, detained in Newgate at the last Admiralty sessions, for robbing on the high seas a neutral ship, called the City of Rotterdam, of divers quantities of linen, wearing apparel, &c. the property of Le Marquis de Pignatelli; but no prosecution being commenced against him, he was discharged.

Declarations were delivered at London in the name and on 3 lft. the part of Vienna, Petersburgh, Verfailles, Stockholm, and Warfaw, proposing the assembling of a congress in order to put an end to the present destructive war, which declarations and the answers of the courts of London and Berlin thereto, &c. the reader will find among the State Papers for this year.

At the affizes at Huntingdon, I convict received fentence of death; at Bedford, I; at Oxford, I, viz. the famous Dumas, alias Darking, (fee p. 88.) at Reading, I; at Aylefbury, 3, who were all reprieved; at Chelmfford, 7, 4 of whom were reprieved; at Dorchester, 2; at Gloucester, I; at Winchester, 10; at Hertford, I; at Worcester, I, who was reprieved; at Bury, I; at Thetford, I, who was reprieved; at York, I; Cambridge and Salisbury were maiden affizes.

At the affizes at Kingston in Surry, Mary Davis was indicted for the murder of her male infant, by cutting its throat, and throwing it into the Thames at Billingsgate. She had confessed before a magistrate that she could not be easy, having murdered her child, which haunted her day and night, and appeared to

her

^{*} Gage in French fignifies a pledge.

her wherever the went; that the cut its throat on some rubbish near the Grange-road, Southwark, and afterwards threw the body into the Thames, and this confession she voluntarily made and figned; but on her trial it appearing that at times she was out of her mind, and that the never had had a child, and that this confession was the effect of a distempered brain, she was acquitted. This poor creature has been fince suffered, it seems, to ramble about the country, and perplex other courts of justice with the same groundless accusation of herfelf.

Died lately. Benjamin Schultz, a protestant missionary from the court of Denmark, at Tranquebar in the East-Indies. He resided twenty-four years in the town of Nagapatan. He translated the Old and New Testament, and the Psalms of David, into the language of the country, for the use of the natives.

Father Charlevoix, the celebrated

Jesuit missionary.

Farmer Hapgood, near Cray-

ford, in Kent, aged 101.

Anne Tyler, of Bewdley, in Shropshire, aged 101.

John Crawford, a farmer, in Northumberland, aged 104.

Mrs. Eliz. Williams, of Wrexham

in Denbighshire, aged 103.

The widow Dallett, of Boulogne in France, aged 103.

George Lockhart, jun. of Carn-

wath, Esq; at Paris.

This day an earthquake was 3 iff. felt in very different and remote parts of the globe, the accounts of which, for the fatisfaction of our readers, we have collected into one point of view in the order they arrived in London.

Extract of a Letter from Fort-Augustus. "A very uncommon phænomenon happened here the 31st of March. About two in the afternoon, Loch Ness rose on a sudden above two feet in perpendicular height, and continued alternately rifing and falling, for the space of three quarters of an hour. Mr. Gwyn, commander of the king's galley, with feveral others, were just by the galley, when, by the violence of the water, she broke from her moorings, and drove into the loch: at the same time, by the same shock, several boats were cast very far up on dry land. In the middle of the loch, the water swelled up like a mountain, and during the whole time appeared extremely muddy and dirty. What makes it still more extraordinary, it was a perfect calm for feveral hours before and after. The motion was attended with a very uncommon hollow found." __ The fame happened during the last earthquake at Lifbon, but never before for 50 years.

Corke, March 31. A quarter after twelve this day a shock of an earthquake was felt here in the Exchange, in the Merchants Coffee-house, and from the beginning of the Red-House Walk to the East-Marsh, between the gates only, just as it was in November 1755; but allowed to have been more violent by all that selt it. It did not continue above one minute, undulating from east to

west, and vice versa.

Dublin, April 7. A letter from Kinsale runs thus: " As to what is mentioned in the Cork newspaper, about the shock of an earthquake on Tuesday last, there might be one felt there: but here

here I can't find that any person selt any such thing. As to what happened here, it was about fix o'clock in the evening; near dead lowwater the tide rose suddenly in our Strand, about two seet higher than it was, and went out again in the space of sour minutes with great force, which repeated several times, but the first was the greatest."

Extract of a letter from Amsterdam, April 15. " We have an account from Paris, that a little before the departure of the post for this country, an express arrived there, in feven days, from Madrid, with advice, that a violent shock of an earthquake had been felt there, and along the coast of Spain, on the 31st of March. This news is confirmed by letters from Bayonne, which add, that a pretty fmart shock, which lasted three minutes, was felt there the fame day. And from Bourdeaux they write, that a shock of an earthquake was felt there on the 1st of April, about one in the after-

"These accounts have made us recollect the vibrations which we thought we observed here [at Amsterdam] on the 3 st of March, between half an hour after one and two in the afternoon, particularly in the fynagogue, where the branches seemed to move; and in the great church at Maesland Slys, the branches moved about a foot from the perpendicular; and the vessels in the harbonr were agitated."

A letter from on board his majesty's ship Gosport, in the Downs, dated April 16, says, "On the 31st ult. in our passage here from Lisbon, being then in the latitude of 44. 8. N. long. 5. 10. off the rock

of Lisbon, Cape Finisterre, bearing E. S. E. about 80 leagues, at three. quarters past eleven in the forenoon, the weather quite calm, we were alarmed with two violent shocks of an earthquake, which was felt by all the merchantmen under our convoy, some of whom the violence of the shocks cause to make water: The first continued near a minute and an half; the second not fo long: The shaking of the ship was not unlike that occasioned by letting go an anchor, and the cable running fast round the bits, or by a ship's striking on a sunken rock, which many aboard thought to be the case, till they recollected the shocks felt by ships at sea, during the great earthquake at Lisbon the 1st of November 1755, and which the shocks they now felt perfectly resembled.

Extract of a letter from Corunna, March 31. "We had this day at noon a most violent shock of an earthquake, which lafted some minutes: no houses fell down at this place, but many removed fome feet from where they stood before. The conful's house, which may be numbered amongst the strongest houses in all Europe, has been moved at least four feet forward to the sea, and its fronts towards the waterfide have altered their aspect (in fea phrase) better than two points of the compass."

Liston, April 15. We had an earthquake here the 31st ultimo, which lasted longer, and to the apprehensions of the inhabitants was much brisker than that which overturned the city; but passing in a direct line, did no other mischief than splitting most of the

walls

walls more or lefs: Villa Franca, however, is reduced to a heap of rubbish, and St. Ubes and some other country places have fuffered feverely. There are feveral rents or chafms in the earth, through which confiderable quantities of fand and shells have been thrown. If it had not been for the wife precautions taken by the king, the terror of the people was fo great, that this metropolis had probably been abandoned. The fea and the rivers gave visible marks of an uncommon agitation for ten days. After the earthquake, the king fent to defire the bishops to prevent their clergy from alarming the superstition of the people, by declaiming on the procuring cause of earthquakes, and representing them, though merely natural phænomena, as extraordinary testimonies of heaven's wrath: for the fame reason, no days of humiliation were appointed, nor processions or publick prayers permitted here on this occasion.

During the confusion occasioned by the shocks, the prisoners in the feveral gaols here gained their liberty, to the number of 3,00 men and upwards; but, an embargo being immediately laid on all the ships in the harbour, and guards placed at the feveral avenues into the town, they are fecured again, all but fourteen. They apprehend this city not to have been the centre of it; and that it has been more fatal to the northward. There have been three or four small shocks since the first, but none of any other consequence, than that they keep us in alarms; and the fears of the people seem rather to increase than diminish.

Extract of a letter from a merchant at Theffalonica, the capital of Macedonia, to his friend in London.

" Confiderable havock has been made by the plague here, though it is now pretty well over; but, what with the earthquake of last year, the rumbling noises still heard, and feveral fevere shocks which happen almost every day, the country is become desolate, and the best part of this magnificent city laid in ruins. It is a most dismal sight to behold flately palaces, and noble buildings, levelled with the ground, besides numbers of persons of various quality that are baried in the ruins, and the stench of whose carcases occafioned the additional misfortune of the above-mentioned plague; the latter, however, being, thank God, now abated, numbers of persons are employed in removing the rubbish, in order to recover their jewels and other valuable effects. The bashaw and principal inhabitants are likewife doing all they can to restore things to their former order.

"Yesterday we were terribly alarmed by a prodigious ball of fire, which rose from the earth in the south-east part of the city, and directed its course horizontally towards the west, where entering a dark black cloud, it burst with a prodigious loud noise, attended with thunder and slashes of fire; so that it seemed as if heaven and earth had been coming together. This was followed by so violent a shower of rain, that it threatened a second deluge. God preserve us, my dear friend, amidst this complication of

troubles !"

We also learn by some fishermen

that

that were upon the water coming in at that time, that the course of this earthquake was nearly from the S. W. to the N. E. and that they perceived the noise, as of a distant rising wind, some considerable time before the shaking came on.

Extract of a letter from a gentleman of Santa Cruz, South Barbary,

dated April 17, 1761.

" I am forry to tell you we have had two shocks of an earthquake, the first was the 31st of March, at twelve at noon, which was very flight, and did no damage; the fecond was the oth inft. at half past feven in the evening, and a most dreadful one it was; it did not last above a quarter of a minute; had it lasted half a minute longer, the town had been infallibly laid in ruins; it has split the walls of most of the houses; and ours, though one of the strongest, has suffered greatly. We were writing when the dust and small stones began to rattle about us; we immediately ran up on the top of the house, and the dreadful terror we past that night in, fearing a return, can only be known by those that felt it. We are very far from being recovered from the consternation it put us in, The least noise alarms us; and we frequently think the ground shakes when there is no fuch thing. God preferve us, and fend us fafe out of this dreadful country."

Barbadoes, April 5. On the 31st of March, at four o'clock in the afternoon, fluxes and refluxes of the fea here, which about eight feemed to abate, but at ten confiderably increased, and continued till fix o'clock next morning. It is observed that the same agitation of the waters was perceived here, at the time the

earthquake happened at Lisbon in

1755.

An earthquake was likewife felt on the fame day, the 31st of March, at the Madeiras. But the island of Terceira, one of the Azores, feems to have been the centre of all these violent shocks, as they ended there in dreadful eruptions, an account of which the reader will find in our article of Natural History for this year, page 98. An earthquake was felt at Rousillon in France, on the same day these eruptions happened.

APRIL.

The fociety for the encouragement of arts, manufactures, and commerce, gave a premium to Mr. William White, mafter of the ftone pot-house at Fulham, for his inventing the art of making crucibles of British materials, which not only equal, but excel those imported from abroad.

Ended at Guildhall the poll for members for the city of 2d-London, when the numbers were.

for

Sir Robert Ladbroke, Knt. 4306 Sir Richard Glyn, Bart. - 3285 William Beckford, Efq; - 3663 Hon. Thomas Harley, Efq; 3983 Sir Samuel Fludyer, Bart. - 3193

And on the 4th, Sir Robert Ladbroke, Sir Richard Glyn, William Beckford, Efq; and the Hon. Thomas Harley, were declared by the sheriffs, duly elected, to represent

this city in parliament.

On Monday last were buried in one grave, William Davis, and his wife. This couple had formerly lived in credit in Claremarket; but coming to decay, their

funeral

funeral was only fuch as parishes generally give; which coming to the knowledge of their old friends in their former neighbourhood, they made a collection, had them taken taken up out of their grave, and reinterred in a manner fuitable to the station they had formerly lived in.

Ended the fessions at the Old Bailey, at which three received fentence of death, viz. The'cdore Gardelle for murder, (see our Characters) one for forgery, who has been fince executed, and a woman for shop-lifting, who has been pardoned: twenty to be transported for feven years, one to be whiped; and two were branded. - Darwell, one of the thieftakers, mentioned the 25th ult. was found guilty of manslaughter, and the other acquitted.

Geneva, March 11. We are told by persons who visit Mr. Voltaire, that having fome moneymatters to fettle at Paris, he made application to the king for leave to go there for fifteen days only. His majesty wrote in answer with his own hand: " I give Voltaire leave for "fifteen days, for fifteen months, or fifteen years." Having received this answer, Voltaire is to go immediately to Paris. He left his feat, which is within piltol-shot of this city, a fortnight ago; and he will probably not return to it. He is gone to his handsome castle of Fernay, in the province of Gaix,

to make himself enemies. They write from Rome of the 7th past, that the pope had or-

which is about a league and a half

from this city. As to the rest, Voltaire is not beloved in this neighbourhood. He seems to study

dered a proof to be made of the gold and filver ores lately dug out of the mountain Polino, and medals of them to be ftruck upon trial: it is affured the pope hath resolved to send for some miners from Germany to work thefe

Count Konigfegg, great dean of the chapter of Cologne, was unanimously chosen elector of Cologne. This is the first instance, where a native has attained the honour of being chofen for its elector.

A proclamation was issued by the lords justices and council of Ireland, declaring his majesty's pleasure for summoning a parliament to meet at Dublin May 19. the writs to bear teste April 7.

The court at Hicks's hall lately committed Anne Martin, alias Chapney, to Newgate, where she is to be imprisoned for two years, pursuant to her fentence; she is accused of putting out the eyes of children, with whom she went a begging about the country; she has been feveral times whipped at the cart's tail.

Extract of a letter from a gentleman at Rome, dated March 12, 1761.

"It is with pleasure I can contradict what I have feen in your English news-papers, which mention, that there had been an earthquake at Naples. 'Tho' it had all the appearance of one, an English gentleman who was there gave me the following account of it, which I suppose you have not yet had the particulars of .-- The cruption issued from nine mouths; the principal one, in a few hours, by the great quantity of flores, cinders,

&c. which it threw up, raised a hill 200 yards high; the lava, or melted matter which it discharged, was a mile broad; the length I do not remember: it afterwards becomes stone (with which they pave the Neapolitan streets.) In its course, which was flow, it destroyed vineyards, and set on fire large trees. It is remarkable, it had always encircled the tree more than half an hour before it took fire, and then at first it was all a blue fulphury flame; the matter is always red, like melted glass; but tho' it be a liquid, it is impossible to make the least impression on it. The principal mouth fometimes abated its violence for five or fix minutes, and threw out nothing but some cinders and smoke; but then returned with fo great a force, that tho' Naples is 12 miles distant from it, the shock forced open the windows and doors, which gave rife to the report of the earthquake. The stones which it threw up appeared as large as both hands clinched; and one might count flowly five hundred, from the time of their rifing till the time they returned to the ground. The damage it has done is only a fourth of what is mentioned in the English papers, and does not exceed 15,000l."

Constantinople, Feb. 18. A sloop is arrived with some Magnotes, who, either from obstinacy or inability, refused to pay the annual tribute to the Grand Signior. These Magnotes, or Mainotes, are descended from the ancient Lacedæmonians, and inhabit the Maina in the Morea, defending themfelves as well as they can against the tyranny of the Turk. They are fituated between two chains

VOL. IV.

of mountains which advance into the fea, are a courageous people, and amount to above 40,000 men. Their government is a kind of republic; they are always at war with the Ottoman Porte:

Extract of a letter from rear admiral Holmes, commander in chief of his majesty's ships at Jamaica, to Mr. Clevland, dated at Port-Royal Harbour in

Jamaica, Dec. 31, 1760.

Since the taking of the French frigates in October last, the squadron have brought in here, or destroyed, about eight of the enemy's privateers. The most remarkable of these little affairs were the two last, brought in here the other day; and taken by the boats of the Trent and Boreas, commanded by the first lieutenants of their respective ships, Messrs, Millar and Stuart, in Cumberland harbour. there not being water to carry any of the ships up to them, viz. The Vainqueur of 10 guns, 16 swivels, and 90 men; and Mackau, a small vessel of fix swivels, and 15 men. The officers and men in the boats, behaved with great intrepidity, and boarded and carried the Vainqueur, under the strongest premeditated difficulties the enemy could lay. The Trent had three men killed, one missing, and one wounded. The Boreas had one killed, five wounded, and her barge funk in boarding: So foon as they had taken these two vessels. they pushed on after the Guespe, of eight guns and 85 men, which lay farther up in the Lagoon; but on their approach the French fet fire to her, and the was destroyed. The loss of the enemy is uncertain, for about forty of them jumped overboard when the boats boarded [H]

the Vainqueur, and ten men were found wounded on board. The Mackau made no resistance.

oth. Law, author of many religi-

ous tracts, aged 75.

A fire broke out at a bifcuit baker's near Brown'swharf, East Smithfield, which burnt down 28 houses, and greatly damaged 12 others. The king's brew-

house was preserved.

Capt, Money, of the Norfolk militia, and aid de
camp to general Townshend, standing on a horse's back, without a
saddle, in full speed leapt over a
sive-barr'd gate, and performed
several other amazing seate of
horsemanship in Hyde-Park, before their royal highnesses the duke
of York, prince William Henry,
and other persons of distinction.

A very ingenious piece of mechanism has been lately exhibited in the Thames at Richmond in Surry, by way of experiment; the offices of which (which are very eafify conceived) compared with its simple construction, are really wonderful. The defign of this machine, we learn, is for the eafy capture of fea-fish, in the most tempestuous weather, without hazardiing lives at fea, which certainly is a very great thing: and we are told; and clearly perceive it to be fo, that this machine is capable of fending into the sea, at proper places, some thousands of hooks, baited; and of working the fame back, by the fole use thereof, with the affistance of two persons only on shore to work the machine, bait the hooks, and take off the fifth when brought to the shore there-

by. Thus far a machine in miniature has performed here; it has wrought out line near 100 yards from the land, and back again, with a proportionable quantity of hooks, baited; and notwithstanding the scarceness of fresh water fish that bite at bait at this feafon of the year, particularly at this place, it has most surprizingly catched a number of fish, and that with no more strength to work the same, than than of an infant, indeed even but pleafing amusement for such strength. This, now little, though great meaning affair, is most certainly highly worthy of the countenance of the great, and the observation of the judicious and curious. It is therefore to be hoped, that a matter of fo promising utility, by preferving the lives of fo many, caufing a plenty of fish, and giving employment to many of his majesty's subjects, &c. &c. will be put in real execution.

The young prince stadtholder was seized with a sudden and violent sever last Thursday sevennight in the evening; and lay delirious all the next day, infomuch that his life was seared to be in great danger. The malady proceeding from an indigestion, speedy and proper remedies were applied, which had so good an effect, that his serene highness from began to mend, and when the last letters left Holland he was judged entirely out of danger.

His most christian majesty having been obliged to suspend for three years the salaries of the parliament, and other courts of justice, superior and inferior, has insisted upon the payment of the

capita

capitations, or poll-tax, during those years notwithstanding, without any regard to the remonstrances of the parliament. By an arret of his council he has ordered those three years capitations to be stopped out of one year's falary now to be paid; the parliament have cancelled that arret, and thus there is a rupture between the court and that respectable body.

A person of distinction having carried off an actress of the comic opera at Paris, her family are profecuting the ravisher with great animofity. They have already been offered above 1000l. fterling to make up the affair; but it is not money, but a public example to deter others, that they want.

St. James's. His majesty 14th. in council was pleased to appoint the following new governors, and other officers, in feveral of his majesty's plantations in America, viz. New York, Robert Moncton,

efq; governor.

Cadwallader Colden, efq; lieu-

tenant governor.

Benjamin Pratt, esq; chief justice. South Carolina, Thomas Boone, elq; governor.

Cha. Shinner, efq; chief justice. Nova Scotia, Henry Ellis, efq;

governor.

John Belcher, esq; lieut. gov. Georgia, Ja. Wright, esq; gov. New Jersey, Josiah Hardy, esq; governor.

Nevis, Ja. Johnston, efq; Lt.gov. Leew. Islands, T. Cottle, efg;

follicitor general.

North Carolina, Tho. Falkner, elq; fecr. and clerk of the crown.

Rob. Jones, jun.esq; attorney gen.

Died Archibald Campbell, duke of Argyll, marquis of Lorn, &c. lord lieutenant of Argyllshire, admiral of the Western isles, keeper of the great seal, justice general of Scotland, hereditary mafter of the king's houshold in Scotland, chancellor of Aberdeen, and one of his majesty's privy council, aged 79; he is succeeded by lieutenant general John Campbell.

The fociety for the encouragemeat of arts, &c. adjudged the præmium of 100 guineas to the chevalier Cafali, for his historical picture of Edward the martyr's being stabbed by the direction of his mother-in-law Elfrida.

This morning two horses started at Colchester, in order to make the best of their way to Whitechapel church for 50l. a fide; they ran the first forty miles in two hours and ten minutes, and the last ten miles in 52. The winning horse carried it by about 200 yards.

A fervant maid at Charlton in Kent was committed to prison on her own confession, for alarming the family by feveral stories of the house and herself having been attacked by robbers, and leaving an incendiary letter in their way, all

of her own forging. Dublin, April 7. In the late fearcity of fuel, some of the inhabitants of Clontarf went to the North Bull to dig in the fands for old wrecks, and in the hold of a ship, which some of them recollected to have been lost 18 years ago, they found a filver dish and fland, and fix bottles of very good

Died the right rev. Dr. Benjamin Hoadley, bishop of Winchester, aged 85.

> [H] 2 ^ A very

A very extraordinary wager was lately laid by two gentlemen at a coffee-house near Temple-bar; one of whom is to jump into feven feet of water with his cloaths on, and to entirely undress himself in the water; which if he fails accomplishing, he is to lofe.

Two men are faid to be arrived at Cologn, who fay they came from Damascus. The jefuits of that town have been with them, and talked to them in latin, greek, hebrew, and chaldaic. They answered them in all languages. They say they are come by the order of heaven, to turn men to repentance. They give out that they are 700 years old. The jefuits have obtained deave to carry them to Rome. Being put in irons, they were glad of that opportunity of proving the truth of their mission, by breaking them. They fay

They write from Paris, that the duke of Burgundy is in general regretted. Some days before his death, M. de la Vauguyon, thinking him afleep, was talking in his chamber to a lord, of an

officer of merit in great distress, who had long follicited in vain for a pension sufficent to furnish him with necessaries. The prince, being awake, heard all that was faid, About an hour after, the dauphiness coming to see him, he asked her for three louidores, which she gave him. He made the same demand fuccessively from the dauphin, the king, the queen, and his four aunts. By which means he got twenty four louidores. Then sending for M. de la Vauguyon, " Take (faid he) this money, and give it to that brave foldier who is under misfortunes. Tell him that I shall solicit for his pension, and that I shall urge the thing, for I shall be glad when I am dying, to have the fatisfaction of having ferved a deferving man." This shews his benevolence. What follows will ferve to shew his firmness.

One day, when he was fomething better than he had been for some time, his mother told him that the fine weather was approaching, and that she would take him out to give him an airing, " Yes, faid he with a smile, but it will be to St. Denis," [the burial place

of the royal family.]

From Ratisbon we hear, that a memorial, on the part of the court of Petersburg, has lately appeared there in print. This memorial, which bears date the 17th of February, new style, contains an anfwer to the Teutonic order, relative to the pretentions made by them to Courland and Semigallia. It imports, that the brethren of the fraternity of the fword, established by Pope Innocent III. being incorporated in 1239 with the Teutonic

order.

order, became thereby joint proprietors of Livonia, Courland, and Semigallia; but that in the fequel, Walther, of Plettenberg, at the head of the faid fraternity, being again detached from the Teutonic order, conformably to a mutual convention on both fides, he remained by this convention possessed of the above provinces, and to the title of grand master of his own order, added also that of prince of the empire, which he obtained from Charles V. That afterwards his fucceffor, Gothard Keller, being greatly weakened by the many wars he was engaged in, and receiving no affiftance from the empire, concluded a treaty with Poland, by which he ceded Livonia to the above crown. That at the peace of Oliva, Livonia was again given to Sweden, and even gaurantied by the emperor; and lastly, that the faid province, together with Courland and Semigallia, was made over to Ruffia, by the peace of Neustadt. This is the substance of this famous memorial, which has made a great noise, and will probably be productive of many bickerings between certain powers.

It is confidently faid that the whole

number of English prisoners, now remaining in old France does not exceed 1000 men; and that the number of French prisoners in

England exceed 25,000.

The following is an exact account of the articles confumed at dinner only by the voters of a fmall borough on the day of electing their members, independent of veal, mutton, poultry, paftry, &c. and a preparatory breakfast, which last alone amounted to 75cl.

Confumption at dinner,

980 stone of beef. 315 dozen of wine. 72 pipes of ale, and

365 gallons of spirits converted

into punch.

Naples, March 24. The court has fent a commissary to visit the ports of Augusta and Syracusa in Sicily, and to make proper dispofitions against their being surprized, in case the armament that is still carried on at Constantinople should appear in those seas. As there is no doubt concerning the reality of that armament, though its destination is not known, they are alfo preparing for the worst at Malta. The bailiff Marulli has just made a call of all the knights profeffed and non-professed, and ordered them to keep in readiness on the first notice. Eight from each of the two priories in this kingdom have already been chosen by ballot, and they are to go over forthwith to Malta, which each two attendants fit for military fervice. Two vessels lately arrived at that island one from Constantinople, and the other from Salonica; by which there is advice, that the Grand Signior goes every day to the arfenal, and having perceived that two officers,

 $[H]_3$

ushe

who had the charge of expediting the preparations, were not fo diligent as they might have been, he ordered them to be beheaded. The grand master of the order of St. John of Jerusalem has sent away to Sicily and Calabria, divers Greeks and other useless mouths, and takes all proper methods for putting the island in the best posture of defence, in case the Turks really intend to attack it: and yet there is no reason to be much asraid. confidering the natural strength of the island, the great quantity of artillery mounted in the places most exposed, and the barrenness of the fpot. Meffengers frequently arrive here from the viceroy of Sicily, to inform the court of the instances made by the Maltese for supplies of

corn and other provisions. Vienna, April 3. Yesterday the count de Losymthal prepared a grand entertainment, at which the emperor and empress were present. Just as they were sitting down to dinner, the princess of Anersperg, going to take her chair by the emperor, funk down in his arms, and notwithstanding all possible affiftance was inftantly given, she never breathed more. Their imperial majesties immediately returned to the castle, and the rest of the guests to their feveral houses, without tasting the dinner. lady, who was in her fifty-third year, is greatly regretted. emperor took so much pleasure in her conversation, that he would always have her fit by him at pub-

lic entertainments.

Two bodies of equal cube exhibited this day to publick view at Bristol, transmitted three each other five times in a minute; also a large cube through a smaller

twelve times in a minute, to the preat furprize of all present, as it sufficiently proves, both in practical and foeculative mathematicks, the falsehood of the old hypothefis, viz. That space and magnitude cannot pass through a body of equal space and magnitude .---These dice, or cubes, pass exactly at an angle of eleven degrees from the horizontal plane: They are made of folid brass, about an inch and five-eights cube, and admit of no expansion or contraction (as many have imagined) but are diffected in fuch a manner as to give the folid die a free passage, without destroying or breaking the die so diffected --- This curious experiment was performed by Mr. James Bridges, architect, and builder of Briftol bridge.

A fire broke out in some stables behind Swallow-street. about ten at night, and raged with with great fury till about two in the morning, in which time 14. houses were burnt down, two of which were handsome new built dwellings of great value. family of one of these houses was at Ranelagh, and knew nothing of the accident till their house was in ashes. The gentlemen, however, in the neighbourhood, together with their fervants, formed a ring, kept off the mob, and handed the goods and moveables from one to another till they fecured them in a place of fafety, fo that a pennyworth was neither loft nor damaged; a noble instance of neighbourly respect and kindness. Eight or nine horses perished, and some lives were

A box of writings that was in an iron cheft belonging to Mrs. Buckade Buckade (who was burnt out on this occasion) though inclosed in fand near a foot thick, was entirely confumed, and a quantity of cash in the same box was melted.

One Mrs. Holden, an aged gentlewoman, who lived at the end of Swallow street, being alarmed with the cry of fire, fell down, and expired directly. And the next day, as a number of persons were gazing at the ruins, a party wall fell down, by which a man was killed, and several others dangerously bruised.

This accident was owing to Edward Winwood a coachman carrying a lighted candle into the stable, and (agreeably to Dean Swift's Advice to ferwants) sticking it against the rack; the straw being set in a stame in his absence by the candle's

falling.

This man being a few days after convicted of thus negligently and carelefly caufing the faid fire, and refusing, the very able, to pay the penalty of 1001. for the faid offence, was committed to the house of correction at Westminster, to hard labour for 18 months.

ACAUTION to ferwants in general, relative to fires happening in London, by their negligence and

carelessness.

By the 6th of Q. Anne, Cap, 31. Sec. 3d it is enacted, "That if any menial or other fervants, through negligence or carelessness shall fire, or cause to be fired, any dwelling house, or out-house, such fervants or fervants thall on conviction forfeit and pay the sum of one hundred pounds to the church-wardens of the parish where such fire shall happen, to be distributed amongst the sufferers in such proportions as to the said

church-wardens shall feem just; and in default of payment to be committed to some work-house, or house of correction, to hard labour, for the space of 18 months."

Rome, May 28th. The resident. from the grand master of Malta has had an audience of the Pope, in which he produced fome dispatches concerning the warlike preparations making by the Turks. which leave no room to doubt but that their armament is destined against the island of Malta: upon which representations the Pope has ordered all forts of ammunition and provisions to be transported from the Ecclesiastic state to that island. A negotiation for the loan of a fum of money is likewise set on foot, upon the fecurity of the estates and revenues of the knights of that order.

The great cause between 25th the duke of Devonshire (who 25th sued in the king's name) and the lead miners, concerning the duty upon the ore, was determined by a special jury in the King's-bench, after a tryal of 17 hours, in fa-

vour of the duke.

A grant has passed the great seal, granting to the right hon. Arthur Onslow, Esq; a pension of 3000l. per annum, payable out of his majesty's treasure at the exchequer, for his life, and the life of George Onslow, Esq; his son, and the servivor of them.

The vice chancellor of Cambridge gives notice, that the subjects for Mr. Finch and Mr. Townshend's prizes for this year are, --- For the senior batchelors; Utrum sit præstantius nova invenire, an inventis cultum addere et ornatum. For the middle batchelors: Utrum

At Warwick affizes, one was capitally convicted, but reprieved; at East-Grinstead two; at Rochester two, one of them, a French prisoner, for murder; at Kingston three, two of them were reprived; at Taunton two; at Stafford three, two of whom were reprieved; Coventry, proved a maiden assize. Extract of a letter from capt. John

Bell, of the Elizabeth of London, dated from Oporto.

" Since I have been here, a Dutchman fell into the river, and was taken up from the bottom about three quarters of an hour afterwards: he was carried on board the ship he belong'd to, and orders were actually given for fewing him up in a hammor, in order to bury him. The British vice conful, Mr. Gabriel Hervey, who is a very humane gentleman, hearing of the affair, took a boat, went on board, laid the fellow by the fire-fide, and kept rubbing him with common falt till life returned, and the man is now hearty and well. Mr. Hervey hath fince told me, he has known a dog kept under water two hours; and recovered by being covered with falt; and his lady told me that she had recovered a cat.." See our second volume for 1759, p. 420.

28th The court went into mourning for a fortnight for the late duke of Burgundy.

The collection, at church and at the annual feast of the Middlesex hospital, amounted to near 400l.

Eleven dwelling houses, with barns, stables, &c. were consumed by fire, at Kineton, in Warwickshire.

Chatham, April 24. In a meadow adjoining to this town,

which a month ago was covered with the most beautiful verdure, and afforded the prospect of a crop of the finest grass, there are thousands of uncommon maggots or grubs, which have destroyed the grass; and in some places the root also is wholly eaten up and gone: the ground is left entirely bare as a foot-path. These maggots are found under the furface of the earth, are about an inch long, and like those called bots, which fometimes destroy bowling-green, &c. They are of the caterpillar kind; and it is imagined that in a few weeks they will be metamorphosed, and be furnished with wings and fly away. Some little trenches, dug to carry off the water, are almost filled with these vermin. We don't hear of any such appearance in other parts. These insects live in the worm flate two or three years according to the mildness of the weather. and the rooks are faid to be great devourers of them in that state. The third or fourth year they become flies, when they may be eafily destroyed by means, which in due time shall be communicated to our readers.

At the anniversary sermon and feast of the London hospital 13541.

17s. was collected for that charity.

Marshal Broglio having lately fent notice to the hereditary prince of Brunswick, of his having been a created a prince of the empire, his ferene highness answered him by the following letter.

SIR,

"Titles, which do honour to those on whom they are conferred, receive a new lustre when borne by your highness. You are known to Germany, only as a hero; and its

head

head has decorated you with the most valuable gift he could bestow. What would not my countrymen do, if they durst regard you as their defender? Your highness may be affured that I take a fincere part in whatever personally concerns you; and that nothing would give me greater pleasure, than, one day, after these troubles are past, to assure you, by word of mouth, of the high regard and effeem with which I have the honour to be, fir, your highness's most humble, and most obedient fervant.

Charles of Brunswick." They write from Magdeburgh of the 14th inft. that a fisherman fishing for falmon in the river Elbe near that place, caught a fea dog in his nets: it is surprising how that fish came there, being at such a vast distance from the sea, and how it could live in fresh water; but it is supposed the late great inundation brought it up.

On Easter Tuesday, the elector palatine declared to his court, that the electress, after being married 19 years, and then 40 years of age, entered that day into the 6th

month of her pregnancy.

A letter dated at Fort Prince George in South Carolina, January 9, fays, 'I have been several winters in the north of Scotland, and do not think I ever felt it colder than here at this time; the fnow is in general three quarters of a yard deep, attended with very sharp frosts.'

Many people of fashion have lately visited a tradesman's family at Brentford in Middlesex, to see nine fine healthy children, all of whom were born in 28 months.

Died lately, Mrs. Jane Atkins,

of York, aged 100.

One Klauk, a peafant of the vil-

lage of Treppendorff in the Upper Lusatia, aged 104; during his life he had no fickness till he was about 100 years; he could fee to the last without spectacles; his wife was 102 years old, when she died, with whom he lived 52 years, and hath a fon now living that has two children, who are grandfathers to two others.

In the diocese of Lucon in France, one James Benerteau, aged 104 years, two months, and five days, who never had any illness but that which laid him in his grave, and never was subject to the infirmities incident to old age. His father lived to be 107.

In the last Easter week, Mrs. Sarah Hooper, at Exeter, an old maiden, in her 105th year, whose father was buried in the same church with her 95 years ago. The same week. one Cox, a gardener in that city. who is in his 99th year, and has all his senses perfect, went to the Guildhall, and voted for Mr. Tuckfield and Mr. Walter.

Ifaac Duberdo, of Clithero, in Lancashire, aged 108.

Patrick M'Ewan, of Fordie, in Perthshire, aged 100.

Mrs. Gillam, of Aldersgatestreet, aged 113.

M A Y.

A large collection was made at the Foundling-Hospital for the benefit of that charity, after a fermon preached on the occasion by the reverend Mr. Sterne.

On the 3d ult. there ran ashore at Candia, a little town in the kingdom of Valentia, part of old Spain, a sea monster, 24 ells round, and only feven long, from head to tail. It had two rows of teeth, and its body was covered with large

black

black scales. It produced 1250

quintals of oil.

About one o'clock this morning, a terrible fire broke out at a biscuit-baker's, on Wapping wall, between Pelican and king James's-stairs, Lower Shadwell, which confumed about 30 houses. One ship, which was repairing in the dock, took fire, but was foon extinguished; and eight other ships were, with great difficulty, preserved. Several persons had their limbs fractured, and feveral it is feared perished in the flames. Eight barges and lighters were destroyed, and three funk, and the damage is computed at above 50,000l.

A little after two o'clock the people on the Royal-Exchange were much alarmed by the appearance of a cow (hard driven from Smithfield) at the fouth gate, and (though the beast did not run in upon change,) great confusion enfued; some losing hats and wigs, and some their shoes, while others lay upon the ground in heaps, with their limbs bruised, &c. and during the alarm, a rumour of an earthquake prevailing, some threw themselves on the ground expecting to be swallowed up. The cow, in the mean time, took down Sweeting's-Alley, and was knocked down and secured by a carman in Gracechurch-street. This accident probably gave occasion to a motion made the next day in the court of common-council: " That many fatal accidents being frequently occasioned by the driving of horned cattle through this city and liberties, in a careless or inhuman manner, it be earnestly recommended to the right honourable the lord mayor and the rest of the worthy magistrates, to exert

their authority to suppress this growing evil, so contrary to the police of the metropolis, and the security of its inhabitants." Which was resolved in the affirmative, and ordered accordingly.

At a court of commoncouncil held at Guildhall, it was unanimously resolved, " that the freedom of this city, in a gold box of the value of 100l. be presented to the right hon. Arthur Onflow, Efg; speaker of the house. of commons in five successive parliaments, as a grateful and lasting testimony of the respectful love and veneration which the citizens of London entertain for his person, and distinguished virtue; for the many eminent qualifications he displayed, the unwearied and difinterested labours he bestowed, and the impartial and judicious conduct he maintained, in the execution of that arduous and important office, during the course of three and thirty years; and for that exemplarly zeal, which, upon all proper occasions, he exerted with so much dignity and succels, in support of the rights, privileges, and constitutional independencies of the commons of Great

Was tried at Guildhall, before lord Mansfield, chief juftice, the cause so long dependingbetween Samuel Blackden, of Hallifax, in Nova-Scotia, plaintiff,
and capt. Gambier of his majesty's
ship Burford, defendant. The action was brought for damages the
plaintiff sustained in Nova-Scotia,
by the defendant's taking him by
violence from his freehold there,
burning his house, and detaining
the plaintiff unjustly on board the
Burford 125 days; when after a
hearing of three hours, a special

jury

jury of merchants gave the plaintiff 8001. damages and costs of suit. This verdict must give great satisfaction to all his majesty's subjects in America, and increase their esteem a affection for their mother country, whose excellent laws will not fuffer any injury to the fubject in the most remote part of the British dominions, to pass with impunity; and convince all men in power, that they are accountable at home for every arbitrary act, even in the most distant parts of his majesty's dominions.]

James Grattan, Efq; recorder, and Charles Lucas, M. D. were chofen members for the city of Dub-

lin, after a poll of 13 days.

A cause is depending before the parliament of Paris, which deeply concerns the jesuits. The point to be decided is, whether the whole order be bound to make good the obligations of any particular house, or whether each house is to be anfwerable for itself alone. The jefuits, the defendants, demand that the houses of the society may be confidered in the fame light, as the regular abbeys and other rented monasteries. What gave occasion to this trial was, that father de la Valette, procurator-general of the professed house at Paris for its possessions in French America, had purchased estates and effects in Martinico and elsewhere, for which he gave bills on the professed house. The remittances he sent from the West Indies, either in filver or goods, being intercepted by the English, or lost at sea, the house at Paris refused to honour his bills, because they had no effects in hand, This affair being brought before the judge-confuls, they gave a decree for the plaintiffs. The defendants appealed to the parliament. - One of the plaintiffs has produced letters from the general of the jesuits, acknowledging the doubt to be just, and asking him to have patience. If it be determined that these houses are answerable for each other, their credit, and confequently their gains, will be immenfe. other hand, if their houses are adjudged not to be answerable for each other, the credit and trade of each fingly will be greatly diminished.

Mr. Gleditsch some time since read to the royal academy of sciences at Berlin, a memoir, the fubstance of which may not be difagreeable, as explaining a phænomenon which may have been often observed: it is that a dead mole being left on the ground, after a few days is no longer to be feen. and this fooner or later, according to the feafon and the nature of the

foil.

Mr. Gleditsch, in the month of May, left in his garden a mole, on a moist soft, and black earth; two days after he found it a hand's breadth deep in the ground, and the day following this cavity was half filled up; examining further, under the corpse he found four beetles, which he immediately conjectured to be the gravediggers; this was further confirmed about a week after, when, within the mole, he faw three or fourfcore whitish maggots, unquestionably the issue of the beetles, who had there provided them with plenty of fustenance in their infantine state. Further, by repeated experiences, this indefatigable naturalist has been frequently entertained with a large fight of beetles from the fame parental parental

parental cause, inferring moles, frogs, birds, fishes, &c. and concludes with this pious observation. That animals, when become unfit for the uses annexed to their life, immediately after their death acquire others; and thus, even in their destruction, concur to the universal design of the Creator, whose wisdom and goodness is over all his

The reading the history and memoirs of the foreign academies of sciences, must necessarily hinder the notion of our vast superiority in scientific abilities and improvements, from degenerating into a contempt of foreigners, like the narrow question of Nathanael, Can there any good thing come out of Nazareth? On the other hand, as there may be foreigners, though probably very few, infected with the like national prejudices, we would refer them to our Transactions and other publications, as fhining proofs that the poet did not flatter his country when he fays, its natives are

In genius and substantial learn-

ing high

Her fons of glory many. The following are fome particulars relating to the death of fir William Peere Williams, lately killed at Belleisle. Being eager to reconnoitre the works of the citadel, he drew near the glacis, notwithstanding the repeated warning of his fervant, whom he ordered to attend him, and who was very fenfible of their being within the reach of a musket: But his advice being difregarded, fir William was shot by a centinel, and expired on the spot. His body being taken up by some men belonging to

the garrison, the French comman-. dant judging it to be a person of distinction, sent out a drummer to general Hodgson, to request him to fend for the corpfe; which drummer was shot dead by an over-forward foldier in our army. who, for this breach of the laws of war, was ordered to be hanged; but the French commandant, judging it to be a mistake, proceeding from ignorance and zeal to revenge the death of fir William, fent off another drummer with a polite interceffory letter on behalf of the delinquent, who has been pardoned in consequence, and the corpse of fir William was brought back to our camp. 'Tis faid fir William had in his pocket notes to the amount of 2501, which were returned with the body.

Was held the anniversary 7th, feast of the sons of the clergy. The collection at the church, and after dinner, (including a benefaction of 200 l. by the hands of earl Talbot) amounted to 10781. besides 1001. given (as usual) by

Sampson Gideon, esq;

Ended the fessions at the Old Bailey, when feven were 8th. capitally convicted; one for horse stealing; one for stealing mercery goods out of his mafter's warehouse; three for robbing on the highway, one for forgery, and one for fodomy. Thirteen were order ed to be transported, two were branded, and eight were discharged for want of profecution. Of those capitally convicted, four were executed the 27th, the rest have been pardoned; one was reprieved at the place of execution, and fince pardoned on condition of ferving his majesty.

A book

A book entitled, The liberties of France afferted against the arbitrary, power of excommunication, was lately burnt by the common hangman at Paris. The author is M. Huerne de la Mothe. His brother advocates, who brought this disgrace upon him, have also struck his name out of the list of the members of their body. M. Huerne wrote this book on occasion of an actress, being refused the rites of matrimony, as a person excommunicated by the canons.

The following is a translation of the Turkish manifesto

against the Maltese:

" From the mighty powerful grand fultan Ofman, &c. &c. The grand Amurath, illustrious sultan of the Turks, our predecessor, and well-beloved brother, of immortal memory, had conceived the defign of wresting the little rock of the knights of Malta from the Chriftians, and to destroy their ships which cover and infest our seas, but death fnatched him off and prevented his project from taking effect; to us he has left it in charge by his will to fee his defign put in execution. Perhaps we should have deferred the enterprize, had we not been obliged to it by our just wrath against these knights and their abettors; the behaviour of whom, in regard to our ships, is but too shocking. Therefore, taking a quick and lawful resolution, we ordain by this present ordonnance, that our subjects appear at Constantinople in the moon of March, with their galleys, and their other armed veffels; and that all ships in our arsenals be ready at the same time, that we may embark our army, in order that it may imprint terror in the universe; that the whole christian world may feel our just indignation; and that by our invincible power may be made the last massacre of the Christians, &c. &c. &c."

The fleet of the Grand Signior might perhaps be able to exterminate the Maltese, if they were abandoned to their own strength; but it is likely they will be succoured by Spain, who has 36 ships of war all equipped, which joined to those of Naples, the galleys of the Pope, and those of Genoa, &c. may be more that sufficient to render all the designs of the Sultan abortive.

Admiralty-Office. Extract of a letter from vice admiral 9th. Saunders, to Mr. Cleveland, dated at Gibraltar bay, April 6, 1761. " I have the fatisfaction to defire you will acquaint their lordships, that his majesty's ship Isis fell in with the Oriflame, on the 1st instant, off Cape Tres Forcas, and, after a running fight of some hours, took her; and they are now both arrived in this bay. She had been 29 days from Toulon, and one from Oran. The particulars of her lading are not yet known, as her papers of that fort are not yet found.

I am extremely forry to acquaint their lordships, that although the Isis had only four men killed, capt. Wheeler is unfortunately one of that number, who, with two others (a midshipman and quarter-master) were killed by one shot, very soon after the beginning of the action. The Isis had nine wounded, two of them badly. The numbers killed and wounded in the Ori-

flame,

flame, are not yet ascertained, but are supposed to be between forty

and fifty.

They began to engage at fix in the evening, and continued a running fight till half past ten; the Oriflame endeavoured to get to the northward of the Isis, in order to get over to the Spanish shore, to prevent which, lieutenant Cunningham (commanding officer of the Isis) found it necessary to run on board her, which he did, with no other damage to either ship, than the loss of one of his own anchors, very foon after which she struck. She had forty guns mounted, 26 of them twelve pounders, and 14 eighteen pounders, and upwards of 370 men.

As lieutenant Cunningham, and all the officers and people, appear to have behaved extremely well in this action, I cannot omit recommending him carneftly to their lordfhips favour; and, for the prefent, I have given him an order to command the Oriflame, till their lordfhip's pleafure be known, whether fhe shall be taken into his majestys fervice. She fails remarkably well; has lately had a thorough repair; is well found in all respects; and carries her ports extremely well, though now deep.

Paris, April 27. The publick cannot guess what may be the crime of the counsellor who drew up the memorial for Ambrose Guy against the jesuits: it is to be suppose that the judges of the Chatelet, by whom he has been tried, knew what they were about. His fentence imported, that he should be whipped, branded, and sent to the galleys for three years. After this sentence was read to him the 22d

instant, he found means to cut his arteries, and the next day he was found expiring in his cell: upon which a profecution was instantly commenced against the corpse, and in the afternoon of the same day it was hung up by the heels, and then dragged through the streets on a hurdle. [Probably it was not for drawing up a memorial, but forging an arret of the council of state in savour of Ambrose Guy's heirs, with which the jesuits were regularly served, but which the council soon after disclaimed.

The feveral divisions of the Middlesex militia were mustered in the Artillery ground, Tothill-fields, Lambs Conduit-fields and White-Conduit-fields, where they received their new cloathing, &c. and afterwards marched off in different parties, for Hampstead, Highgate, Hendon, and Finchley, to be quartered there till further orders.

A fire broke out at Waltham-cross, which in a fhort time, reduced the whole building to ashes; and another at Hungerford, Berkshire, by which several houses were consumed.

By the last advices from Malta, they were very bufy in fortifying the places that are most accessible, cleansing the cisterns, changing the water in them, airing certain provisions in the magazines, inspecting the arms in the arsenals, and making new muskets, &c. On numbering the people in the island, they have found fifteen thousand men fit for military service. They write from Rome that the Pope is going to make an augmentation in his troops, and has ordered his galleys to keep constantly cruising

on

on the coasts of the ecclesiastick

State.

There has lately been published at Wittemberg, a fecond edition of a very curious piece, intitled, De Polyphago et Allatriophago Wittebergensi Dissertatio, præside D. G. R. Boehmer, resp. C. G. Trenzel. This is an account of one of the most prodigious eaters ever heard of: This man, at pleasure, for he did it only to get money, would eat up a whole sheep, or pig, and fometimes a bushel or two of cherries, stones and all; and even things of a destructive quality, and which other men would on no confideration attempt, did not affrighten him, breaking with his teeth, mafticating and fwallowing earthen and glass vessels, and flints. He has been seen to ingurgitate a bagpipe with all its appurtenances, living creatures, birds, mice, and catterpillars by handfuls. And, what feems beyond all belief, a tin standish being offered him by way of defiance, he made no bones of it, but devoured it, together with the pens, penknife, ink, and fand. This last fact, indeed, is fo strange, that though there it passes for certain, though the celebrated. author of this differtation makes no question of it, and seven credible witnesses made oath of it before the worshipful senate, it is apprehended, many will reject it as an imposture. This enormous eater, however, was uncommonly strong and robust, and continued his atchievements, which turned to good account, to the age of fixty years; when, betaking himself to a regular life, he reached his 70th year. On opening his body, the author discovered many extraordinary particulars, of which he gives a very circumstantial account, together

with the history of several other excessive eaters; and concludes with an enquiry into the causes of such a strange faculty.

Six hundred prisoners set out from the King's-bench, the new goal, and marshalsea for Ryegate, to take at the fessions there, the benefit of the late infolvent act.

To the Printer.

"SIR,

The machine (see page 98.) lately mentioned in the publick papers, being painted in such glaring colours, obliged me to think the picture (no other than what the witty apes of these times call humbugging) drawn by fome finish'd Boniface of Richmond, by way of invitation to the curious Londoners, that he might have the opportunity of shewing them the excellence of his wines, &c. But having business at Richmond yesterday, I found myfelf most agreeably deceived in my conjectures. That there is a machine there for the capture of fish, is most certain, your description of which, I assure you, is far short of its excellency. I saw it work, and in my opinion, there never was an invention fo fimple in itself, and so serviceable to mankind in general, and to this nation in particular. To me 'tis plain, if this invention is properly encouraged, Great Britain cannot fail of rivalling all Europe, in the cod and ling trade. I should not have troubled you with this, had I not thought it the duty of every individual in Great Britain, to expose his thoughts in all things that may tend to the honour and interest of the nation.

Thames-street, I am, Sir, &c. John Dervill." May 15. Extract

Extract of a letter from Bourdeaux, April 25.

On the 19th of this month, the wind being at S. W. between eleven and twelve at noon, there fell here a shower of yellow powder, resembling the flour of brimstone, but of a little deeper colour, which foon lay a quarter of an inch deep in many parts of the city. The inhabitants having never feen the like, were greatly alarmed; their minds were possessed with a thousand frightful ideas. Pure sulphur could proceed from nothing but fome dreadful volcano; they expected torrents of fire to follow the eruption, and every minute to fee the earth open and fwallow us all. In a word, the final dissolution was thought to be at hand. While the multitude were foolishly terrified with their own chimeras, our phyficians and some other sensible citizens coolly collected this powder, examined it with attention, viewed it through a microscope, and foon discovered the simplicity of the phænomenon. It was nothing more than the dust or powder of the stamina of the flowers of pines, which abound in the lands fituate on the fouth of Bourdeaux. A ftrong S.W. wind having, doubtless, blown off great quantities of this duft, brought it hither and spread it over the city. Some more fell the 21st. and the wind continuing to blow very hard, it has been again examined by a microscope, and appears, like the first, to come from the flamina of the pine flower. All therefore, furprizing in this, is, that the like thing mould not be remembered to have been feen in Bourdeaux, fince the fame apparent causes have subsisted a long

Some letters from the 15th. Hague mention, that the famous Polish countess and her dwarfs. are now the only subjects of the conversation and diversion of the nobility and gentry in Holland, for their witty expressions. The princess Nassau Weilbourg, having one of those dwarfs upon her lap, faid, "Are not you very forry you are not taller." " No. (replied he) if I was, I should not have the honour to fit upon your ladyship's knee."

See an account of these surprize ing children in our last volume, under the head of Natural History,

page 78.

About two o'clock the caissoon for the first pier of 19th. Black-friars bridge was launched with great dexterity, and no damage done either to it, or the scaffold, which supported it; but the populace were disappointed of seeing it float from the fixed part of the stage. by the tide not flowing fo high as it generally does about the full of the moon, on account of a firong foutherly wind, which occasioned some perfors to suppose there was a failure in the execution of the defign.

Mr. Godfrey's experiment for extinguishing fire, was tried in the house erected for that purpose, by the fociety of arts, &c. in Marybonefields. The duke of York, prince William, and prince Henry, several persons of distinction, and a numerous crowd were present. hundred and forty of the footguards attended on this occasion.

[See an account of this experiment, &c. in our article of Projects for this year, page 146.

Fifty-four French prisoners escaped from Winchester castle. Near

eighty

eighty more were taken out of the

The gardeners round Lambeth are peftered with vermin called flying moles; their fore feet are like the wings of a cock-chaffer. No vermin can do greater damage than they in a garden; they cover themfelves at the root of the vegetable, and eat it off, particularly the cucumbent plants. Several persons are now employed in destroying them.

Paris, May 9. The great caufe between M. Lioncy, of Lyons, and the jesuits, who refused to honour the bills drawn on them in the West-Indies, by M. de la Valette, to the amount of 1,500,000 livres, was decided yesterday in favour of the plaintiff, who obtained 50,000 livres as an indemnification for his bankruptcy, occasioned by the jefuits refusing to pay. The court being informed that many others had demands of the fame nature, and waited only for the decision of this cause, to bring their actions, declared that all the houses of the fociety in France, except the colleges, shall be responsible, with the general of the order residing at Rome, for each other. The jesuits are ordered to pay M. Lioncy's money immediately, and to pay all M. de la Valette's other bills within a year and a day. Lastly, the fociety and all its members are prohibited to trade any more. This is a mortifying affair to the fociety.

At a meeting of the society of arts, their approbation and thanks were ordered to Mr. Godfrey for his experiment of yesterday.

A gratuity of twenty guineas was offered by the same society to the person, who, within the month of Vol. IV.

June ensuing, shall produce the best drawing and likeness of his present majesty in profile, from which a die of a guinea may be executed with the greatest propriety.

The method lately taken by the right hon, the lord-mayor, at the adjournment of the general quarter fessions of the peace at Guild-hall, when a great number of poor prifoners were discharged from Ludgate, the two Compters, and the Fleet, was the most humane, concife, and judicious imaginable; no person was returned back for frivolous objections, or for bare opposition, as has formerly been the custom; it being observed that it was the business of the court to clear the prisoners, agreeable to the tenor of the act, as any one who in the least falsified his oath. lay open to the penalties of the law. which it was incumbent on the creditor to prove afterwards.

Sunday night last the servant of a green-grocer in Piccadilly, after the family were gone to bed, robbed the house of all the linen that was looked out to be washed the next morning, and other wearing apparel; after which she set the house on fire in three several parts of the kitchen, by putting lighted similar coal against the wainscot; and then made off. Some of the family being awakened by the smoke, happily extinguished it, before it had communicated itself beyond the wainscot and furniture of the room.

Two cabins at Stillorgan, near Dublin, were lately confumed by fire, and a woman, a girl, a boy, an infant, and two horses, perished in the slames.

We hear by letters from Rome, that digging lately in the vineyard of St. Cefarea, on the Appian way, near the Latin gate, they found, in two subterranean apartments, four sepulchres of Greek marble, with two superb vases of marble of a very hard kind, used in baths; having a beautiful head of a lion on each side, and the head of another fierce animal in the centre, near the bottom. These vases are said to be ten palms in length, and sour high; and the property of the jesuits of the Clementine college.

which the grand master of Malta requests of the holy see, a new mount of piety has been erected at Rome, under the title of St. Paul, of the Religion of Malta, the actions whereof are said to be nearly

full.

The receivers of the order of Malta have borrowed a confiderable fum of the bank of Venice, the reimbursement of which is assigned upon all the commanderies.

The Turkish armament has so much alarmed the Genoese, that they have concluded to send the same succours to the Maltese, that they did in the year 1717; and all their gallies are to join those of the two Sicilies and Malta.

Four hundred pounds eighteen shillings was collected at the fermon and feast of the city of London lying-in-hospital.

About half an hour after nine in the evening, the warehouse and work-shop belonging to Mr. Pym's paper-mill at Bramshot in Hampshire, were wilfully set on fire by one of his apprentices. There being a great quantity of pitched rope and rags in the warehouses, they were burnt to the ground in a few minutes a and the mill was with great difficulty saved. The damage

is computed at 600l. The boy has confessed the fact, and is committed to Winchester goal, in order to be tried at the next affizes.

Died the truly ingenious Thomas Simpson, F. R. S. 22d. master of the royal academy at Woolwich.

A curious botanist at Fulham. has imported from America, a most wonderful production of the vegetable creation, viz. a kind of melon, which weighs fifty pounds, is four feet round, and thirty-two inches long; the body is fluted like a pillar of wood or stone, and between the flute is a regular number of prickles, as sharp as thorns, and in shape resembling spur-rowels; these prickles are about an inch long each, and at the extremity of the head are four round excrefcences of folid substance, in the form of monks caps, and overgrown with a reddish bristly substance as hard as a brush. production is greatly admired by the virtuofi.

Hans Stanley, Esq; his majesty's minister to the court 24th. of France, set out to embark for Calais.

Thursday sevennight the rev. Mr. William Cullis, at Bristol, stooping down, in order to pick up a paper he had dropped, instantly expired. — What is somewhat remarkable, his brother died in the same manner some time since.

Capt. Edward Power (late of the ship Dublin) of the Tuscany of Bristol, bound for Newsoundland, arrived at Belfast, brought advice that on May 1, in an engagement with the Duke de Biron privateer of Dunkirk, the Tuscany blew up and sunk in a few minutes; and out of 211 persons, including passengers,

a conly

only the captain and four or five were faved; among whom was a young infant, that was blown into the privateer, and found on her deck after the explosion, without having received the least injury.

The new knights compa-26th. nions of the most honourable order of the Bath, were installed in Henry the VIIth's chapel, viz. The right hon, lord Carysfort; the right hon. lord Blakeney; the hon. lieut. gen. Sir Joseph Yorke; Sir James Grav, bart, Sir William Beauchamp Proctor, bart. Sir John Gibbons, bart. Admiral Sir George Pococke: major general Sir Jeffery Amherst; major gen. Sir John Griffin Griffin; Sir Francis Blake Delaval: Sir Charles Frederick; Sir George Warren: Admiral Sir Charles Saunders.

After the procession, the following oath was administered by the dean, Bath holding the book. You shall honour God above all things; you shall be stedfast in the faith of Christ; you shall love the king your fovereign lord, and him and his right defend to your power; you shall defend maidens, widows, and orphans in their rights, and shall fuffer no extortion, as far as you inay prevent it; and of as great honour be this order unto you, as it ever was to any of your progenitors, or others.28

Divine fervice being ended, the dean gave the following admonition: "I exhort and admonish you to use your sword to the glory of God, the defence of the gospel, the maintenance of your fovereign's right and honour, and of all equity and juffice, to the utmost of your

power."

On their return, the king's mafter cook, having a linen apron on,

and a chopping knife in his hand. repeated to each new created knight the following admonition: "Sir. you know what great oath you have taken, which, if you keep, it will be great honour to you; but if you break it; I shall be compelled by my office to hack off your fours from your heels."

In confequence of a writ of mandamus, from the court of King'sbench, Dublin, for restoring Dr. Charles Lucas, lately elected one of the members for that city, to the liberties and franchifes of the city of Dublin, when the doctor was

restored accordingly.

The house of lord Annesley, at Castle Villain, in Ireland, was burnt to the ground, and great quantities of houshold furniture. &c. consumed.

According to the last accounts, received by the last Flanders mail, the king of Prussia is likely to be involved in a quarrel with the canton of Berne, on account of his interpoling as lovereign in some religious disputes, relative to the punishments of the dead, which had been carried on with great vehemence in the province of Neufchattel: which this last canton resenting. they have implored the protection of that of Berne.

The academy of inferiptions at Paris has lately loft a valuable member, or rather prodigy, in Abbè Fenel; when only in his 14th year he undertook a treatife of geography; at feventeen he exercised his pen on divination, hermetic philosophy, and the construction of the universe; at twenty he immersed himself in the depths of metaphysics; thence proceeded to morality, the law of nature and nations, polity, and all the [I] 2

died."

branches of philosophy; he ascended the heights of sublimer geometry; penetrated into algebra; applied calculations to optical, astronomical, and physical problems, and extended his knowledge thro' all the sciences, divinity, physic, the Oriental languages, and universal history, sacred and prophane not excepted.

Extract of a letter from Copenhagen, April 12.

during the year 1759, 1079 were the eff cts of the small-pox; that is to say, within the compass of only one year, this distemper, which to some authors seems so mild and clement, has laid in their graves the hundredth part of the inhabitants of this city. How may they congratulate themselves, who, by inoculating their children, have prevented those afflictive cases,

which are fo bitterly lamented by

those unfortunate parents who are

fwayed by old prejudice. Of 200

inoculated, not so much as one

"Bishop Pontoppidan, so well known for his history of Norway, has nearly finished a large work on the antiquities of this capital; which will be found much more curious than foreigners imagine, and in regard to them, he has writ it in Latin."

Boston, March 30. From Wrentham we are informed, that there hath been lately made in that town, a Dutch machine, for winnowing grain, viz. wheat, rye, barley, oats, Indian corn, stax-seed, clover-seed, &c.—It was made by the direction of a gentleman in the Jersies — From thence we are affored, that two boys can winnow 100 bushels of wheat in one day, and do it in the

best manner. It makes all the wind it wants; and lays the grain, the chaff, and the cobs, in three different heaps.—That it has been tried at Wrentham with the beforementioned forts of grain; and anfwers the utmost expectation. That two boys, about 15 or 16 years of age, winnowed 21 bushels of rye, in 50 minutes, in the best manner; which a gentleman, with his watch, who was present, can attest to; and fince which, it winnowed 50 bushels in one hour and a half, done as well as the other.—It is esteemed a useful instrument for a farmer; and being not very cumbersome to move from place to place, might ferve a large neighbourhood. —The director of this inftrument expresses himself thus; "I should be glad if the most useful arts, and best methods in husbandry were more generally known; it; would afford the husbandman renewed cause of praise and thankfulness to that God who doth instruct him with direction."-We are further informed, that on Monday last it winnowed 40 bushels in one hour. as can be attested by many witnesses.

Petersburgh, April 10. On the 30th past arrived here with a retinue of 76 persons, the reigning prince of Georgia, father of the prince Heraclius who has rendered himself famous in the civil wars of Personal He comes, after the example of his predecessors, to pay his compliments to the Czarina, and was received with all the honours due to his high rank.

He had not been here above five or fix days, when he received letters from prince Heraclius, advising that the disturbances in Persia are greater than ever; each chan or lord

ulurping

vulurping the fovereignty of his particular diffrict; and these usurpers make war upon one another in support of their usurpations; whilst the great lords fight with the utmost animosity for the crown itself.

Florence, April 14. The knights of Malta, refiding in the empresqueen's dominions, are forbid by her majefty to go to the affiltance of their island, for fear of disobliging the Turks. According to the most common estimate, it consists of 20 ships of the line, six galleys, many smaller vessels, and some cordairs that were ordered to join it.

We learn from Holland, that a little while ago, the Narden waggon was stopt by the French, who took out of it a large fum of money, and other effects. The Dutch ambassador at Paris presented a memorial demanding restitution. The French minister at the Hague hath fince represented to the states general. " That the king his mafter was furprized, that they should claim money which could be undeniably proved to be defigned for the allied army; that it had indeed been feized, on the territory of the republic; and therefore when their high mightinesses should give his majesty fatisfaction for the outrages and damages suffered by his subjects from the English on Dutch territory, particularly in the affair of the Felicité frigate, his majesty would give them just satisfaction, being defirous, that their high mightinesses should enjoy the benefits of their neutrality in its full extent; and that in the mean time he would restore all the merchandizes belonging to the subjects of the republic, which were taken out of the waggon."

A fet of fine cream coloured 30th. horses, and several other coach

and faddle horses from Hanover, were landed at Tower-wharf for his maiesty's service.

Boston, March 16. Last Thursday morning about half an hour after two, the people of this town were awakened with an earthquake. which lasted about twenty seconds. but without doing any damage to our houses .- It was divided into two thakes, with a fhort paufe between; and the last was the greatest .- The weather was moderate for the feafon, like that of the preceding days, and a perfect calm rested upon both land and water. The flars over head shope clear: but the horizon all around was eovered with a whitish fog, which appeared as if there had been a light behind it.

We also learn by some sisterment that were upon the water coming in at that time, that the course of this earthquake was nearly from the S.W. to the N.E. and that they perceived the noise, as of a distant rising wind, some considerable time before the shaking came on.

The colony of Connecticut has provided for raifing and equipping 2300 effective men; Rhode Island 665 men; Massachusets Bay 3000, and New York 1787 men, for the enshing campaign in America.

Augsburgh, where the congress is to be held, is a very large and elegant city of Suahia, (a circle in Germany, subject to several princes and states) situated on the river Lech and Wardour, 36 miles east of Ulm, and 65 south west of Ratisbon, 220 west from Vienna, and 33 north west from Munich. It is an imperial city or sovereign state, being governed by the town council, and the representatives of the burghers in the first, the execu-

tive power is lodged, and in both the legislative authority; there is a large territory about Augsburgh, subject to this city. Half of the burghers are protestants, and the other half papists, who have an equal share in government, and the choice of their representatives. Here it was the Lutherans presented their confession of faith to the emperor Charles V. at the diet of the empire, in the year 1550, from hence called the Augsburgh confession, which occasioned a civil war between the protestants and papists, that lasted upwards of twenty years. The bishop is one of the ecclesiascal princes of the empire, by virtue of the territories annexed to his bishoprick, but has no share in the civil government of the city. The inhabitants, in expectation of a vast concourfe of illustrious strangers, demand excessive prices for their houses. They infift on from 15 to 18 thousand floring per ann. for indifferent houses, and if they are to be accommodated with stables, &c. they must pay 3000 more.

31st. An as went 100 miles in 21 hours at New-market. The bett was 100l, to 10l, he did not perform it in 24 hours, and the

owner won 40l. to 20l.

Arrived in town M. Bufly, the French minister. He was detained near a week at Calais, by contrary winds. Mr. Stanley and he met there, and had a conference of some bours.

Died lately Peter Champagne, of Mayac, in Perigord, France, aged 100.

William Bruguier, a French re-

fugee, at Berlin aged 103.

Joseph Standley, of Aston, near Birmingham, in the 106th year of his age: at a hundred he

had all his fenses perfect, and in appearance feemed to be but 70; he would, with chearfulness, relate what happened remarkable in his youth, with clearness and perspicuity; in his decline, he was pleafant in conversation, and in rapartee jocose and agreeable. Being lately told by a young lady, how handsome he looked (which was the case, considering he was 103) he replied, "I thank you for the compliment, madam, but what would you have faid if you had feen me his pleafantry, for he told them as they were taking him from his bed, "They were carrying him to Rumford to have his backfide newbottomed." His illness was a fever, in which he laid about fourteen days.

JUNE.

Was decided a remarkable wager of 1000 guineas, between Mr. Shaftoe and Mr. Meynell, that a man rode 29 hundred miles, 29 days fucceffively, which was performed, without much difficulty, by Mr. Woodcock.

M. Buffy waited on Mr. fecretary Pitt, the earl of Bute, and the duke of Newcassle, and afterwards

went to court.

Began paying at the pay-office the fum of 20,0001 granted to the crews of his majesty's ships Nassau, Harwich, Rye, and Swan sloop, as also the marines who were on board at the conquest of Senegal, May 1, 17,58, which sum has been raised from the effects taken at that place.

At one o'clock in the morning, it being high water, and the wind at north, the caffoon, belonging to the intended bridge at

Black-

Blackfriars, floated with the greateft eafe; and was immediately conveyed to its proper moorings within the piles drove for that purpose.

Was tried at guildhall, before lord Mansfield, by a special jury of merchants, a remarkable cause between a merchant and a wharsinger: the matter in dispute was, whether the wharsingers are accountable for the thests committed on board their lighters; and after a long hearing, it was unanimously determined by the jury, without going out of court, in favour of the latter; and that no goods are under the charge of the wharsinger, but remain under the care of the ship's agent, until

passed the king's beam.

Omar Effendi, lately atrived ambaffador from Algiers, had his first audience of his majesty, to deliver his credentials: the ambafsador brought over, as presents to his majesty, &c. 24 fine horses, a lion, two tygers, and fome curious fheep. The ambaffador was very defirous of having the lion and tygers he brought over as a present, led before him, which could not be granted; however, the fine horses and curious sheep he intended for his majesty, were admitted into the cavalcade, but could not (as he expected) be drove into the apartments for the king to fee them; at which his excellency feemed fomewhat difgusted, 'till he was affured by the lords in waiting, that it was contrary to the custom of this country. His majesty viewed them in the royal garden, from the windows of the palace, The ambassador being admitted into the royal presence, the king told him he was forry that his excellency had such a bad day for his publick entry. No, fire, says the ambassador, it is not a bad day, it is a very fine, it is a glorious day for me, when I have the honour to behold so great a monarch as your majesty.

Extract of a letter from Paris, dated May 22:

" In 1672 and 1686, Caffini, with a telescope of 34 feet, thought he perceived a fatellite which revolved round Venus: but no astronomer hath feen it fince, till the 3d of this month, the 4th and the 7th, when it was discovered by M. Montagne. M. Baudouin, a member of the grand council, who put Montagne in the way of obferving it, read, in the royal academy of sciences, on the 20th, a memoir, in which he determines the revolutions and distances of the fatellite; and deduces all the confequences that may refult from this It follows from his calculations, that this fatellite is about a fourth of the diameter of Venus, and is distant from it as bout fixty femi-diameters of that planet. It performs its revolution in nine days feven hours. Its afcending node is in the zzd degree of Virgo. Its greatest digression to the north, was on the 7th at nine at night. M. Baudouin hopes to fee this fatellite pass of ver the fun some hours after Venus. fuppofing M. Montagne's observations to be perfectly exact." This fatellite was also feen by Mr. Short, F. R. S. in 1740, an account of which is in the philofo phical transactions of that year.

Being the anniversary of his majesty's birth, when he 4th entered the 24th year of his age, it was celebrated with the utmost

[1] 4 demon-

demonstrations of joy. There never was a more brilliant court on any occasion. Most of the ladies cloaths were gold and silver brocade. The gans in the park and at the Tower were discharged, and in the evening several curious fireworks were played off on Towerhill, St. James's square, Leicesterfields, Kew, and Richmond, with illuminations in the houses, and a grand ball at St. James's.

At the duke of Newcastle's entertainment was a curious desert, representing the citadel of Palais, and his majesty's forces now be-

fleging the same.

The hay-makers being diffressed by the rainy weather, near 30 l, was collected for them, at two several times, by the merchants, &c.

on the royal-exchange.

While some young gentlemen were drinking lately at a tavern in Whitechapel, one of them who happened to be confiderably in debt, was informed of two bailiffs loitering about the door; on which they held a council, and came to a refolution to fend for two men, who lived just by, who were ordered to nail the two bailiffs by their cloaths to the post which they leaned against. This being effected unperceived, they gave the men a crown for their trouble, and paying their reckoning went out; when the bailiffs going to do their duty, and attempting to move from their station in a hurry, each of them got a most violent fall on the stones, and before they could difengage themselves, the young gentlemen made off. The mob who were gathered about the bailiffswere highly diverted with the affair.

5th. council, it was unanimously

refolved to present the freedom of this city in a gold box of 150 guineas value to his royal highness the duke of York, one of the rear admirals of the blue squadron of his majesty's fleet. Resolved also, that 2000l. the money lately received for the city remembrancer's place, should be returned, and that the place should be a gift to be disposed of by the common council, for the future.

A gentleman, who travelled last year thro France, observed that in all the provinces where the chief business of the inhabitants was husbandry and agriculture, the people in general were taller, stronger, less volatile, and more populous, than those who cultivated vineyards; though no sensible difference could be found in the climate. This remark, supported by a detail of natural reasons, was communicated to a member of the society of agriculture in France, who hath laid it before the mi-

nistry.

This morning the long expected transit of Venus was 6th. observed by many curious gentlemen, with fuitable apparatules, and by comparing notes, it appears, that it differed very little from doctor Halley's computation; which shews the great perfection to which aftronomical observations have arrived, and from thence what greater usefulness may be expected; fince it appears from the observations, that at two places, viz. one at the east, the other at the west of London, the time of the absolute emersion was at one of them thirty-five minutes three feconds after eight, and the other thirty-five minutes feven feconds after eight. And the accounts

fram

from different parts of England and Holland too, give the greatest fatisfaction with respect to the faid phænomenon; and to establish the truth, that there is a fatellite like our moon, which performs a courfe in twelve days about her.

This week was presented to fir Edward Hawke, by the hands of lord Farnham, the freedom of the city of Dublin, in a gold box, as a mark of their gratitude to that gallant officer for his great fervices, particularly for his victory over M. Conflans, on Nov. 20, 1759.

The following threatening oth. letter, directed to Mr. George Catter, being found near Haverhill in Suffolk, his majesty's pardon, and a reward of 201. are offered for the discovery of the accomplices therein, except the perfon who wrote the fame.

" Mr. Catter. Bumfted of the Recept of this goo and Tell Hemsted Pickett and Milleway and all the Rest of your Heaverill Gang of the Bandity that so Vilinously oppose the Gorspell being Preached that if we meet with any more affronts or abuse when we Come again as we Intend to Doo on the 17th Instant we are Resolved to Reveng itt on your Parssons or Houses for as wee have lifted under the Baner of Christ our Captain we are on and al; deturmin'd to stand by on another our Number is Larg and our Caus good therefor we fett all your Mallis att Defians Dont fay You had no Notis or worning for Wee are so prepar'd that we fear you not thefor tak Care what you doo I am order'd by my Brethren in the Lord to Sighne for the Rest your Friendly Moneter five Hundred or the Gospel Legion,"

Lisbon, May 5. A few days ago a priest, whose brain was touched, but otherwise a good fort of a man, infifting that he felt the shock of an earthquake between twelve and one in the morning of the 22d past, a foldier, who was then on duty, gave him the lye. Upon this the priest called the foldier infidel, heretic, and one who feared neither God nor man, which the foldier refenting, he laid fome heavy blows with the but end of his musker on the priest's back, and would probably have finished him, had not fome by standards interpoled. The affair being carried before a magistrate, the ecclesiastic was ordered to be confined in a madhouse for fix months, and the foldier to be exempted from night duty during the same space of time.

A confiderable shock of an earthquake was felt this day 9th. at Sherborne, Shaftesbury, and other places thirteen miles round, about five minutes before twelve. I be soon

At Lower Areley, in Worcesterfhire, is now living a woman og years of age, who can read finall print without spectacles, and is of great vivacity and comelines for a person of such an advanced age.

A letter from Madrid has the following paffages All livery fervants, as well those of illustrious blood as of low extraction, except fuch as belong to the king, are forbid to wear fwords." There are nobles of Galicia, Afturias, and Biscayes amongst the valets of Spain; and, notwithstanding their humble state, they retain a great part of the prerogatives of their

Came on at the King's 3th, bench, Westminster, a cause 3th, wherein one Mr. Butler was plain-

tiff, and one Bell defendant, on an action for the defendant's dog being loofe, and biting the plaintiff's hand, fo that he loft the use of three of his singers. The jury brought in a verdict of 2001, and advised the defendant to hang his dog, for fear of farther mischief.

Gloucester, June 6. Yesterday a man, who was washing sheep in a pool at Tibberton, in this county, let one of the sheep get from him, and, endeavouring to catch it, sell into a hole very deep in the mud and water, and was suffocated; one of his companions, who stood on the bank, immediately jumped in to assist him, and met with the same sate; and a third, who was with them, in endeavouring to help them, fell in also, and was drowned.

A letter from Stockholm gives the most melancholy account of the distemper amongst the cattle, with which the province of Finland has for some years been afflicted; it now affects even the men who atfend the fick cattle, or who flay the dead : a flout young fellow after flaying a cow dead of the diftemper, at night laid himself down on the fkin, wrapped it about him, but the next morning was found quite stiff and dead. "The most ingenious Mr. Hartman, continues the letter, has advanced, that the fymptoms of this distemper in the human species, perfectly correspond with those of the English sweating: we fometimes burn the liver, milt, and lungs of the dead beafts, and administer the powder of them to the fick beafts, on account of the volatile falts in these ashes: I hear that now they are beginning to burn whole carcales for the same use; and likewise to prevent the air from being infected by fuch a number of putrified carcases, the cow-houses also are sumigated with sulphur,

gunpowder, and vinegar."

Letters from Smyrna, dated the 6th ult. fay, "The report of the Turkish armament being destined against the pretended usurper of Egypt, is here looked upon as an idle ftory. It is true that Ibraham Kiaja extends his fway of government beyond the usual limits: but it is far from being to the disadvantage of the Ottoman Porte, as, by his difinterested and spirited exections, he keeps the haughty and oppressive pachas within due bounds. It is computed the revenues of Egypt amount to 100,000 purfes per day; of which enormous fum, hardly one tenth part enters into the exchequer of the Grand Signior, on account of the avarice of the pachas, and other frauds; and as the revenues have. confiderably increased of late, Ibrahim Kiaja will be supported as a most useful vasfal to the Porte, by the strongest political cement, which is common interest. As nothing is fettled in Persia, there is no hope at present of reviving the stagnated

Sir Thomas Harrison reported to the common council of London, the answer that the Rt. Hon. Arthur Onslow gave him in writing, when he attended him with the freedom of this city, in pursuance of an order of this court: which was as follows:

Mr. Chamberlain,

of gratitude, this great mark of refpect the city of London is pleased to shew towards me in their gift of the freedom, and which I can only impute to the high regard the citizens of London bear to the house of commons, and as a testimony for

their

their esteem for those who faithfully perform their duty to the public there.

"The expressions of good will and kindness to me, which are used in conferring this honour upon me, however little deserving I may think myself of them, do indeed affect me extremely, as an argument of the favourable opinion the city of London entertains of my fincere and dutiful endeavours to support, upon all proper occasions, the rights, privileges, and constitutional independence of the commons of Great Britain.

"I beg my lord mayor, aldermen, and the whole of the common council will accept my respectful and humblest thanks upon this occasion, and be assured of my confiant and warmest wishes that this great metropolis may ever slourish in all prosperity and dignity—in a dignity that becomes the metropolis of a great kingdom, and of which the city of London is so considerable and respectable a part."

The lord mayor, aldermen, and common council, &c. of this city, waited on his majefty at St. James's with an address on the

taking of Belleisle.

His grace the duke of Bridgwater, with the earl of Stamford, Francis Reynolds, Efg; and several other gentlemen, went to Boston, to see the water turned into the canal over the river Irwell, which drew together a great number of spectators: as soon as the water had risen to the level of the canal, a large boat, carrying 50 tons, was towed along the new part of the canal, over the arches, across the river Irwell, which were so firm, secure and compact, that not a single drop of water could be perceived to pass or ouze through any of them, although the surface of the water in the caual is 38 ft above the surface of the navigable river under it. This canal will be carried on to Manchester with all expedition, and will be compleated before Lady-day next; and, in the mean time, the subterraneous navigation to the colliery will be perfected.

Newcastle, June 13. Sunday morning a whale about 44 feet long, said to be a bone-sish, ran ashore under the cassle of Burnt-island; where the country people with forks and other instruments soon killed it.

A remarkable cause was 18th tried in the sheriffs court in Guildhall, on an action brought against a carrier for stopping a goose which was fent to a gentleman last christmas, because the gentleman did not pay the porter a shilling for his trouble of carrying it to the gentleman's house. It appearing to the jury that the porter had charged as much more as ought to do, and that the carrier had no right to stop the goose for the porterage, the jury brought in a verdict for the plaintiff of three shillings damages, and costs of suit.

Thomas Higginson was tried before his majesty's justices of 20th. the peace for the city and liberty of Westminster, on an indictment for a nusance, to wit, for keeping a place in James-street, near the Hay-market, for his lucre and gain, for boxing, cudgel-playing, cock-sighting, and other disorders, to the great nusance of that neighbourhood; of which offence he being convicted, the court set a fine on him, and bound him to his good behaviour for sive years.

A brace

A brace of carp were presented to her royal highness the princess of Wales, by a gentleman of Chancerylane, which weighed 28 pounds and a half: they were catched in a pond, near Godstone in Surry.

Major Rooke and Capt. Barton, who brought an account of the reduction of Belleisle, have been ordered a prefent of 500, each.

Extract of a letter from Helstone in

Cornwall.

A method has been discovered of preserving the timber of ships bottoms under water from worms and weeds, which is under the confideration of the fociety for the encouragement of ufeful arts and manufactures, &c. It is some years fince that fociety fent fix planks, prepared by the inventor, to Kingfon in Jamaica, by way of experiment, and a proof was made on one of the piles of the pier at Penzance, which no worm or weed has adhered to, tho' it has lain in the water five years. - An invention of the greatest utility to this nation."

and Sir Robert Ladbroke, with many other gentlemen of the committee for building Black-friars bridge, went on board the caiffoon, and laid the first stone of the first pier. And a medal of his present majesty, let into black marble, was likewise laid by desire of Sir Francis Gosling knight and alderman: the inscription thereon is as follows;

On the 23d Day of June, 1761, In the First Year of the Reign of

KING GEORGE III.
The first Stone of this the first Pier
was laid by Sir ROBERT
LADBROKE, Knight, Alderman, and Chairman of

The Committee appointed by the Court of Common-Council to carry into Execution the Act of Parlia-

ment for building a bridge cross the River Thames at Black friars, to the opposite Side in the county of Surry.

ROBERT MYLNE, Architect.
JOSEPH DIXON, Mason.

His majesty was been pleased, upon a surrender of her royal highness the princess Amelia, to grant unto John earl of Bute, one of his majesty's principal secretaries of state, the office of ranger and keeper of his majesty's park, called the New park, near Richmont, otherwise Richmond, in the county of Surry.

Upwards of 300 prisoners 24th. from Ludgate, the two compters, and the fleet, were discharged at Guildhall by the lord mayor. A poor woman, who was brought there in a chair on account of her ill state of health, in expectation of being cleared, expired in the chair on

her return to prison,

The price of beer was raised, to 3d. 1 per, quart, by many publicans, at the infligation it is faid of their brewers, on account of the new duty upon malt; but they foon fold it at the old rate of 3d. as they found their houses deserted by their custor And foon after many of them, at a meeting held by them, came to a resolution to let it remain there. Some tumults were occafioned thereby, in many parts of the town, where labouring and poor people chiefly live, and great discontent and murmuring every where. Several of the Westminster publicans were on this occasion carried before a magistrate, and fined 5s. each, it being contrary to an act passed in the reign of king William III, which fixes beer at 3d. per quart. The publick alledge that, though malt and hops were, about

four

four years ago, at double the price they are now, the brewers, without advancing their price, made great fortunes, and that the additional duty of 3s. per barrel, reduces their profits but one thirteenth part of the whole, that is to fay, where a brewer heretofore cleared 1,3001. he may now, notwithflanding this new tax, clear 1,2001. and so in pro-

portion for other fums. Bath, June 18. On Sunday last the most barbarous murder that has been heard of for many years was committed between Hilperton and Trowbridge on the body of one Mary Allen, by feveral men, who are yet unknown. It is thought they wanted to be rude with her. and her refuging to confent provoked them to be guilty of this horrid crime. A large quantity of blood was foilt on the place where she was found, and a flick of an amazing fize was taken out of her body, on its being opened by order of the coroner. Humanity obliges us to omit many of the particulars we have received concerning this shocking affair, left the mention of them should make too great an impresfion on the minds of people. Several men have been taken up on fuspicion, but the fact cannot yet be proved against any of them.

Letters from the Hague advife, that a lieutenant of marines, and a merchant's wife of Amsterdam, had been taken up, and committed to the cassle that the publick had been impatient to know their crimes; which fince appeared from two sentences of the states general: the first degrades the officer from his rank and employment, and banishes him the four principal provinces of the republick, for seducing the lady to go off with him, and take

with her all the money and effects fhe could lay hold on. Their fecond fentence orders the lady, in her hufband's name, to be closely confined for eight years, in a house which her hufband hath chosen for that purpose in East-Friesland.

Last Sunday some young gentlemen belonging to a merchant's compting-house, who were a little disgusted at the two frequent use made of the bag-wig by apprentices to the meanest mechanicks. took the following method to burlesque that elegant piece of French furniture. Having a porter just come out of the country, they dreffed him a bag-wig, laced ruffles, and frenchified him up in the new mode; telling him, that if he intended to make his fortune in town. he must dress himself like a gentleman on Sunday, go into the mall in St. James's Park, and mix with people of the first rank. They went with him to the scene of action, and drove him in among his betters, where he behaved, as he was directed, in a manner the most likely to render him conspicuous. All the company faw, by the turning of his toes, that the dancing-master had not done his duty; and by the fwing of his arms, and his continually looking at his laced ruffles and filk stockings, they had reason to conclude it was the first time he had appeared in fuch a drefs. The company gathered round him, which he at first took for applause, and held up his head a little higher than ordinary; but at last some gentlemen joining in conversation with him, by his dialect detected him, and laughed him out of company. Several, however, feemed diffatished at the fooffs he received from a parcel of prentice boys, monkified

monkified in the same manner, who appeared like so many little curs round a mashiff, and snapped as he went along, without being sensible, at the same time of their own meanners.

On the 4th of May, a most violen whirlwind of that kind commonly known by the name of Typhons, passed down Ashley river, and fell upon the shipping in Rebellion road, with incredible violence. See a full account of it in our article of Natural History for this year, p. 93.

The French minister at the Hague, in a late conference with the states general, informed them, "That being commanded by his court to make the strictest search to discover and apprehend the chevalier de Maupertuis, who had fled France for the murder of his own brother, he had received information of his being at Maestricht: that the most Christian king hoped, that their high mightinesses, from their known equity and love of justice, would immediately fend orders to the governor of that town to apprehend that murderer, and fend him to France with a guard of foldiers: that the most Christian king would, in return, without any previous requifition, deliver up M. de Schouenbourg, who some time ago murdered his father-in-law, the baron de Brakel, at Thiel, in Gueldress if he should ever set foot on French ground," This request was immediately complied with by the flates general.

The clerk of the treasurer at Madrid, who by forging the treasurer's hand-writing, obtained a monthly pension of 5000 heavy piastres, is condemned to perpetual imprisonment, with an allowance of five Dutch folls per days and the tradef-

men, with whom he laid out his money, are compelled to take back their goods, tho' half-ufed, and pay to the exchequer the full value of them when new.

They write from Rome, that in digging in the gardens of the convent of St. Ambrose, the workmen discovered part of the Flaminian Circus. One vault is in good prefervation; the paintings, which have sustained scarce any damage, are some of the most valuable remains of that monument. In digging near the Latin-gate, two subterraneous saloons have also been discovered, in which were sound four tombs with marble urns, adorned with sculpture.

Great damage was done near Kingston in Surry, by a storm of 25th, thunder, lightning and rain. The country about Harrow, in Middle-fex was laid under water; fix deer were struck dead, by the lightning, in Bushy-park; and at Bourn, in Lincolnshire, hail stones fell, as big as pigeons eggs, and very great damage was done, as well as in many other parts of the kingdom.

The artists who lately exhibited their works in the room belonging to the truly laudable fociety for the encouragement of arts, manufactures, and commerce, in the Strand, having raised a sum of money by the sale of the catalogues, viz. 501 to the Middlesex hospital, 501 to the British lying in hospital, 501 to the asylum, and a small ballance to two distressed artists.

There is a kind of warlike vessel called a prame, fourteen of which are faid to be now equipping in different French ports. Each of these vessels has two decks; on the lower are mounted twenty-fix guns-

thirty-

thirty-two pounders, and on the other three mortars; they are long and broad, but draw very little water, and are rigged after the manner of a ketch.

They have besides in Dunkirk two bomb-ketches of a new confiruction, which carry each 16 four pounders, and 3 fourteen inch mortars. Their sides are near four seet in thickness, and they are as long upon the keel as our 40 gun ships. They carry 150 men for their complement, but have conveniencies to carry 3 or 400, if they want to send them any where. They sight their guns below. There are two others which will be launched in a fort-

night.

What the bishop Pontoppidan has written concerning the growing of the Naper turnep on hillocks raifed in bogs, is confirmed by experience here in England. Dr. Hill having obtained feeds from that learned prelate fowed fome upon the plain furface of a bog, in his garden at Bayswater, and some upon hillocks, of two feet high, thrown up in the fame bog. The hillocks are now covered with large and perfectly good turneps, whereas the plants on the plain surface are scarce alive, and form no roots. There requires no draining of the bog, for this fervice; and the expence of throwing up the hillocks is very trifling. Our common turnep will succeed in this manner, though not fo well as the Norway kind; as appears by another hillock on the same spot, on which some are now growing. But the Naper feed may be had in any quantity from Norway, as cheap as the English. The spot at Bayswater is naturally bog, taken into the garden for the reception of bogplants, groveswy Leganger

A violent florm which lately happened in the neighbourhood of Durham, has levelled and firipped most of the trees in a wood near that place; its force was the more impetuous as it came on in the form of a current.

Lisbon, May 26. A vessel is arrived here with 124 jesuits, the last of those who were in the king's territories in the Indies. Their number was 140 when they embarked, but 16 died of the scurvy. The others are ill of the same distemper, and we wait for their recovery to put them on board some foreign vessels bound to Italy.

At the fessions at the Old Bailey, 20 received sentence 27th. to be transported, three were branded, and one ordered to be whip-

ped.

The feveral appeals depending upon the English ships from Monte Christi, taken by our men of war, and condemned at Jamaica, were determined by the lords commissioners, when their lordships reversed the sentence of the vice-admiralty court, and ordered restitution of ships and cargoes.

The four classical prizes annually given to the university of Cambridge by their representatives in parliament, were adjudged to Mr. Bates of Peter House, and Mr. Foster of Jesus-College, senior batchelors; and Mr. Norris of Caius-College, and Mr. Eyre of Peter House,

middle batchelors. A transfero

At a court martial at Spithead on board the Arrogant, 29thcapt. Amherst, for the trial of capt.
James Allen, concerning the loss of the Speedwell cutter, by the Achilles, a French man of war, capt.
Allen and his officers were honourably acquitted, and the court were

unanimously of opinion that the faid cutter was an illegal capture; it being proved that the was taken in

the harbour of Vigo.

A falt-officer at Droitwich and another man having lately laid a trifling wager which could drink most neat rum, the falt-officer, after he had drank a quart, dropped down dead.

The prize question for the year 1762, proposed by the Petersburg academy of sciences, is, How far the defects of telescopes and microscopes, arifing from the different refrancibility of the rays, and the Spherical figure of the glaffer, may be amended or diminished, by a combination of several lenfes? the theory to be adapted to practice, and demonstrated by experiments. Frair

The prize is a hundred ducats. The memoir to be in Latin, with a motto prefixed, and a fealed billet inclosed, containing the author's name, station, and place of abode. It is to be transmitted, free, to the fecretary of the academy at Peterfburg, before the 1st of June of the current year and in the current

Concerning the question for the year 1760, viz. To investigate, by experiments, the refraction of the rays of light, in several bodies, both solid and fluid; and thence to find out how far the greatness of the refraction is oaving to the different specific gravity of bodies, the various cohefion of the particles, or the constituent principles of bodies; illustrating the whole by a theory corresponding with the experiments? - The academy has received only one memoir, and as that contained no new experiments, the collation of the prize has been deferred till fomething more fatisfactory be offered.

The question for the year 1761

was, To determine the theory of the disturbances [perturbationum] in the motion of the comets from the attraction of the planets, and to demonstrate the conformity of this to the observations on the comet of the year 1750?

Repeated experiments at Lyons have shewn that the sembir, or sowing instrument, invented at Geneva by M. de Chateauvieux, saves half the feeds, augments the produce of the land, shortens the sowing time above three-fourths, and lessens the charges in proportion.

Paris, May 27. Father la Borde, the inventor of the electrical spinette, has found a method of procuring a strong electricity at a small expence: Take a plate of Alfatia or Bohemia glass, or a circular piece of looking-glass a foot diameter: at the centre on one fide cement à fmall wooden pulley fourteen or fifteen lines in diameter, on which the wheel-cord is to pass; and, on the other side, a small piece of wood turned to the diameter of the pulley. This plate is to be moved round between two points, like a globe, rubbing it with a small skin-cushion, and the fringe of the conductor touching the furface which is rubbed: This will produce strong scintillations, which may be increased by cementing, as above, fix, feven, eight, and even twelve plates of glass, at an inch distance from each other, and with little skin-cushions between: 34

Mr. Benjamin Wilson's experiments in electricity, contained in the last volume of the Philosophical Transactions, tend to shew that glass is permeable by electricity; in thefe experiments wood properly dried or baked till it became very brown, and then boiled in oil to prevent the return of moissure into its pores, was used as a non-conductor, and afforded stronger appearances than glass. In this article Mr. Wilson, besides the experiments which confirm the principle proved by those of the Tourmalin, relates the following, which he says has been lately made by his friend Mr. Hamilton, prosessor of philosophy in the university of Dublin, which, besides that it seems to illustrate the doctrine of resistances so far as respects the air, may afford an agreeable amusement to such of our philosophical readers as have con-

veniences for repeating it. Let a slender brass or iron wire, five or fix inches long, be fitted in the middle with a circular brass cap, fuch as that in the middle of a magnetic needle, by which it is fuspended on a vertical point; let both ends of this wire be finely pointed, and then let half an inch at each extremity be bent in opposite directions till they are perpendicular to the rest of the wire, and in fuch a manner, that when the wire is suspended like a needle by its cap on a point of metal, they may be in a plane parallel to the horizon. The pointed metal on which this wire is suspended must be two or three inches long, and must have its other end fixed into a small block of wood: then let the block with the wire suspended on the point, be fer in an electrifed body, and the wire will turn round with great ved locity in a direction contrary to that in which the electric fluid issues from its points. Mr. Hamilton thinks this happens from the reliftance of the air to the fluid that iffues from the points of the wire, and that an electrometer might be constructed by causing this wire to turn round in a vertical direction,

YOL. IV.

and loading the wire with fome fmall weights near one of its extremities, which will be raifed to a greater distance from the perpendicular line as the motion of the electric fluid is more forcible.

This day the new road 29th. from Islington to Old-fireet was opened for all passengers and carriages, and the Doghouse Bartaken away. This road is called the City Road, has a foot path on each side, is well lighted, and is indisputably the finest road about London.

On Sunday last the following extraordinary affair happened at an eminent gardener's at Wallworth: Two young birds being put into a small wir'd cage, and set in the garden for the old ones to feed them, a snake about 40 inches long worked his way thro' the wire of the cage, and swallowed both the young birds, but by swallowing them he could not return the way he came: when cut open the birds were found in him intire and perfect, without any alteration.

Bourn, Lincolnshire, June 27. On Thursday last about half an hour before five it began to rain very large drops, having been black and cloudy for two hours or more in the west, which was followed by very large hail-stones, and in five minutes it increased and was mixed with large pieces of ice (a more proper appellation, we think, than hail-stones) of extraordinary fize, and irregular shapes; some were taken up and measured eight inches in circumference, numbers five inches and a half, and buthels might have been gathered in the fireers as big as pigeons eggs ; the confequence of which was, that in less than five minutes all the windows on the western aspect were entirely broke to pieces, the damage whereby, upon the nearest calculation, will not be repaired for 1501. Several dozen of pigeons have been killed by the hail-flones; all our fruits and flowers are destroyed, the trees being stript of their small branches and leaves: but what is much worfe, our corn fields is demolished entirely, the principal part of the storm falling on them; so that the damage is prodigious. It came in a line about three miles wide, but was most violent here, and in the fields on each fide of us. Four sheep were killed by the lightning, which was accompanied with the most dreadful thunder claps that were ever heard. In short, 'tis impossible to describe our fituation; it can only be imagined by those who have seen or suffered by fuch a terrible misfortune.

Extract of a letter from Gibraltar, May 16. " A few days ago arrived his majesty's cutter, captain Ferritur, from Tetuan, who fays, that when he was there, it being the Moorish festival, the governor, and all the heads of the town, dined with Joseph Popham, Esq; his majesty's consul general; there was in the middle of the table a large dish of Cusicustu, the general food of the country, the rest of the victuals was in the English manner; their drink was butter-milk and lemonade; there was no wine at the table for fear of giving offence, it being contrary to their law to drink wine (though many will drink it to excels in private;) they ear hearty, and tasted almost of every dish. After dinner each drank a glass of Spaw water, and then coffee and tea. Capt. Ferritur faid they all seemed to be well pleased, and declared they never faw fo good a dinner, (though many had been in different parts of Europe;) some being faints or religious men, faid their dining with Mr. Popham was an honour they never did a Christian before, but the great regard they had for the English nation, and particularly for the conful general for his prudence fince he has been in the country, induced their accepting his invitation, and that on all occasions they would protect and ferve him. By all the accounts, there never was a conful that maintained the dignity of his function, or protected his majesty's subjects, better than the present."

A merchant of Copenhagen, who died the beginning of this month, has left his fine house in that city, and a sum of money to endow it, for the maintenance of twelve mer-

chants daughters.

By a lift published, we find that the Dutch have no fewer than 152 vessels employed in the Shetland herring fishery, and 122 in the Iceland.

Mrs. Cox, of Clerkenwell-greeh, was lately delivered of 3 30th.

The wife of Mr. Bandon, page to the late king, aged 58, of a fon. Her husband is 70.

Died lately. Robert Arnot, of Fifeshire, within 15 days of 100 years of age.

A peasant, at Millet, in Italy,

aged LO5.

Jean Jacquement, curate of Barrois, in the county of Bourbon, in France, aged 107, who had been curate of the parish 75 years,

At Boston, in New-England, Mr. Wilks, merchant, aged 100.

Near Athy, in the county of Kildare, Mrs. Norton, aged 109. At a time when old age is often a burthen,

burthen, she retained such vivacity that within these five years she led up a country dance at the wedding of one of her great grand children, where 42 of her offspring were present.

John Ray, of Wanston, in Hamp-

shire, aged 110.

IULY.

M. Boreel, lately arrived as ambassador extraordinary from the states general to compliment his majesty on his accession to the throne, appeared at court with his new equipage. The harness of his horses were covered with filver, and his horses dressed in an extraordi-

nary manner.

At Chateauroux, near Embrun, there is a boy about 13 years of age, whose name is William Gay; and who, if we may believe a number of persons, has neither eat nor drank any thing fince the 14th of April, 1760. His mouth has a little tincture of vermillion; a pale red overspreads his cheeks; and he has a smiling countenance. His belly is, as it were, joined to his backbone, and he voids neither urine nor excrement; he fleeps regularly and foundly nine hours every day. Since he has ceased eating and drinking, he has had the fmall-pox very violently, which has not in the least impaired his conflitution. He used to be ailing during the time of his taking nourishment, and has often been thrown into a lethargy of three days continuance. All the food which they endeavoured to give him afterwards, he voided thro' his nose and ears. M. Fournier, the curate of Chateauroux, took him home to his house for a whole month, and ap-

pears perfectly convinced of the reality of this extraordinay fact. An account of fo furprifing a phenomenon has been communicated to the royal academy of sciences.

Rome, Jan. 7. There has happened a very odd affair in the great convent of capuchins at Ascoli, where the monks having punished their cook a little too feverely, he mixed a quantity of opium in their fauce at fupper, and when they were fast asleep, shaved their reverences beards, and made his escape before they were able to rife in the morning. The poor monks are confined to their convent, till their beards have acquired a decent fize, to render it practicable for them to appear

in public.

Letters from Algiers inform us, that the Moors who inhabit certain districts of the mountains to the east of Algiers, having for three or four years refused to pay the tribute imposed on them by the dey, that prince had fent some troops against them, under the command of an aga, who had already made his mafter a present of a number of their heads, and was in pursuit of the rest, who, to the number of 3 or 4000, had taken arms, and feemed determined to perish in their rebel-

All the members of the privy-council were fummoned to 4th. meet at St. James's on the 8th, when the king was pleafed to make a most gracious declaration of his having chosen for his consort the Princess Charlotte of Mecklenburg-Strelitz, and likewise to appoint Tuesday the 22d day of September next, for folemnizing his coronation; and to order, That a proclamation should be issued for notifying the same. See a full account of these

[K] 2

august ceremonies of their majesties nuptials and coronation, and all the proceedings relating thereto, in a separate article after the Chronicle.

A violent shock of an earthquake was felt in the Madeiras.

Paris, June 23. Our agriculture and manufactories will necessarily derive some benefit from the uses made by M. Rouviere, his majesty's furrier, of the plant known by the name of Altocynum or Asclepias. is originally a native of Syria. From the filky wad it affords we call it Soveuse. The abovementioned artifan has found out a method for rendering it capable of being fpun; and for encouragement of his useful invention, a patent has been granted him for making Soyeuse velvets, fays, and flannels, which (as they fay) exceed the English. For a bound of this wad, ready picked, he gives a petit ecu (about 2s. 10d.) the feeds he gives away gratis, and calls on land-holders not to neglect this commendable way of getting wealth. This plant, very probably, is our dogs-bane, or filky recity.

Admiralty Office. Extract of 6th. a letter from captain Innes, of the Enterprize, to Mr. Clevland, from the Downs. I cannot help informing their lordships of the bad behaviour of the masters of the convoys in general; for the whole voyage, they never obeyed any one fignal that tended to keep them in their stations, and it was in vain to fire shot to compel them, because they took care to be fcattered about fo much. that they were feldom within gunshot; and when I shortened sail for the bad failing ships, most of the others kept a-head, and to windward, often fo far off as we could but see their hulls, and frequently in

the mornings, the Enterprize was the hindmost ship of the fleet, except one or two bad failing ships, that I made my fludy to keep fight of. In the night-time I did fire fome shot at them, in hopes it would put them in mind of doing their duty, according to the instructions they received from me, but instead of that, I had the mortification to fee my fignals, which were made in the king's ship, disobeyed with contempt, and found it was in vain to throw away any more powder and shot at them, as I might have fired all that was in the ship, without answering any end. I may venture to fay, if the ships that lost company with me, had kept to their flations as they ought to have done, for many ships would not have been taken, as I brought home some of the worst failing ships in the fleet."

More complaints of this kind have been made within the course of this

year.

There were lately dug up in Kintbury church-yard, in Berkshire, some hundreds of ancient silver pieces of coin, which were found under a skull. The grave-digger sold those that fell to his share for 16s. 6d. Many of them are much valued by the curious.

A lady of the dauphines's household, having lately stolen some of her lace and jewels, is to be confined the remainder of her life in a cloister at Rennes. Of three other ladies who were suspected, one died of the fright, one has lost her tenses, and the third is at the last extremity.

We hear from Madrid, that on the 22d of May, a royal edict was published there, with orders that all the fireets of that capital are to be paved in the same manner as in London and Westminster, with foot-paths on both fides for the passengers; and that four large and beautiful causeways are likewise ordered to be made from Barcelona. Cadiz, Valence, and Gallicia, leading to Madrid. And a duty of a Dutch florin per quintal is laid on falt, in order to support the expence of making the faid roads.

Hamburgh, June 26. They write from Hanover, that they have received advice there from London. that his Britannick majesty is determined to pay off all his grandfather's debts in that electorate. which, together with the arrears, may amount 'to 500,000 rixdollars, and one third of which is going to

be paid directly.

Early this morning a fire broke out at the house of Mrs. Kennedy, in Manchester-buildings, near Cannon-row, Westminster, which confumed that house, and the house of miss Dawson the dancer, and a house in the fish-market, and

damaged feveral others.

Extract of a letter from Mull, one of the Western Islands in Scotland, dated June 20. . " On the 26th instant our neighbour Colin Muir Campbell, his fon, myfelf, and a few other friends, making a party of pleasure, went in our boat to the island of Coll, in order to go a fowling among the rocks, when Mr. Campbell's fon, who had mounted almost on the top of a rope-ladder, in order to examine some holes wherein several large fowls, as big as geefe, had neftled, as he was reaching out his hand in order to lay hold of one, the bird discharged near a pint of oil in his face, which blinded him fo, that losing his hold, he fell down, and was killed on the fpot. Another

of our friends too, who was beginning to mount the ladder just before this melancholy accident happened, was thrown down, and broke his arm by the shoulder-bone, besides which he was otherwise much bruised. These birds are near as big as a fwan; they are fo rank that nobody eats them, but are fought after for their oil, according to their bigness, they containing from a pint to a quart of this liquor in them: and if the person that goes to take them happens not to feize them properly, they discharge it upon him out of their throat, and by that means often fave themselves from being taken."

Paris, June 2. The general hofpital, to which the foundling hofpital was united by Louis XIV: in 1670, having taken into confideration the great expences of the hofpital, found that the number of foundlings which were taken care of by the state 100 years ago, did not exceed 5 or 600; and that at present they amount to good; of which at least 6000 are with wet or dry nurses; that most of the girls remain at the Saltpetriere, [the place, we suppose, assigned for their residence] till they reach 25, and then dispose of themselves as they please; that the boys when they come to man's estate, are without a trade or profession, and disperse themselves as vagabonds over all the provinces of the kingdom.

For the remedy of these abuses, it was unanimously resolved, that children should still be received as usual, and fent to nurses in the country: that when they attained the age of fix years, a proper number of both fexes should be taken to ferve in the house belonging to the hospital in Fauxbourg St. Anointy

[K] 3

and the house de la Couché. That the others should be placed at that age with burghers, labourers; shopkeepers, or tradefmen, who should apply for them, till they attained the age of 25. That the hospital should give with the boys, till they were 12 years old, 40 livres by the year; 30 livres from the age of 12 to 14; and with the girls 40 livres, till they compleated their 16th year. And on their first receiving the facrament, 30 livres to cloath them: that their masters and mistreffes should give an account of them to the board, every fix months, and of their progress in religion and other necessary knowledge, and fuffer them to contract no matrimonial or other engagement, without the confent of the board.

These resolutions being presented to the king, and his majesty finding that they tended to promote population and the culture of the ground, was pleased to order, that male foundlings, of the age of 16, and properly qualified to bear arms, shall be admitted to draw lots to serve in the militia, in the room of the fons, brothers, or nephews, of the persons who bring them up, who shall be exempted from ferving: and that this exemption shall extend to all others who shall bring up the children put out by other hospitals, communities, &c. throughout the

Kingdom.

Extract of a letter from the fame place to an English gentleman.

You expatiate very eloquently on the endowments of your young king; we are not totally ignorant of them here; for my part, I can fe arate the qualities from the perfon, and efteem virtue in a heretic; but give me leave to relate to you a fingular inflance of the favour which

men of genius enjoy under the auspices of Louis le bien aimé. Some persons, as creditors of M. Crebillon, the celebrated writer, took on them to get an attachment laid both on what copies were in the hands of the bookfellers and of the players, of his tragedy of Catiline. On this, the tragedian preferred a petition to the king's council, fetting forth, that to class the productions of the mind among feizable effects was a thing unheard of; that should such an abuse take place, they who had devoted themselves to study, in order to make themselves useful members of society, would not publish works, often very valuable and of importance to the state. A torturing case! that most of the votaries of literature fland in absolute need of the produce of their compositions; and that in France, the fees of counsellors, the perquifites and emoluments of persons of liberal profession, were never allowed to be seized. On this an act of council was iffued against his prefumptuous arrest, which was published with this title : "Act of the king's council of state in behalf of the fieur de Crebillon, author of the tragedy of Catiline, declaring that the productions of the mind are not seizable." I am he had in week

Cologn, June 26. A letter from Liston, dated the 15th past, says, 16 All our regiments are learning a new exercise; and orders are given to raise recruits in all parts of the kingdom, in order to put ourselves on a respectable condition, tho' the funds for that purpose are very deficient. The pay of the army is 14 months in arrear; and tho' all the cossers have been swept, there is not enough to make them a payment; and there are still owing to

the

the persons who furnished corn last year to the troops in the province of Alanteja, the fum of 400,000 crusades [about 2s. 6d. each.] The advantages derived from the erection of companies do not answer expectation. The Maranham company is still in arrear. The Oporto company, tho! they do not know yet what their gain is, regularly pay every year to the count d' Overas the free gift of 70,000 crufades. The king hath just granted to that minister, and his heirs for ever, a pension, payable out of the customs at Paco d'Arcas."

Extract of a letter from an officer in colonel Frazer's regiment, dated St. Valier, near Quebec, Feb. 19.

"You may easily conjecture, that the feveral parts of this country which have been traverling for these two years, are, with the calamities of war, greatly ruined, and its poor inhabitants reduced to the greatest extremities and want; a great number of whom would certainly have perished this winter, had not a most humane act of British generosity been shown them, by collecting among ourfelves money for buying the necessaries of life for these needy wretches. Every private man, ferjeant, corporal, and drum in our regiment, has of their own accord, contributed one week's pay for the relief and support of these diffressed Canadians : each fubaltern officer has given 11. each captain 31. and the major 51. sterl. fo that we are now returning good for evil, and entirely forgetting their scalping so many of our countrymen last year.

"The Indians bring us in great quantities of bever, partridges, &c. and begin to be very fond of English money.—They of this neighbourhood in every respect live like the Canadians, have their houses built and furnished after the same manner, plough their ground, sow their corn, &c. and are more indusrious in the chace than they; they all speak French, and have a handsome church in their village of Loretto, where I have sometimes been to see their ceremonies and entertainments, which are curious enough."

Other accounts from Quebec by the same conveyance say, that the troops there enjoyed good health, and that it being winter no ships had arrived there for four months, tho' they had constant expresses across

the lakes.

A great florm of thunder and lightning fell at Bougham in Norfolk, about 11 o'clock, which flruck upon an oak belonging to Roger North, Esq. in a piece of ground called Brown's

wood, in that parish.

The oak measured about 30 feet neat timber in the body, the bark of which was clean taken off by the fury of the lightning in about 40 pieces; some of which were near a yard in length and 6 inches over in breadth, some less; many of these pieces of bark were drove thirty yards from the tree, and

fome lay under it.
The body itse

The body stielf was split in pieces longitudinally, so that in some places one could easily get two singers into the sissue or crack, in another a whole hand; in some parts one piece was drove almost out, seemingly as big as a man could well lift, others but just crack'd; in short, the operation was unaccountable, but seem'd like the explosion of gunpowder, only here was no visible marks of discolourment, or

[K] 4 any

any fulphureous finell. The place where the igneous matter went into the ground from the tree, making a hole like the feraping of fome dog was very vifible; but there was no finell, nor had the lightning any great effect among the roots; it is supposed the force was almost spent.

The lightning had no immediate effect upon any of the arms or small twigs, nor was the head of the tree hurt saving from second causes; for the bark being totally stripped off, the leaves and arms must die of course. The manner how this inflammable material (come it in whatsoever shape providence pleafes) operates, I imagine will be some time a secret amongst our philosophical virtuoss.

This form continued with little interruption till late the day following, in the evening of which it greatly fhattered, during divine fervice, Sisland church near Loddon in the same county. The north side of the church fied from the other parts about four inches. The clap which did this damage was attended with a very great concussion of the air. Many other places suffered greatly by the same from.

At three o'clock, the right hon. the lord mayor, fix aldermen, and twelve commoners, attended by a committee of the grocers company waited on his royal highness the duke of York, to present him with the freedom of that company and the city in gold boxes of one hundred guineas value each. They were reseived in a polite obliging manner, and all had the honour to kiss his royal highness's hand. It is necesfary that every person should be free of some company of the city previous to his being admitted to the freedom, for which reason the grocers were introduced to his royal highness before the common council. The freedom of the city of London was finely wrote on vellum by Mr. Champion, enriched with feveral emblematical figures on the margin thereof, with the arms of the city of London emblazoned on the top, those of the lord mayor on the right fide, and those of the chamberlain on the left, and the city feal affixed to the bottom. The gold box in which it was inclosed was of very fine workmanship, and the lid of it richly chased; the following is a description of the device thereof: " His royal highness emblematically represented in the character of a Roman admiral, fitting on a pile of naval stores, with a rifing fun behind the city prefenting him a freedom; two figures representing religion and liberty in union, and Mercury as deity of commerce by their fide; a view of the sea, and Neptune triumphant, with the British cross on his trident, and the temple of Fame on a rock at a distance; and the whole encompassed with a fishing-net interwoven about the mouldings.". The freedom of the grocers company was also finely wrote on vellum by Mr. Champion; and Mr. John Alexander their clerk presented their compliments in the following man-

May it please your royal highness,

"In restimony of the dutiful affection of the worshipful company of grocers of the city of London for their illustrious sovereign, and out of the grateful respect they bear your royal highness, on account of your many eminent virtues and great love for this your native country, they most humbly request that

YOU.

your royal highness will be pleased to honour this company by the acceptance of the freedom thereof."

Then John Lane, Esq; master of the company, presented the copy of the freedom, and his royal highness addressed himself to the committee, in the following manner:

"Gentlemen, ...

"I receive with pleasure the freedom of the grocers company, as an instance of their duty to the king, and as a distinguishing mark of their attention to me; and I shall always be happy in any opportunity of shewing them my regard."

The grocer's company being withdrawn, the lord mayor, and commitee of common council were introduced, and after the recorder had paid their compliments, the city comptroller (in the absence of the chamberlain) presented the freedom to his royal highness, who, upon receiving it, spoke as follows:

My lord and gentlemen, " It is with pleasure I receive this compliment from the lord mayor, aldermen, and common council of London, as a fresh instance of their duty to the king, and as a diftinguishing mark of their attention to me. I shall think myself happy in any opportunity of shewing my regard to the city of London, and in promoting its trade and prosperity; and I shall always exert my best endeavours in that profession to which I belong, and which is fo effentially connected with the reputation and independence of this commercial country."

The fociety for the encouragement of the arts, &c. adjudged a præmium of 60l. to the rev. Mr. Gainsborough of Henley in Oxfordthire, for the best model of a tide mill; and the gratuity of 20 guineas for the best drawing and likeness of his majefty to Mr. J. Meyers.

The committee having felected four of the many fine drawings offered on this occasion, they were this day daid before his majesty by the duke of Devonshire, in order that one of them might be ultimately fixed on.

The right reverend Dry 17th. shop of London, &c. departed this life, aged 82, a prelate of most diftinguished abilities, and the greatest goodness of heart and life.

At a quarter past eleven 18th. at night, a comet was feen off the quarter of his majefty's ship Princess Royal at the Nore, during near half a minute, very bright and light, but the clouds, being thick, obscured it presently. It had a very long tail, and appeared to the E.S.E. . HALLES COLLEGE ADDRESS

About fix in the asternoon, the inhabitants of Whitby in Yorkthire were greatly furprized at an extraordinary flux and reflux of the fea. It was then quite calm. and tho' a little more than half flood, the tide rose and fell four times fucceffively in about a quarter of an hour. In the harbour, at the bridge, which is half a mile from the head of the pier, the first time it ebbed more than a foot perpendicularly; the second time, about eight inches; the third time, about fix inches; and the fourth time. about four inches. Nearer the fea it was yet more confiderable; and we are credibly informed, that the water adjoining to the pier fell more than two feet the first time it ebbed. This extraordinary phænomenon was not only observed in the harbour, but also upon the open sea, where the fishing boats were very sensible of it, and seemed greatly surprized at the uncommon agitation they perceived in the waves.

The Prince George, capt. Reed, of 24 guns and 108 men, has taken and carried into Camerina bay, a French outward bound East India ship of 600 tons, 22 guns and 208 men, laden with stores, after an obstinate engagement, in which the Prince George had but 7 men killed, and the French upwards of 60.

By an enquiry making in the different departments of his majefty's houshold, &c. it is said some impositions have been detected, which will occasion a saving of near 100,000l. per annum.

Extract of a letter from Vienna,

June 24. " A letter from Carlstadt, the capital of Croatia, gives an account, that about two leagues from Segua, a strong town of that province, fome herdfmen meeting together near a hill covered with wood, made a fire to warm themselves with large branches of trees they tore down. Unhappily the wind blew strong from the north; the flames were carried to some old oaks, which took fire in an instant, and one tree catching fire from another, in less than an hour the whole wood, containing above 10,000 arpents [1800 feet square each refembled one vast funeral pile. When the flames gained the heart of the wood, a great number of wild boars and wolves, some of them of a monstrous fize, came out of their dens with horrible shricks and howlings. Soon after, the fouthern part of the hill opened with a frightful noife. The aperture was about 15 feet deep, and 10 in diameter; and out of it rushed, with impetuosity, a stream of liquid matter on sire; which hardened as it ran, and formed a mass of 7 or 800 quintals. This matter is a mixed metal, composed of copper, iron, tin, and filver, and is faid to be most beautiful. If the fact be truly related, it is probably the Corinthian brass, and will serve to justify what the ancients have said of that samous compound."

General confat Laudohn, 18th, who commands at present the empress queen's forces in Silesia, obtained not long since an authentic certificate from North Britain of his being descended from a younger branch of the ancient family of Lowdon, of Lowdon, in the shire of Air, and the state of the

This morning the honourable captain Monckton arrived at Whitehall from India with an account of the reduction of Pondicherry, &c. and in the evening captain Douglas arrived with the following letter from the right honourable lord Rollo, to the right honourable Mr. fecretary Pitt.

Rofeau in the island of Dominique, June 8, 1761.

I had the honour of writing to you on the 3d inflant from Guadalupe; and I then informed you of the resolution I had taken to proceed directly to attack the island of Dominico, with the sew North American troops which had arrived, and the reinforcement surnished by governor Dalrymple, under the command of lieutenant governor Melvill. I accordingly sailed from the road of Bassetre, under the escort of commodore sir James Douglas, with four ships of the line, and some

frigates

frigates, on his majesty's birth day, and arrived within a league of Rofeau about noon on the 6th; when we judged it best to fend a summons to the inhabitants: to which. after their recovering somewhat of their consternation, and having fent off two deputies, probably to amuse us, they returned a negative answer. manned their entrenchments and batteries at and above Roseau, and prepared to stand on their defence: I thereupon gave immediate orders for the troops to land; which was effected very speedily, and in the best order, much owing to the difposition of the boats, and position of the king's ships, very judicionsly directed by the commodore; and. agreeably to orders given, there was not one fingle cannon or musquet discharged, till the enemy began to fire just before our landing. The troops formed quickly on the beach, and while part foon after possessed the town, the corps of grenadiers, confilling of the companies of the 4th and 2.2d regiments, commanded by colonel Melvill, feized a flanking battery, and part of an adjoining entrenchment, which had been abandoned. The enemy annoved us with fome popping mufquetry from behind trees and bushes, and fired from time to time from their battery, overlooking their entrenchments, the town and shore. It was now pretty late, and it appeared to me, that the troops might be extremely harraffed, and fuffer even great loss, during the night, by the cannon and musquetry of the enemy, from the entrenchments overlooking the town; as also, that the enemy might be much reinforced before morning; and having an excessive strong country in their favour, with four entrenchments behind, and above each other, might make a great defence. I ivlged it best therefore to order them to be immediately attacked by the grenadiers, supported by the battalion troops, which was accordingly done, with so much order. rapidity and resolution, that the enemy, with very little lofs, were driven successively, in great confufion, from all their entrenchments. from their batteries, and from the head quarter above it, where colonel Melvill immediately took post with the grenadiers. We took there M de Longprie, the French commandant; their fecond officer, M. de la Couche, and some others, with a quantity of powder.

I lay myfelf at their advanced post during the night, having established a communication, by proper guards, with the rest of the troops who possessed the town. Next day I established my head quarters in Roseau, and have been fince much employed in receiving the oaths of submission and surrender of arms from the nearest inhabitants, as well as in dispatching orders for that effect to the distant quarters; the landing of military stores and provisions, the quartering of troops, and the preparation to occupy and entrench a defensible post, have been the chief objects of my attention hitherto.

I shall soon have the honour of transmitting to you more particular accounts of this island; but must inform you, in the mean time, that as it was carried by assault, I gave them no other terms than a protection, till his majesty's pleasure should be known, obliging them first to deliver up all their arms, and to swear allegiance to his ma-

jesty.

jesty. Five hundred of the inhabitants, among which are the captains and militia officers of the quarters, with most of the principal planters, have delivered up their arms, and sworn submission, for which I have granted them a protection, till his majesty's further pleasure shall be known. The native Caraibs, who inhabit a rugged quarter on the windward part of the island, seem to like their new masters, and are to deliver up their arms in a body.

I cannot conclude without having the plea ure of affuring you, that the greatest harmony has subsisted hetween his majesty's squadron and the troops under my command; and that I have experienced the greatest zeal, and most chearful support from the commodore, who also very much favoured the attack, by a brisk and well directed cannonade. As to the king's troops, I cannot enough applaud the coolness and intrepidity with which they acted

on the occasion.

It is probable, that this will be delivered to you by capt. Douglass, of his majesty's fourth regiment, who, notwithstanding very bad health, came upon this service, and was present in the attack; but, being become much worse, now returns, with my leave, to Guadaloupe, and I am, &c.

Rollo.
Admiralty-Office, July 21, 1761.
Captain Innis, of his majesty's ship the Arundell, arrived here last night, with the following account transmitted by commodore Sir James Douglas, to Mr. Clevland, dated on board the Dublin, in the road of Roseau, Dominique, the 13th of June, 1761.

"On the 4th of June Isailed from Guadaloupe with the troops we had for Dominique, with the Dublin, Belliqueux, Sutherland, and Montague, and on the 6th in the forenoon arrived off Roseau, when I fent a lieutenant on shore, accompanied by a land officer, with a manifesto, figned by lord Rollo and myself, addressed to the principal inhabitants, and all others residing in the neutral islands of Dominique; which was read by the officer to the people in the town; and foon after two of the inhabitants of most note came off in the boat to me, who feemed, upon the whole of their conversation, not to be displeased at our coming to take possession of the island; but in the afternoon. when they were put on shore, we found the people were spirited up by the governor, Monf. Longprie, to stand upon their defence, and declared they had come to a determination to defend themselves: upon which I ordered the ships to anchor as close in as possible, and the necessary dispositions were accordingly made for landing the troops, which was effected about five in the evening, under the cover of the shipping; and notwith standing the enemy had 4 entrenchments upon the face of a steep hill. with two nine pounders in the upper one, lord Rollo, at the head of his troops, and colonel Melvill, at the head of the grenadiers, with a furprising alertness and intrepidity, drove the enemy from their entrenchments and battery, with the loss only of eight men, killed and wounded, and made themselves mafters of Roseau, and the adjacent places of defence, in a time too fhort to be conceived from the difficulty of the undertaking. The refistance

refisfance the enemy made, has put it in our power to bring them to fuch terms as we please; and they are flocking from all parts of the island, to take the oath of allegiance to his majesty king George.

M. Longprie is a prisoner, with three other of the principal people.

It is with pleasure I assure their lordships of the good understanding fubfifting between the officers and

men of the navy and army.

Major Wedderburn arrived 22d at St. James's with an account of a very figual advantage gained the 16th by his majesty's troops over the French in Germany; and his majesty was pleased to order publick prayers of thanksgiving for these so remarkable successes.

A letter from an officer of diftinction in the allied army to a nobleman in town, concerning the above battle, concludes thus: "Though very prolix in my detail. I cannot help adding the most tragical history of a family I ever heard: from Rouge I had it; of the two lieutenant-generals killed, the duke de Havre, his father in-law, was one, his uncle was another; and two brothers lieutenant-colonels, killed by the same shot; himself and whole regiment prisoners: all passing within his particular view."

Copy of the orders Prince Ferdinand of Brunswick delivered after the day of the battle of the 16th of

July 17, 1761. His serene highness duke Ferdinand of Brunfwick has been graciously pleased to order lieutenant colonel Beckwith to fignify to the brigade he has the honour to command, his entire approbation of their conduct on the 19th and 16th.

The foldier-like perseverance of

the Highland battalions, in refifting and repulfing the repeated attacks of the chosen troops of France, has deservedly gained them the highest honour.

The ardour and activity with which the grenadiers pushed the enemy, and the trophies they have taken, justly entitle them to the highest encomiums; and the intrepidity of the little band of Highlanders merits the greatest praise.

Lieutenant colonel Beckwith begs leave to add, that the humanity and generofity with which the foldiers treated the great flock of prisoners they took, in his opinion, does them as much honour as their fubduing

the enemy.

The little band of Highlanders abovementioned were commanded by captain Patrick Campbell, of Barcaldine, of colonel Campbell's regiment.] boths the flew has

Admiralty office. Rear admiral Holmes, having in- 28th. telligence that several ships of war of the enemy had failed from Port Louis the 5th of June; as also that the St. Anne French ship of war had failed from Port au Prince on the same day, he disposed several ships of his foundron in fuch a manner as he thought most likely to meet with those of the enemy for In the morning of the 13th, the Hampshire fell in with the St. Anne to windward, and chased her right down upon the Centaur to leeward. Upon difcovering the Centaur the Sr. Anne hauled up, and was kept between the two ships till she was run quite in shore; and becalmed about a league to the northward of Donna Maria Bay, when the began to fire her stern chace. Soon after one o'clock the Centaur got close alongalong-fide the St. Anne, when she struck her ensign. She is a very sine ship, constructed for 64 guns, and had on board six 24 pounders, 26 twelve pounders, and 8 eight pounders, with 389 persons; was commanded by M. Aguillon, and was carrying home a cargo of indigo, coffee, and sugar, to the value of nine million of French livres.

The fea flowed at Plymouth about 18 inches in about two minutes, and immediately ebbed with the fame rapidity. This extraordinary flux and reflux continued the whole day. The fame was obferved at Penzance, and at Carrick, Dungarvan, and Waterford in Ireland, as appears by the follow-

ing letters.

Penzance, July 30. Last Tuesday we had an uncommon hot day, and very calm; and between the place and Marazion, distant about three miles, the waters were agitated in an uncommon manner. Sometimes it would run in past its usual bounds, and return again with great swiftness, and continued in this manner most of the afternoon. Towards evening the horizon began to be cloudy, attended with thunder and lightning; and at half past seven there was the fiercest flash of lightning, attended with the loudest clap of thunder that ever I heard. At Ludgvan, about three miles from hence, the lightning struck down one of the pinnacles of the tower, forced in one of the doors of the porch, and into the church, and battered the pulpit and canopy, threw down one of the tables of the commandments at the altar. and did a great deal of other damage. It is imagined, that if the

tower had not been a very frong built one, it would have been laid in ruins.

Carrick, July 31. Last Tuesday about four o'clock in the afternoon, the waters of the river Sure rose four feet, in the space of five minutes, thirty miles from the sea, and to which the tide comes. It happened about two hours after the slood. At Dungarvan, the sea slowed and ebbed five times alternately, between four and nine o'clock the same evening, and once rose much higher than it was observed to do in the greatest spring tides.

A person in Leeds rode his common hackney, from thence to Hull, and back again, which is 130 miles, in 19 hours and 22 minutes; he was allowed 20 hours.

Upwards of 100 young fellows fent to Portsmouth in order to take shipping there, as servants to the British colonies, have been stopped and secured, but the person who hired them is not to be found, notwithstanding the most diligent search has been made for him.

Two malefactors were executed at Pennenden heath, 29th. near Maidstone, for forging seamen's wills.

About fix in the evening, there was a terrible florm of lightning, thunder, and rain, at a village called Sowerby, near Hallifax in Yorkshire; the whole town was by the thunder agitated in a dreadful manner, which threw the inhabitants into the utmost consternation, and many were thrown down; several sheep in an adjoining crost were scorched to death by the lightning, part of the wool was burnt and torn off, no other marks of violence appearing on them;

them; the ground in many places was forced up as with a plough, in others many furprizing apertures were made in the earth, which feemed to be of an aftonishing depth. The lightning penetrated into one house in particular, tore up the pavement, and many of the pieces hit the dwellers on the legs and shoulders, but, thro' the mercy of God, not one in the town received any capital damage.

A few days fince a gentlewoman, near Leicester-fields, was suddenly taken ill; and sending for a nurse, she was likewise taken ill after the same manner the next day, when she went home and died soon after, not having proper care taken, but the gentlewoman recovered. Upon enquiry, this accident was found to be occasioned by using a copper sauce pan, from which the tinning was worn off.

The empress queen has fold to a gentleman of Strasbourg, the town and lordship of Riechshossen in the Lower Alsace, being the last patrimonial estate she possessed in France.

Berlin, July 14. A young woman, aged 29, of a brown complexion, and strong features, who hath ferved in our troops four years with honour, hath been discovered in prince Henry's camp. Her name is Anne Sophia Detzleffin, born at Treptow on the Rega. In 1757 she left her father's house, and came to Colberg, where the enlifted in the militia, and ferved fix months. She afterwards enlifted in prince Frederick's regiment of cuiraffiers, in which she served two years. In a skirmish near Bamberg, she was wounded in her right arm with a fabre. She afterwards fought in the battle of Kunnerfdorff. Since that time, the corps she belonged to returning to Saxony, she fell dangerously ill there, and was fent to the hospital at Meissen. After her recovery, having no opportunity to rejoin her regiment, she enlisted in a battalion of grenadiers which fuffered much in the actions at Strehlen and Torgau. In the last of those battles, she received two wounds in the head: was made prisoner, and sent to the hospital at Dresden. When she recovered a little, she found means to escape out of the hospital, and passed, without being discovered, thro' the Austrian posts, but inflead of going to join her corps, fhe enlifted with colonel Colignon, who fent her to the regiment of Le Noble's volunteers, in which she ferved two months. One of her comrades accusing her (but without foundation) of stealing from him 14d. fterling, a subaltern put her under arrest: this she could not digeft, and fending for her lieutenant, acquainted him with her fex, and told him, that, during four years fervice, the had never been put under an arrest, nor received a blow for neglect of duty, that she could not put up with this last indignity, and would serve no longer.

The war that has so long subsisted between the Genoese government and the malecontents of Corsica, is approaching fast towards a conclusion. The Genoese, no longer in a capacity to maintain the war, have published a manisess, by which they offer a general pardon to the revolters, upon terms of submission; but this has been so far from producing the desired essent, that it has inspired the

male

malecontents with fresh courage, who upon this occasion surrounded the house of the Sieur Martinetti, colonel in the fervice of the republic, who had dispersed money very freely among the inhabitants of Finmorbo, allowing the poorer fort 15 fols a day, forced the Genoese mediators to fly for shelter to the fortified towns, seized fome of their retinue, they hanged five in terrorem, besides three sailors who were hardy enough to bring over an executioner from Genoa. and hanged in effigy the officer who proclaimed the republic's propofal; General Paoli, who has fo long and fo bravely fought for the liberty of his countrymen, has been requested by his officers not to expose his perfon any more to the dangers of war, and the people, out of their zeal to recover their independency, have subscribed a 13th of their income towards defraying the expences of the war. Two galliots have been built in order to cruife upon the Genoese merchant ships, from the apprehensions of which, some of the wariest among the Genoese senators have proposed to free the state by disposing of all their right and interest in the island of Corfica to a neighouring prince.

A sheep's head woman, near the Seven dials, was lately delivered of z children, two days after her delivery, she went to her business.

And a jewes in Agate's passage, Houndsditch of two children, and in two hours after, of two more.

Died lately. At New Hampshire in New England, the widow Sarah Rawlins, who was married at 19 years of age, and lived with her first husband 27 years; in which time she had 14 children: she also lived 27 years with her last husband. All

her children lived to have children of their own, and some them even grandchildren. The number of her children, grandchildren, and great grandchildren, at her decease, amounted to 239, of whom 182 are now living.

John Newell, Efq; at Michaelflown, Ireland, aged 127, grandfon to old Parr, who died at the

age of 152.

AUGUST.

Several houses, &c. were confumed by fire, at Fincham, in 3d. Norfolk.

As a ferieant was lately exercifing some of the soldiers on board one of the transports at Portsmouth, he observed one of them, who went by the name of Paul Daniel, had a more prominent cheft than ordinary. After the firings were over, he fent for the person to the cabbin, when telling his fuspicions, that he was a woman, and infifting upon fearching him, after some evasions, the foldier confessed her fex. The account she gave of herself was, that having a husband whom she dearly loved, and who, after spending a plentiful fortune, by which means they were both reduced to beggary, inlifted in a marching regiment, and had been in Germany two years: having not heard from him in all that time, the was determined to range the world in fearch of him; and being informed that we were fending more troops over, the came to a resolution of entering as a soldier, and was now inconforable that the discovery of her sex should prevent her design.

Plymouth, July 31. By an annual custom, the right worshipful the mayor, many of the corpora-

tion.

tion, and feveral others, rode out this day to the Head Ware, from whence this town is supplied with water, brought by a current of almost twenty miles, by the ever memorable Sir Francis Drake, who in the year 1,81, was an inhabitant here, and mayor of the town, and as tradition has it, in the year 1590, when the water ran before his own door, dipt his fearlet gown therein, for joy that he had obtained his defired end.

. The following cargoes of fix . ships, under the convoy of the Dutch man of war the Loo, which arrived the 18th of July, in the Texel, from Curacoa, will ferve to fhew what quantities of French property are imported in Dutch bottoms, viz. 537 bales of cocoa, 195 ferons ditto, 5179 bales of coffee, 1532 hogsheads of sugar, 436; flicks of logwood, 12540 hides, 37.3 bales of Porto Rico tobacco. &c.

The honourable Francis Fauquier, deputy governor of his majefty's province of Virginia, has procured a very public-spirited law to be passed, in the affembly of that colony, for distributing annually the sum of one thousand pounds in the way of premium for promoting the principal commodities that province is capable of raising, and which hitherto have been fcarce attempted, for want of fuch an immediate encouragement as by this law is secured to the industrious and ingenious planter.

. Annapolis in Maryland, April 46. On Tuesday the 7th instant, at the plantation of Mr. John Booth, in St. Mary's county, Mr. Booth having just left home, in order to fettle accounts with the sheriff, a negroe man, whom he had bought daft fummer, attacked a negroc

VOL. IV.

wench, and beat her head to pieces with a maul, and would have killed a negroe boy, but he faved himfelf by running; when he had killed the negroe woman, he went into the house and murdered his mistress, beating her head to pieces, and with an axe folit the head of a little boy, about three years old, his mafter's fon, as he lay fleeping in bed. He immediately went away, and is supposed to have put an end to his own wretched life. Mrs. Booth, and the negroe wench, were both advanced in their pregnancy.

Letters from Dominico dated June 8th, 1761, advise, that the cash and goods found in the town of Rofean only, were valued to a great amount, and were lodged in the warehouses, under different locks, by the land and fea officers. till they shall receive instructions from England how to act therein. The foldiery and failors availed themselves of the plunder; but that was chiefly confined to a little cash, cloaths, and provisions of all kinds.

A most violent form of thunder and lightning, attended with 5th. hail, did incredible damage to the corn in the neighbourhood of Benfield in Northamptonshire. Many of the hail-stones, or rather pieces of ice, weighed a pound each, and broke the windows wherever they

Extract of a letter from Paris, July 24. "The king came on Tuesday to the parliament, where the princes of the blood, and the peers of the kingdom were affembled by his orders, and his majesty there held a bed of justice. He declared on this occasion the necessity of continuing still for two years (to the end of 1763) the double capitation and the third twentieth; af-

ter which the chancellor proposed in the king's name, the borrowing of twenty-feven millions upon the farm of leather, at an annual interest of 3 per cent. and the capital to be reimburfed at the end of nine years. The votes being afterwards collected, and found unanimous, the two edicts in question, and declaration of the king, were registered, with the clause, "The king holding his bed of justice." being finished, his majesty rose, and fet out on his return to the castle of Muette. On leaving the city, he was faluted by discharges of the cannon of the Bastile and the royal hospital of invalids."

The above edict for prolonging the poll-tax for two years, sufficiently proves the disress of that kingdom, since it was such, that the parliament, notwithstanding their zeal for the king's service, resulted to register it; so that his majesty was obliged to come in person to the parliament-house, to cause it to be registered before him. To soften the minds of the people, the preamble of this edict was in these

plaufible words.

" Louis, &c. &c. We have hitherto supported a war rendered indispensible by justice and honour: animated by a fincere defire to procure our subjects a folid and lasting peace; we have agreed with the belligerent powers on a congress, the fuccess of which cannot be doubtful, if each of them would therein discuss their interests with that spirit of equity and moderation, of which our plenipotentiaries will fet an example : but the greater foundation there is for our hopes, the more we are obliged to pur ourfelves in a condition to refift our enemies, that at the fame time we

are occupied about a peace, they may know, that if they reject it, we are always fure of finding in the love, as well as courage of our subjects, new resources to oppose their efforts.

"The prorogation for two years of a tax, which is attended with almost no expence in collecting, being the most natural method of securing to us those resources, we have the more readily adopted it, &c."

A letter from Ancona gives the following tragical account: there was in the neighbourhood of Bagni, the capital of Bosnia, three convents of the brothers of Minor-observantins of the order of St. Francis; fome Greek priests, jealous of these religious, or possessed with a siery zeal, endeavoured to perfuade them to prefer the communion of the schismatic patriarch of Constantinople to that of the holy father. but all their attempts proved vain: then, in their fury at this disappointment, they impaled a guardian of the three convents, beheaded a bishop of that order, and twentyfive religious, and fet fire to the most considerable of their cloysters. The guardian martyr furvived three days, and was a witness to the fufferings of his twenty-fix brethren, exhorting them to the last to persevere to death. This account is confirmed by letters from Dalmatia.

Letters from Coningsberg bring a confirmation of the hemp ware-houses being consumed by fire, on the 10th past, by which 400,000 pood of hemp, amounting in the whole to between 6 and 7 thousand tons, was destroyed. A pood is about 36 lb. English.

A navigation being compleated from Lynn to North-7th.

ampton, the same opened this day, and 38 barges, laden with coals, &c. preceded by a band of music, and adorned with slags and streamers, came up with the greatest ease to the public wharf, at the south bridge.

We hear of a remarkable instance of a gentleman's approbation of the old Roman method of adoption in one John Smith, Esq; of (we think) Overton in the county of York, and which, as the case stood with him, cannot but be a piece of charity approved of by every judicious person. This gentleman, lately deceased, was possessed of an estate of about 700 l. a year, and having none but very distant relations, except a fifter very ancient, left 500 l. a year to a clergyman of his acquaintance, with 7 children, with all his personal estate, supposed to amount to 7 or 8000 l. paying an annuity of 300 l. a year to his fifter aforesaid, for her life. As the clergyman is a very worthy man, and beloved by all that know him, and possessed of but a moderate living, it meets with every one's approbation, and they wish he had made him his only heir; as the other 200 l. a year will go no one knows where, or be swallowed up in law.

According to the last advices from Persia, prince Heraclius had made himself master of the city of Hendischi by assault, after subduing Erivan (the ancient seat of the sophis) which he had taxed at 10,000 gold sequins per annum. After these victories, Assault the most formidable of his competitors, came, with all his family, to pay homage to Heraclius, who doubting his sincerity, thut him up in the castle of Testis, where (from the cruel policy of that country) it was

thought most of them would foon end their days.

A dispute having happened 8th. between the farmers of Kings-Langley and the Irish reapers, about wages, the royal foresters, quartered at Watford, were sent for, and a great kirmish ensued, in which several were wounded. Six were taken and committed to St. Alban's jail, and the rest were dispersed. Some of these afterwards made a riot in the isle of Ely.

They write from Padua, that his grace the duke of Marlborough had been there some weeks; and that the celebrated Dr. Righellini had extracted from his eye a black particle, hard, elastic, concave on one side, and convex on the other, and about the fixth part of an inch in length, which gave him infinite pain night and day. The operation had the desired effect.

His grace Dr. John Gilbert, 9th. lord archbishop of York, primate of England, lord high almoner and privy counsellor, departed this life.

Likewise prince Henry of Brunswick Wolfenbuttle, a son of the reigning duke, and nephew to prince Ferdinand, of his wounds in a late battle.

The prisoners in the Savoy, to the number of 200, mutinied, and were with difficulty got under by the guard, after several shot being fired, and much blood spilt; an unconcerned spectator looking down from the top of the prison was taken for one of the rioters, shot at, and killed on the spot.

A tender from the British herring fishery arrived at Bremen with 225 barrels of the first pickled herrings caught this year, which were sold at a high price.

[L] 2

Twenty:

Twenty English ships caught, this season, but 11 whales; 7 Scotch ships, but 6 whales. Whereas 138

Dutch ships caught 287.

The prisoners in Ludgate were removed to the London workhouse in Bishopsgatestreet, in order that Ludgate may be decorated against the approach-

ing lord mayor's day.

The example of the king of Denmark has engaged a private gentleman of Copenhagen to devote the fum of 200 rixdollars, for four prizes of 50 rixdollars each, for the best answers by subjects of Denmark, to the following questions, to be delivered before the feast of St. John, 1762, viz.

"I. Why have we absolute need

of a divine Redeemer?

"2. What are the advantages and defects of the Danish language, compared with the German and French languages?

"3. To what point fathers, without prejudice to the state, may and ought to inspire their children with love for the publick weal?

"4. Which countries have been the most happy, those where the writing upon public occonomy has not been permitted, or those where every one has had that liberty."

14th. A very fensible shock of an earthquake was felt all over the island of Guernsey, accompanied with a rumbling hollow noise; and tho' the wind was easterly, a violent swell of the sea set in, all on a sudden, from the south west.

At Cumbernauld, in Scotland, they have lately had a violent florm, attended with thunder and lightning, which have done great damage to the planting, and killed above 1000 crows; upon examination it appeared, that their bones were all broke, and their flesh quite black, and when offered to the hogs, they refused to touch it.

Oxford, July 11. The subjects appointed for the current year, for two orations to be spoken in the theatre for the prizes given by the Rev. Dr. Thomas Wilson, prebendary of Westminster, are, for the Latin oration, Salus populi, suprema Lex. For the English oration, The advantages of a safe, bo-

nourable and lasting peace.

The four classical prizes annually given, by their representatives in parliament to the university of Cambridge, have this year been adjudged to the following gentlemen.
—Senior batchelors; Mr. Bates, of Peter House; Mr. Foster of Jesus College, brother to the late Dr. Nathaniel Foster—Middle batchelors; Mr. Norris, of Caius College, fon of Anthony Norris, Esq; of Barton; Mr. Eyre, of Peter House.

Extract of a letter from commodore Keppel, to Mr. Clevland, dated in Belleisle road, the

28th of July, 1761,

"I yesterday received letters from fir Thomas Stanhope in Bafque road, extracts of which I here enclose you. The enemy's fecond attempt to remove the ships attending the demolition of the works of Aix, has been as ineffectual and difgraceful to them as their first was. The indefatigable pains and skilful manner in which captain Chaplen, of the Furnace bomb, has directed the destroying the enemy's fortifications and works upon the island, has been such, that it would be injustice in me not to acquaint their lordships of it. The whole is now finished, or within a

day

day of being so, when it will be unnecessary to keep the ships any longer fo near the island; and the enemy may then, if they pleafe, take a view of the ruins."

Extract of a letter from fir Thomas Stanhope, to commodore Keppel, dated in Basque road, July 22,

(1761.

Yesterday morning, about 8 o'clock, the fix prames that were in the Passe de Filles, attended by fome row-gallies, and a great number of launches, crowded with men, dropt down upon the first of the ebb, and placed themselves between the isle d'Ent and Fort Fouras, from whence they played on our ships in Aix road, with 12 mortars, and upwards of 70 pieces of heavy cannon, till past z o'clock, when the reception they had met with from his majesty's ships obliged them to retire with difgrace to their former station.

"I herewith inclose you the report of captain Parker, of his majesty's ship Buckingham, who directed the operations on this service."

Extract of a letter from captain Parker, of his majesty's ship Buckingham, to fir Thomas Stanhope, dated in Aix road, July 22,

At 7 o'clock yesterday morning, the enemy's fix prames loofed their topfails, and got under way, attended by fome row-gallies, and a number of large boats and launches full of men. They stood towards us with a land-wind, in a close line a-head; and from that motion, and the number of men, I judged they intended to attack us with resolution; but they foon hauled their wind, and brought up a regular line upon the shoals, about two gunthots from us, and at a quarter past

9 began to bombard. In less than half a hour they got the distance exact, and we veered away, to be out of the range of their shells; but we found that when we veered, they weighed anchor, dropped with the tides, and still preserved their distance; on which, all the ships hove a-head, expecting that they had neared us fo much as to bring them within reach of our cannon, and we imagined that feveral of our shot struck them. At half an hour after II our own long-boats, and those of the ships in Basque road, came to affift us; and the ebb-tide being almost fpent, we prepared to warp nearer the enemy: about the same time the Action, Fly, and Blaft floop joined us: "the two latter I ordered to keep under fail, and the former to range along the prames, and to give them her broadfide as the passed, in order to amuse them, and draw their attention from the boats' employed in carrying out warps, and from throwing shells at the line of battle ships, many of which fell as near as possible without touching.

At half past 12 the Action ran aground on the tail of the Pall-Bank: the boats were immediately dispatched with stream-anchors, and hawlers to her affiftance, and about 2 o'clock she floated. This accident prevented all the ships from warping, except the Nassau, who was directed to cover the Actaon; and she laid out warps, which obliged five of the prames (the tide of flood now making) to retreat to their former moorings, and the other to get under the cannon on the S. point of Oleron. During the bombardment, captain Chaplen threw from the Furnace 32 shells which were extremaly well directed. This

this morning one of the five prames dropped with the flood above the men of war in the river.

" Before I conclude this letter, I must beg leave (in justice to captain Ourry) to acquaint you, that he executed my orders with the greatest bravery and resolution, and shewed a spirit and address becoming the character of a British officer.

"The Action had 4 men killed, and I wounded, and a great part of her rigging cut. One of the foreputtock-sheowds, and the mizen-top-sail braces of the Buckingham were shot away. One of the enemy's shells fell under the Nassau's counter, lifted the ship a little, drove in two trunnels, and shook her whole frame. Several shells fell also very near the Monmouth and Buckingham. We are now certain of the weight of metal which the prames carry, one of their shot being on board the Action, and weigh upwards of 38lb."

Captain Elphinston, of his majesty's ship Richmond, gives an account in his letter dated in Yarmouth roads the oth instant, that while he was on the coast of Norway, he took a French privateer called le Facheur, with 6 carriage, and 8 swivel guns, and 40 men, with one ransomer on board.

Twenty-two country transports. all healthy young fellows, who were fome time ago taken by the French in their voyage to America, and refused, it is said, to inlist with them, being fince retaken and brought from Portsmouth to the new goal in Southwark, were delivered from thence, having received the king's free pardon, on condition of ferving as foldiers in his majesty's 49th regiment of foot now in Jamaica.

Since the conquest of Canada,

Great Britain is become the fupplier of great part of Europe with furs: from Flanders several large orders have lately come over; and from Russia orders have been received of the like kind, as that country cannot produce all the skins its inhabitants make use of.

The world may expect foon to fee some of the divine works of Raphael, engraved by Mr. Strange: that gentleman has, on account of his extraordinary merit, met with a distinguished reception at Rome: Prince Rezzonico has not only obtained permission from his uncle the pope, that scaffolding be erected in the Vatican, so that Mr. Strange may \(\gamma\) make what drawings he pleases; but also assigned him a genteel apartment in that palace, during his residence there. This attention to the merit of a British artist cannot fail of being agreeable to the natives of this country; and is the more remarkable, as the late pope had, by an express edict, forbid that any feaffolding should be erected, because the painting had been much damaged by those who were formerly indulged with that convenience.

At the affizes of Abingdon, two person's were capitally convicted; at Wincester 10, one of them for murder, who was executed as usual, and g were reprieved; at Worcester 2, but reprieved; at Maidstone two; at Exeter 7, two for murder; at Buckingham 1; at Salisbury 2, one for murder, who was executed as usual; at Northampton 3, but afterwards reprieved; at Ely 1, who was reprieved; at Monmouth 4, who were all reprieved; at Thetford 1, but reprieved; for Yorkshire, 2; at Croydon 1; at Gloucester g, two for murder, who

were executed as usual, and one of the others were reprieved; at Wells 3; at Warwick 1; at Shrewsbury 1, who was reprieved; Chelmsford, Cambridge, Bedford, Huntingdon, Dorchester, Lewes, Hereford, Hertford, and Oxford assizes, proved maiden ones.

At the affizes at Warwick, were tried, before Mr. justice Foster, two actions upon the statute of 2d George II. for bribery and corruption at the late election of members to represent the borough of Tamworth in parliament; when the juries (who were special in each action) brought in verdicts for the plaintiffs.

The princes of Brazil was safely delivered of a prince, to the great joy of the Portuguese nation.

Admiralty office. Extract of a letter from Sir Charles Saunders, vice admiral of the blue, to Mr. Clevland, dated in Gibraltar Mole, on board his majesty's ship the Neptune, July 20, 1761.

" It is with the greatest pleasure that I defire you will acquaint their lordships, that capt. Proby, in the Thunderer, who was cruizing off Cadiz with the Modeste, Thetis, and Favourite floop, in order to intercept the Achilles and Bouffon, has fallen in with and taken those ships, and brought them into this bay. On looking into Cadiz, on Thursday morning the 14th instant, he miffed the French ships, and at two in the afternoon of the 16th he difcovered them, Cadiz then bearing E. N. E. 1-4th E. distant nine leagues about one in the morning of the 17th, the Thunderer came up with and began to engage the Achilles, who struck after an action of about half an hour, Cadiz then bearing E. 1-half S. distant 19 leagues. The Thetis came up with

the Bouffon about feven the fame morning: they engaged also about half an hour, when the Modeste coming up, and firing fome guns, the Bouffon ftruck. The Thunderer is pretty much damaged in her masts, yards, fails and rigging; had 17 men killed in the action, and 1.13 wounded, 17 of which are fince dead. The Theris has also suffered in her masts, rigging, &c. but had not one man killed or wounded. I cannot yet ascertain the loss of the enemy we are fending their wounded to the hospitals, of which I will fend you a more particular account as foon as possible. The fecond and third lieutenants of the Thunderer are among the wounded, and the former of them in a very dangerous way. Captain Proby also received a flight wound in his right hand,"

Translation of a letter from prince Ferdinand to the marquis of Granby, on occasion of the behaviour of some of the British troops in an affair on the 5th instant.

Convent at Buhren, Aug 6, 1761.

" My Lord,

I think it my duty to acquaint your Lordship how much I admire the valiant and brave conduct of Lord George Lenox with the piquets, and of major Welsh, with his batalion of grenadiers yesterday, in the attack of the post and village of Westen. I beg your lordship will be pleased to fignify to them my most grateful acknowledgments, and that these two gentlemen would do the same to the brave troops who were led on by commanders of such distinguished va'our.

I have the honour to be, with the most perfect respect, my lord,

[L] A more man have Copy

Copy of the marquis of Granby's letter to major Welfh, commanding the 1st battalion of British granadiers.

Campat Haarn, August 7, 1761.

SIR

You will perceive, by the copy of the letter I have the pleafure to enclose to you, how much his ference highness admired your behaviour, and that of the 1st battalion of grenadiers under your command, at the attack of the post and village of Westen, on the 5th.

"You will, therefore, according to his ferene highness's defire, testify to the troops his extreme approbation of their distinguished bravery and firmness, and likewise my thanks in the strongest manner. I am, with the greatest regard, Sir,

&c.

GRANBY."
Extract of a letter from on board the
Swiftfure, in Basque road, July

15, 1761. As the love and fludy of antiquities is one of the most prevailing taftes of this age, I could not delay acquainting you of some very valuable gems, medals, and coins, which were discovered a few days ago by our miners, who are employed in destroying, in an effectual manner, all the facings of the baftions and curtins of the fort at Aix, together with the large casements. As the most valuable part of the curjosities are in Sir Thomas Stanhope's possession, who no doubt intends them for the British mufeum, I can only give you a short description of those I was so fortunate as to view, which were pieces of gold and filver, many of them irregularly cut about the edges, and near to the thickness of our fixpence. Those of filver had a piece of Bac-

chanalians impressed on one side; the other contained the sigure of Ceres, with her cornucopia; from whence seemed to be issuing summer fruits, with causislowers, cabbages, lettuces, &c. — Those of gold had on one side a Venus riding on a sea-horse, and the other side had the representation of a naval tournament, or race upon the warm tern, resembling those practised at Venice in the carnival season.

"As this late noble fortification in the island of Aix is very near Oleron, from whence all our marine customs and laws were derived, and whose inhabitants have been esteemed expert failors, for these goo years past, and these islanders have enjoyed very great privileges, with respect to commerce, I hope the antiquarians will find many useful curiosities from this discovery."

In the night between the 3d and 4th, inft, a fire broke out in a tradefman's house at Stutgard, the duke of Wirtemberg's capital, near the place where the archives are kept. In less than fix hours the house where it began, with forty or thers, were entirely confumed, and the whole city put in the utmost danger. The damage amounts to upwards of 200,000 florins Many of the inhabitants endeavouring to fave their effects, lost their lives, and others were much hurt. The author of this fire being feized was thrown into a dungeon, where next day he made away with himself. But his corpse was laid on a fledge, and after being dragged thro! the principal flreets of this city, was fulpended on the common gallows and at head to

By a calculation made in the college of commerce, at Petersburg, of the goods confumed by fire on the 29th of June, O. Soil appeared

that

that the following quantities have been burnt, viz. about 11,200 tons of different forts of hemp; about soe tons of flax of all forts; about 350 tons of hemp oil, and 97,200 matts.

Letters from Corfica by way of Leghorn, of the 20th ult. fay, that the inhabitants of that island are determined not to enter into any accommodation with the Genoefe, but to declare themselves a free and independent people; and, upon condition that the Genoele will deliver up all the fortified places they have possession of in that island. the Corficans will pay all the debts, both capital and interest, that may be due to that republick from them. On the other hand, they tell us from Genoa, that the republick is determined to carry on the war with the utmost rigour against the Corficans, both by sea and land; and that several Genoese vesfels have failed, and others will foon fail for that purpose.

Charles Town, South Carolina, May 30. The pernicious confequences of too free an importation of aggrees into this province, having lately become the subject of serious confideration of some publicspirited gentlemen: a motion was lately made in the honourable the commons house of assembly, for leave to bring in a bill, laying an additional duty on all negroes and other flaves thereafter imported; and fuch a bill has accordingly been brought in this day. The duty proposed to be laid, we hear, will amount nearly to a prohibition; and it is thought the bill will pass and take place very foon.

Captain Potts, of the Julius Cæfar, from Jamaica, lately gallantly cleared himfelf from 6 French privateers, which is looked upon to be as brave an action as any fince the commencement of the prefent war.

The royal academy of sciences at Paris have given a very fentible and polite answer to a paper, lately transmitted to them from the British. fociety for promoting arts and manufactures, in relation to the possibility of procuring vegetable tube fiftence for black cattle and theep during the winter months, which is certainly a matter of great importance.

Paris, Aug. 14. The de-claration of the king for pro- 24th longing the edict of February 1760. hath been registered by the parliament of Normandy, on express command of his majesty, fignified by the duke d'Harcourt, lieutenant general of the province.

The parliament of Douay has registered the same declaration purely and fimply, and wrote at the fame time the following letter to the

Sire, A dishonourable peace after an unfortunate war would be to France the height of ignominy, and the speedy source of a new war, more fatal perhaps than that which she hath terminated, 'Tis therefore to your people, Sire, a point of honour, a motive beyond all interest! a point of necessity, a motive beyond every other motive! to furnish your majesty with succours capable of vanquishing or tiring the oblinacy, the arrogance, the fortune of our enemies; with fuccours capable of making them yet feel, what they have experienced to many times, that French generolity fets no value upon estate and life when glory is in question, and that it is never more terrible than when even decay and the re-

verse agitate it with the horror of contempt; with succours, in short, capable of obliging nations allied only by the desire of vexing humanity, to sinish, by a just, and reasonable treaty, a war, to which they have forced us without reason, and against all justice.

and against all justice.
"These sentiments, those of

Frenchmen at all times, those of Frenchmen at all times, those especially of your Frenchmen, we see with joy engraven in the hearts of our countrymen, expressed in their discourse, and by their conduct; and we are ever eager; in all circumstances, to set them the lesson and example.

"In this fpirit, fire, we have not hefitated to enregifier, purely and fimply, the declaration of the 16th of June last, prolonging for two years the double capitation, and the third twentieth-penny, because we have perceived the distance of peace, and the probable continuance of

the war for two years.

"But at the same time we have no doubt, that if heaven filling up our wishes, and anticipating our hopes, should deign to restore reconciliation and repose before that term, your majesty will cause these heavy impositions to cease, with the war that is the object of them, &c. &c."

Extract of a letter from a surgeon, in the island of Goree in Africa,

May 27, 1761.

"A fire happened here on the 14th of March, which confumed, in a few hours, the whole town to ashes, (except three houses) together with several officers quarters. The inhabitants have suffered greatly. My instruments and medicines I regret the most, as that is a publick loss, not retrievable in this country, before the fickly season

which approaches. There was a good supply sent out for both garrisons, but unfortunately the vessel was cut from Senegal bar by 3

French frigate."

The Prince of Bevern, Nichols. belonging to Liverpool, was lately taken by the St. David privateer, of Martinico, after a brave defence. Captain Nichols had only 18 white men on board; and the Frenchmen, in revenge for their captain and forty of the crew being killed, on boarding the Prince of Bevern, after they had ftruck their colours, killed the mate, carpenter, doctor, and several others in cold blood; cutting their arms, hands, and legs off with cutlasses, and firing their pillols through their bodies. captain received two deep cuts on his head, but luckily faved his life. Only four of the crew escaped being wounded very dangeroufly, though none of them were hurt in the engagement.

Captain Hoggan, of the Lyme, from Guinea, with flaves, after having beat off a flout French privateer, was taken by five others, who came in fight foon after, near Defeada. The villains immediately pulled off his hat and shoes, as he had nothing else on but a bloody shirt and trowfers, and hove him over board, where he was afterwards taken up by one of the sloops, and carried into Martinico, and there treated like a pirate or thief, as they

called him.

Two violent shocks of an earthquake have been felt at Santa Cruz, in South Barbary.

A letter from a capuchin missionary at Salonica, the capital of Macedon in Greece, describes the wretched situation of that country during the last two years: he says

a plague

a plague had carried off at leaft 200,000 fouls; and feven successive earthquakes have overthrown most of the cities in that province; the capital is reduced to a heap of rubbish; the plains, once so famous. are now a defert the inhabitants have abandoned their dwellings, nor will any return to bury his friend or relation. On the 8th of April last the miserable people were terrified beyond description, at the fight of an extraordinary phenomenon; the heavens, after fun-fet, appeared as if all on fire, they discovered trains of fire, and felt a suffocating fmell of brimstone and bitumen, which they thought portended the general conflagration: but about midnight the whole vanished in the most dreadful claps of thun-

27th Extract of a letter from Sir Piercy Brett, commander in chief in the Downs, to Mr. Clevland, dated the zeth of

August, 1761.

Mr. M'Bride being off Dunkirk with the Grace armed cutter, on faturday morning, and observing that the two prames were gone into the harbour, and only four flatbottomed boats and a dogger privateer were in the road, he immediately left his station to join the Maidstone, and proposed custing out the privateer that night, if captain Digges would let him have four boats manned and armed which he very readily complied with, knowing his abilities and resolution. The boats left the ships at ten o'clock at night; and when they came near the road, they faid all their oars across, except two in each boat, which they muffled with bayes, to prevent their being heard at a distance. They rowed in that

manner till they were within mufket shot of the privateer; and, being haled, they made no answer; but in a few minutes boarded him on both fides, and took possession of him without the loss of a man, and only two were wounded. Mr. M'Bride shot the lieutenant of the privateer through the head with a musket, as he was pointing a gun into the boat; and one common man was killed, and five wounded. This was done within half gun shot of a fort on the east side of the harbour, but the fort did not fire at them; and when the prisoners were fecured, they cut the cables, and failed out of the road.

We hear from Sunderland, that Hannah Hatherington, of that place, has been lately cured of a tympany, which had continued upon her from April 1759; during her illness she had been tapped 12 times, and 288 quarts and one pint of water had been taken from

Dean Langton, of Ireland, was lately killed by a fall from a precipice, in the Peak Derbythire, 200 yards deep; his horse was also killed. But it is said a lady who rode behind him, was providentially faved by fome bushes catching hold of her cloaths.

From Kiel in Holstein, we learn. that M. Stambke, counsellor of state to the hereditary prince of Rusfia and duke of Holstein, died lately there in an advanced age. The late duke of Holstein owed his life to this gentleman; for being at Petersburgh, and having ordered a new state wig to be made, when the peruke maker brought it home, he feemed to infift with more than ordinary earnestness that the duke should be shaved, that the wig might

might fit the better; Mr. Stambke being accidentally there, suspected from the follicitude of the perukemaker that there was fome foul play antended, and advised the duke to compel the peruke-maker to have his own head shaved; which being done, and the wig put upon his head, he expired within twelve mi-

Died lately. Mr. Edward Moore, in Greenwich hospital, aged 100.

Mary Fox of Keynsham; near Bristol, aged 101.

Mrs. Elizabeth Wilcock, of Lancaster, aged 104.

At Pistoia in Italy, a peasant, aged 105.

Durand de Puy, of Auch, in

France, aged 109.

James Carlewhite, of Seatown,

in Scotland, aged 111.

John Lyon, of Bandon, in the county of Corke, Ireland, aged

SEPTEMBER.

Being the first day of the triennial meeting of the three choirs at Worcester, the collection at the cathedral amounted to upwards of 186 l.

And at the clergy's fons feaft, at Briftol, the collection for that charity amounted to 183 l. 10's. 2d.

The parliament met and were prorogued to Thursday October 8.

Admiralty-office. Extract of 4th. a letter from capt. Faulkner, of his majesty's ship the Bellona, of 74 guns, to Mr. Clevland, dated Aug. 21, 1761, · in Lisbon river.

" Please to acquaint my lords commissioners of the admiralty, that on the 4th inftant, at three P. M.

faw three fail in the S. W. quarter, Cape Finisterre bearing N. E. & E. distant ten leagues; we immediately gave chace, and, by their crowding from us, foon suspected them to be enemies. We came up but flowly. At five A. M. we got almost up with the chace, and found them to be a large ship and 2 frigates. At 6 the Brilliant began to engage one of the frigates; foon after with the other also. Twentyfive minutes after fix we came along fide of the large ship, and began to engage as near as possible. Thirtyfour minutes after fix our mizenmast went away by the enemy's shot; and at forty-five minutes after fix, the enemy's mizen-mast went over her side. At four minutes after feven the large ship struck, which proved Le Courageux of 74 guns, commanded by M. Dugué L'Ambert, and had on board yoo men, from St. Domingo. The Brilliant continued to engage the two frigates. At half past seven, the French frigates bore away, and neither of our ships were in a condition to purfue them. At the same time the prize's main-mast went away. We found our lower rigging much cut. The fore-mast. main-mast, and main - top - mast, much shattered. We lost in the action fix men, and had 28 wounded. The enemy had 240 flain. and 110 wounded. We fent our first lieutenant, Mr. Male, with other officers, and 150 men, to take possession of the prize, and received 224 prisoners on board. The Brilliant sent 50 men, and received 100 prisoners on board. She had five men killed, and 16 wounded; among the flain is the mafter.

We have fince heard that the above French frigates are called the Malicieux.

Malicieux, captain Longueville, and the Hermione, captain Montigney,

of 32 guns each.

I must also beg leave to acquaint their lordships, that captain Bogie, in the Brilliant, in the day of action, behaved like a skilful officer, in engaging the two frigates, and preventing their coming upon me. I also further assure their lordships, that the officers and ships company of both ships, behaved with true bravery. The wind being strong northerly after the engagement, and our ships much disabled, was the reason of my bearing up for this port."

The captain of the Courageux received a wound in his neck, of which he died the 25th, and was attended at his burial by the English and French officers. She is valued at 320,000 l. and had ranfomers on board for five prizes, a-

mounting to 8200 l.

When the French prisoners were landed at Lisbon out of the Bellona, they applied to the French consul for relief, without effect; but the gentlemen of the English factory, moved with compassion, and such a scene of distress, generously raised by subscription 230 l. sterling for their relief. A noble instance of English generosity.

8th with five adjoining houses, at the Three Cranes, were confumed by fire. Several persons were killed by the fall of walls, chimnies, &c.

and others much hurt.

Was found near the Spaniard below the Nore, a fisherman who had been cast away seven hours, and saved his life by means of a cork jacket.

The princess Charlotte of Mecklemburg Strellitz arrived in good health at St. James's palace, and at night the nuptials between his majefty and her ferene highness were celebrated with great pompand magnificence at the chapel royal.

The parliament of Paris seem refolved to drive the whole body of Jesuits out of that kingdom, for which purpole, besides ordering feveral books written by the members of that fociety to be burned, they have iffued fome fevere arrets against them, requiring them to deliver into their clerk, a compleat lift of all the members of the fociety in France, their age, place of birth, function, and rank in the fociety, with an exact schedule of the society's eftates and effects; and likewife not to receive any more novices, icholars, private or publick, or boarders, and fend away all those actually with them, in fix months from the 6th ult. This last arret is confirmed by another directed to the subjects in general. But these fathers have prevailed with the king to iffue an edict, by which he suspends all proceedings of the parliament against them for a twelvemonth, takes upon himself the confideration of the affair, and accordingly orders the superiors of each house of the society to deliver within the fame space of time to the clerk of the council the titles of their several establishments in France. This edict the parliament have agreed to register, but with a proviso, that it shall continue in force no longer than till the first of April next; and at the same time they directed their first president to represent to the king, in the strongest terms, the ill confequences of protecting that for

The epitome of facred and prophane history by the jesuit Horace Turcellin, is one of the books con-

demned

demned to the flames. It was published about 100 years ago, and in use in some protestant as well as popish universities. But the Jesuits, in reading it to their scholars, are charged with pointing out a concealed meaning in many places, particularly the not giving the title of king to Henry IV, till he reconciled himself to the church of Rome, and had obtained the pope's absolution.

The Lisbon Gazette of the 2d of Tune, printed in the fecretary's office, positively afferts, that all the reports of the departure of Jesuitmissionaries for Mexico and Paraguay, by permission of the king of Spain, were entirely groundless; and that notwithstanding the magnificent presents offered by the Jefuits to his Catholick majesty, he had constantly refused to ratify the permission granted by the late king for the departure of the missiona-Whereas the Cologne Gazette affirms, that they are not only embarked, but advice hath been received of their arrival, at the place of their destination; and that more Tefuits are now waiting for a veliel to carry them to Paraguay.

Whitehall. Letters from Sir 19th. Teffery Amherst, dated Albany, August 13, give an account, that the operations against the Cherokees, under the command of lieutenant colonel Grant, of the 40th regiment of foot, had fucceeded, though the country would have been impenetrable, had it been well defended. Fifteen towns, and all the plantations in the country, have been burnt; above, 1400 acres of corn, beans, peafe, &c. destroyed; about 5000 people, including men, women, and children, driven into the woods; and mountains, where, thaving nothing to subsitupion; they

must either starve or sue for peace. Col. Grant fays, that the provincials have behaved well, as he always expected they would do, and that they feem now to despife the Indians, as much as they were suspected to fear them before; that major Monypenny has been extremely diligent and attentive, and of great use upon all occasions: That the officers, commanding the feveral corps have exerted themselves, and every body has behaved with a proper spirit. Our Indians have been of great use. Capt. Kennedy has had a great deal of trouble, and has merit for taking so much care of them, and for keeping them in fo good order. The Upper Chickefaws are quite a different species of people from any other Indians; they have behaved remarkably well. If the province does not reward them, it must be done at the expence of the crown. Though they have been at war above a twelvemonth, they readily agreed to flay with colonel Grant as long as he pleased. They said, they would ask nothing till the service was over: but the preliminary article was, that when they went home, they were to trust to the colonel only, for their presents. The Cherokees must certainly starve, or come into terms; and, even in that case, colonel Grant thinks it is hardly in the power of the provincials to fave them. He proposed, in a few days, to fend for the Great Warrior, and the Little Carpenter, to come and treat of peace, if they chose to fave their nation from destruction. Till he receives their answer, he will endeayour to fave the small remains of the lower towns. In the mean time, colonel Grant intends to put Fort Prince George into repair, and to wait wait there, or at Ninety-Six, till he receives orders from Sir Jeffery Amherst.

M. Peter Van Musschenbrock, professor of physick in the university of Leyden, departed this life.

Right honourable William lord Blakeney, knight of the Bath, and a lieutenant general, aged 91, distinguished by his defence of Stirling-castle in 1746, and Fort St. Philip's in 1756, departed this life.

The Friendship, from America to London, being taken by a Bayonne privateer, feven Frenchmen were put on board to carry her into harbour, but the mate, and two seamen recovered her, and carried her

into Belleisle.

Boston in New-England, Aug. 10. We hear from Taunton, that on Thursday the 6th inst. the following unhappy accident happened there; Mr. James Walker, a gentleman of note and substance in that town, having a well which was become dry by the drought, went down to make a fire at the bottom to foften a rock there, in order to dig the well deeper. Some time after, the fire being out, he went into the well's mouth in order to go down: 2 d who flood by, observing, that when he got about half way down, he fell, run thereupon and called two men, who went down one after another, but both of them fainted there. Immediately the neighbours gathered round, and one was lowered down with a rope, but was almost overcome before he could fasten it round him and be got up again. When they were all got out, Mr. Walker was found to be entirely dead, and the other two near expiring.

-Part of a letter from Mr. J. Hippefley, dated cape Coast Castle, dated Jan. 22, relative to a young black that was a fervant in London about two years ago, and proved to be the fon of the prince of Anamaboo.

"I answered your favour by a ship, which, as I since hear, was taken by the French in her passage to the West-Indies; and as you seemed earnest, on your friend's account, to know the young man's situation, I cannot omit writing again. Indeed it is an office I am not fond of, as my information will not give pleasure either to you or

vour friends.

The father of Anthony the young prince had for some years past made a great noise about his fon's not being brought back to him, and threatened to feize all the English vessels and effects he could meet with. He took for granted his fon was dead, and rejoiced at the opportunity of gratifying his avarice: for as to revenge it was out of the question: he would not have iven fix-pence to fave the life of any child he had; and when the arrival of Anthony deprived him of a pretext to put in practice his intended feizures, nothing could exceed his rage at the disappointment. His fon became the object of his hatred. He barely spoke to him, and this was only to tell him to provide for himself, for that he would never see or hear of him any more. He has kept his word; and the poor lad owes his subsistence to the charity of a Dutch gentleman, settled upon that part of the coast. He behaves very well, I am told, and wishes earnestly to go back to England. This, however, (I am forry to tell you, and the gentleman who feems fo concerned for him) can

never

never be: no captain dare to take him home, as he would become anfwerable for all the damages his father might do to the English trade. Such is the fate of poor Anthony, and such a dog is the father.

You will, doubtlefs, be furprized, that paternal affection should not subsist even among savages: the truth is, their fondness for their young (for so I will call them for shortness) nothing can exceed when infants, but once out of that helpless state, all tenderness and attachment are at an end. In this, as in every other relation of life, such as husband and wife, brothers and sisters, lovers, &c. they seem actuated by instinct alone, and are (I might almost say) literally brutes."

22d. *Their majesties were crowned with the usual solemnities at Westminster Abbey.

Mr. Stanley arrived from Parls, and Mr. Buffy is returned to his own court.

The Earl Temple, lord lieutenant of the county of Bucking ham, having been requested by Richard Lowndes, Efq; one of the knights of the shire, on behalf of the lace manaufacturers, to present to the king a pair of fine ruffles made by Mess. Milward and Comp. at Newport-Pagnel in the faid county; his majesty after looking at them, and asking many questions concerning this branch of trade, was most graciously pleased to express himself; that the inclination of his own heart naturally led him to let a high value upon every endeavour to improve any English manufacture, and whatever had fuch recommendation, would be preferred by him to works possibly of higher perfection, made in any other country.

His majesty has given 100l. to-

wards the subscription for printing the works of Mr. James Thomson, the whole profits of which are to be applied to erecting a monument to his memory, and for the relief of some of his near relations in distress.

Paris, Sept. 4. Societies for the encouragement of agriculture, have been lately established in several parts of thisking dom; and by an arret of the council of state, all persons who shall cultivate, in any shape, the uncultivated lands in the generalities of Paris, Amiens, Soissons, Orleans, Bourges, Morilins, Lions, Poitiers, Riom, la Rochelle, Limoges, Bordeaux, Tours, Auch, Chalons en Champagne, Rouen, Caen, and Alençon, shall not be subject to pay any taxes for the produce of such land, for the space of ten years. All lands that have not been cultivated for twenty years, are to be confidered as uncultivated.

A conspiracy amongst the negroes, at Nevis, has been discovered, for massacring all the whites on the island. That island has been very sickly, occasioned by the want of hurricanes and high winds.

Captain Freeman, of the Buckinghamshire miliva, 26th. shot a highwayman who attempted to rob him on Clapham-Common, in his way to Kingston. The fellow was found dead in a ditch.

About one in the morning a fire broke out in the 29th. timber-yard belonging to Mr. Cox, of Cuckold's-Point, which confumed that, and an adjoining timber-yard, with feveral warehouses full of cordage, fail-cloth, and other naval stores. It is said to have been wilfully set on fire by rogues.

Many houses were likewise burnt and others greatly damaged, by a

dread-

dreadful fire, in Barbican, Garter-

On the night of the 11th of September, being a rejoicing night for the arrival of the queen, and the nuptials of their majesties, one Robinson, by throwing a squibb, frighted the horses in the coach of Sampson Gideon, by which a man was killed upon the spot. The coroner's jury have sound the said coach and horses, deodands to the duke of Bedford, in whose mannor the accident happened.

There is an aloe in the physic garden at Oxford, now opening for bloom, that is said to be different from any yet seen in England.

An epidemical diffemper has lately raged at Toulon, that in two months has carried off one third of the inhabitants.

The epidemic distemper among the horned cattle, rages in several parts of the continent.

The plague, that at Constantinople is periodical, ceased in June.

Between twelve and one o'clock, there was fuch a ftorm of hail fell in Enfield-marsh, as is not remembered to have happened in the memory of the oldest man living in those parts; some of the stones, or rather pieces of ice. measured five inches round, broke feveral panes of glass at Sufon-ferry, tore down branches of trees, and did infinite damage all around: the storm was attended with violent claps of thunder, which greatly frightened the inhabitants in that neighbourhood; feveral birds were knocked down and killed by the weight of the stones, yet the whole did not last above 3 minutes.

Exact lift of French ships of war, taken since the commencement of hostilities.

4 ships of 84 gune, 14 of 74, 2 Vol. IV. of 66, 17 of 64, 1 of 58, 2 of 56, 1 of 54, 6 of 50, 4 of 44, 2 of 40, 19 of 36, 1 of 34, 13 of 32, 3 of 28, 2 of 26, 7 of 24, 3 of 22, 7 of 20, 1 of 18, 7 of 16, 4 of 14, 2 of 12, 1 of 10, 8 of 8. Total, 131 ships, 5300 guns, taken. According to a list of the French navy, published in June 1756, including five which were then building, their whole number amounted to only 111.

An exact list of the number and calculation of the value of merchant ships taken and ransomed, for nine months, ending with September.

684 Total.

George Wilson, of Harbottle, born November 30, 1660, (as appears by the baptism-register of the parish of Jedburgh, signed Robert Wright, Seff. Clerk) was married the beginning of this month at Alwinton in Northumberland, to his fourth wife, a prudent and discreet woman, aged 51. By the two first of his wives he had fixteen children, In the year of the revolution he was impressed a foldier, and continued in the fervice fix years; when he got his discharge; and at his native place, returned to his former bufiness of merchandizing, as he calls it, viz. buying and felling about the country sheep skins, tobacco, &c. His earliest and continued trading hath been on Coquet-water, where he gained the esteem and goodwill of the country; this brought him, about fifteen years ago, wholly to settle in it, at Harbottle, where he follows the same business, gaining more now by the people's bounty, than by the profits of his trade, though at this time he is able to follow his laden als eighteen of the longest computed miles, through a very wild and mountainous country, in one day, viz. from Harbottle to Jedburgh in one day, and back the next. The curiofity of feeing the wedding of a man upwards

of 100, drew together a numerous and genteel fet of people from great distances, who, in regard to his good character, &c. made an hand some collection. The younger part of the company chose generally to dance with the bridegroom, who herein behaved in a very brisk and lively manner, giving to all the highest satisfaction. He is a strong-built middle fized man, his looks as extraordinary as his performances, being fresher than most men at seventy.

Mr. Merchet, of St. Anne's Westminster, aged 97, was lately married

to Mrs. Jourdain, aged 67.

Mrs. Roe, in Spital-fields, was lately delivered of two girls and a

boy.

Died. Captain Richard Aylmer, at Chapel Izod, near Dublin, aged 102. He ferved in the armies of king Charles and king James.

Mr. Isaac Thornton, of South-

wark, aged 102.

Henry Fleet, of Ely, aged 106. Died lately, John Williamson, of Pennybridge, in Lancashire, aged 101.

OCTOBER.

The materials (to a great value) in two yards, ware-houses, &c. belonging to two breakers up of ships, at Cuckold's-point, were consumed by fire.

The lord-mayor elect, recorder, and theriffs of London, waited on their majesties, the princes dowager of Wales, and the rest of the royal family, to invite them into the city next lord-mayor's day, which invitation they graciously accepted.

[See a full account of this enter-

tainment in a separate article after

His majesty was pleased to confer the honour of knighthood on

John Fielding, Efq;

One of the smallest horses ever feen, is brought over in the Latham, Mossat, lately arrived from the East-Indies; he is only two feet ten inches high, and belongs to a gentleman who came passenger in the ship from Bengal. It is said there are as small horses in the Highlands and western islands of Scotland, particularly the island of Terie, belonging to the duke of Argyle.

The Almirante and Capitana with some other ships under their convoy lately arrived at Cadiz, with 7,500,000 dollars on board. A dollar is worth about 48, 9d.

They write from Beziers, in Languedoc, that at the last asfembly of the academy of sciences there, the sieur de Rouviere, one of the members, communicated an observation on a kind of caterpillar found on pine trees, in the country of Gex; the cocoons of which yield a filver-coloured filk. According to him these insects do not fix on any other trees but pines. From whence he infers, that a great quantity of very fine filk might be produced by planting pines in uncultivated lands, and transporting thither a number of these caterpillars. Rouviere affirms, that he has feen, in the village of Farges stockings manufactured with the filk produced from the cocoons of those infects.

Gurnet and Campbell were executed at Tyburn; the 5th. former for house-breaking, the latter for forgery. Haynes was reprieved.

[M] 2 6th. His

6th. His excellency the earl of Hallifax, lord lieutenant of Ireland, arrived at Dublin, where he was received with all the honours

ufual upon fuch occasions.

The right hon. William Gerrard Hamilton, principal fecretary of flate to his excellency, was fworn of his majesty's most hon. privy council, and took his feat at the board

accordingly.

We are informed that Mr Robt. Waddington, who accompanied the rev. Mr. Nevil Maskelyne, F. R. S. to St. Helena, in the Prince Henry Indiaman, capt. Hoggis, is returned in the Oxford Indiaman, capt. Webber, and relates as follows: That they falled from the road of St. Helen near Portsmouth, the 17th of Jan. 1761, and arrived at St. Helena the 6th of April, with their instruments in good condition; they had an observatory made upon a hill about kalf a mile higher than the furface of the fea, wherein they had their inflruments for observing the transit of Venus over the sun; they made feveral observations of the transit of Venus over the sun's disk, but could not see the contacts, the day being very rainy and cloudy. Their observations of fundry kinds will be laid before the royal fociety at their meetings; also the results of their observations made on their voyage of finding the longitude of the ship at sea, and, when made, the island; likewise of the observations made on their return in the Oxford; which observations we shall take the first opportunity of laying before our readers.

9th. St. James's. The right hon. William Pitt, having refigned the feals into the king's hands, his majesty was this day pleased to appoint the earl of Egremont to be

one of his majesty's principal secretaries of state. And in confideration of the great and important fervices of the faid Mr. Pitt, his majesty has been graciously pleased to direct, that a warrant be prepared for granting to the ladyHester Pitt, his wife, a barony of Great Britain, by the name, stile, and title, of baroness of Chatham, to herself, and of baron of Chatham, to her heirs male; and also to confer upon the faid William Pitt, Efq; an annuity of three thousand pounds sterling, during his own life, and that of lady Hester Pitt, and their fon John Pitt, Esq;

St. James's. Earl Temple keeper of the king's privy-feal, refigned the faid feal into his majesty's

hands.

At the quarter sessions of the peace, held at Kingston upon Thames, for the county of Surry, which ended this day, near five hundred prisoners were discharged from the King's bench prifon, New-goal, and Marshalsea, on the compulsive clause, in the late act for the relief of infolvent debtors; when fathers compelled their fons; fons compelled their fathers; brothers and fifters compelled brothers and fifters; and bailiffs compelled those that employed them, &c. &c. there being no power given by the act to fwear the compelling creditor to the justness of his debt, or to make him attend to answer any questions. But it appearing to the court, in four or five instances, that there were frauds, the prifoners were remanded back. One instance was very remarkable: a person in the Borough had undertaken, for a fum of money, to get prisoner discharged; for which purpose he lent a man a bank note of 201, which man immediately lent the same to the prisoner in custody. and which note the prisoner immediately returned to the first lender; yet the middle man, who only paffed the note from the lender to the prisoner, compelled him to appear to a debt for 201, though the bank note was returned at the time, pretended to be borrowed. One prisoner, whilst waiting in court to be discharged, had his pocket picked of feven guineas. These practices, which have been too general, have occasioned great discontent amongst fuffering creditors.

There lately arrived in the port of London, within the space of eight days, no less than 196 ships in the foreign trade, besides 207 colliers, and 68 coasting vessels; which are the greatest number of ships that have arrived in the river Thames in so short a time since the beginning of the present war.

The right honourable James 12th. Grenville, brother to earl Temple, refigned the office of cofferer to his majesty, 4000l. a year.

At an occasional fermon preached at Gloucester cathedral, on the day of the coronation, a collection was made of 891. 11s. 4d for portioning out young women of good characters; which being left to the disposal of the ladies, subscribers to the county infirmary, the said ladies met this day at the infirmary, and chose four maids to partake of that bounty, to each of whom the following letter was delivered:

"You have been elected this day by ballot to receive a marriage portion of five pounds, which will be paid you by Mr. Arnold, the fecretary of the infirmary, as foon as you shall produce a certificate of your marriage. You will likewise be entitled to a benefaction of five pounds more at the end of the twelve months after your marriage, provided you and your husband shall be found to deferve good characters during that time. And, in order that you may begin the world properly, without running into unnecessary expence of any fort, the ladies do require, that you be married by bans, and not by licence: and that you do conduct yourselves in all respects in such a manner, as to do credit to their choice, and to become patterns of industry, fobriety, and good management to those of your rank and station.

"As to the notion, which has been spread all over the country, concerning the children of such marriages, as if the sons would be taken away to serve as soldiers, assure yourself, that this is a very great untruth, invented by wicked persons, who, not willing to do good themselves, are desirous of preventing any good being done by others. Your children, whether sons or daughters, will be as much the free-born subjects of the realm, as the children of the greatest person in it."

During a visit which his royal highness the duke of York yesterday paid to admiral Rodney, on board the Mariborough, at Spithead, a common failor got upon the very top of the vane of the main-mast, and stood there upon his head, waving his hat with his foot several times round, to the admiration of his royal highness, who made the fellow a handsome present for his extraordinary dexterity.

The fociety at Haerlem for promoting commerce, agriculture, arts and fciences, and whatever tends

[M] 3 to

to the welfare of mankind, has, at its last annual meeting, declared, that having received little fatisfaction from the feveral memoirs tranfmitted to it, " On the physical causes of the present much longer continuance of the mortality among the horned cattle than formerly;" that subject, which has been twice proposed, will be discontinued; but for the ensuing year it again proposes another subject, in which it has received as little satisfaction, viz. "How women's milk may be increased, lessened; or suppressed; the disorders most commonly arising from it, with the prevention or cure of them." At the same time the fociety proposes two new subjects; the first, " The best method for long life and health, to be observed in the cloathing, food, and exercises of children, from the birth to the age of puberty:" the second, "The best improvements or uses to be made of the feveral grounds in that country, high and low, according to the different nature of them." The memoirs on the two first subjects to be fent before the first of March 1762, to M. C. C. H. Vander Aa, secretary to the fociety; and those on the third, before the first of March 1763. They may be written in Dutch, French, or Latin, but very legibly.

Stockholm, Sept. 22. Letters from Nouissis, a town near Abo, mention the following remarkable accident: On the 25th of the last month, some minutes before functions, all the houses in the village of Sandamala were heard to give a very loud crack. The inhabitants being greatly terrified, immediately an out of their houses, and soon after, to their great associations, saw above half the

houses fink twelve feet into the earth for the space of fixty-four fathoms. This accident did little damage to the houses, except to the chimneys, and hardly altered the furface of the earth round about them. At the distance of twenty-four fathoms from these houses there is a little brook, the bed of which is not so deep as before this accident, but the ground between the houses and the brook is neither higher nor lower than before. At the time that the houses were finking, the perfons present heard but little noise: but those at a greater distance thought they heard a loud clap of thunder. A crack was perceived in the earth near the village, the evening before this event, and though it is not grown wider fince, the inhabitants are not without apprehenfions of some accident of the same nature, frequent cracks being heard in the neighbourhood.

Mr. L-, a young woollen-draper in Cornhill, stood on the pillory there for a sodomitical attempt, committed on a boy in a court in Lombard street, and, notwithstanding advertisements were previously published in the papers to intimidate the populace, and that a greater number of peace-officers were got together to prevent his being pelted, than ever were known on the like occasion; yet the refentment of the people was so great against him, that in returning to Newgate, they fell furioully upon the coach that was carrying him, and the officers that had the care of him were obliged to lodge him in the compter, till the mob dispersed.

New fish warehonses were opened for the sale of fish brought by land carriage from sea-

ports

ports at a great distance, in Covent-Garden and Oxford markets. This is a project of Mr. John Tull, fon to the late ingenious Jethrow Tull, Esq; author of the horse hoeing husbandry, and as it deserves general encouragement, the society for promoting the arts and sciences, have resolved to patronize it. We insert a letter wrote on a similar occasion to the lord mayor of London, by king Charles II. about two months after his restoration.

To our trusty and well-beloved the lord-mayor (Sir Thomas Allen)

of our city of London.

Whereas our royal father, of bleffed memory, did, in the year 1632, constitute and establish a society of fishers, and declared that he was refolved, by all good occasions, favourably to affift, and graciously to accept the forwardness of all those that should express their zeal to his majesty's service in so general and publick an undertaking, it being then resolved and concluded by his majesty, that it was both honourable and necessary for this kingdom. Now, that the true managing and most advantageous profecution thereof, is by certain experience discovered, by Philip late earl of Pembroke and Montgomery, and his affociates, who did cause fundry fishing vessels to be provided and built, which employed many families in making of nets and other provisions, one vessel employing twenty families in work, besides the breeding of country youths to be serviceable mariners, in a short time, as by the book called, The Royal Herring Buss Fishing, prefented unto us, doth plainly appear. And whereas we are informed, that the nation doth abound in poor families and vagrants,

who for want of employment are like to perish, unless some speedy care be taken for their relief; and that the feveral wards and fuburbs of this city of London and hamlets adjacent, are burthened with multitudes of poor people, not only which are born in the faid parishes. but fuch as come out of fundry countries to feek relief: for redrefs whereof, we do recommend unto the care of you our lord mayor of the faid city, to advise with each alderman, and to cause his wardmote-inquest to give in a particular account of all poor inhabitants in his ward, what their employment is. and how many are without employment, and present the same to the rest of the inhabitants of his ward. with a copy thereof, and excite them to a free subscription for raifing a stock to buy hemp and clapboards, to make herring fishing nets, and barrels, for the fitting out of one buss or fishing vessel, to belong to the faid ward, which will give all the poor and vagrants employment, the faid wards hufbanding the same to their best advantage: the which we shall in like manner. recommend to all counties, cities, and towns, within our dominions, whereby to make it a national employment for the general good, and will give all fitting assistance to the undertaking for their encouragement; that fo when provisions shall be made ready, and store-houses built in commodious places about the river of Thames, where breeches have been made, and the like in feveral ports, magazines may be filled with nets, casks, falt, and all other things in readiness; the buffes may go forth to our island of Shetland, as their rendezvous to keep together in their filhing, according

 $[M]_4$

to certain orders prescribed in the aforesaid book, and to take that privilege of filling grounds which belongs to us before all nations Whatfoever; and fo we bid you beartily farewell.

Given, &c. (in 1660)

We likewise insert Sir John Fielding's scheme for sapplying the "London market with fish, taken from extracts of such of the penal laws as relate to the peace and good order of this metropolis, and occasioned by a combination to keep up the price of that ufeful article.

The author apprehends that the inconvenience might be removed, if the gentlemen belonging to the Builish herring fishery, " a laffe, able, and respectable body,

the d (hefides the catching of herbecome fishermen for this metropolis; which, as they have much leiture from their other fifhery, ate accustomed to, and conversant in the building of boats, making of nets, and hiring of fishermen, they can carry on, with more eafe, and less expence to themselves, and more utility to the public, than any other body whatever. By this means an immense quantity of fish would be brought' to Billingfgate and Westminster markets, yet not more than this town would confilme, and would totally destroy the present monopoly of different fish, viz. lobsters, turbots, &c. as well as the little combinations lately practifed to make an artificial fearcity tand as the conveniency of a plenty of fish in London and Westminster to all ranks of people, is much caster to be conceived than expressed, I shall now mention what feems necessary to the furtherance of this plan and first, that

the legislature should enable the the members of the free British herring hibery to apply a necessary part of their capital to this proposed fishery, which cannot be attended with any hazard, as ready money is always paid at the fishmarkets; fo that it will rather enrich the body, and enable them to carry on the herring fishery itself, with more effect and advantage, than obstruct it.

" Secondly, besides the provisions made by the late statute relative to fea fish, an officer should be appointed to attend both markets to fee fuch methods faithfully executed, as the legislature shall think necesfary, to prevent the engrossing or monopolizing of any fift brought to the faid markets for fale.

"Thirdly, That every person felling fish by retail out of the faid markets, shall be obliged to expose to open view, from eight to twelve in the morning, whatever fish he has to fell, with a penalty for concealing any part of the same.

"In this plan, public spirit and interest will go hand in hand; and as they will be enabled to fit out a larger fleet of fishing-boats than was ever yet fent to fea, great plenty of fish must be the consequence, and cheapness will naturally follow; and by little bounties and rewards which they themselves will be able to give to fishermen, it is hoped that the evil now fo loudly complained of, will be most effectually cured; and the fishmongers themfelves, who have lately been the dupes of the fithermen, and the monopolizers of particular fish, would have reason to rejoice; for, by selling more fifth at reasonable rates, their gain would be the fame."

They write from Paris, that the

marquis de la Galassoniere has prefented the royal academy of sciences with feveral pieces of granite, found near Montaign, which will take the finest polish imaginable. It is amazing to fee what plenty of this stone, which has been thought peculiar to the Upper Egypt, is to be found in France.

A marine belonging to one of his majesty's tenders, was convicted at the last Bristol assizes, and executed accordingly, for shooting some time ago the young man who gives the intelligence of the arrival of ships at that port, commonly called the warner. This marine and some of his comrades had been shooting birds for their diversion, in a piece of ground where fome women were at work, and on the warner's civilly entreating them to defift or go farther to divert themselves they gave him very rough language; upon which he withdrew: but the marine in question, in a minute or two turned about, and in a barbarous frolick, to shew himself a good marksman, told his comrades he would fetch that fellow down, and accordingly shot him dead.

A dreadful fire broke out at Workfop Manor, the feat of his grace the doke of Norfolk. It was first discovered in a closet near the library, that had been newly washed, raging with such violence, that notwithstanding the assistance of several neighbouring gentlemen, and most of the inhabitants in the adjacent villages, it could not be extinguish-The engine had little or no effect, as the building was princi-pally of lime-stone. The chapel, with fome part of the east wing, is all that now remains of this late venerable feat; which, by feveral improvements made by the present

duke, was thought to be one of the finest seats in England. tained five hundred rooms. The library, pictures, &c. which were very valuable, are entirely confumed; and the magnificent furniture, especially a rich bed of needle work, of which the hangings only were faved, suffered confiderably by this dreadful conflagration. One man loft his life in the rubbish, and another was much burnt. When the duke received the fad account. he faid. God's will be done: and the dutchels, How many besides us are fufferers by the like calamity? Great as this loss is to the family, being computed at 100,000 l. it will be followed by a still greater to the country, as upwards of 12,000l. of late have yearly been paid in wages to workmen who were conflantly employed about the house.

The city of London came 22d. to a resolution to give their representatives in parliament, instruction relating to the present state of affairs, and thank Mr. Pitt for his fervices &c. all which and Mr. Pitt's answer the reader will find in the State Papers.

Ended the fessions at the Old Bailey, at which four received fentence of death, viz. Richard Parrot. for the wilful murder of his wife, by cutting out her tongue; Esther Bowden, for the murder of her bastard child; John Perrott, a bankrupt, for concealing his effects, [fee our Characters for this year; and Samuel Lee, for publishing a forged bill of exchange, who were accordingly executed. Twenty received fentence of transportation for seven years, two to be whipped, and one was branded.

Parrot on his first examination appeared to be deaf, tho' his plea, it is faid, for cutting out his wife's tongue was, that she was an intolerable foold.

The messenger who found in a trunk of Perrott's, the half of a 1000l. bank note, having delivered it to one of the principal creditors, without putting any mark upon it, faid when it was shewn him that he could not fwear to the identity of it. and the prisoner's council objected to the gentleman, in whose possession it was, being examined; but one of the judges, telling the gentleman, if he would give up his right to the proportion he might receive of it, he might then be examined; this the gentleman very readily did, and fwore it to be the identical note he received from the messenger.

Leeds, Oct 20. A few days ago a young woman, about 20, dreffed in man's cloaths, was impressed at Plymonth, and sent to capt. Toby in this town. On her arrival, she was committed to prifon; but not liking confinement, fhe discovered her sex, and was discharged. She gives the following account, of herfelf; that her name is Hannah Whitney; that she was born in Ireland, had been a marine on board different ships for upwards of five years, and would not have discovered her sex, if she had been allowed her liberty.

Extract of a letter from Great Malvern, Oct. 16.

"On Wednesday last we had the most violent thunder ever known in the memory of man. At a quarter past four in the afternoon. I was surprized with a most shocking and dismal noise; a hundred forges (the nearest resemblance I can think of) were they all at work at once, could scarce equal it; I ran to the foredoor, and casting my eye upon the

fide of the hill about 400 yards to the fouth west of my house, there appeared a prodigious smoak, attended with the same violent noise. I ran back into the house, and cried out a vulcano (for fo I thought) had burst out of the hill; but I had no fooner got back again, than I found it had descended, and was passing on within about a hundred yards of the fouth end of my house; it feemed to rife again in the meadow just below it, and continued its progress to the east, rising in the same manner four different times, attended with the same dismal noise as first: the air was filled with a nauseous, sulphureous smell. I saw it gradually decrease till quite extinguished, in a turnep field about a quarter of a mile below my house. The turnep-leaves, with leaves of trees, dirt, flicks, &c. filled the air. and flew higher than any of these hills. The thunder ceased before this happened, and the air foon afterwards became calm and ferene. The furprize and aftonishment of all ranks of people, during the appearance of this strange phænomenon, is scarcely to be expressed."

The vast column of smoak, mentioned in the above letter, was so large, that a physician of eminence at Worcester, saw it in its progress down the hill, about a mile from Feckenham, which is above 20

miles from Malvern.

At the fessions of the high court of admiralty, held this day at the Old Bailey, capt. Wm. Watson of the Fly privateer, was, by the villainy of two of his failors, indicted for piratically boarding and robbing a Dutch ship of several things of value; but it being proved that the captain, so far from encouraging his men to commit any act

of piracy, ordered them to carry back the things laid in the indictment at the peril of their lives, he was honourably acquitted.

Extract of a letter from Misson.

Sept. 22.

" I cannot fend you a printed list of the Auto de Fé, which we had on the 20th, because there was none published by the tribunal. Auto exceeded all we have ever feen in magnificence. Boxes were built round the square da Rosico. All the regiments of horse and foot furrounded the square to the gate of the Dominican convent, and each foldier had eight charges.

" The scaffold built in the cloyster of St. Dominic, on which the criminals had their fentence read to them, was in the form of a theatre, richly adorned. All the nobility, the judges, and great officers of ftate were present, but none of the

royal family.

" A grand entertainment was given in the convent, by the inquisitor Nuno de Mello, to all the no-

bility.

"The number of the criminals amounted to fifty-four, including three in effigy. Father Maligrida was the only person burnt at a stake. His crime is fet forth in the following fentence.

· Abandoned in the flesh, *

' Michael Maligrida, native of Mi-lan, jesuit, for feigning revelations

and false prophecies, for com-" mitting lewd actions, and for fol-

- ' lowing heretical opinions; one of which was the afferting in the
- ' life of St. Anne, and in another work of his composing concerning
- Antichrist, that the three persons
- of the trinity, were father, fon,

and grandfon. Convicted of various impostures, falsehoods, du-

oplicities, impenitent hardness, prevarication, and broaching many

' heretical doctrines.'

Philadelphia, Aug. 20. A very laudable example has been shewn by the pastors, or ministers of the feveral persuasions in this country, viz. church of England, Presbyterians, Baptists, and German Lutherans, in an address to the honourable James Hamilton, Efg: lieutenant-governor, and commander in chief of that province, &c. fetting forth the ill consequences of encouraging gaming, and all' forts of luxurious and vicious publick diversions, particularly a new subfeription by way of lottery, for opening publick gardens, baths, bagnios, &c. and other schemes of dissipation, which they observe have already increased too much within these few years: all which they petition the governor to use his influence to suppress, as they are willing to preserve the character that province has hitherto borne, of a fober, fedate, industrious, frugal and religious people. To which the governor has given his word and honour, that every scheme tending to the diffipation of the minds of the people shall be difcountenanced to the utmost of his power.

One Daniel, condemned for the murder of his wife, 31st. and whose execution was postponed as falling on the day of their majesties coronation, has after many respites received the king's pardon, it appearing by the strongest circumstances, that the unhappy woman was the author of her own

death.

^{*} That is, delivered over to the fecular arm.

death, by throwing herfelf out of the window. He is the first instance of a murderer respited since the act for their immediate execution.

The inhabitants of Bow were lately greatly alarmed by the appearance of a leopard, which tore a man's leg in a terrible manner, and killed all the dogs that ventured near him; several persons were thrown down by this ferocious animal, and a general consternation enfued : At length some resolute fellows resolved to destroy him, and prevent any further mischief; for which purpose they provided a large quantity of fishing and other nets, which they found means to throw over him, and luckily entangled him in fuch a manner that . all his efforts to escape were fruitless; when clubs, pitchforks, and other instruments soon put an end to his life.

A new piece of artillery was tried lately in Dublin, after the manner of marshal Saxe's amusette; it carries a ball of lead of half a pound, is loaded at the breech by a chamber; its bore is two-thirds of the diameter of the shot, and its point blank range is about 800 yards. It has a stock and lock, and is fired from the shoulder like a common musket, resting on its carriage which ferves as a parapet to fire over. is drawn by one man on all occafions, and its carriage is fo contrived, that in case of bogs, brooks, ditches, &c. the shafts slide back; and it is carried by two men like a fedan chair.

A cast gun carriage of a new invention, has likewise been tryed at Woolwich and highly approved.

Five hundred pounds worth of herrings were lately taken, in one morning, at Galway, valuing them at 18 or 20 pence per hundred.

A cave containing three acres of ground, feveral beautiful rooms, entered by a narrow floping passage, that only one person can pass through at a time, has been discovered near Dry-Harbour, in Jamaica.

By an estimate made in France in the year 1710, there were then in that kingdom 612 jesuits colleges, 340 residaries, 59 noviciates, 200 missionaries, and 24 prosession houses of that society, amounting in the whole to 20,000 jesuits; and it was thought, that within the 50 years since that time their houses are very much enlarged and their number greatly increased.

As the island of Malta has nothing further to fear on the part of the Turks, the grand master has permitted all the knights, whom he had fummoned thither for the defence of the isle, to return to their respective places of abode. Italians embarked on board gallies, which failed first to Naples, afterwards to Civita-Vecchia, and from thence to Leghorn. The French were to return home on board a man of war. The island has been well fortified, and provided with every thing for a long and vigorous defence; the commander of Mamora having, for that purpose, advanced to the order the fum of 200,000 crowns at two per cent. and moreover made them a free-gift of another large fum in ready money.

An account of the proceedings of the French king's frigate Amethyst, of 32 guns, capt. Oxeoday, (lent to the merchants) from Cape Blanco to the river Gambia.

os After

& After she had made Cape Blanco, the fleered along the Guinea shore, till she discovered the Tryal fnow, laving at Port en Derick, to take in a lading of gum. The frigate fent in a packet of 10 ouns, which she had before taken. in order to scize the faid snow, which she accomplished, and then made fail down the coast to Senegal, and on her coming a-breaft of Senegal fort, the fired four guns by way of fignal to the fort, which not being taken notice of, or returned, the frigate ran down to the bar of Senegal, and there took a fnow laden with provisions from England for the garrison, which capture greatly diffressed the said garrison. She fent feveral of her prisoners on shore in her long-boat, and then proceeded down the coast to Goree, where (by the information of the prisoners) she intended to have cut out the Goree brig, and the other vessels employed for wooding and watering the garrison of Goree: but, on her arrival off the hill of Goree, she discovered four fail off Dunness, which she immediately made fail for, and took two of them. From thence the proceeded to the tiver Gambia, where she brought to, and manned the packet of 10 guns, and the Tryal snow of eight, and fent them up the river, in order to take James's fort. But the commanding officer of the fort having received the notice fent by governor Newton of the 'frigate's defign, about fix hours before the two veffels appeared, they gave them fuch a reception, by a discharge of their guns, which was fo little expected by the French, that instead of attacking the fort, the two vessels wore, in order to retreat, but in wearing, the Tryal being a good deal by the stern, run a-ground, and finding they could not get her off in time, left her all but eight men, four of which were English; the other vessel (being the packet) having received the crew of the Tryal on board, made all the fail the could down the river. The mate of the Tryal being one of the four Englishmen left on board, made the fignal of distress, on which affistance was fent them from the fort by governor Debatt, and the was imme-

diately got afloat.

" Governor Debatt took out her cargo, and fent her to Goree with provisions, as he knew of the capture of the fnow with provisions from England, but before her arrival at Goree, they had received a fupply by the arrival of another vessel from England. The Tryal then failed for Senegal on account of the African company: but on her arrival at Senegal, capt. Hickes, of his majesty's sloop Goree, seized her, as also a brig in the river Senegal, belonging to the conful of Teneriffe, in confequence of which the Tryal was fent to England without the cargo defigned.

"The captain of the Amethyst, appointed by the French king, is faid to have behaved well to the prisoners; but the second captain who belonged to the adventurers, together with the rest of the officers and crew, were perfect ba-

shaws in their behaviour."

Died lately at Petersburgh, the spouse of a prince of Mongala, who came there to feek for refuge. The chan of Undoria, her husband, in alliance with other petty chans, had waged continual war against the Chinese for near a century. Three

years ago he took a journey to Peking, and under pretence of making his submission, and desiring to enter into the emperor's fervice to fubdue his neighbours, he obtained the command of an army of 30,000 men whom he led to the frontiers of his country, and there caused them all to be massacred. To revenge this treachery, the Chinese marched a numerous army to overrun his country, whom the chan encountered; but after an obstinate engagement of 17 hours, being defeated, he was obliged to fly for shelter, with 600 families to Siberia, where he died last winter. His extensive country, the Chinese converted to a defert, and the czarina has assigned the remaining families a safe retreat on the confines of Perfia.

Thomas Brooks, Efg; in Goodman's-fields, aged 89, who had made the tour of France, Portugal, Spain, and Italy, of about eight thoufand miles, on foot. He has left a fum of money for the encouragement of industry.

Mrs. Rasby, 30 years a prisoner for debt in York castle.

David Eagle, aged upwards of eighty, who has lived above thirty years by begging about this city, and for the last seven years lodged in Bread-street, and paid fix-pence a night for his lodging, but never fuffered any body to go into his room, either to clean it or make his bed, nor suffered a clean pair of sheets to be laid on the bed, fince the first night he lodged there. On fearching the cloaths he wore every day, they found 251.35. 1d. and are in expectation of finding more concealed in the room.

A man in the island of Ely, in the 104th year of his age. As he was a few days before driving a cart, his fon, who was aged about 70, being too near the shafts, was thrown down, and the wheels going over him he was killed upon the spot. This accident so affected the father as to cause his death.

alms houses, aged 106.

Barbe Semperin, at Vienna, aged

William Proleyn, Efg; at Newland, Gloucestersh. aged 106.

Widow Rogers at Wrexham, aged

107.

At Liverpool, William Marsh, aged 111. At South-Waltham in Norfolk,

Sarah Brown, aged 112.

Dame Otherley, at Naples, aged 114.

NOVEMBER.

His majesty reviewed the Dorsetshire militia in Hyde-Park, and expressed his entire fatisfaction at their behaviour. Their colonel is the earl of Shaftesbury. They represented a scene as if defeated, and all ran 500 different ways amongst the crowd, and all of a sudden every man, in a few minutes time, was in his place again.

Last night between eleven and twelve o' clock the following odd affair happened: A gentleman went into a hackney coach at Templebar, and ordered the coachman to drive him to Dock-head; but the coachman being in liquor, turned under Black-friars gate-way, in Ludgate-street, drove to the bottom of Water-lane, down the flight of stone steps, and on to the causeway: it luckily happened to be quite low water, fo that no accident enfued; but it was with great

difficulty the horses got the coach up again, tho' all possible assistance

was given them.

This day the parliament met, and his majesty went with the usual state to the house of lords, where being seated on the throne, and the house of commons attending, his majesty signified his pleasure to them by the lord high chancellor, that they should return to their house, and chuse a speaker, and present him on Friday next. They returned accordingly, and unanimously chose Sir John Cust, Bart, member for Grantham in Lincolnshire.

A little after fix in the evening, a meteor, resembling a ball of fire. was feen at Whitby. Its direction was from N. E. to S. W. and in its progression, which was parallel to the horizon, it threw off a vast quantity of fire, that formed a train across the hemisphere, which continued a quarter of an hour after the meteor itself had disappeared. It is supposed that its rapid motion through the higher regions of our atmosphere, in a path directly contrary to the wind, caused it to throw off from its body that long train of fire that made fo beautiful an appearance in the heavens, and was gazed at with wonder and delight by the connoisseurs.

The fociety for the encouragement of arts and commerce, voted the difbursement of a capital of 2000. For establishing the supply of fish, by land carriage for London, at the entire dispusal of John Blake, Esq; pursuant to the most excellent scheme for this purpose lately projected by Mr. Tall

lately projected by Mr. Tull.

6th. The king went with the usual state to the house of lords; and the commons being sent

for, they prefented their speaker Sir John Cust, whom his majesty approved. His majesty then made a most gracious speech from the throne. See the State Papers.

The convocation of the province of Canterbury met at St. Paul's cathedral, and heard a latin fermon, and afterwards chose a prolocutor.

The East India company have received an account, that the cruelty of the Dutch at the island of Ceylon, had caused the natives to rise, and destroy most of them, with their plantations of cinnamon and other

spices.

An order of council was issued, to suppress the unlawful combination lately formed by numbers of the journeymen cabinet makers. and to enjoin all magistrates to profecute the masters of publick houses. where fuch journeymen shall refort. The journeymen on the other hand. charge the masters with entering into a combination, every whit as dangerous and blameable, to hinder the timber merchants from felling to fuch among them as may be able to purchase it, stuff to work up on their own account. Justices of the peace have a right to interfere, upon complaint made to them, on these occasions, and check oppression in the master, and idleness in the journeymen; but unfortunately for the latter, they feldom know any thing of the redress provided for them by our excellent constitution; for which reason it were to be wished, that some of our great men would condescend to become their protectors. This is practifed in other countries, where the working people contribute far less to the wealth and power of their superiors, than they do here

[176]

9th their majesties and the rest of the royal family honoured the city of London with their presence at Guildhall, and were entertained in a manner that reslects great honour on the opulence of the metropolis, and its and duty affection to their majesties.

A most horrid murder was committed by John M Naughton, Efq; on Miss Knox, daughter of Andrew Knox, Efq; knight of the shire for Donnegal in Ireland. See a full account of this murder, and the murderer, among our Characters for this year, p. 73.

Our troops at Belleisle are faid to fuffer extremely by a fevere fever and flux. (See our article of Projects for this year p. 122.) There are 14 hospitals in the town of Palais, which are not enough to hold the great number of fick, therefore more are erecting. There are also regimental hospitals in different parts of the ifland, particularly Saufon and la Maria, where, at each place, a brigade is quartered. A confiderable number of the troops have been brought to the ifle of Wight. It is furprizing what quantities of live flock and garden stuff it has been found necessary to send them from time to time. Most of these articles were supplied from Corke.

The house of commons waited on the king with their address of thanks for his speech and likewise on the queen, with their address of congratulation on her nuptials.

During the course of last month were exhibited in the garrison church of Berlin, three fine paintings: The first represents the immortal count de Schwerin, as he was found dead in the field with a pair of colours in his hand, after the battle near Prague. The dying hero, as he falls, embraces Victory, under the figure of a woman, holding out to him a crown of laurels. At the fame time his wound is feen.

In the fecond picture is feen lieutenant general Winterfield compleatly armed, who was flain near Gorlitz. A woman, with a gardland round her head, fhews War coming to meet him with a lighted torch; upon which he fnatches up his helmet, and puts his hand to his fword, for the defence of his country.

The third painting represents major Christian Lehwald de Kleist, a gallant warrior, and an eminent German poet, who was mortally wounded at the battle of Kunnerf-dorst, and died soon after at Franckfort on the Oder. Friendship, under the figure of a woman, is weeping over his arn, and at the bottom of the tomb is a lyre surrounded by laurels with a sword.

The portraits of several other heroes who have died, in the bed of honour this war, in defending the rights of Frederick the Great, will be successively put up in the church

of the garrison.

By a private letter from Spain, the following remarkable intelligence has been received, That Burrington Goldsworthy, his Britannic majesty's consult at the ports of Cadiz and Port St. Mary's, intending to celebrate their majesties coronation, at his house at the latter port, on the 30th of September last, had written a circular letter to all his majesty's subjects, requesting the favour of their companies to rejoice with him on so great and happy an event: intimating at the same time, that to illuminate their

boute

houses would be a further demonstration of their joy on that occasion; but though this letter was fent to 45 English and Irish gentlemen, no more than ten houses were illuminated at Cadiz, and at Port St. Mary's only the consul's and vice-consul's, the rest excusing themselves for fear of giving umbrage to the Spaniards.

The prisoners in the several prisons of this city, who claimed the benefit of the compulsive clause in the act of insolvency, were carried to Guildhall to be discharged; but were all ordered back to the prisons from whence they came, a bill for explaining this clause being now be-

fore the parliament.

Saturday last his royal highness the duke of York, attended by lord Anson and several noblemen; gentlemen of the admiralty and navy boards; were at Woolwich, to examine his majesty's ship Alarm, whose bottom is entirely plating over with copper to preserve her from worms in southern climates: this is the first ship ever done in this manner; this sheathing is extremely neat and curious, without being heavy or very expensive; and gave a great satisfaction.

Both houses of convocation waited on their majesties with their ad-

dreffes.

The right honourable Sir Francis Dashwood, baronet, has received the following anony-

mous threatening letter.

"Sir Frans Dashwood I have taken this hoper tunet to a Quent You That if You do go hon as You do You sartenly lose Your Life and that Black that Lord Northampton and some more that I have not mentioned for when that You go to dine You go hout hand near leaves

Voi IV.

won farthen nor woot let Your Sarvants tak One farthen for if You dont leave of You sarten shall have a Dose of Leden Pills and tha hare vere hard to digest for if Sarvants has but Nine rownds tha cannot Ceep a Wife and Famele For You must bild Work Howses and Cep Them but You will not live to se them bilt for I wod have Yout be all wase prepard for Deth for You do se that theare is nothing but robin upon the hi Way and that is o caisened by no thing Else but by starven the Poore Sarvants and so You must concider a bout This a fare for dam You You shall suffer and hall fuch Blacks and more fuch Blacks as Youer self and so I ham

Youer and be dam'd"
His majesty's pardon is offered to
any (except the person who sent it)
that will discover those concerned;
and Sir F. Dashwood offers 1001.

for the like discovery.

By a sudden hurricane of wind several merchant ships 20th, below bridge were driven from their anchors, and received great damage. Several of the small craft were stove in pieces, and a corn-lighter was such off East-lane stairs.

The academy of sciences and belles lettres at Besançon in France, have promised a gold medal; of the value of 350 livres, to the author who, in a piece of eloquence that may be ready in half an hour, shall best resolve this question: Whether it be true that fortune often seeks the man, or that the man seeks fortune?

A private letter from Conflantinople fays, that a fire happened there in the horse-market, on the 23d and 24th of September, which has destroyed a number of noble palaces, besides a multitude of tradesmen's houses. The loss occasioned by

[N]

which

which is estimated at an immense sum.

The committee appointed to prepare the late entertainment for the royal family at Guildhall, waited on their majelties at St. James's, in purfuance of an order of common council of the 17th, and being introduced to the king in his closet by the duke of Devonshire, the right honourable Sir Samuel Fludyer, lord-mayor, addressed his majesty to the following effect:

ROYAL SIR,

"The lord mayor, aldermen, and commons of the city of London, in common council affembled, being defirous famongst other marks of their personal veneration and esteem for your majesty) to have your majesty's statue erected on the Royal Exchange, amongst those of your royal predecessors, and the picture of your majesty put up in the Guildhall of the faid city; have, in order hereunto, directed us to make our humble application to your majesty, that your majesty will be pleased to do the city of London the honour to fit for your picture, and to fignify your pleasure therein: And we are commanded, at the same time, to express to your majesty the deep and grateful fense which the said court of common council will ever retain of your majesty's gracious condescension in honouring their late entertainment at Guildhall with your royal presence."

The committee afterwards waited on the queen, being introduced to her majefty by the duke of Manchester; when the lord mayor addressed her majefty on behalf of the common council, requesting her majefty would be pleased to fit for her picture; and expressing also the common council's grateful sense of her

majesty's condescension in honouring the city with her presence.

His majesty was pleased to receive the committee in a gracious manner, expressing his entire fatisfaction at the late entertainment, and signified his royal intention to give orders that his picture and that of her majesty should be sent to the city.

Her majesty was also pleased to receive the city in a polite manner; and such of the committee as had not before, were permitted to kiss her

majesty's hand.

The Dutch, we are well affured, received annually, upon an average, from this kingdom, not less than 100,000l for the fingle article of turbot.

An ancient register, which may be depended on, give us the following very mortifying instance of the brevity of human life, of a hundred persons, who were born at the same time:

11410 .
At the end of 6 years, there 64

Some coins have been lately found
04 1 7

Some coins have been lately found in an urn, at Church-Burrow, near Newcastle, which are very antique, several of them being of Julius Cæsar, Augustus, Vespasian, Nero, and a few of Otho's, which are greatly esteemed by antiquarians.

Extract of a letter from Winchelfea, in Suffex. "The cambrick manufactory here established, is like to be attended with great success; we have now already eight looms at work, and shall soon have more.

Two

Two pieces have been finished, and fent to town; one of which, I am told, was presented to the king. Should this manufactory of French cambricks fucceed, it would fave the nation 300,000l. per annum; and there is more probability of its fucceeding here, than in any part of England, where attempts of this fort have been made: the fituation of the place; the vast number of fine vaults under ground, where only the works of this manufactory can be carried on; the peculiar quality of the waters for bleaching, and the richness of the neighbouring foil to raise the flax, all forebode a happy iffue.

Ten thousand hogsheads of fish have been taken, lately, in one week, at Penzance, in Cornwall.

Elizabeth Canning is arrived in England, and received a legacy of good left her three years ago, by an old lady of Newington-green.

The following fums have been granted by the Irish parliament to the following persons and publick uses.

To the trustees of the linen manufacture, for two years, 4000l. The corporation of the inland navigation from Kilkenny to Ennifteague, 4000l. To finish the church of St. Thomas, Dublin, 10001. For carrying on the inland navigation from Dublin to the Shannon, 10,000. The pier at Dunleary, 3000l. Promoting English protestant charter schools, 12,000l. 18 Towards building St. Catherine's, church, Dublin, 1000l. To finish the aqueduct from the river Finisk to Dungarvan, in the county of Waterford, 500]. To remove the obstructions in the navigation of the river Barrow, 20001. For extending the pier of Balibriggan at

Skerries, 15001. Clearing the channel of Corke harbour, 4000l. Making the Shannon navigable from Limerick to Killaloe, 8000l. Carrying on the inland navigation of the Black Water, 2500l. Payment of debts of the Foundling-hospital, 42521. To discharge the debts of the Lying-in-hospital, and to finish and furnish it, 3000l. To make a navigable canal from the bason of Drumreagh to Farlough Lough, 3000l. To the widow and children of the late Dr. Mosse, who projected the building of the Lying-inhospital, 1000l. Mr. George Semple, architect of Effex bridge, Dublin, gool. - Arthur Mervin, Efg; 2000l. to enable him to finish the mill and granaries at Naul, in the county of Meath. To finish the dock at the west end of the north wall, Dublin, 10001. Dublin fociety, for the improvement of hufbandry, arts, &c. 20001. A further fum of 10col. per annum, for two years, to the protestant charterschools. To encourage the cambrick manufacture at Dundalk. 13751.

Further sums granted by the Irish parliament for public uses.

To the trustees of the linen manufacture to encourage the raising of hemp and flax in that kingdom, 2000l per annum for two years, 4000l. To the corporation for carrying on the inland navigation to be applied towards inclosing, fixing and defending the channel of the river Boyne below the bridge of Drogheda to the bar of the faid river, 2000l. For widening and repairing Baal's bridge in the city of Limerick, and for continuing a new key eastward on the north fide of the Shannon to the back river on the fouth fide of the fouthern

[N]z

bank

bank of the new canal, and for purchasing several houses on the west side of Baal's bridge, &c. 4500l. For finishing the harbour of Wicklow, 18501. 8s. gd. For continuing the ballast-office wall to the east end of the piles 5000l. For making the river Legan navigable from Loughneagh to Belfast, 4000l. Besides the 2000l. given to the Dublin fociety for the improvement of husbandry, and other useful arts, 10,000l. is granted to them to be distributed to so many of the several persons who petitioned the house of commons this fession for premiums or rewards, upon which reports have been made.

By an account delivered in to the Irish parliament, it appears that the pensions upon that kingdom, from the 25th of March 1759, to the 25th of March 1761, amount to the sum of 118,501l. is, 3d. three farthings, which exceed the whole charges of the civil list by 25,129l. 3s, 3d. halfpenny.

Last Lady-day their national debt was 223,4381. 178. 11d. half-penny. The supply granted by parliament to his majesty, is one million nineteen thousand one hundred and twenty pounds four shill-

lings and eleven pence.

On this day was argued, 24th, before the court of King's-Bench, a special verdict, found at the last Lent assizes at Exeter, on an ejectment brought on the demise of his grace the duke of Bolton. The question upon this argument was, whether the late duches dowager of Bolton had a power, as a jointres, to grant leases for 99 years, determinable on lives. The court, after a full hearing of council on both sides, was unanimous, and gave judgment for his grace, which

will determine the fate of a great number of other leafes of the fame nature, and the duchefs's executor will be obliged to account for all the money the received for the fines of fuch leafes, to the amount of many thousand pounds.

St. James's. His grace 25th. John, duke of Bedford, was this day appointed keeper of the

privy feal.

Bath, Nov. 21. There are at this time living in eight houses, fix of which lie within a stone's cast of one another, the other two very near, and all in a small group of dwellings about the parish church of Widcombe, half a mile from the bridge of this cay, twelve persons in tolerable health, whose ages together, upon an exact calculation, amount to 945, five of which are upwards of 80, and the other seven a trifle under. There are also feveral other ancient people in that fmall village; and in the more populous parts of the parish, are many between 80 and 100.5359 is burn

Exeter, Nov. 21. Last Monday fome of the Welch militia began to dig for coals on the estate of Northmore, Esq; not a mile from this place, and yesterday evening, as we are informed, was dug up very good coal. We are likewise told that Mr. Northmore has already been offered 1000l and 200l. per annum, for the pit.—Coals are now fold in this place for 20s. per quarter.

Berlin, Nov. 3: The prize queftion of experimental philosophy proposed by our academy of sciences for the year 1763, is, "Whether all living beings, both of the animal and vegetable kingdom, proceed from an egg secundated by a germ, or by a prolific matter analogous to the germ."

The

The question in speculative philofophy for the same year, is, "Whether metaphysical truths in general, and particularly the first principles of natural religion and morality, are susceptible of the like evidence with geometrical truths; and if not susceptible of such evidence, what is the nature and degree of certainty, and whether sufficient for conviction."

The learned of all countries are invited to the concurrence. The prize is a gold medal of fifty ducats weight. The memoirs to be written in Latin, French, or German, and transmitted to Mr. secretary Formey, before the rst of January 1763. The authors, instead of naming themselves, are desired only to send a motto, accompanying it with a billet sealed, and containing the motto, their name and place of abode. The academy's decision will be declared the 31st of May 1763.

Paris, Nov. 1325 The academy of arts and sciences at Lyons have offered a prize for the year enfuing, to any person that can find out a new manner of washing filk, without-lofing any of its quality or gloss. moCivita: Vecchia, Oct. 30.11 Bath the commissioners of the Mount of Piety at Rome, Binni, and Ferretti, according to their fentence for betraying their trust by embezzlements, were brought to this place, in order to be put on board the papal gallies during their lives ; but Ferretti, on account of his great age (being above 84 years old) hath obtained to finish his days there ashore in prifon:

30th and gentlemen were elected to be of the council of the royal fociety for the year ensuing.

Members of the late council con-

tinued. George earl of Maccleffield, prefident, Mus. Britannici Curator, Thomas Birch, D. D. secretary, Mus. Brit. Cur. James Bradley, D. D. Astr. Reg. James Burrow, Esq; V. P. Lord Charles Cavendish, V. P. Mus. Brit. Cur. Peter Daval, Esq; V. P. Charles Morton, M. D. secretary, James Short, A. M. Acad. Reg. Suec. Soc. William Watson, M. D. Mus. Brit. Cur. James West, Esq; V. P. Treas. Mus. Brit. Cur. Hugh lord Willoughby of Parham, V. P. Mus. Brit. Cur.

New members elected into the council, Mr. Henry Baker, Mr. John Belchier, Samuel Clark, Efq; Mr. Peter Collinson, Lewis Cursons, D. D. the earl of Marchmont, Nicholas Munckley, M. D. James Parsons, M. D. Matthew Raper,

Samuel Wegg, Eigrs.

One of the burghers of Mentz, after eight years, evidence, lately prefented to the regency a new piece of artillery, not of metal, but of paste, of a kind of glewy nature; which carries a ball four hundred yards, and will beat down walls at that distance. The ball is also of a particular composition; the piece need not to be spunged till it has fired a hundred times; it weighs but fifty pounds, and each ball but two and a half; fo that one man may carry the piece, and another the ammunition. What carnage, adds this account, if in an army of 20,000 men, ten thousand of these pieces were employed; and then exclaims. Was it a man on a devil that invented this deteftable machine? But it is hoped that so extraordinary a composition may be applied to better purpoles.

About the middle of this 3 ist.

[N] 3 courfing

courfing near Snaith in Yorkshire, observed a swallow fly round them feveral times, a thing very uncommon at this feafon of the year.

aged 100.

Mr. Marsh, of Liverpool, aged XI Front Tommi

DECEMBER.

2d. His majesty went to the house of peers, and gave the royal affent to the bill for fettling her majesty's dowry. When the act passed, her majesty, who was present, and placed on a chair of state on the king's right hand, rose up, and made her obeyfance to the king. On presenting this bill, the ipeaker of the honourable house of commons addressed his majesty as follows:

" Most gracious sovereign,

"It has been the first care of your faithful commons, to take it into their confideration what your majesty most affectionately recommended to them from the throne, namely, the enabling your majesty to make that provision for the queen, in case the shall survive you, to which her royal dignity, and her own mesit, give her the justest claim.

" On fuch an occasion, I should ill discharge the trust which has lately been reposed in me by the commons, and most graciously confirmed by your majesty, if. I omitted to affure you, that they feel the warmest sentiments of gratitude to your majefy, who have made their happinels, and that of their posterity, your principal object. Of this your majesty has given abundant

proof, by your royal nuptials with a princess, whose illustrious ancestors were early affertors of the civil and religious liberties of mankind, and in consequence closely attached to your majesty's family; a princess, whom the most distinguished virtues and amiable endowments pointed out to your majesty's choice, and made the partner of the brightest crown in Europe.

" I cannot but esteem it a very fingular honour and happiness to myself, that the first bill, which, by command of the commons, I present to your majesty, is a bill, in which they have, with the greatest zeal and unanimity, endeavoured to

testify their duty to your majesty, and your royal confort; and that it is no less acceptable to your majesty, than to your commons, and all

whom they represent.

But, Sir, though they have passed it with the utmost expedition, which their forms allow, yet it is a matter of real fatisfaction to them, that they can entertain the most pleasing and well-founded hope. that it will be a long course of years, before it can have any effect. And the domestic happiness of the queen is so inseparably connected with the public interests of your people, that, on the behalf of her majesty, as well as of every subject of your realm, your faithful commons will never cease to implore the Almighty, that he will be pleased to distinguish this nation by his divine favour and protection, in prolonging your majesty's happy reign beyond an ordinary date; and that if ever the provision of this bill shall become effectual, it may be lamented only by posterity.

" The bill, Sir, which I have in

my hand, is entitled,

ff As

"An act for enabling his majefly to make provision for supporting the dignity of the queen, in case she shall survive his majesty.

"To which your commons, with all humility, befeech your majefty's

royal affent."

The fog was so very thick in and about London, that even chairmen lost their way in the streets, and carriages run against carriages, by which much mischief was done.

4th. His majesty went to rhe house of peers, and gave the royal affent to the land and malt tax bills, the bill for repealing the compulsive clause in the last information, and to one private bill.

By the above act for repealing the late compulsive clause, &c. those that have already had the benefit of it, are fill to enjoy it, it being

only enacted,

That from and after the 19th day of November, 1761, so much of the said act, as relates to creditors compelling prisoners charged in execution to deliver up their estates, and to such prisoners being thereupon discharged, shall be repealed, to all intents and purposes whatsoever.

"Provided, That this act shall not extend, or be construed to extend, to pardon, indemnify, or discharge, any person who hath incurred, or, before the said 19th day of November, 1761, shall incur, any penalty or forfeiture, by committing any offence against the said act made and passed in the said first year of his present majesty's reign; but that every such offender shall be liable to the forfeitures and penalties incurred, or, before the said 19th day of November, 1761, to be incurred, under the said act, made and passed in the

faid first year of his present majesty's reign, as if the said act had not been repealed, and had continued in full force."

Paris, Nov. 26, At a meeting of the academy of belles lettres of Paris, held the 13th inflant, these two questions were proposed for the subject of the prize to be given at Easter, 1763. 1. What were the rights and prerogatives of the sovereign pontiff of ancient Rome, over the priests of the city and provinces? 2. Whether the authority of that sovereign pontiss extended to the priests and the temples of the Roman deities introduced in the conquered countries, and to those of the national deities?

They write from St. Reine, a village in Burgundy, that as fome workmen were digging in a small eminence near that place, they discovered a strong work of masonry, and on demolishing part of it, they found that it served to make the entry of a subterraneous passage ex-

tending several leagues. We

Several lords and ladies of othe the first distinction, were prefent at the debates in the house of commons, on the expediency of the German war. The house was so crowded with strangers, that it was with distinctly the members could take their places, which we hear has produced an order, that no strangers shall be admitted this sessions.

Extract of a letter from New-York, October 3.

The fociety of Scotch merchants here have taken the laudable resolution of employing all such poor women belonging to this town, as are capable of working, and whe, for want of employ, are in great diffres; a large house is taken for

 $[N]_4$

their reception, and they are to be "employed in knitting and spinning. Several public-spirited persons are already become benefactors to this charity, in order to make it the more extensive. Bills have been fluck up in public places of this city, advertifing those poor people to apply to the faid charity, and they will be admitted to immediate employ, and have good wages."

The fessions ended at the 12th. Old-Bailey, at which the following persons received sentence

of death.

Daniel Looney, for the murder of captain Shanks, by shooting him with a loaded gun. Looney was the mafter of a trading veffel be-Jonging to Shanks, with whom Looney's wife lived as a housekeeper in the quarrel happened in a fit of jealoufy. The prisoner had an extreme good character, and was much pitied. / contract.

Robert Greenstreet, for the murder of his master, to whom he had ferved his time, and actually lived with as journeyman, pleaded guilty.

Thomas Afton, a dragoon, who guarded the Bristol mail, for robbling the Bath stage waggoner on the highway. All of whom have been executed. Besides three women for theft, who were pardoned on condition of transportation for life: open

- Nineteen were call for transportation, ten of whom have fince received the king's pardon, on condition of ferving his majesty in the regiment of foot now at Jamaica; three ordered ofto be privately whipped, one to be burnt in the hand, and one to be publickly whipt. 22.41 if o.me

5 This day the following ad-14th. vertisement appeared in the

public papers. Any nobleman, gentleman, or other, possessed of fishing royalties, are earnestly requested to transmit a description of the shore each of them respectively hold; a gentleman having, thro' intense application, and at a great expence, found out an easy and advantageous method of catching fish in all weathers; which, when put in practice, will not only turn out of great emelument to fuch gentlemen's estates, and afford comfortable support and employment to the industrious inhabitants, but will foon prove of univerfal fervice to the public; which information shall be gratefully acknowledged, and due respect paid to: and fuch description as answers the author's intention, shall certainly have in answer an explicit account of the invention, and reasonable proposals offered.

N.B. This new method of taking fish, will only answer where there is a good bottom, and the shore not rocky. Please to direct (post free) to Mr. James Hamilton, at Jacke's coffee-house in Dean-street, Soho,

London.31.

It is not improbable that this method of catching fish is by the machine already mentioned, pages

08. & 111.

Paris, Nov. 4. M. de Chamouset, ever fertile of invention, hath proposed the establishing in Paris, on the footing of the hackney-coaches, one horse chaises, to be hired at the rate of fix fols the hour [three pence fterling.] Our penny, or penny posts, as its called here, was a scheme of that gentleman's. It is faid that it brings in 7 or 800 livres daily to the farmers general, who, we hear, allow M. de Chamoufet a pension of 20,000 livres.

The noblesse and clergy of the

province

province of Languedoc, at their general meeting on the 26th past, worked up by a speech of the archbishop of Narbonne, resolved to appropriate the pen ons they receive from the king, to pay the interest of the money that will be necessary to build a ship of 74 guns, of which they intend to make a present to the king; and their example has been followed not only by feveral of the lay and ecclefiaftical communities of that kingdom, but even many individuals, who have subferibed large fums for that purpose. Perhaps, as the Dutch observe, the king has put fums of money into the hands of some wise men privately, that with fuch furns they might begin a subscription, in order to induce fools to follow their example. A man was executed on 14th. board the Duke, at Spithead,

for the murder of the mate of the Burford, captain Gambier, by ripping up his belly on his striking him with a rattan, at grumbling to

do his duty.

21st. Loshua Ward, Esq; so well known by the name of Dr. Ward, died at Whitehall, aged 76. This gentleman was formerly a member of the house of commons; but on account of a particular affair, was obliged to go abroad, where he remained fome years; but at last received his late majesty's pardon. He then came to England, where, foon after his arrival, he purchased three houses at Pimblico, near St. James's park, which he converted into an hospital for his poor patients; over the door of which he had inscribed most fignificantly in large characters,

MISERIS' SUCCURERE DISCO; And very foon became fo eminent in his profession, as to be applied to

by all ranks and degrees of people. Meeting with great success in his practice, and the poor from all parts flocking to him for relief, he took part of a house in Threadneedle-street, for the better distribution of his medicines to the poor. which he gave generously to all who asked his advice: that, as well as his house at Whitehall, was every day crowded with objects of charity. to whom he always gave, with the greatest humanity, his medicines and advice gratis, and often relieved them with money. Of late years he was particularly applied to by the nobility and gentry, even after they had been given over by regular physicians, upon which account he used facetiously to call himfelf the scavenger of the faculty; and it is well known that many, who have been pronounced dead, have been restored to life (Jub Dee) by his medicines. So that all allow he richly merited the great fortune he died possessed of

Paris, Dec. 14. Of forty prelates to whom it hath been referred by the king to take into confideration the affair of the jesuits, one part is for leaving them on their prefent footing; another part is for giving them a vicar-general independent of the general at Rome. and forming new constitutions for them free from all dangerous doctrines, and agreeable to the liberties of the Gallican church; and a third part is for expelling them the

kingdom.

M. Cambalufier has lately published a very seasonable piece on the Poiton, or the Painters Cholice In part I. is a narrative of a poiton cholic, occasioned by some lattice wood painted green, which the duke de la Valiere's gardener, at his feat at

Montrouge, used for baking bread and cooking the victuals. Nine persons were seized with the cholic, and one died before the discovery of the cause. The history of the distemper is followed by that of the cure, with an account of the medicaments by which it was effected.

The count de St. Florentin lately presented to the queen two young gentlemen, born deaf and dumb, who have been brought to their speech by M. Pereire, a Portuguese, who at the same time had the ho-

nour to be presented.

We learn from Mittau, that the new duke of Courland practifes every method in order to acquire the efteem and captivate the affections of his subjects. He has given a pension to two learned men, to write the history of the duchies of Courland and Semigalia. He has fent two or three young men to travel at his expence, and is extremely affiduous in the introduction of agriculture, and in all the manufactures to which timber can be applied. But we do not yet hear that he is at all tractable in the point of religion.

By letters from Constantinople we are informed that Muly Mustapha Aga, first physician to the Grand Signior, viewing, with concern, the vast havock and devastation, lately made in that metropolis and its suburbs, by the pestilence, had collected a quantity of laudable matter from some pestilential eruptions, and tried the effects of inoculation on feveral persons, of whom some were perfectly recovered, and the others were in a fair way. This may justly be looked upon as the greatest, and most valuable discovery of the moderns; as many thoufand lives will be thereby annually faved. All art the

Hague, Dec. 10. Yesterday, between eight and nine in the morning, the princess of Nassau Weilbourg, the stadtholder's sister, was safely delivered of a prince; and both mother and child are as well as can be wished.

The powder magazine near the Bruffels gate in Maestricht, a strong town on the frontiers of Holland. blew up with a terrible explosion. The guard of the magazine, confisting of 11 foldiers, were all killed. The house of the princess of Hesse Philipstahl was very much shattered, and her highness buried under the The house of baron Salis. that was nearer the magazine, was quite destroyed, and not one of the family, except the coachman, efcaped. A breach of 130 feet in length was made in the rampart, and some of the outworks were also damaged. Stones of two and three hundred weight were thrown almost a mile from the town. About 18 persons perished by this disaster. which was occasioned by a cannonier plundering the magazine in the night.

His majefty went to the house of peers, and gave the ²³d royal affent to the bill for an additional duty on spirituous liquors, that for the free importation of Irish salted beef and pork, and Irish butter, for the navy, and to two na-

turalization bills.

They write from Hamburgh of the 11th, that the frost there is so severe, that they begin to compare it to that of 1740; and that the Elbe having been froze over for some days, the magistrates thought proper to double the guards, both of the regulars and the trained bands, on account of the shoals of French and Hanoverian deserters who slock

there,

there, in so much that they think, that if the frost should continue, they should soon have in the neighbourhood of that city above 10,000 deferters of different nations.

The magistrates of Hamburgh ordered a general collection to be made in all the churches of that city on the 13th inst. for the relief of the unhappy sufferers in the war in

Germany.

Neufchatel, Nov. 15. The fatal controverfy which has lately diftracted the church of this country (on the duration of the fufferings of the wicked in a future state) has produced a very acrimonious paper war: there are, however, not wanting some, who surmife, that a political drift is at the bottom of thefe feuds; and that the commonwealthsman, whatever his private fentiments be, should observe a filent neutrality. One writer concludes in this mysterious manner: "The history of our differences is indeed a very fingular riddle; but the key to it partly lies in the scheme of setting up a schism long fince concerted, in flow and clandestine advances to the execution of it by the best means possible, but the time of its breaking out most ill chofen.

Extract of a letter from a gentleman in Germany to his friend in

England.

Magdebourg, Nov. 22, 1761.

I must give you an account, Sir, of a very extraordinary woman we now admire here, and who deferves to be known abroad. Her name is Rarschin; Heaven has endowed her with a most astonishing poetical genius. I really believe there was never any thing like it heard of either among the ancients or moderns. She excels in diffe-

rent forts of poems, but chiefly in odes and tales. She is a very difagreeable figure, was born in Silefia. of the lowest extraction, and had never any kind of education or instruction. Her parents forced her to marry a taylor, who treated her in a very barbarous manner: the composing verses, while he made fuits. She is now separated from her husband, and lives at Berlin. from whence she came hither to fee the court. Every body is curious to fee her, and a volume of her poems will foon be published by subscription. She not only surpasfes by far all our German poets, but even the ancients. The most admirable ode only coils her a few minutes, and the one day made twelve in one evening on different fubjects, all alike furprifing. even speaks verses, but without any enthufiasm, uses the noblest expresfions, and is full of lofty fentiments. All this is very much like a fable, you will fay; but were you to fee the rapidity with which the writes her fublimest odes, you would think it still more a fable. Cette inconceivable femme donne bien a penser a nos meilleures tetes, et detruit les meillieures theories du genie. A great many people think the has a dæmon, for, I affure you, the is a fingular phænomenon."

We hear from Newfoundland, that an ugly accident happened at Carpoon, a little illand at the entrance into the straits of Belleisle, and the most northern parts of our

fisheries.

The Indians from the main come there once every year (the straits being very narrow) in order to trade with the Europeans, and to rob them if they can. These Indians, who are a tribe of the Essimaux,

coming

coming over with their whalebone, traded for two days with our fishermen; but the third day observing them to be off their guard, and their fire-arms left at some distance behind them, and that they were a good way from their blockhouse, these savages thought it a good opportunity for attacking our people, especially as it was a Sunday, which is a fort of holiday with the fishermen, and when every body's curiofity or avarice prompted them to run and meet the Indians, the two preceding days having been spent principally about the fish. The Indians mixing with our people, traded with each particular man for his knife, or whatever cutting infrumenta he shad, almost at the fame moment, whilst others brought bows and arrows from their canoes. and distributed them among their own people and this being done. they instantly, with cone confent, fell upon our fishermen, and stabbed many with their knives, which they had parted with but the very moment before:

They killed or on the spot, and wounded 16 or 17; whereupon all our people that could, fled away to their boats, and got on board a floop which lay in the road, (four or five however, having a little less fear than the rest, got into the blockhouse and brought off most of the arms killed one Indian; who was more forward than the rest) They then weighed one anchor, cut the cable of another, and came away as fait as possible, leaving their whole feafon's fish, furnitureo trade, whalebone, and every thing behind, in possession of these favages no Our countrymen were co art first, my were killed outright, 17 on 18 got off wounded, and of these

two died of their wounds within a few days. The Indians had been for prudent as to fingle out and make fure of the principal people; for they killed two masters of vessels (one of whom commanded the floop, the other took care of the fishery on fhore) and the mate, and flew or wounded every boat-master, splitter and mafter-voyage, who are the chief people among the fishermen and shoremen, being the catchers and curers of fish. These Eskimaux are a faithless and cruel tribe. and have often furprized the French in the same manner, and are, notwithstanding, so terrified at firearms, that a dozen resolute steady men, armed, would have defroyed every one of those wretches, had there been 500, as they were on an island; and had five of our men kept themselves armed, they would never have been attacked at all.

We have had accounts during the course of this month, of several terrible florms on the coast of America. At South Carolina, a hurricane arose Sept. 4, that has been attended with unexpected confequences; for the navigation of Cape Fear river, from being the most difficult, is changed to the eafieft and fafest on that part of the continent. A new channel 18 feet deep at high water, and near half a mile over, having been formed by the prodigious influx of the fea, which threatened destruction to the whole country. --

Another from arose on the 4th of October, which did incredible damage along the coast of New England.

The Griffin man of war, of 20 guns, was loft, October 25, off Bermidas, and 50 of her men were drowned.

Flis

His majesty's ship Biddegoth ford ran on shore on Hazeborough sand, near Yarmouth; captain Gordon, and above one half of his men perished. Those who escaped were quite exhausted, having staid till Friday on the wreck without other sustenance, than a little raw meat and spiritnous liquor.

His royal highness the duke of York, in the course of this month, visited Bristol, Bath, and the westtern parts of England, and by his courteous and frank behaviour, has gained the affection of the people

wherever he has been.

The contract for oxen this month by the victualling office, was 11. 3s. 11d. for oxen; and 11. 15s. 6d. for hogs.

31st. Charles Pratt, Esq; attorneygeneral is knighted and appointed lord chief justice of the

court of common pleas.

- Murders, robberies, many of them attended with acts of cruelty, and threatening letters, were never perhaps more frequent about this city than during this and last month. One highwayman in particular, by the name of the flying highwayman, engroffes the convertation of most of the towns within twenty miles, of London, as he has occafionally vifited all the publick roads round this metropolis, and has collected feveral confiderable fums. He robs upon three different horses, a grey, a forrely and a black one, the last of which has a bald face, to hide which, he generally hangs on a black cat's fkin; he has leaped over Colnbrook turnpike a dozen times within this fortnight, and is now well known by most of the turnpike men in the different roads about town.

One of these threatening letters

was directed to a gentlewoman at Waltham Abby, vowing death and destruction to her and hers, with the most shocking execrations, if she did not leave 5001 in a certain place, or marry her daughter to some young man at Waltham Abby in a month.

Five persons were lately burnt at Hartley colliery, in Northumberland, by an explosion of foul air.

A whale 63 feet long, was cast on shore, lately, near Nairn, in Scotland.

A fea eel, 6 feet long, 20 inches round, and weighing 30lb. was lately taken, in a shallow water, where it had been left by the tide, at Whitstable in Kent, a shallow water.

Heads of a bill for limiting the duration of parliaments in Ireland, have been agreed to by the commons there, and his excellency the lord lieutenant has been requested to transmit the same to his majesty.

Several shocks of an earthquake were felt at Lima in December, 1760; and one, which happened on the 8th of January 1761, was much more violent than that which

happened in 1756 in sight olgan

Accounts lately received of the unfavourable or rather hostile dispofitions of the Spanish court, have occasioned a very great hurry at both ends of the town. Extraordinary councils have been held, press warrants granted and rigorously executed, the royal exchange crowded with merchants, notwithstanding the holidays, which fo many generally fpend in the country This news too caused the new subscription to fall 4 per cents. The Spanish minister would have fet out on his return home, if not delayed by his daughter's being dangeroufly ill.

Orders have been fent to the customhouse, for the Spanish ambassador's baggage to be passed without any examination, and to be shipped without any delays whatfoever. And the Spanish merchants here, having waited upon the earl of Egremont, have obtained leave for all Spanish ships, now loaded or loading in any of the ports of Great Britain, to depart in fafety, agreeable to treaties which flipulate, that in case of a rupture, the subjects of each nation shall have fix months to return to their respective countries with their effects. The Spaniards, on the contrary, have laid an embargo on all shipping in their ports, till they knew how we behaved to theirs.

It is computed that among the prisoners actually in England, taken on board of French ships, there are about 10,000 Spaniards.

The state of the Spanish navy, by the last accounts, was as follows.

	guns	wood guns.

And one hulk at Cadiz, making

in all voi fail.

A short view of the whole royal navy of Great Britain, now ac-

tually in commission.

Two first rates, which carry from 96 to 110 guns each; 11 second ditto, from 84 to 90; 60 third ditto, from 64 to 80; 43 fourth ditto, from 48 to 60; 71 fifth ditto, from 26 to 44; 40 fixth ditto,

16 to 24; 68 floops, from 8 to 14 befides fwivels, 12 bombs, 10 fire-ships, 4 store-ships, 39 armed versels hired, 7 royal yachts, 5 small yatchs.—372 king's ships.

English ships of war lost, taken, or become unserviceable 1761.

Duke d'Aquitain, of 64 guns, Sunderland of 60, Newcastle of 50, Queenborough of 20, Duke and Protector, company's ships, lost off Pondicherry.—Cumberland, of 50 guns, lost off Goa .-- Pheafant floop, loft in the Channel --- Sybilla armed veffel, lost off Gibraltar .-- Speedwell cutter, taken off Vigo .-- Emerald, of 34 guns, Kennington, of 20, and Port Antonio sloop, broken up and fold .--- Great Britain, of 120 guns, Victory of 110, London of 90, Formidable of 80, Ramilies of 74, on the stocks, building new, or rebuilding .-- 48 thips (28 of them of the line) are at prefent laid up for repair, &c. days

Mrs. Canner, of Melton-Mowbray, aged 50, was lately delivered

of a fon.

Some time ago Mrs. Cook, a shop-keeper in Middlewich, Che-shire, being in distressed circumstances, in her great despair, murdered her two children, and then put an end to her own life.

Died lately. A woman, at Arnhuus, in Denmark, aged toz.
Three other persons are now alive

there, aged above 100.

Francis Watkins, of Trevethin, in Monmouthshire, aged 1022

Jane Prudhomme, near Guise, in

France, aged 103.

Francis Atkins, aged 104, who had been porter at the palace gate at Salisbury, ever fince bishop Burnet's time.

Mrs. Post, of Great Cheveril, Wilts, aged 105.

Simeon

Simeon Aubert, at Autreville, in France, aged 106.

Matthew Fuitlen, a burgher of

Namur, aged 108.

At Gros-Ziethen, one Daniel Ammyer, belonging to the French colony aged 113 years, and four months. He was born at Blois in 1648, and had ferved in the troops of France, Sweden, and the Emperor. He enjoyed an uninterrupted state of health, till within a fortnight of his death, when his constitution broke all at once.

Elizabeth Merchant, of Hamilton's-Baun, in Ireland, aged 133.

In the course of this year 1761 were christened at Newcastle, 623; buried, 408 Increased in the christenings 35; decreased in the burials,

In the city and suburbs of Dublin,
Males buried 1144. Females buried 1148. Males baptized 900.
Females 1049. Increased in burials
this year 234. In births 299.

The burials in Norway, in the district of Christiana, amounted to 6929; and the christenings to \$1,024. Twenty-three women were delivered of twins, five brought three children at a time. Among those who died, 394 lived to the age of 90, 63 to the age of 100, and 7 to the age of 101. In the diocete of Bergen, the persons who died amounted only to 2580, of whom 18 lived to the age of 100; one woman to the age of 104, and another woman to the age of 108.

At Copenhagen, 2749 children were born, 2593 persons died

At Vienna, 5672 children were born, and 6310 perfons died; 479 more were born than in the year before, and ten lefs have died; Four thousand, four hundred and eighty children were baptized, and 7720 persons died, at Amsterdam.

Two hundred and thirty-fix protestant children were baptized at

Ratifbon, and 285 died.

They write from Rome that by the last list taken of the inhabitants of that city, there were 157,458 souls, 90,239 males, and 67,219 females, of whom were 42 bishops, 2742 priests, 4381 persons of religious fraternites and nuns, 1725 monks, 878 students, 1053 poor in the hospitals, 37 hereticks, Turks, and insidels, the Jews excepted. During last year, 4989 children were born there, and 7149 died.

A general bill of all the christenings and burials in London, from Dec. 9, 1760, to Dec. 17, 1761.

Christened Buried

On the late transit of Venus over

the Sun, June 6th, 1761. pieces that have come to our hands concerning this curious phanomenon, we should be obliged to leave out many things which cannot, we imagine, but prove much more agreeable to the generality of our readers. We must therefore content ourselves with giving, an account of the observation of the transit in the year 1639, made by our countryman Mr. Horrox, and the first obfervation that ever was made of that phænomenon; and a table of the observations of the late transit, June 6th, 1761, made by several astronomers in England, to whom we heartily wish success in reconciling the difagreements between them, and drawing from their labours such conclusions as may prove of fervice to aftronomy and navigation.

An Account of Mr. Horrox's observation of the transit of Venus over the fun, in the year 1639.

WHEN Kepler first constructed his (the Rudolphine) tables upon the observations of Tycho, he foon became fenfible that the planets Mercury and Venus would sometimes pass over the Sun's disk; and he predicted two transits of Venus, one for the year 1631, and the other for 1761, in a tract published at Leipsic, in 1629, entitled Admonitio ad Astronomos, Ec. Kepler died some days before the transit in 1631, which he predicted, was to have happened. Gaffendi fought for it at Paris, but in vain, (See Merc. in Sole vifus & Venus invifa.) In effect, the imperfect state of the Rudolphine tables was the cause that the transit was ex-

pected in 1631, when hone could be observed: and those very tables did not give reason to expect one in 1639, when one was really ob-

When our illustrious countryman. Mr. Horrox, first applied himself to practical aftronomy, he computed Ephemerides for feveral years. from Lansbergius's tables. After continuing his labours for fome time, he was enabled to discover the imperfection of these tables. upon which he laid aside his work; intending to determine the position of the stars from his own observations. But that the former part of his time spent in calculating from Lansbergius might not be entirely thrown away, he made use of his Ephemerides, to point out to him the fituations of the planets. From hence he foresaw, when their conjunctions, their appulfes to the fixed stars, and the most remarkable phænomena in the heavens would happen; and prepared himself with the greater care to observe them.

Hence he was encouraged to wait for the important observation of the transit of Venus in 16201 and no longer thought the former. part of his time mis-spent, since his attention to Lanibergius's tables had enabled him to discover that the transit would certainly happen on the 24th of November. However, as these tables had so often deceived him, he was unwilling to rely upon them entirely, but consulted other tables, and particularly those, of Kepler. Accordingly, in a letter to his friend, Wm Crabtree of Manchester, dated Hool, Oct. 26. 1639, he communicates his discovery to him, and earneftly defires him to make whatever observation he possibly can with his telescope,

particularly to measure the diameter of the planet Venus; which, according to Kepler, would amount to 7 m. according to Lansbergius to 11 m. but which, according to his own proportion, he expected would hardly exceed one minute. He adds, that the conjunction, according to Kepler, will be Nov. 24, 1630, at 8 h. 1 m. A. M. at Manchefter, the planet's latitude being 14 m. 10 f. fouth; but, according to his own correction, he expected it to happen at 5 h. 57 m. P. M. at Manchester, with 10 m. lat. fouth. But because a small alteration in Kepler's numbers would greatly alter the time of the conjunction, and the quantity of the planet's latitude, he advises to watch the whole day, and even on the preceding afternoon, and the morning of the 25th, though he was entirely of opinion that the transit would happen on the 24th.

After having fully weighed and examined the feveral methods of observing this uncommon phænomenon, he determined to transmit the Sun's image thro' a telescope into a dark chamber, rather than thro' a naked aperture, a method greatly commended by Kepler; for the fun's image is not given fufficiently large and distinct by the latter, unless at a very great distance from the aperture, which the narrowness of his situation would not allow; nor would Venus's diameter be visible, unless the aperture were very small; whereas, his telescope, which rendered the solar fpots distinctly visible, would shew him Venus's diameter well defined, and enable him to divide the Sun's limb more accurately.

He described a circle upon paper, which nearly equalled fix inches, the narrowness of the place

VOL. IV.

not allowing a larger fize; but even this fize admitted divisions sufficiently accurate. He divided the circumference into 360 degrees, and the diameter into 30 equal parts; each of which were fubdivided into 4, and the whole therefore into 120. The sub-division might have been carried still farther, but he trusted rather to the accuracy and niceness of his

When the time of observation drew near, he adjusted his apparatus, and caused the Sun's distinct image exactly to fill the circle on the paper; and tho' he could not expect the planet to enter upon the Sun's disk before three o'clock on the afternoon of the 24th, from his own corrected numbers, upon which he chiefly relied; yet, because the calculations in general from other tables gave the time of the conjunction much fooner, and fome even on the 23d, he observed the Sun on that day, but more particularly on the 24th; for on the 24th he obferved the fun from the time of its rifing to o o'clock; and again, a little before ten; at noon; and at one afternoon, being called in the intervals to bufiness of the highest moment, which he could not with decency neglect. But in all these times he faw nothing on the Sun's face except one small and common fpot, which he had feen on the preceding day, and which also he afterwards faw on some of the following days. at door

But at 3 h. 15 m. in the afternoon, which was the first opportunity he had of repeating his observation, the clouds were entirely dispersed, and invited him to leize this favourable occasion, which feemed to be providentially thrown in his way; for then he beheld the

most agreeable sight, a spot, which had been the object of his most sanguine wishes, of an unusual size, and of a perfectly circular shape, just wholly entered upon the Sun's disk on the left side, so that the limbs of the Sun and Venus exactly coincided in the very point of contact. He was immediately sensible that this round spot was the planet Venus, and applied himself with the utmost care to prosecute his observations.

And first, with regard to the inclination, he found, by means of a diameter of the circle fet perpendicular to the horizon, the plane of the circle being fornewhat reclined on account of the Sun's altitude, that Venus had wholly entered upon the Sun's disk at q h. 15 m. at about 62 d. 30 m. (certainly between 60 d. and 65 d.) from the vertex towards the right hand. (Thefe were the appearances within the dark chamber.) And this inclination continued constant, at least to all sense, to the end of the observation.

Secondly, the following distances of the Sun's and Venus's centers were as follows:

13 50 The apparent time of funfet.—The true time of funfet was at 3 h. 45 m.—Refraction keeping the Sun above the horizon for the space of sive minutes.

Thirdly, he found Venus's diameter, by repeated observations, to exceed a 30th part of the Sun's diameter, by a 6th, or at most a 5th sub-division. The diameter therefore of the Sun to that of Venus

may be expressed as 30 to 1.12. It certainly did not amount to 1.30, nor yet to 1.20. And this was found by observing Venus, as well when near the Sun's limb, as when farther removed from it.

The place where this observation was made was an obscure village, about 15 miles distant from Liverpool towards the north called Hool. The latitude of Liverpool had been often determined by Horrox, to be 53 d. 20 m. therefore that of Hool will be 53 d. 35 m. The longitude of both seemed to him to be about 22 d. 30 m. from the Fortunate Islands; that is, 14 d. 15 m. to the

west of Uraniburg.

These were all the observations which the shortness of the time allowed him to make, upon this most remarkable and uncommon fight; all, however, that could be done in fo small a space of time he very happily executed; and scarce any thing farther remained for him to defire. In regard to the inclination alone, he could not obtain the utmost exactness; for it was extremely difficult, from the Sun's rapid motion, to observe it to any certainty within the degree: and he ingenuously confesses that be neither did, nor could possibly perform it. The rest are very much to be depended upon, and as exact as he could wish.

Mr. Crabtree, whom Horrox had, by letter, invited to this Uranian banquet, and who, in mathematical knowledge, was inferior to few, very readily complied with his friend's request, and intended to observe the transit in the same manner with Horrox; but the sky was very unfavourable to him, and was so covered with clouds, almost during the whole day, that he gave

him-

himself up entirely to despair. But, a little before the time of fun-fet, about 3 h. 35 m. by the clock, the Sun breaking out for the first time from the clouds, he eagerly betook himself to his observation, and happily faw the most agreeable of all fights, Venus just entered upon the Sun. He was fo ravished with this most pleasing contemplation, that he flood for some time viewing it leifurely, as it were; and, from an excess of joy. could scarce prevail upon himself to trust his own senses. Upon which occasion Mr. Horrox observes, 'that mathematicians have a certain womanish disposition, diffractedly delighted with light and triffing circumstances, which hardly make the least impression upon the rest of mankind. Which levity of disposition, let those deride that will; and with impunity too. But let not any severe · Cato be feriously angry with these vanities of ours: for what youth, fuch as we are, would not fondly admire upon earth Venerem Soli, pulchritudinem divitiis conjunctam? What youth would not dwell with rapture upon the fair and beautiful face of a lady, whose charms derive an additional grace from her fortune?" But, to return, the clouds deprived Mr. Crabtree of the fight of the Sun, almost as soon as he was roused from his reverie; so that he was able to observe little more than that Venus was absolutely in the Sun. He could not accurately observe either the distance of Venus's center from that of the Sun, or the inclination, from the shortness of the time: but as far as he could guess by his eye, he sketched out Venus's fituation upon paper, which Mr. Horrox found to agree very nearly, even to co-incide with his own observations : nor did he err, adds his friend, more than Apelles himself would have done in the like hurry. --- He obferved Venus's diameter to contain of that of the Sun: that is 1 m. 3 f. according to Horrox's method of reckoning *.

These observations were made near Manchester; the latitude of which place as determined by Crabtree is 53 d. 24 m. and its longitude is three minutes in time to the

east of Liverpool.

Mr. Horrox acquainted his younger brother with this discovery of Venus's transit, and desired him, who was then at Liverpool, to observe it, if possible; which he attempted, but to very little purpose, for on the 24th the sky was entirely overcast.

Mr. Horrox, in his treatife on this subject, published by Hevelius, and from whence almost the whole of this account has been collected, hopes for pardon from the astronomical world, for not making his intelligence more publick; but his discovery was made too late. He is desirous, however, in the spirit

^{*} In almost every calculation of the transit 1761, the diameter of Venus is assumed too large. According to Mr. Horrox's observations, Venus's diameter was to that of the Sun as 1 m. 12 st. to 30 m. which, when reduced to a proper diameter, is equal to 1 m. 16 st. But the planet's diameter will not probably be found greater than 62 st. or 63 st. since the distance of Venus from the Earth, in conjunction, in 1761, is 28,898 parts, of which the Sun's distance from the Earth was only 26,434.

of a true philosopher, that other afronomers were happy enough to observe it, who might either confirm or correct his observations. But such considence was reposed in the tables at that time, that it does not appear that a transit of Venus was ever observed but by our two ingenious countrymen, who profecuted their astronomical studies with fuch eagerness and precision, that they must very foon have brought their favourite science to a degree of perfection unknown to those times. But unfortunately Mr. Horrox died on the 3d of January 1640-1, about the age of 25, just after he had put the last hand to his treatise entitled, Venus in Sole visa, in in which he shews himself to have had a more accurate knowledge of

the dimensions of the solar system than his learned commentator Heavelius.

Mr. Crabtree died on the first of August 1644, at Manchester, as appears, if I am rightly informed, by the register of that place. Cotemporary with these two illustrious youths lived William Gascoigne the inventor of the Micrometer, who was flain at Marston-moor on the 2d of July 1644, fighting for king Charles I. at the age of 23. The exact age of Mr. Horrox is not known; but, perhaps, some of your Cambridge correspondents may be able to inform us by confulting the university books, as Mr. Horrox was educated at Emanuel college.

Yours, Astrophilus.

I have reduced these observations to the meridian of the Royal Obfervatory at Greenwich, because both the first and last contact were observed there by three good observers all agreeing, if I am rightly informed, within the same second, and all using the same magnifying power! An agreement more to be wondered at than expected!

The right honourable earl Ferrers likewise made an accurate observation of this phænomenon, and prefented to the Royal Society a delineation of it, and a transitarium invented by him, for giving an ocular demonstration of the principles relating to the theory of that planet, but no account of his observation has as yet been published.

Mr. Dunn proposed, that in case the sky should prove so cloudy as to prevent the ingress or egress of Venus from being duly observed, her appulse to such the solar spots as might then be visible, should be noted, as this method, by the help of a good clock, and Mr. Dolland's micrometer, might be made to answer the same purpose.

Lord Bacon in his history of king Henry the leventh, fays, When the king was ancient [anno 1505] he had thoughts of marrying the young queen of Naples, and fentt three embassadors, with curious and exquisite instructions, for taking a furvey of hir person, complexion, &c." These instructions, figned by the king, together with the embassadors answers to the feveral articles, having been published by the favour of a descendant of Mr. Braybroke. who was one of the embassadors; and as they answer the character given of them by lord Bacon,

they cannot fail of being acceptable to our readers.

Instruccons geven by the king's highnesse, to his trusty and welbeloved fervantsFrunceys Marfyn, James Braybroke, and John Stile, shewing howe they shall ordre theymself when they come to the presence of the old quene of Naples, and the yong quene hir doghter.

I. FIRST, after presentacion and delyverance of suche lettres as they shall have with theym, to be delyvered to the faid quenes, from the ladie Katheryn, princesse of Wales, making hir recommendacon, and declaracon of suche charges and words, as shall bee shewed and committed unto theym by the faid princesse, to be openned and declared on hir behalf to the faid quenes, they shall well note and marke thestate that they kepe, and howe they be accompanied with nobles and ladies.

2. Item, To take good hyde, and marke thestats that the said quenes kepe, and whether they kepe their estats and housolds apart, or in oon house togedres, and howe they be accompanyed, and what lords and ladies they have abouts theym.

3. Item, If it shall fortune the king's faid fervants to fynde the faid quenes keping their estats togeders, they shall well and affuredly note and marke the maner of keping and ordering theym in their estats, with the countenance and maner of every of theym, and fuche answer as they shall make upon the speche and communicacion as they shall have with theym, at the delyverance of the faid lettres, and declaracion of thother matiers before mencioned; and to marke

hir discrecion wisedom and gravitie, in hir said communicacion and an-

fwer in every behalf.

4. Item, They shall in like wise endevor theym to understand, whether the yong quene speke any other langages than Spaynyshe and Italyon, and whether she can speke any Frenshe or Laten.

5. Item, Specially to marke and sote well the age and stature of the said yong quene, and the feturys of

hir bodye.

6. Item, Specially to marke the favor hir vifage, whether she bee paynted or not, and whether it be fatte or leene, sharpe or rownde, and whether hir countenaunce bee chierfull and amyable, frownyng or malincolyous, stedefast or light, or blushing in communicacion.

7. Item, To note the clearnesse

of hir skynne.

8. Item, To note the colours of hir here.

9. Item, To note well hir ies, browes, teethe, and lippes.

10. Item, To marke well the fassion of hir nose, and the heithe and brede of hir forehedde.

11. Item, Specially to note hir

complexion.

12. Item, To marke hir armes, whether they bee grete or smale,

long or shorte.

- 13. Item, To fee hir hands bare, and to note the fascion of theym, whether the palm of hir hand bee thicke or thynne, and whether hir hands bee fatte or leene, long or shorte.
- 14. Item, To note hir fyngers, whether they bee longe or shorte, fmale or grete, brode or narrowe before.
 - 15. Item, To marke whether hir nekke bee longe or shorte, smale or grete.

- 16. Item, To marke hir brefts, and pappes, whether they be bigge or fmale.
- 17. Item, To marke whether ther appere any here about hir lippes or not.
- 18. Item, That they endevor theym to speke with the said yong quene fasting, and that she may telle unto theym some matier at lengthe, and to approache as nere to hir mouthe as they honestly maye, to thentent that they may fele the condicion of her brethe, whether it be swete or not, and to marke at every time when they savor of spices, rose waters, or muske, by the brethe of hir mouthe, or not.
- 19. Item, To note the height of hir stature, and to enquere whether she were any slippars, and of what height hir slippars bee, to thentent they be not deceyved in the veray height and stature of hir; and if they may come to the sight of hir slippars, then to note the fassion of hir foote.
- 20. Item, To enquere whether the have any fekenesse of hir nativitie, desormitie or blemmysshe in hir bodye, and what that shuld bee; or whether she hath been communely in health, or sometyme seke, and sometyme hole, and to know the specialities of such diseases and sekennesse.
- 21. Item, Whether she be in any singular favor with the king of Aragon hir uncle, and whether she have any resemblance in visage, countenaunce, or complexion to him.
- 22. Item, To enquere of the manor of hir diet, and whether she bee a grete fedar or drynker, and whether she useth often to ete or

[O] 4 drynke

drynke, and whether she drynketh wyne, or water, or bothe.

23. Item, The kings faid fervants shall also at their comyng to the parties of Spayne, diligently enquere for some conynge paynter, havyng good experience in making and paynting of visages and por-tretures, and suche oon they shall take with theym to the place wher the faid quenes make their abode, to thentent that the faid paynter maye drawe a picture of the vifage and femblance of the faid yong quene, as like unto hir as it can or maye bee conveniently doon; which picture and image they shall substancially note, and marke in every pounte, and circumstance, soo that it agree in fimilitude and likenesse as near as it may possible to the veray vifage, countenance and femblance of the faid quene; and in case they may perceyve, that the paynter at the furst or second making thereof, hath not made the fame perfaite to hir similitude and likenesse, or that he hath omitted any feture or circumstance, either in colours, or other proporcions of the faid vifage, then they shall cause the same paynter, or some other the most conyng paynter that they can gete, foo often times to renewe and reforme the fame picture, till it be made perfaite, and agreeable in every behalfe with the veray image and vilage of the faid

24. Item, The kings faid fervants by the wifest wayes that they cann use, shall make inquisician, and enserche, what land or livelood the said yong quene hath, or shallhave, after the decesse of hir mother, either by the title of jointer or otherwise, in the reame of Naples, or in any other place or contraye,

what is the yerely value thereof, and whether the shalhave the same to hir and hir heires forever, or ells during hir lif oonly; and to knowe the specialties of the title and value thereof in every behalf, as nere as they shall knowe.

ANSWERS.

To the 6th article. — As to thys articule, as farre as that we can persayve or know, that the said quene ys not paynted, and the favore of hir vialage ys after hir stature, of a verrey good compas and amyabille, and fome what round and fatte, and the countenance chierful and not frowneynge. and stedfast and not lizght nor boldehardy in speche, but with a demewre womanly shamefast contenance, and of fewe words as that we coude persayve, as we can thynke that she uttered the fewer words by cause that they guyn hir moder was present, the whiche had all the fayengs, and the yonge quyn fatte as demeure as a mayden, and fome tyme talkeynge withe ladyes that fatte about hir, with a womanly lawzgheynge [laughing] chere and contenance.

To the 9th article.—As to thys articule, the eies of the said quyn be of colore browne, some what grayesshe, and hir browes of a browne here, and very small like a wyre of here.

To the 10th article.—As to thys articule, the fashion of hir nose ys a littell riseynge in the mydward, and a littell comeynge or bowynge towards the end, and she ys mych lyke nosid unto the quyn hir moder.

To the 13th article.—As to thys articule, we fawe the hands of the faid quyn bare at thre fondry tymes, that we kysied hir said hands, whereby

whereby we perfayvyd the faid quyn to be rizghte fair handyd, and accordeynge un to hir personage they be some what fully and softe, and

faire, and clene skynnd.

To the 16th article.—As to thys articule, the faid guynes brefts be fomewhat grete, and fully; and in as muche that they were truffid iomewhat highe after the maner of the contrey, the whiche causithe hir grace for to seme muche the fullyer, and hir neck to be the thorter.

To the 17th article.—As to thys articule, as farre as that we can persayve and see, that the said quyne hath no here apereyng abowte her lippes, nor mowthe, but she ys

very clere skynned.

To the 18th article.—As to thys articule, we cowde never come un to the speiche of the said quyn fasteynge, wherefore we cowde nor myzght not attayne to knowliche of that part of this articule: notwithstondeynge at such otoer tymes as we have spoken and have had comeunicacion with the faid quyne, we have aproched as nyzghe un to hir vifage as that we convenyently myzght do, and we cowde fele no favor of any spices or waters, and we thynke verely by the favor of hir vifage and clenenys of complexion and of hir mowthe, that the faid quyn ys lyke for to be of a fewit favor, and well eyred.

To the 19th article.-We cowde not come by the parfite knowliche of hir heizghte, for as much as that hir grace werithe flippers after the maner of the contrey, whereof we fawe the fashione, the whiche be of fix fyngere brede, of heizghte large, and hir foote after the proporcion of the same ys butt small.

To the 22d article. - The faid quyn ys a good feder, and eets well hir meit twyes on a daye, and drynkithe not often, and that the drynkithe most commonly water, and fometime that water ys boyled with fynamon, and fometime the drinkithe ypocras, but not often.

The services done at the coronation of our monarhs, is one of the most curious parts of that august ceremony, for which reason as no account has yet appeared of those performed at the late coronation, we must be content to give our readers the claims of feveral perfons to do service at the coronation of the late king James II. and his queen, in 1684. Thefe ceremonies are too ancient to vary much, if at all, at fuch a distance from their institution in

fo fmall a space of time.

HE lord great chamberlain of England claimed at the faid coronation, to carry the king his shirt and cloaths the morning of the coronation, and with the lord chamberlain to drefs the king. To have forty yards of crimfon velvet for a robe, also the king's bed and bedding, and furniture of his chamber where he lay the night before, with his wearing apparel and nightgown: also to serve the king with water, before and after dinner, and to have the basons and towels, and cup of affay. Allowed, except the cup of affay. He received the forty yards of velvet, and the rest of the fees were compounded for 2001.

2. The Earl of Derby counterclaimed the office of lord great chamberlain, with the fees, &c. but

was not allowed.

3. The king's champion claimed his office as lord of Scrivelfby manor in Lincolnshire; to perform the faid office, and to have a gold cup and cover, with the horse on which

he rides, the faddle, armour, and furniture, and twenty yards of srimfon fattin.—Allowed, except the twenty yards of fattin.

4. The faid office counterclaimed by another branch of the faid fami-

ly, but not allowed.

5. The lord of the manor of Lyston in Essex claimed to make wasers for the king and queen, and serve them up to their table, to have all the instruments of silver and other metal, used about the same, with the linen, and certain proportions of ingredients, and other necessaries and liveries for himself and two men.—Allowed, and the service, with his consent, performed by the king's officers, and the sees the same under the service of the same under the

compounded for 301.

6. The lord mayor and citizens of London claimed to ferve the king with wine after dinner, in a gold cup, and to have the fame cup, and cover for his fee, and with twelve other citizens, by them appointed, to affift the chief butler of England in the butlership, and to have a table on the left hand of the hall. -Not allowed in the reign of king James, because the liberties of the city were then feized into the king's hands; but yet they executed the office, ex gratia, and dined in the hall, and had a gold cup for their fee.

7. The faid lord mayor and citizens of London claimed to ferve the queen in like manner; and were only disallowed, at that time,

for the same reason.

8. The mayor and burgeffes of Oxford, by charter, claim to ferve in office of butlership to the king with the citizens of London, with all fees thereunto belonging.—Allowed, and to have three maple cups for their fee; and also, ex gra-

tia regis, a large gilt bowl and co-ver.

o. The lord of the manor of Bardolf, in Addington, Surrey, claimed to find a man to make a mess of grout in the king's kitchen, and therefore praying, that the king's master cook might perform that fervice.—Allowed, and the said lord of the manor brought it up to the king's table.

ro. The lord of the manor of Ilmer in Bucks, claimed to be mar-shal, surveyor, and conservator of his majesty's hawks in England, with divers sees, and the nomination of under officers.—Not allowed, because not respecting the coronation, but left to take his course at

law, if he thought fit.

11. The lord of the manor of Little Wilden, who at that time was also seized of the bailiwicks of keeper of the king's buckhounds, claimed to be keeper and master of the same, and to keep 24 buckhounds, and 16 harriers, and to have certain fees and liveries for himself and servants.—Disallowed, for the same reason as the former, but left to take his course at law.

12. The mafter of the king's great wardrobe, claimed to receive from his deputy a pall of cloth of gold, and to carry it to the altar for the king to offer, and that his deputy should attend near Garter king of arms, in a robe of scarlet cloth, with a gold crown embroidered on the left sleeve.—Not allowed, but left to take his course at law, if he thought fit.

robe, claimed to bring a rich pall of cloth of gold to be held over the king's head while he is anointed, as also the armil of cloth of tiffue, and to attend near Garter king of arms,

in a robe of scarlet cloth, with a crown embroidered on the left sleeve—Not allowed, but left to take his course at law, if he thought fit.

14. The master of the horse to the king, claimed to attend at the coronation as ferjeant of the filver scullery, and to have all the filver dishes and plates, ferved on that day to the king's table, with the fees thereto belonging, and to take affay of the king's meat at the kitchen dreffer bar .- Not allowed, because not claimed heretofore; but left to make application to the king; who was pleased to allow the faid service and fees, as the duke of Albemarle enjoyed them on the coronation of king Charles II. by virtue of the same post.

15. The lord of the manor of Nether Bilfington, Kent, claimed to present the king with three maple cups, by himself or deputy.—Al-

lowed.

16. The lord of the manor and hundred of Wynfred Dorfet, claimed to ferve the king with water for his hands, and to have the bason and ewer for his fee.—Not allowed, but left to make his application to the king, if he thought fit.

17. The duke of Norfolk, as the first earl of England, claimed to redeem the sword offered by the king at the altar, and to carry it before his majesty, in his return to his palace, and reservation of other rights and dignities, with sees, &c.

18. And also, as earl of Surrey, claimed to carry the second sword before the king, with all privileges and dignities thereto belonging.—Neither of which allowed, the claims not being made out, and the same being disallowed at the last coronation.

19. The earl of Exeter, As 20. Sir George Blundel, feised

21. Thomas Snaggs, of feveral parts of the barony of Bedford, respectively claimed to execute the office of almoner: and as the fees of that office, to have the filver alms-bason, and the distribution of all the filver therein, and of the cloth spread for their majesties to walk on; as also the fine linen towel, a tun of wine, &c. On reference to the king to appoint which of them he pleased, the earl was appointed, pro hac vice, with a falvo jure to the other two; but the filver dish, and the cloth from the throne in Westminster-hall to the west door of the abbey-church, were only allowed.

22. The dean and chapter of Westminster claimed to instruct the king in the rites and ceremonies used at the coronation; to affift the archbishop in divine service; to have the custody of the coronation robes; to have robes for the dean and his three chaplains, and for fixteen ministers of the faid church; the royal habits put off in the church, the feveral oblations, furniture of the church, canopy, staves and bells, and the cloth on which their majesties walk from the west door of the church to the theatre, &c .- Allowed, except the custody of the regalia; and the fees referred to the king's plea-

fure.

23. The church-wardens of St. Margaret's Westminster, claimed to have the cloth (lying in their parish) whereon the king goes in procession, for the use of the poor.

24. The vicar and church-wardens of St. Martin's in the fields, claimed a fhare of the faid cloth,

for their poor.—Which claims were only read, and not admitted.

25. The earl marshal of England claimed to appease the debates that might arise in the king's house on this day; to keep the doors of the same, and of the abbey, &c. and to dispose of the places to the nobles, &c. with all sees belonging thereto.—Disallowed, as unprecedented; and several of the particulars being counter-claimed by the lord great chamberlain; but with a salvo jure, to the earl marshal.

26. The lord of the manor of Aihlee, Norfolk, claimed to perform the office of the napery, and to have all the table-linen when taken away.—Not allowed, because that he had not his evidence ready to make it out, but with a salvo

jure.

27. The earl of Derby, as feifed in fee of the isle and castle of Pelham, and dominion of Man, claimed to present the king with two faulcons on this day.—Which was allowed, and the faulcons presented accordingly.

28 The earl of Kent claimed to carry the great spurs before the king; but not being made out, was

not allowed.

29. The fame counter-claimed by the lord de Grey of Thyn, and allowed annual is the second

- 30c. The fame counter-claimed by the duke of Norfolk, as earl of Surrey; but disallowed for want of evidence, and because it was not admitted at the preceding coronation.
- over the king, and to have the fame with the flaves and bells for their fees, and to dine in the hall on the king's right hand.—Allowed.

32. The lord of the manor of Scoulton, alias Bourdelies, Norfolk, claimed to be chief larderer; and to have for his fees the provisions remaining after dinner in the larder. Which office and fees, and also that of caterer, were likewise.

33. Counter-claimed by the lord of the manor of Eston at the Mount, Essex; and on reference to the king, it appearing that other manors were also severally held by the same service, the former was appointed pro hac vice, with a salvo

jure to the other.

34. The lord of the manor of Wirksop, Nottingham, claimed to find the king a right-hand glove, and to support the king's right arm while he holds the scepter.—Allowed.

35. Bishops of Durham, and Bath and Wells, claimed to support the king in the procession.—Allowed; the king having graciously consented thereto; and the bishops of London and Winchester being appointed to

support the queen.

36. The lord of the manor of Fyngrith, Essex, claimed to be chamberlain to the queen for the day, and to have the queen's bed and furniture, the basons, &c. belonging to the office; and to have a clerk in the exchequer to demand and receive the queen's gold, &c.—Disallowed, because not made out; but left to prosecute it at law, if he thought sit.

37. The lord of the manor of Great Wymondley, Hertfordshire, claimed (as chief cup-bearer) to ferve the king with the first cup of silver gilt, at dinner, and to have the cup for his fee.—Allowed.

38. The lord of the manor of Heydon, Effex, claimed to hold the bason and ewer to the king, by vir-

virtue of another moiety of the faid manor, when the king washes before dinner.—Allowed, as to the

towel only.

of Arundel, and lord of Keninghall manor, Norfolk, claimed to perform by deputy the office of chief butler of England, and to have for his fees the beit gold cup and cover, with all the veffels and wine remaining under the bar, and all the pots and cups, except those of gold or filver, in the wine-cellar after dinner.—Allowed, with only the fee of a cup and ewer.

A full account of their majesties nuptials.

HE early proofs given by his majesty, our present most gracions fovereign, that his only ambition was to be the father of his people, and that he was possessed of all the endowments requifite to fill fo exalted a character, rendered the whole nation extremely impatient to fee him united to a princefs capable of making him as happy, as he was defirous of making his people. As foon, therefore, as they faw him, by his ascending the throne, at full liberty to listen to the dictates of his own royal heart, they bent all their thoughts towards finding out the princefs most worthy of the love and affection of the best as well as the greatest prince of Europe; not but that a few thought he might find in a subject one every way qualified to wear a crown, and made no difficulty of pointing her out. But while fome were amuling themselves with accounts of his majesty having actually fixed his choice on this, or that foreign princess; and others

with pamphlets, written for or against any connection with a subject; an extraordinary gazette appeared with the following intelligence, which agreeably put an end to all their conjectures, and convinced them, that even in the affairs of life which most nearly concerned his majesty's personal welfare he made that of his subjects the chief rule of his deliberations.

At the court at St. James's the 8th day of July, 1761.

PRESENT.

The KING's most excellent majesty, His royal highness the duke of York, archbishop of Canterbury. lord chancellor, lord prefident, ford privy feal, lord chamberlain, duke of Bolton, duke of Leeds, duke of Bedford, duke of Rutland, duke of Queensberry, lord great chamberlain, duke of Newcastle, lord Steward, earl of Huntingdon, earl of Winchelsea earl of Sandwich. earl of Shaftesbury, earl of Holdemesse, earl of Rochford, earl of Albemarle, earl of Godolphin, earl of Cholmondeley, earl of Kinnoul, earl of Bute, earl of Halifax. earl Waldegrave, earl of Bath, earl of Buckinghamshire, earl Powis. earl Harcourt, earl Cornwallis, earl of Hardwicke, earl of Egmont, earl of Thomond, viscount Falmouth, viscount Barrington, vifcount Bateman, viscount Ligonier, viscount Royston, lord Berkelev of Stratton, lord Sandys, lord Anfon. lord Lyttelton, lord Melcombe, lord Grantham, Mr. vice chamberlain, Henry Legge, Efq; George Grenville, Esq; James Grenville, Esq; Mr. fecretary Pitt, lord chief justice Willes, mafter of the rolls, Henry Fox, Esq: Charles Townshend Esq; Robert Nugent, Esq; Welbore Ellis, Efg; Sir Francis Dashwood.

His majesty being this day present in council, was pleased to make the

following declaration, viz.

Having nothing so much at heart, as to procure the welfare and happiness of my people, and to render the same stable, and permanent to posterity, I have, ever since my accession to the throne, turned my thoughts towards the choice of a princess for my consort; and I now, with great fatisfaction, acquaint you, that, after the fullest information, and mature deliberation, I am come to a resolution to demand in marriage the princess Charlotte of Mecklenburg Strelitz; a princess distinguished by every eminent virtue, and amiable endowment, whole illustrious line has constantly shewn the firmest zeal for the protestant religion, and a particular attachment to my family. I have judged proper to communicate to you these my intentions, in order that you may be fully apprifed of a matter so highly important to me, and to my kingdoms, and which, I perfuade myself, will be most acceptable to all my loving subjects.

Whereupon all the privy counfellors prefent made it their request to his majesty, that this his majesty's most gracious declaration to them might be made public; which his majesty was pleased to order ac-

cordingly.

W. SHARPE.

The country of Mecklenburgh, which is about 120 miles in length, and 30 in breadth, is bounded on the north by the Baltick fea; by Brandenburgh, on the east; by Lunenburgh and Brandenburgh, on the fouth; and by Holstein, on the west. Its ancient inhabitants were the famous Vandals, who formerly made so great a bustle in Europe,

and, at length, had their kingdom reduced to this dutchy, by the knights of the Teutonic order, the Poles, and the Brandenburghers. The Vandals were a rude, barbas rous people, who had fettled in this country at least twelve hundred years before the birth of Christ, They formed it into a powerful kingdom, and preferved its title and dignity till 1162; when its monarch, Pribiflaus II. was compelled to embrace the Christian religion, by Henry Lyon, duke of Saxony and Bavaria, and one of our king's ancestors, assisted by the duke of Pomerania. At this time the title of king of the Vandals was extinguished, and that of the prince of Mecklenburgh substituted in its stead; who became a vassal to the duke of Bavaria. However, in 1240, the prince of Mecklenburgh. as he was called, was created a duke, and made a prince of the empire. The remnant of the Vandals united with the Mecklenburghers about the year 1429: after that time they were divided into three branches, viz. of Gustrow. Swerin, and Streelitz; but the extinction of that of Gustrow in 1688, occasioned a law suit, between the descendants of the two other branches, about the fuccession: which dispute continued till 1701. when a treaty of partition was made at Hamburgh, and ratified by the emperor in the following manner: that the dutchy of Gustrow should go to the duke of Swerin, and that the duke of Strælitz should have the bishoprick of Ratzelburg fecularized, and 40000 crowns a year from the tolls of Boitzenbourg, and a voice in the diet of the empire.

The duke of Swerin's annual revenue amounts to 40,000l. and

that

that of the duke of Strælitz to 15,000l. besides his domain. The country is fruitful, but unhealthy, and excessive cold in winter. It has often been the scene of war. particularly in the differences between Sweden and the empire. when its principal towns, Rostock, (a sea port) Gustrow, Butzow, Wismar, Swerin, Domitz, and Gaddebush, were several times taken by the Swedes, Danes, and Imperialists, and some battles fought near them. The country is able to raife a confiderable body of troops; but they never had a fufficient number to repel any invader. The titles of both dukes are the same, viz. dukes of Mecklenburgh, princes of Wenden, Swerin, and Ratzelburgh, lords of Rostock and Stargard; which last was the name of the final branch of the Vandals. The established religion of the country is Lutheran. Imhoff, in his Notitia Princeps Germaniæ, gives a large account of the genealogy of this family, which he fays, is lineally descended from the kings or leaders of the Vandals. Hubner, in his genealogy of the German princes, fays, this family, if not the most ancient, in Europe, is certainly one of the most noble in Germany. The branch of Streelitz is the fecond branch of the house of Mecklenburgh; but its duke is one of the fecular princes of the empire, and takes his feat in the diet of Ratzelburgh. The late duke of Mecklenburgh Strælitz, Adolphus Frederick III. dying unmarried, was facceeded by his nephew, (fon to his brother Charles Lewis, who is dead) Adolphus Frederick IV. born May 5, 1738, who is not yet married; but has the following brothers and fifters ::

1. Christina Sophia Albertina,

born Dec. 6, 1735.

z. Charles Lewis Frederick, now a lieutenant-colonel in the Hanoverian foot-guards, born Dec. 10.

3. Ernest Gottlob Albert, born

Aug. 27, 1742.

4. Sophia Charlotte, or Caroline I four present most gracious queen, born May 16, 1744.

5. George Auguitus, born Aug. 3,

1748.

The mother of this illustrious family, who died a little before the queens marriage, was the princels Albertine-Elizabeth, born Aug. 1. 1713, the daughter of Ernest Frederick, duke of Saxe-Hildbourghausen.

What his majesty was pleased to fay concerning the princess Charlotte of Mecklenburgh, in his speech to the council, nay, his choice alone, being a sufficient character of her ferene highness, people were now obliged to look out for other topics of conversation; and those were principally the manner in which the king first became acquainted with the extraordinary merit of her ferene highness, and her person.

In regard to the first, a letter was immediately produced, which, it was faid, her serene highness had written to the king of Prussia, on his entering the territories of her coufin the duke of Mecklenburgh Swerin, and which that monarch fent over to his late majesty, as a miracle of patrioism and good sense in so young a princess. ... The letter is as follows.

"May it please your Majesty,

I am at a loss whether I shall congratulate or condole with you on your late victory; fince the fame fuecefs that has covered you with laurels, has overspread the country of Mecklenburgh with desolation. I know, fire, that it seems unbecoming my fex, in this age of vicious refinement, to seel for one's country, to lament the horrors of war, or wish for the return of peace. I know you may think it more properly my province to study the arts of pleasing, or to turn my thoughts to subjects of a more domestic nature; but however unbecoming it may be in me, I can't resist the defire of interceding for this unhappy people.

It was but a very few years ago that this territory wore the most pleafing appearance. The country was cultivated, the peafant looked chearful, and the towns abounded with riches and festivity. What an alteration at present from such a charming scene! I am not expert at description, nor can my fancy add any horrors to the picture; but fure even conquerors themselves would weep at the hideous prospect now before me. The whole country, my dear country, lies one frightful waste, presenting only objects to excite terror, pity, and defpair. The business of the husbandman and the shepherd are quite discontinued; the husbandman and the shepherd are become foldiers themfelves, and help to ravage the foil they formerly occupied. The towns are inhabited only by old men, women, and children; perhaps here and there a warrior, by wounds or loss of limbs, rendered unfit for fervice, left at his door; kis little children hang round him, ask an history of every wound, and grow themselves soldiers before they find strength for the field. But this were nothing, did we not feel the alternate infolence of either army as it

happens to advance or retreat. It is impossible to express the confusion, even those who call themselves our friends create. Even those from whom we might expect redress, oppress us with new calamities. From your justice therefore it is that we hope relief; to you even children and women may complain, whose humanity stoops to the meanest petition, and whose power is capable of repressing the greatest injustice.

I am, Sire, &c.

As to the princess's person it is impossible, as it would be impertinent, to repeat all the descriptions given of it. However we cannot but mention the mean and scandalous advantage taken on this occasion of the well natured credulity of his majesty's subjects. A print-seller was base enough to publish, as the true portrait of the princess, that of a celebrated English beauty, whose name he struck out of the plate to make room for that of her most ferene highness.

While the publick were thus employed in conning over arbitrary descriptions, and gazing on spurious prints of the future confort of their beloved monarch, his majesty himfelf was giving the proper directions for demanding and bringing over the princess in a manner suitable to his dignity, and his love for her ferene highness. Lord Harcourt was named to make the demand of her serene highness; the dutchesses of Ancaster and Hamilton, and the counters of Effingham. to take care of her person, and lord Anfon to command a gallant fleet that was to convoy her over to the English shore. The Carolina yacht was, with great ceremony, new named a e Charlotte, in honour of

her

her ferene highness, by the principal lords of the admiralty and other noblemen, as well as the barges which were to bring her most ferene highness down the Elbe, embellished with a profusion of carving and gilding, and manned with picked men, all richly and elegantly cloathed in a red uniform, at his majesty's private expence; and the chapel royal ordered to be newly furnished in the most splendid and sumptuous manner.

In the mean time the fleet appointed to bring over her most ferene highness put to sea on the 8th of August, and on the 14th lord Harcourt and the other lords and ladies fent on this important embassy arrived at Strelitz. The next morning at eleven, the earl of Harcourt performed the ceremony of asking in form her ferene highness in marriage for the king his mafter. The moment the contract of marriage was figned, the cannon fired. Her royal highness was afterwards complimented by the states of the country, and the deputies of the towns. She dined at a separate table with the princess of Schwartz-bourg, her grand aunt, and the princess Sophia, her fifter. Her royal highness was ferved by M. de Zestersleth, grand marshal of the court, M. de Knesebeck, marshal of the court, and the misses Seltern and Rauchbar, ladies of the court. M. de Dewitz, privy-counsellor of legation, did the honours of the table standing. His ferene highness the duke dined with the English minister, and several ladies and gentlemen, at a large table in a saloon. Four tables of upwards of 160 covers were served in two other apartments. In the evening the gardens of the callle were illuminated with above 40,000

VOL. IV.

lamps. Castle-street and the market were also illuminated. On the 16th there was a grand festival and entertainment. In short, the splendour of the court of Mecklenburg-Strelitz on this occasion was infinitely beyond the conception of those who attended the important occasion. Lord Harcourt was received there with a grandeur eafier to be conceived than expressed. His lordship never stirred without a body guard to attend him, which, it is faid, confifted of remarkably tall men, who made a formidable and handsome appearance.

On the 17th, her highness, accompanied by the reigning duke her brother, set out for Mirow. amidst the tears and prayers of all ranks of people, the poor in particular, whose zealous patroness she had always shewn herfelf. The 18th fhe arrived at Perleberg, where the was complimented by the count de Gotter. in the name of his Prussian majesty, who had ordered that no post-money should be taken for any of the horses and carriages attending her highness; but when they got to the end of his territories, her most serene highness ordered a confiderable fum of money to be given to the Prussian hunters who escorted her.

On the 19th, her mest serene highness continued her journey by Leutzen for Ghorde, where she dined twice in publick, and walked in the afternoon in the park. On the 22d, at seven o'clock in the evening, she arrived at Stade, under a general discharge of the cannon of the place, and amidst the acclamations of a vast number of people, both citizens and foreigners. The burgesses of Stade were assembled under arms, and lined the

[P] Areets

streets through which her most serene highness passed. Some of the principal ladies of the town presented her with verses on her majesty's approaching nuptials on velvet cushions. At nine o'clock the whole town was illuminated, and several triumphal arches were erected in the principal streets, on which were placed many small lamps and inscriptions analogous to the feast. The fame night their marks of publick joy were reiterated. morning she set out for Cuxhaven; and about ten, her most serene highness embarked on board the yacht, amidst the acclamations of the people, accompanied by the duchesses of Ancaster and Hamilton, the earl of Harcourt and lord Anson. She was faluted by the whole foundron destined to convoy her to England. They were ranged on each fide the yacht. The moment she entered her cabin, she saluted the officers of the different ships, who had crowded the decks in order to have the pleasure of seeing her, and were all charmed with her affable and polite behaviour.

In the boat in which her majesty croffed a branch of the Elbe, was fixed a table, covered with all sorts of fruit. When croffed, there being no house, huts were prepared for her attendants, and a grand tent for herself, where she dined. The dinner at this place was provided for three hundred people, by his majesty's cooks, who came from

Hanover for that purpose.

At Buxtehude her most serene highness was addressed by the fellowship of merchants adventurers of England, residing at Hamburgh, and gave them a most gracious answer.

On the 28th the fleet, having on board her most ferene highness, put

to sea, but as no dispatches were received from it from that time till its arrival at Harwich, the court was in some concern lest the tedioulnels of her voyage might affect her health; besides the day fixed for the coronation of his majesty, by a proclamation issued from the fame council, in which his majesty had declared his intentions to demand her ferene highness in marriage, was drawing near, his majesty was desirous that the ceremony of the nuptials might precede that of the coronation, so that fresh instructions, it is faid, were dispatched to the admiral to fail at all events, and to land his charge at any of the ports of Great Britain. where it could be done with fafety. At length, after three different storms, and being often in fight of the English coast, and often in danger of being driven on that of Norway, the fleet with her most ferene highness on board arrived at Harwich Sept. 6th. Her most serene highness, during her tedious pasfage, continued in very good health and spirits, often diverting herself with playing on the harpfichord, practifing English tunes, and endearing herself to those who were honoured with the care of her per-

As it was night when the fleet arrived at Harwich, her most serven highness slept on board, and continued there till three in the afternoon the next day, during which time her rout had been settled; and instructions received as to the manner of her proceeding to St. James's. At her landing, she was received by the mayor and aldermen of Harwich, in their usual formalities. About five o'clock she came to Colchester, and stop-

ed at the house of Mr. Enew, where the was received and waited upon by Mrs. Enew and Mrs. Rebow; but captain Best attended her with coffee, and lieut. John Seabear with tea. Being thus refreshed she proceeded to Witham, where she arrived at a quarter past seven, and stopped at lord Abercorn's, and his lordship provided as elegant an entertainment for her as the time would admit. During supper, the door of the room was ordered to stand open, that every body might have the pleasure of seeing her most ferene highness; and on each fide of her chair stood the lords Harcourt and Anson. She slept that night at his 'lordship's house; and a little after 12 o'clock next day, her highness came to Rumford, where the king's coach and servants met her; and after stopping to drink coffee at Mr. Dutton's, where the king's fervants waited on her, she entered the king's coach. The attendants of her highness were in three other coaches. In the first were some ladies of Mecklenburg, and in the last was her highness, who fat forward, and the ducheffes of Ancaster and Hamilton backwards.

On the road she was extremely courteous to an incredible number of spectators on horse and foot gathered on this occasion, showing herself, and bowing to all who seemed desirous of seeing her, and ordering the coach to go extremely flow through the towns and villages as she passed, that as many as would might have a full view of her.

Thus they proceeded at a tolerable pace, to Stratford le Bow and Mile-End, where they turned up Dog Row, and profecuted their journey to Hackney turnpike, then by Shoreditch church, and up Oldstreet to the city road across Islington, along the new road into Hydepark, down Conflitution-hill into St. James's park, and then to the garden gate of the palace, where she was received by all the royal family. She was handed out of the coach by the duke of York, and met in the garden by his majesty, who in a very affectionate manner raised her up and saluted her, as she was going to pay her obeyfance, and then led her into the palace, where she dined with his majesty, the princess dowger, and the rest of the royal family, except the two youngest. After dinner her highness was pleased to show herself with his majesty in the gallery and other apartments fronting the park. About eight o'clock in the evening the procession to the chapel began in the following order:

The Procession of the BRIDE.

Drums and trumpets.

The Serjeant Trumpeter.

The Princes's Servants.

A Page.

A Quarter Waiter. A Gent. Ush. bet. the 2 Sen. Heralds. Vice Chamberlain.

and

and Pr. William, her train borne as before.

The Ladies of her Majesty's Bed Chamber in waiting. Maids of Honour.

Gentlemen Penfioners.

The marriage ceremony performed by the Lord Archbp. of Canterbury. The D. of Cumberland gave her hand to his majesty, and immediately on the joining their hands, the Park and Tower guns were fired.

Their majesties, after the ceremony, fat on one fide of the altar on two state chairs under a canopy; her R. H. the Princess Dowager of Wales fat facing them on a chair of state on the other fide, all the rest of the royal family on stools, and all the peers, peereffes, bishops, and foreign ministers (including M. Buffy) on benches. There was afterwards a public drawing room, but no persons presented. houses in the cities of London and Westminster were illuminated, and the evening concluded with the ut-

most demonstrations of joy.

The nobility of Ireland, having previous to this ceremony revived the dispute about the precedence of the Irish peers walking at the wedding of their majesties, the king directed, that the privy council should enquire, and report the precedents as they happened upon fimilar occafions; upon which report the Irish peers and peeresses were admitted to walk, and were marshalled in the procession, together with the peers and peeresses of Great Britain, according to their respective degrees, taking place of the Bri-2ish nobility of inferior rank.

The following anthem composed by

Dr. Boyce, was performed on this occasion.

A GRAND FESTIVAL SYMPHONY. Charus.

' The king shall rejoice in thy ftrength, O Lord: exceedingly glad shall he be of thy falvation.

Duet by Mr. Savage and Mr. Cooper. ' Thou hast given him his heart's ' desire, and hast not denied him

' the request of his lips.'

Chorus repeated. Solo by a Boy, accompanied by Mr. Vincent on the haughtboy.

Bleffed is the man that hath a ' virtuous wife, for the number of ' his days shall be doubled.'

Solo by Mr. Mence, accompanied by Mr. Weideman on the German

' A viruous woman is a crown to ' her husband, her price is far above " rubies.

' Strength and honour are her ' cloathing, and she shall rejoice in ' time to come.'

Solo by Mr. Beard.

' Hearken, Odaughter, confider, and incline thine ear, forget thine own people and thy father's ' house.

' So shall the king have pleasure

in thy beauty.

' Instead of thy fathers thou shalt have children, whom thou mayst make princes in all lands.'

Chorus.

' Children are an heritage of the ' Lord, and the fruit of the womb is his reward.

. Lo thus shall they be blessed

that feareth the Lord.'

On the 9th, the day after the ceremony, there was the most numerous levee of the peers and peeresses, and gentlemen of the first [P] 3

distinc-

distinction, with the foreign minifters, all in their grand dresses, that had ever been seen, to pay their compliments to their majesties on their nuptials, and at night a most splendid ball, which was opened by the duke of York and the princess Augusta.

On the 14th, the lord mayor, aldermen and commons of the city of London, in new mazarine filk gowns lined with fur, presented an humble address of congratulation to their majesties on this joyful occafion; and the same day the chancellor and university of Cambridge presented their addresses, and were

most graciously received.

The fame night about a quarter after fix, their majesties, with most of the royal family, went to Drurylane playhouse, to see the Rehear-Their majesties went in chairs, and the rest of the royal family in coaches, attended by the horse guards. His majesty was preceded by the duke of Devonshire his lord chamberlain, and the Hon. Mr. Finch, vice-chamberlain; and her majesty was preceded by the duke of Manchester, her majesty's lord chamberlain, lord Cantalupe her vice-chamberlain, the earl of Harcourt her mafter of the horse, and by the duchess of Ancaster, and the countess of Effingham. It is almost inconceivable the crowds of people that waited in the streets, quite from St. James's to the playhouse, to see their majesties. It is faid the crowd preffed fo violently upon her majesty's chair, that she discovered some signs of fear; but upon enterings the playhouse she prefently recollected herfelf, and behaved with great gaiety the whole

night after. Never was feen fo brilliant a house, the ladies being mostly dressed in the cloaths and jewels they wore at the royal marriage. The house was full almost as foon as the doors were open, fo that out of the vast multitude prefent, not a fiftieth part got in, to the infinite disappointment and fatigue of many thousands. There was a prodigious deal of mischief done at the doors of the house; several genteel women, who were imprudent enough to attempt to get in, had their cloaks, caps, aprons, handkerchiefs all torn off; the great crowd and want of fresh air brought to the people's minds the condition of those unhappy people, who were fuffocated in the black hole at Calcutta in the East Indies*. A girl was killed, and a man fo trampled on that he recovered with much difficulty.

On Wednesday the chancellor and university of Oxford presented their address; and both universities seemed to have vied with each other in making the most illustrious appearance on this happy event; there being a greater number of persons of high rank and eminence attending the presentation of their respective addresses, than has been known

on any former occasion.

The playhouses likewise vied with each other on this occasion. On the 25th their majesties and the royal samily went to Covent Garden theatre to see the Beggar's Opera, with which her majesty appeared highly delighted. On this occasion two magnificent boxes were prepared; one for their majesties of a cherry-coloured velvet, the section enriched with a filver embroidery, lace, and fringe; in the centre was represented two hymeneal tor-

ches inclosing a heart, the device, mutuus ardor; the columns were wreathed with lace, and the canopy adorned with tassels and a crown of excellent workmanship; the whole lined with white satin.—The other for the princess, was of blue velvet, decorated with gold, and the canopy distinguished with the ensigns of the principality of Wales. The whole is said to have cost 700 l.

We shall conclude this article with the following lift of the establishment made by the king for the

houshold of her majesty.

Chamberlain. Duke of Manchester.

Vice Chamberlain. Lord Can-

Mistress of the Robes. Duchess

of Ancaster.

Ladies of the Bedchamber. Duches of Hamilton, Countes of Effingham, Countes of Northumberland, Countes of Egremont, Viscountes Weymouth, Viscountes Bolingbroke.

court.

Equerries. Lieut. Col. Montgomery, Capt. Harcourt, Mr. John Schutz.

Pages of Honour . Mr. Fitzpa-

trick, Mr. Byne.

A clerk of the stables; a bottleman; five coachmen; eight footmen, and three for the master of the horse; two grooms; four chairmen; five possilions; five helpers.

A full account of their majesties coronation.

The eighth of July, the same day on which the king declared his intentions to demand in marriage her most serene highness the princess Charlotte of Mecklenburg, his majesty signed the following proclamation for his coronation.

PROCLAMATION.

GEORGE R.

HEREAS we have refolved, by the favour and bleffing of Almighty God, to celebrate the

folemnity of our royal coronation upon Tuesday the twenty-second day of September next, at our palace at Westminster: and forasmuch as by the ancient customs and usages, as also in regard of divers tenures of fundry manors, lands, and other hereditaments, many of our loving subjects do claim, and are bound to do and perform divers several services on the said day, and at the time of the coronation, as, in times precedent, their ancestors, and those from whom they claim, have done and performed at the coronation of our famous progenitors and predecessors: We therefore, out of our princely care for the prefervation of the lawful rights and inheritances of our loving subjects, whom it may concern, have thought fit to give notice of, and publish our refolutions therein; and do hereby give notice of, and publish the same accordingly; and we do hereby further fignify, that by our commission under our great feal of Great Britain, we have appointed and authorized our most dearly beloved brother and counsellor Edward duke of York [with all the other members of the privy council] or any five or more of them, to receive, hear and determine, the petitions and claims which shall be to them exhibited by any of our loving fubjects in this behalf: and we shall appoint our faid commissioners, for that purpose, to fit in the painted chamber of our palace at Westminfter, upon Tuelday the twenty-first day of this instant July, at ten of the clock in the forenoon of the fame day, and, from time to time, to adjourn, as to them shall seem meet, for the execution of our faid commission, which we do thus publish, to the intent that all such perfons, whom it may any ways con-

cern, may know when and where to give their attendance for the exhibiting of their petitions and claims, concerning the services before-mentioned to be done and performed unto us at our faid coronation: and we do hereby fignify unto all and every of our subjects, whom it may concern, that our will and pleafure is, and we do hereby strictly charge all persons, of what rank or quality foever they be, who either upon our letters to them directed, or by reason of their offices or tenures, or otherwife, are to do any fervice at the faid day or time of our coronation, that they do duly give their attendance accordingly, in all respects furnished and appointed as to fo great a folemnity appertaineth, and answerable to the dignities and places which every one of them respectively holdeth and enjoyeth; and of this they, or any of them, are not to fail, as they will answer the contrary at their perils, unless upon special reasons by ourself, under our hand, to be allowed, we shall dispense with any of their services or attendances.

Given at the Court at St. James's, the 8th day of July, 1761, in the first year of our reign.

The Monday following between eleven and twelve o'clock, the officers of arms, ferjeants at arms, and others, mounted their horfes, and at Westminster-hall gate, Windfor herald (after the trumpets had thrice founded) read the above proclamation aloud; which being done, a procession was made to Temple-bar (where the constables of the city and liberty of Westminster retired, and were replaced by those of the city of London, the city marshal attending) in the following order.

A par-

A party of conftables, with their flaves, to clear the way.

High conftable of Westminster with

his faff.

Knight marshal's men two and two.
Drums two and two.

Trumpets two and two.

Serjeant-trumpeter in his collar, bearing his mace.

Bluemantle and Rouge Dragon pursuivants, in their coats of his majesty's arms.

Rouge Croix pursuivant, in his coat of his majesty's arms, having a serjeant at arms on his left hand.

Lancaster herald, in his coat and collar, having a serjeant at arms on his left hand.

Windfor herald, in his coat and collar, between two ferjeants at arms.

A party of constables to close the procession.

At the end of Chancery-lane Lancaster herald made proclamation; and lastly at the Royal Exchange (in 'Change time) Rouge Croix pursuivant proclaimed it at third time, which ended with loud acclamations of multitudes of people

present,

After the king's nuptials, another proclamation was published, to give notice, that it was his majesty's inher majesty should be crowned at the same time and place. Upon this occasion Westminsterhall was laid open from end to end, and every thing it lately contained entirely removed, except the floor and steps of the King's-Bench court. A new boarded floor was likewife laid from the north gate up the middle of the hall to those steps, covered with matting. On each fide was built a large gallery, the bottom about five feet from the ground, and containing eight benches, covered also with matting for the spectators. Over this was erected a fecond gallery, not so wide, but of the same length, viz. that of the open part of the hall, when the King's-Bench court subfifted; but what must at first fight appear very frightful, a third gallery was fixed as it were in the roof, and supported by those beams, which are decorated at the ends with cherubims: it did not run quite the fame length as the others, nor was it so wide as may be imagined, from its being placed in so narrow a part of the building. Between the first gallery and the floor were contrived on each fide, large closets or pantries, with double doors, answering the purpose of side-boards, cellars, &c. as well as to contain the plates. dishes, and other things wanted by the company and waiters. space, left between these pantries and the platform up the middle of the hall, the tables were placed for that part of the company to dine at, who had not the honour to be at the king's table. His majesty, with his queen, nobility, great officers of state, &c. dined on the elevated part of the hall, where is kept the court of King's-Bench. The whole was lighted by fifty-two large chandeliers, each ornamented at the top with a gilt imperial crown. lower gallery was accommodated with a curious fluice, of an admirable contrivance, for the reception of urinary discharges. Over the north gate, which was opposite the king's table, a large balcony was put up, for the trumpets, the kettledrums, and other mufick, and in the centre over them was fixed an organ. It was under this mufick, that the champion, attended by the lord high constable, and the earl marshal,

marshal, all on horseback, made their entry into the hall. The procession entered at the west door of the abbey; marched on a platform up the great middle isle to the choir, the front of which was covered with scarlet; the organ was not taken down, but no alteration made to the arch under it.

A platform was likewise erected from the upper end of Westminfter hall, where the procession commenced, and continued through New Palace yard, Parliament street, and Bridge-street, into King-street, and fo round to the west door of abbey to the choir, where his majesty was crowned; and, in view of this platform, the houses on each fide were lined with scaffolding, the feats on which were let at exorbitant prices. The front feats in the galleries of the abbey, were let at ten guineas each, and those in commodious houses along the procession, at no less prices. The prices in the ordinary houses were from five guineas to one

guinea, so that one little house in Coronation-row, after the scaffolding was paid for, cleared 7001. and some large houses upwards of 1000l. In the coronation theatres, as they were called, being a fort of large booths, capable of containing from 12 to 1500 feats, the prices were beyond all precedent. However some, who fitted up houses or scaffolds on this occasion, lost considerably by outstanding their market. ground-rent to build the scaffolding on was proportionably extravagant. That in the broad fanctuary, let at 31. 13s. 6d. per foot. That within the rails, inclosing the abbey, let at 51. 5s. per foot. *

We need not wonder at the great and universal eagerness to see this grand spectacle, when we consider how unlikely it was that many of those who were capable of it should ever see the like again. As an instance of this eagerness, it was reported that a gentleman was prevailed on to take a room for his lady at the rate of one

* On confulting Stow, Speed, and other antiquaries with regard to the prices formerly given, it appears that the prices of a good place at the coronation of the conqueror was a blank; and probably the same at that of his fon William Rufus. At Henry I. it was a crocard; and at Stephen's and Henry the IId. a pollard. At Richard's, and king John's, who was crowned frequently, it was a fuskin; and rose at Henry III. to a dodkin. In the reign of Edward the coins begin to be more intelligible, and we find that for seeing his coronation a Q. was given, or the half of a ferling, or farthing; which is the fourth part of a sterling or penny. At Edward II. it was a farthing, and at his son's Edward III. a halfpenny, which was very well given. In Richard the IId's thoughtless reign it was a penny, and continued the same at that of Henry IV. At Henry V. it was two pennys or the half of a groffus or groat; and the same at that of Henry VI. though during his time, coronations were fo frequent, that the price was brought back to the penny or halfpenny, and fometimes they were feen for nothing. At Edward IV. it was again the half-groat; nor do we find it raised at those of Richard III. or Henry VII. At that of Henry VIII. it was the whole groat, or groffus; nor was it altered at those of Edward VI. and queen Mary; but at queen Elizabeth's it was a testou or tester. At those of James I. and Charles I. a shilling was given; which was advanced to half a crown at those of Charles II. and James II. At king William's and queen Anne's it was a crown; and at George I. was feen by many for the same price. At George II. some gave half a guinca.

hundred and forty guineas; but the appointment of the folemnity of the coronation falling unhappily exactly at the time when she expected to be delivered, she had farther prevailed on her husband, to let a skilful man-midwife, nurse, &c. attend her, and to hire an additional withdrawing room, lest the great hurry of the day should bring on her labour, when it would be impossible for her to be carried away without endangering her life.

The attention of the committee of council appointed to confider of the coronation to prevent accidents, and of the board of works, to whose inspection all the erections on this occasion were made subject, cannot be too much applauded. The committee's first care was to prevent accidents by fire; and as it was apprehended that the joy of the people upon the arrival of their queen, would naturally be expresfed by bonfires and illuminations, the lord great chamberlain, the earl marshal, the dean and chapter of Westminster, and the surveyor general of his majesty's works, were ordered to give the necessary directions as to them respectively appertained, that no bonfires should be made, nor any fireworks played off in any part of Westminster, from Whitehall to Millbank, and from thence to Buckingham gate, round the fouth west part of the artillery ground, till seven days after the coronation; and by another order, all fires were forbidden to be lighted on the day of the coronation, in, under, or near any part of the scaffolding on any pretence whatever; and in case there should be a necessity for people to go under the scaffolding with lights, that

they should be obliged to make use of lanthrons. By these wise precautions, all terrors from fire, which might have affected many persons, were removed. The board of works carfully surveyed all the scaffoldings erected on the occasion, not only for the procession itself, but for the spectators, and ordered such of the latter to be pulled down, as were judged insufficient in point of strength, or found to jut out so far as to obstruct the prospect or passage. And, to prevent accidents by the stoppages of coaches, &c. on the day of the coronation, notice was given, that a way was made for them to pass thro' Parliament-street, cross the New and Old Palace yards; and they were ordered, as foon as discharged, to proceed on directly to Millbank, and from thence to Hyde Park corner, without making any stop; and it was further commanded. that none but the coaches of peers, peeresses, and others, who attended the folemnity, should pass that way after 7 o'clock that morning, nor any whatever after nine; and in the evening the coaches were to return the same way; but no coaches were permitted to pass back by any of those ways till after their majesties returned to St. lames.

Information having also been given to the lords of his majesty's honourable privy council, that the hackney coachmen and chairmen had entered into a combination not to work their coaches and chairs on that day, without exorbitant rates, their lordships caused an order to be published, requiring all hackney-coachmen, and chairmen, to be out with coaches and chairs by four in the morna-

ing, and faithfully to perform their duty without making any exorbitant demands, upon pain of being proceeded against with the utmost feverity. But as working their way thro' the great crowds, with which this folemnity was like to be attended, could not fail subjecting both coachmen and chairmen to infinite troubles, and the latter to great fatigue and danger, they threatened not to ply at all, by which means many persons would lofe the pleasure of seeing the procession, and not a few of those. who made part of it, would find it extremely difficult to reach the places they were to affemble at, it was therefore thought prudent to take a middle course on the occasion; and accordingly one of the most eminent sedan makers affured the chairmen in a most affable advertisement, that the nobility and gentry would confider them properly, if they would but leave it entirely to themselves. This notice had the defired effect. The chairmen gave due attendance, and were generously paid. A guinea for a fet-down from any of the squares at the court end of the town to Westminster abbey and hall and places adjacent was grudged by few; nor does it appear that any of those who might grudge fuch high prices, complained to the board for regulating hackney coachmen and chairmen; the faid board, in confequence of an order from the coronation committee, having given notice that they would have three or four extraordinary meetings to hear and determine fuch complaints. Indeed it might feem unreasonable that any one fet of men should be debarred fetting a just value on their labours, when others took the most

extravagant prices for what cost them little or nothing; for on the day of the coronation, many spectators were glad fo give fixpence for a glass of water, a shilling for a roll, and so in proportion for other refreshments. The day before the coronation, the call for horses to bring people to town, and of coaches to fet them down at the places they had taken to fee the coronation, was so great, that many were obliged to walk feveral miles, and fome, after coming a great way on the occafion, to return home without having been able to fatisfy their curiofity.

The military officers were also appointed their proper stations, Sir John Mordaunt's light horse patrolled the fireets all the day and night, to prevent disorders : Sir Robert Rich's dragoons were placed at Charing Cross, St. James's fquare, and in the Park, at the end of George-street, for the same purpose. The soldiers on duty were ranged in fuch a manner, that no obstruction whatever attended the ceremony; the nearest hospitals were cleared too as much as posfible for the reception and speedy relief of the unfortunate, in case that any accident had happened.

A proclamation was also published at the Royal Exchange, commanding all magistrates, peace officers, &c. to preserve the peace on the coronation day; in confequence of which the justices of the peace for Westminster, ordered the constables of their districts to patrole the streets where the scaffolding was built, on the nights of the 21st, and 22d, and for seven nights after, and to approhend all persons throwing squibs, crackers, &c.

Such

Such were the wife regulations that those worthy personages, to whom the conduct of this most magnificent ceremony was entrusted, caused to be published from time to time; and the measures they purfued were attended with the defired effect; for notwithstanding the greatness of the crowd, the absence of so many persons from home, and the great and universal rejoicings made to folemnize this august ceremony, no accident of any kind happened, which it was possible for human wisdom to prevent.

At length Tuesday the 22d of September, the day appointed for this august solemnity, being arrived, their majesties and the princess dowager repaired in the morning through the Park from St. James's in chairs, and their attendants in coaches, to Westminsterhall, where they arrived by nine, much sooner than a great many who were to assist at the procession.

His majesty retired into the court of wards, and her majesty into the Black Rod's room; where they continued until the officers of arms ranged the procession into order, and brought the persons down from the Court of Requests, Painted Chamber, and House of Lords, into Westminster-hall.

Their majesties being there seated

at the upper end of it, under their states (her majesty's chair being upon the left side of his majesty) and being attended by the duke of Ancaster, lord great chamberlain of England, the duke of Bedford, lord high constable, and the earl of Effingham, earl marshal, and by the great officers, the four swords and spurs were presented, and laid upon the table before his majesty.

Then the dean and prebendaries of Westminster, in a solemn procession brought from the abbey the Holy Bible, with the following regalia belonging to his majesty, St. Edward's crown upon a cushion of velvet laced with gold, the orb with a cross, the scepter with a dove, the scepter with the crossand St. Edward's staff: as likewise the regalia of her majesty, her crown on the like cushion, her scepter with the cross, and the ivory rod with the dove; which were feverally laid before their majesties. All which were afterwards by his majesty's command, delivered to the lords who are hereafter mentioned to have borne them.

About eleven of the clock the procession was begun on foot from the hall to the abbey of Westminster, upon a way raised for that purpose stoored with boards, covered with blue cloth, and railed on each side, in the following manner.

The King's herb woman, followed by her fix maids, strewing the way with sweet herbs.

The dean's beadle of Westminster, with his staff.

The high constable of Westminster, with his staff, in a scarlet cloak.

A fife.

Four drums.
The drum-major.
Eight trumpets.
A kettle drum.
Eight trumpets.
The ferjeant trumpeter.

The

The fix clerks in chancery, in gowns of black flowered fattin with black filk loops and tufts upon the fleeves.

The closet-keeper of the chapel royal. The King's chaplains, four a-breast.
The two sheriffs of London.

Thirteen aldermen of London below the chair, in their scarlet gowns.

The recorder of London, fingle.

The aldermen above the chair, wearing their gold chains.

Eleven masters in chancery, in rich gowns.

The King's three younger serjeants at law, in scarlet gowns, their caps in their hands.

The King's attorney-general, Charles Pratt, Eq; The King's ancient ferjeant, David Poole, Efq; Gentlemen of the privy chamber.

Barons of the exchequer and justices of both benches, in their judges robes of fearlet, with their caps in their hands, the juniors first, two and two.

Chief baron of the exchequer, in his scarlet robe, with the collar of SS of gold.

Children of the choir of Westminster, in surplices.

Serjeant of the vestry. Serjeant porter, in scarlet gowns.

Children of the chapel royal, in surplices, with scarlet mantles over them.

Choir of Westminster, in surplices, with their music books.

The organ blower.

The groom of the vestry.

Gentlemen of the chapel royal, in scarlet mantles.

The sub-dean of the chapel royal, in a scarlet gown, turned up with black velvet. Prebendaries of Westminster, in supplices and copes, with their caps in their hands.

The master of the jewel-house, with one of his officers going by him, both in scarlet.

Bath king of arms, in his habit of the order, and carrying his coronet in his hand. Knights of the Bath, under the degree of peers, in the full habits and collars of their order, two and two, carrying their caps and feathers in their hands.

Pursuivant at arms, Blanch Lyon.
Privy-counsellors, not peers, amongst them the master of the rolls.
His majesty's vice chamberlain, William Finch, Esq;
Rouge Croix. [Pursuivants at arms] Rouge Dragon.
Baronesses, in their robes of estate; their coronets in their hands.

*The King's sword of state having, by some mistake, been left behind at St. James's, the lord mayor's fword was carried before the King by the earl of Huntingdon, in its flead: but when the procession came into the abbey, the sword of state was found placed upon the altar,

About half an hour after one, their majesties entered the abbey, and were received by the choir, finging the first anthem, taken out of the exxiid Pfalm, I was glad, &c. in the mean time their majesties went to their feats on the east fide of the throne. The archbishop of Canterbury (Dr. SECKER,) made the recognition in these words, Sirs, I here present unto you king GEORGE the third, the undoubted king of this realm. Wherefore all you who are come this day to do your homage, are you willing to do the same? Whereupon the nobility and people fignified their willingness and joy by loud and repeated acclamations, all with one voice crying out, God save king GEORGE the

The fecond anthem was then fung, Pfalm xxi. verses 1, 2, 5, 6,

The king shall rejoice, &c.

third.

The first oblation was then made by the king, being a pall, or altar cloth of gold, and an ingot, or wedge of gold, of one pound weight: the queen also offered a pall of gold. After which their majesties took their seats on the south side of the altar. The regalia were severally presented to the archbishop at the altar, and the great officers retired to their seats.

The litany was fung by Dr Keene, bishop of Chester, and Dr. Ashburnham, bishop of Chichester, the choir finging the responses to

the organ.

The archbishop began the communion service, and after the commandments, read the prayer for the king, as the collect for that day's solemnity. Almighty God whose kingdom is everlasting, &c. The bishop of Rochester read the epistle, 1 Pet. Vol. IV.

ii. verses 13, 14, 15, 16, 17.—And the bishop of Litchsield read the gospel, St. Matthew xxii. verses 15 to 22 inclusive.

The archbishop began the Nicene

creed, which the choir fung.

Dr. Drummond, bishop of Salifbury, (nominated to the see of York) then began his sermon, and preached from 1 Kings x. ver. 9. Blessed be the Lord thy God which delighteth in thee, to set thee on the throne of Israel; because the Lord loved Israel for ever, therefore made he thee king to do judgment and justice. The sermon was printed.

At the beginning of the fermon his majefly put on his cap of crimfon velvet, turned up with ermine.

Sermon being ended, the archbishop went to the king and read the declaration against transubstantiation, and the authority of the church of Rome, which his majesty repeated, and afterwards signed the same.

His majesty then took the coro-

nation oath.

The third anthem, or Veni Creator, or Come Holy Ghost, was then fung, after which the archbishop read the anointing prayer; which being ended, the choir fung the well known coronation anthem, Zadok the priest, composed by Mr. After which his majesty removed to St. Edward's chair a and the unction was performed by the archbishop, four knights of the garter holding a pall over his majesty during the anointing, viz. the duke of Devonshire, earl of Northumberland, earl of Hertford, and earl Waldegrave, and then the arch. bishop standing up, said a blessing over his majesty.

The fifth anthem fung, Psalm laxiv. ver. 9. and Psalm xviii. ver. 51. Behold O God our defender, and look upon the face of thine anointed. Great prosperity givest thou unto thy king, and wilt show loving kindness to thine anointed for evermore. Hallelujah.

The spurs were then presented, and his majesty girt with the sword, which was afterwards offered and redeemed. His majesty was invested with the armill, the purple robe and orb, and afterwards the ring was put on the fourth singer of his majesty's right hand by the archbishop, and the orb was re-

turned to the altar.

The marquis of Rockingham, deputy to the duke of Norfolk, as lord of the manor of Workfop, prefented a right hand glove to his majefty, who, putting it on, received from the archbishop the feepter with the crofs, and afterwards the scepter with the dove, into his left hand; and the marquis afterwards supported his majesty's right hand, as occasion re-

quired.

The king fitting in king Edward's chair, the archbishop then set the crown on the king's head, about half an hour after 3 o'clock, at the sight whereof the people with loud and repeated shouts, cried God save the king, the trumpets sounded, and by a signal given, the guns in the park were fired in an instant: the peers put on their coronets; the dukes of Normandy and Aquitaine their hats; the bishops, knights of the Bata, and judges their caps; and the kings of arms their crowns.

The fixth anthem fung, pfalso cxlvii. ver. 12. — Ifaiah xxxii, ver. 1. — pfalm xlviii. ver. 7. — pfalm xxi. ver. 23. — Praise the Lord O Ferusalem, &c. — Then the archbishop presented the bible, and pronounced the benediction; and his majesty kissed the bishops, kneeling before him.

Whilst Te Deum was finging, his majesty was enthroned: whereupon the bishops performed their homage, and then the temporal lords; first his royal highness the duke of York, and his royal highness the duke of Cumberland, each for himself. Then the dake of Devonshire, lord chambertain, pronounced the words of the homage for all the dukes; the marquis of Rockingham, for the marquisses: earl Talbot, lord high steward, for the earls; viscount Say and Sele, for the viscounts; and lord Henley. lord high chancellor, for the barons: every peer likewise taking off his coronet, touched the king's crown, and kiffed his left cheek.

During the homage, his majeffy delivered the feepter, with the crofs, to the marquis of Rockingham, (officiating as lord of the manor of

Workfop) to hold.

In the mean time, medals of his majesty and the queen were thrown about by the treasurer of the houshold.

The coronation of his majefly being finished, the queen removed from her seat on the south side the area, to a chair placed before the altar, and was anointed, (four ladies holding a pall over her majesty) and afterwards invested with the ring, and crowned by the archbishop; upon which the peeresses

put on their coronets. The archbishop then delivered the scepter into her right hand, and the ivory rod into her left hand.

Whilf the medals * were scattered, and the homage performed, the eighth anthem was sung, as a conclusion of the king's coronation, The Lord is arisen, &c. Psalm Ixxxiv. ver. II.—Psalm xx. ver. 6.—Psalm xxi. ver. 7, 8.—Psalm Ixxxv. ver. 9.—Psalm Ixxii. ver. 18, 19. and at the end of this anthem, the drums beat, the trumpets founded, and the people shouted, God save king George. May the king live for ever.

Then the choir fung the ninth anthem, from Pfalm xlv. ver. 1, 10, 14, 15, 16.—Pfalm xlv. ver. 11, 17.—Pfalm cxlvii. ver. 12.—Ifaiah xlix. ver. 23. My heart

Then the archbishop begun the offertory, Let your light so shine, &c. after which the choir sung, — Let my prayer come up into thy presence as incense, and let the listing up of my bands be as an evening sacrifice. Whilst this was singing, the king made his offerings of bread and

wine, and a mark of gold; the queen also made her offerings. The archbishop then proceeded in the administration of the holy sacrament.

The coronation office being performed, the king and queen retired into king Edward's chapel, and flanding before the altar, took off their crowns, and delivered them with their fcepters to the archbishop, who laid them before the altar there.

The king withdrew himself into his traverse prepared for him upon the western wall of that chapel, the queen in the mean while reposing herself in her chair.

The king was difrobed in his traverse of his royal robe of state, and again arrayed with his robe of purple velvet.

When the king came forth, the queen arofe, and they both stood before the altar, and the archbishop fet the crowns of state provided for the king and queen to wear during the rest of the solemnity upon their heads, giving the scepter with the cross into the king's right hand, and the orb with the cross into his left; as also the scepter with the

[9] 2 and odd no nearly crofs

^{*} On one fide of the king's filver medals is his bust, and these words, GEORGIVS III. D. G. M. BRIT. FR. ET, HIBS REX. F. O. and on the reverse, PATRIE OVANTI. To bis country triumphing, with Britannia holding a crown over his head, the king sitting, and the inscription, CORON. XXII. SEPT. MDCCLXI. There were four hundred silver medals also of the queen thrown into the scaleddings, and among the populace. On one side she is represented at half length; and in the exergue are these words, Garlatta D. G. M. Br. Fr et libber. Regime. On the other side is the device, being her majesty at full length, and over her a scraph descending with a crown, and going to place it on her head: In the exergue is, Question Martis, By ment obtained; and the interption, Coron. XXII.

cross into the queen's right hand, and the ivory rod into her left. The archbishop and bishops divested themselves of their copes; and proceeded in their usual habits.

The four fwords being borne before the king, and the heralds again putting the rest of the procession in order, they went out of the church at the west door, in the same manner that they came in, faving that the peers who brought any of the regalia that were left in the church, returned not as they came, immediately before the king, but were ranked in their places according to their degrees or confecrations.

Their majesties retired into the court of wards till dinner was ready; and then fitting in their chairs of state, the first course was brought up with the usual ceremony, his royal highness the duke of York, and his royal highness the duke of Cumberland fitting at the end of the table on his majelty's right hand, and her royal highness the princess Augusta, at the other end of the table, on the queen's left hand. Before the fecond course the champion was brought up between the high constable and earl marshal, followed by four pages, and preceded by the herald, who pronounced the challenge, the champion's two esquires with his lance and target, two ferjeants at arms; the knight marthal going before to clear the passage.

Immediately after the return of the champion, Garter king of arms, attended by the rest of the heralds. proclaimed his majetty's style in Latin, French and English, three feveral times; first, upon the top of the steps near the table; next, in the middle of the hall; and lastly,

at the bottom of the hall.

The fecond course was then ferva ed up in the same order as the first. The feveral fervices, which had been allowed by the court of claims, were performed; and his majesty was pleased, after dinner, to confer the honour of knighthood upon John Bridge, Esq; standard-bearer, and Owen Jones, Esq; sénior gentleman of the band of gentlemen pensioners, and Charles Townley, Efq; Clarencieux king of arms.

A little before their majesties procession began, proceeded that of her royal highness the princess dowager of Wales, from the house of lords, across Old Palace-yard, on a platform erected for that purpose on the south cross of Westminifer abbey. This platform was covered with blue bays, and an awning over head in case of rain. Her royal highness was led by the hand by his royal highness prince William Henry, dreft in white and filver. Her train, which was of filk, was but short, and therefore not borne by any person; and her hair flowed down her shoulders in hanging curls. She had no cap, but only a circlet of diamonds.

The rest of the princes and princesses, her highness's children, followed in the following order:

His royal highness prince Henry Frederick, also in white and filver, handing his fifter the princels Louisa-Anne, drest in a slip with hanging fleeves. Then

His royal highness prince Frederick-William, likewife in white and filver, handing his youngest fister the princess Caroline Matilda, drest also in a slip with hanging sleeves.

Both the young princesses had their hair combed upwards, which was contrived to lie flat at the back of their heads in an elegant tafte.

The other persons who made up the remainder of this procession, were those who had not a right to

walk with their majesties.

The procession was closed by the three Mahometan ambassadors, then at our court, in the proper dresses of their country, having their turbans, of fine muslin, on their heads, and long gowns of flowered and laced filk; their scabards were crimfon, and in each of them were inclosed a dagger and a poinard. They carried no sabres, nor had any thing about their necks.

As this procession was preceded only by a drum, it did not alarm the populace waiting to see the king and queen, otherwise some disturbance might have happened.

L. Ligonier, as commanding officer of the guard on duty, had a fmaltent fixed on the left fide of the platform in Old Palace-yard, where he paid his falute to their majesties, as they passed in procession; 2800 of the foot guards were on duty all the time.

A number of failors, all clean dreffed, came to the platform and infifted on standing there to see the procession, which had like to have occasioned a quarrel between them and the foldiers; but the commanding officer, to prevent a disturbance, ordered that they should remain there, provided they would be quiet; which they pundually complied with; but when the king passed by, they could contain themfelves no longer, the boatswain began with his call, and the failors gave three loud chears, with which his majesty appeared highly delighted.

His majesty, soon after his arrival at St. James's on Tuesday evening, expressed very great satisfactory

faction, on hearing that no material accident had happened among the speciators at his coronation.

The person who undertook the awning over the stage on which the coronation procession past, had 500l, and took the chance whether the cloth covering would be wanted or not.

By way of supplement to the foregoing account, we and the following letter from a gentleman in London, to his friend in the country, as it contains some particulars omitted in that relation.

SIR,

As the friendship of Mr. Roller, who had procured me a pass-ticket, as they call it, enabled me to be present both in the hall and the abbey; and as I had a fine view of the procession out of doors, from a one pair of stairs room, which your neighbour, Sir Edward, had hired at the small price of one hundred guineas, on purpose to oblige his acquaintance, I will endeavour to give you as minute an account as I can of all the particulars omitted in the public papers. First then, conceive to yourself the fronts of the houses in all the streets, that could command the least point of view, lined with fcaffolding, like fo many galleries or boxes, raifed one above another to the very roofs. These were covered with carpets and cloths of different colours, which presented a pleasant variety to the eye; and if you confider the brilliant appearance of the spectators who were feated in them (many being richly dreft) you will eafily imagine that this was no indifferent part of the show. The mob underneath made a pretty contrast to the

[2] 3

rest of the company. Add to this, that though we had nothing but wet and cloudy weather for some time before, the day cleared up, and the fun shone auspiciously, as it were, in compliment to the grand festival. Had it rained, half the fpectators were to exalted, that they could not have feen the ceremony, as a temporary roof put over the platform, on account of the uncertainty of the weather, was exceeding low. This roof was covered with a kind of fail-cloth; which, on orders being given to roll it up, an honest Jack Tar climbed up to the top, and stripped it off in a minute or two; whereas the perfons appointed for that fervice might have been an hour about it. This gave us not only a more extensive view, but let the light in upon every part of the procession. I should tell you, that a rank of foot foldiers were placed on each fide within the platform; which was an encroachment on the spectators; for at the last coronation I am informed they flood below it? and it was not a little surprising to see the officers familiarly conversing and walking arm in arm with many of them, till we were let into the fecret, that they were gentlemen, who had put on the dresses of common foldiers, for what burpole I need not mention. On the outfide were stationed, at proper distances, feveral parties of horle-guards, whose horses somewhat incommoded the people; that pressed incessantly upon them, by their prancing and capering; though luckily I do not hear of any great mischief being done. I mult confess, it gave me pain to fee the foldiers, both horse and foot, obliged most unmercifully to belabour the heads

of the mob with their broad swords. bayonets, and musquets; but is was not unpleasant to observe for veral tipping the horse soldiers. flily from time to time, (fome with half pence, and some with filver, as they could muster sup the cash) to let them pass between the horses to get nearer the platform; after which these unconscionable gentry drove them back again. As foon as it was day-break (for I chose to go to my place over-night), we were diverted with feeing the coaches and chairs of the nobility and gentry passing along with much ado; and feveral persons, very richly dreft, were obliged to quit their equipages, and be escorted by. the foldiers through the mob to their respective places. Several carriages, I am told, received great damage: Mr. Jennings, whom you know, had his chariot broke to pieces, but providentially neither he nor Mrs. Jennings, who were in it, received any hurt.

My pass-ticket would have been of no service, if I had not prevailed on one of the guards, by the irrestible argument of half-a-crown, to make way for me through the mob to the hall-gate, where I got admittance just as their majesties were seated at the upper end; under

magnificent canopies. att sand

There feemed to be no small confusion in marshalling the ranks, which is not to be wondered at, considering the length of the cavalcade, and the numbers that were to walk. At length, however, every thing was regularly adjusted, and the procession began to quit the half between eleven and twelve. The platform leading to the west-door of the abbey, was covered with blue cloth for the train to walk

on; but there seemed to be a defect in not covering the upright posts that supported the awning, as it is called, which looked mean and naked, with that or some other coloured cloth. The nobility walked two by two. Being willing to fee the procession pals along the platform through the streets, I hafsened from the hall, and by the affistance of a foldier, made my way to my former station at the corner of Bridge-street, where the windows commanded a double view at the turning. I shall not attempt to describe the splendour and magnificence of the whole; and words must fall short of that innate joy and fatisfaction which the spectators felt and expressed, especially as their majesties passed by; on whose countenance a dignity fuited to their station, tempered with the most amiable complacency, was senfibly impressed. It was observable, that as their majesties and the nobility passed the corner which commanded a prospect of Wettminsterbridge, they stopt short, and turned back to look at the people, whose appearance, as they all had their hats off, and were thick planted on the ground, which rose gradually, I can compare to nothing but a pavement of heads and faces.

I had the misfortune not to be able to get to the abbey time enough to fee all that passed there; nor, indeed, when I got in, could I have so distinct a view as I could have wished. But our friend Harry Whitaker had the luck to be stationed in the first row of the gallery behind the feats allotted for the nobility, close to the square platform, which was erected by the altar, with an ascent of three steps, for their majesties to be crowned on. You are obliged to him, therefore, for feveral particulars, which I could not otherwise have informed you of. The fermon, he tells me, lasted only sitteen minutes. The king was anointed on the crown of his head, his breaft, and the palms of his hands. At the very instant the crown was placed on the king's head, a fellow, having been placed on the top of the abbey-dome, from whence he could look down into the chancel, with a flag which he dropt as a fignal, the Park and Tower guns began to fire, the trumpets founded, and the abbey ecchoed with the repeated shouts and acclamations of the people; which, on account of the aweful filence, that had hitherto reigned, had a very firiking effect. As there were no commoners knights of the garter; instead of caps and vestments peculiar to their order, they, being all peers, wore the robes and coronets of their respective ranks. When the queen had received the scepter with the cross, and the ivory rod with the dove, her majesty was conducted to a magnificent throne on the left hand of his majesty.

I cannot but lament that I was not near enough to observe their majesties performing the most serious and folemn acts of devotion: but I am told, that the reverent attention which both paid, when (after having made their fecond oblations) the next ceremony was their receiving the holy communion, it brought to the mind of every one near them, a proper recollection of the confecrated place in which they were.

An hour loft in the morning is not to eafily recovered. This was the case in the present instance :

[2] 4

for to whatever causes it might be fide crowded with company, for the owing, the procession most affuredly fet off too late: befides, according to what Harry observed, there were fuch long paules between fome of the ceremonies in the abbey, as plainly shewed all the actors were not perfect in their parts. However it be, it is impossible to conceive the chagrin and disappointment, which the late return of the proceffion occasioned; it being so late, indeed, that the spectators, even in the open air, had but a very dim and gloomy view of it, while to those, who had fat patiently in Westminster-hall, waiting its return for fix hours, scarce a glimple of it appeared, as the branches were not lighted till just upon his majesty's entrance. I had flattered myself, that a new scene of splendid grandeur would have been presented to us in the return of the proceffion from the reflection of the lights. &c. and had therefore posted back to the hall with all possible expedition : but I was greatly disappointed! The whole was confusion, irregularity, and disorder.

However, we were afterwards amply recompensed for this partial eclipse, by the bright picture, which the lighting of the chandeliers prefented to us. Conceive to yourfelf, if you can conceive what I own I am at a loss to describe, so magnificen a building as that of Westminster whall, lighted up with near three thousand wax candles in most fplendid branches, our crowned heads, and almost the whole nobility, with the prime of our gentry, most superbly arrayed, and adorned with a profusion of the most brilliant jewels, the galleries on every

most part elegantly and richly dressed; but to conceive it in all its lustre. I am conscious that it is abfolutely necessary to have been prefent. To proceed in my narration. Their majesties table was ferved with three courses, at the first of which earl Talbot, as steward of his majesty's houshold, rode up from the hall gate to the steps leading to where their majesties sat, and on his returning the spectators were presented with an unexpected fight in his lordship's backing his horse, that he might keep his face still towards the king. A loud clapping and huzzaing confequently enfued.

After the first course, and before the fecond, the king's champion, Mr. Dymocke, * who enjoys that office as being lord of the manor of Scrivelsby, in Lincolnshire, entered the hall, completely armed, in one of his majesty's best suits of white armour, mounted on a fine white horse, the same his late majesty rode at the battle of Dettingen, richly caparifoned, in the following man-

Two trumpets, with the champion's arms on their banners; the ferjeant trumpet, with his mace on his shoulder; the champion's two esquires, richly habited, one on the right hand, with the champion's lance carried up-right; the other on the left hand, with his target, well and the champion's arms depicted thereon; the herald of arms, with a paper in his hand, containing the words of the challenge.

The earl marshal, in his robes and Jan coronet, on horseback, with the an marshal's staff in his hand; the

champion on horseback, with a gauntlet in his right hand, his helmet on his head, adorned with a great plume of feathers, white, blue, and red; the lord high constable, in his robes and coronet, and collar of the order, on horseback, with the constable's staff.

Four pages richly apparelled, at-

tendants on the champion.

The paffage to their majesties table being cleared by the knight marshal, the herald at arms, with a loud voice, proclaimed the champion's challenge, at the lower end of the hall, in the words follow-

ing:

" If any person, of what degree soever, high or low, shall deny or gainfay, Our Sovereign Lord King George III. king of Great Britain, France, and Ireland, defender of the faith, &c. fgrandfon and next heir to our fovereign lord king [George II.] the last king deceased, to be the right heir to the imperial crown of the realm of Great Britain, or that he ought not to enjoy the same; here is his champion, who faith that he lyeth, and is a false traitor; being ready in person to combat with him; and in this quarrel will adventure his life against him, on what day foever shall be appointed." period of and

And then the champion throws down his gauntlet; which, having lain fome small time, the herald took up and returned it to the

champion.

Then they advanced in the same order to the middle of the hall, where the said herald made proclamation as before and fastly, to the foot of the steps, when the said herald, and those who preceded

him, going to the top of the steps? made proclamation a third time, at the end whereof the champion cast down his gauntlet; which after fome time, being taken up, and returned to him by the herald, he made a low obelfance to his majesty: whereupon the cupbearer, affifted as before, brought to the king a gilt bowl of wine, with a cover; his majesty drank to the champion, and fent him the faid bowl by the cupbearer, accompanied with his affiftants; which the champion (having put on his gauntlet) received, and retiring a little drank thereof, and made his humble reverence to his majesty and being accompanied as before, rode out of the hall, taking the faid bowl and cover with him as his fee with bard T

You cannot expect that I should give you a bill of fare or enumerate the dishes that were provided and fent from the adjacent tempor, rary kitchens, erected in Cotton-Garden for this purposes No less of than fixty haunches of venison, with a surprising quantity of all forts of game, were laid in for this grand feast. The king's table was covered with 120 diffies at three feveral times, served up by his majesty's be band of pensioners; but what chiefly attracted our eyes, was their majesties desert, in which the confectioner had lavished all his ingenuityme in rock work and emblematical firm gures. The other deferts were no of less admirable for their expressive devices But I must not forget to teller you, that when the company came, to be feated, the poor knights of the Bath had been over-looked, and no table provided for them. An airy apology, however, was ferved up tonsil them instead of a substantial dinner:

but the two junior knights, in order to preserve their rank of precedency to their fuccessors, were placed at the head of the judges table above all the learned brethren of the coif. The peers were placed on the outermost fide of the tables, and the peereffes within, nearest to the walls. You cannot suppose that there was the greatest order imaginable observed during the dinner, but must conclude, that fome of the company were as eager and impatient to fatisfy the craving of their appetites, as any of your country fquires at a race or affize ordinary.

It was pleasant to see the various stratagems made use of by the company in the galleries to come in for a snack of the good things below. The ladies clubbed their handkerchiefs to be tied together to draw up a chicken, or bottle of wine. Some had been so provident as to bring baskets with them, which were let down, like the prisoners boxes at Ludgate or the Gatehouse, with a Pray remember, the

poor.

You will think it high time, that I should bring this long letter to a conclusion. Let it suffice then to acquaint you, that their majesties returned to St. James's a little after ten o'clock at night; but they were pleafed to give time for the peereffes to go first, that they might not be incommoded by the pressure of the mob. to fee their majesties. After the nobility were departed, the hall doors were thrown open according to custom, when the people immediately cleared, it of all the moveables, fuch as the victuals, cloths, plates, dishes, &c. and, in short, every thing that could flick to their fingers.

I need not tell you, that feveral coronation medals, in filver, were thrown among the populace at the return of the procession. One of them was pitched into Mrs. Dixon's lap, as she sat upon a scassfold in Palace-yard. Some of gold were also thrown among the peeress in the abbey, just after the king was crowned; but they thought it below their dignity to stoop to pick them up.

Our friend Harry, who was upon the scaffold, at the return of the procession, closed in with the rear; at the expence of half a guinea was admitted into the hall; got brimfull of his majesty's claret; and in the universal plunder, brought off the glass her majesty drank in, which is placed in the beaufet as a valuable

curiofity.

I should not forget telling you that I am well assured the king's crown weighs almost three pounds and a half, and that the great diamond in it fell out in returning to Westminster hall, but was imme-

diately found and restored.

My wife defires her compliments to you: She was greatly pleafed with the fight. All friends are well except that little Nancy Green has got a swelled face, by being up all night; and Tom Moffat has his leg laid up on a stool, on account of a broken shin, which he got by a kick from a trooper's horse, as a reward for his mobbing it. I shall fay nothing of the illuminations at night: the news-papers must have told you of them, and that the admiralty, in particular, was remarkably lighted up. I expect to have from you an account of the rejoicings at your little town; and defire to knew whether you was able to get a flice of the ox, which was roafted whole on this occasion.

I am, dear Sir, Wall

P. S. The princess dowager of Wales, with the younger branches of the royal family, had a box to see the coronation in the abbey, and afterwards dined in an apartment by themselves adjoining the hall.

Extract of a letter from a gentleman to his friend in the country, containing a full and circumstantial detail of many particulars, concerning the lord mayor's show, and the entertainment at Guildall, &c.

HEN I got up the morning was fo foggy, that I could scarce see a-cross the way: but, as at the coronation, "it foon after cleared up, and we had the uncommon fatisfaction of having as fine a day as ever was known at this feafon of the year. I call it uncommon, because it has been remarked, almost to a proverb; that the lord mayor's day is generally a bad one. That part of the ceremony on this occasion, which is presented to us on the water, is perhaps equal to any thing of the kind in Holland or Venice: I therefore took a boat, and ordered the waterman to row me along-fide the ford mayor's and the companies barges, as they proceeded on to Westminster. Thames was quite covered with "boats and gilded barges." The skinners barge was diffinguished from the rest by the outlandish dresses, in ftrange spotted skins and painted hides, of their rowers. The barge belonging to the flationers company, after having passed the narrow strait through one of the arches of Westminster-bridge, and tacked about to do honour to the lord mayor's landing, touched at Lambeth, and took on board an hamper of claret, (the tribute annually paid to learning) from the archbishop's palace. This, indeed, is constantly reserved for the future regulement of the master, wardens, and court of affistants—and not suffered to be shared by the common crew of liverymen.

As the ceremonies of swearing in the lord mayor at Westminster-hall are fo well known, and repeated annually, I did not flay to fee them, but landed as foon as I could, in my return back, at the Templestairs. Here I found, that some of the city companies had difembarked from their barges before me. All along Temple-lane, leading from the stairs, I faw them drawn up in order, between a row of the trainbands on each fide, who kept excellent discipline; the Temple-gate at the top of the lane, opening into Pleet-fireet, being kept fhut, and barricadoed from affailants; and only fome small parties of the unorderly; undisciplined mob, on the forlorn hope, just reconnoitring them through the defiles of the bye courts and passages, and retreating, as fast as they could, in order to make a affand in the high roads. through which these regulars were afterwards to force a paffage. The barges belonging to fome of the other companies had the prudence, as there was no danger of fhort allowance, not to land their men; who regaled themselves comfortably on board. while the others were cooling their heels in the lane some hours waiting till the royal proceffion had passed by. The lord mayor indeed, and his attendants, were invited by the master and benchers of the Temple, to come on shore, and were refreshed in the Templehall.

I made my way as well as I could through the crowd to the queen'sarms tavern, the corner of St. Paul's church-yard, kept by honest Bates, so remarkable for his good wines and good treatment in every other respect. Here a party of us had fecured a room, which commanded a complete view both of the royal and city processions. Mrs. Heming was at Messieurs Carr and Ibbetson's upon Ludgate-hill, who, as well as their neighbours, Palmers and Fleetwood, had not only filled every window in their houses, but built a large scaffolding before their doors for the accommodation of their friends. Every house indeed, from Temple-bar to Guildhall, was crowded from top to bottom, , and many had fcaffoldings befides. Carpets and rich hangings were hung out on the fronts all the way long. And for the honour of the city I must observe, that contrary to what was practifed at the coronation, inflead of letting places to hire, and making money of provisions at advanced prices, the inhabitants (some few excepted) generously accommodated their friends and customers gratis, and entertained them in a most elegant manner: so that, though the citizens shops were shut, they might be faid to have kept open house. fame was also done in all the streets from St. James's through which the royal cavalcade was to pass.

This fet out from the palace about twelve o'clock; but (would you believe it?) by the mismanagement of those, who should have taken care to clear the way of

hackney coaches and other obstructions, fuch long and frequent stops were made, that it was near four hours before the royal family got to friend Barclay's house opposite to Bow-church, from whence they were to fee the city procession, in a balcony hung with crimfon filk damask; by which delay my lord mayor was enabled to return the compliment to his majesty, who was just as much in the dark at the coming back of the procession at the coronation. As the royal family passed by our window, I counted between twenty and thirty coaches belonging to them and their attendants, besides those of the foreign ambassadors, officers of state, and the principal nobility.

The royal family proceeded in

the following order.

His royal highness the duke of Cumberland, in his coach drawn by fix horses, preceded and followed by guards.

Her royal highness the princess

Amelia, in the same manner.

His royal highness the duke of York, in a new state coach, in the same manner. His royal highness's coach was the most elegant of all, and instead of coronets at the corners, had a most superb gilt ducal coronet in the center of the top.

Their royal highnesses prince William, prince Henry, and prince Frederic, in one coach, in the fame

manner.

Theirroyal highnesses the princess dowager of Wales, the princess Augusta, and the princess Caroline, in one coach, preceded by twelve footmen in black caps, and with guards, and a grand retinue.

Their majesties in their state coach, preceded by the earl of Harcourt in his chariot, and the dukes

of

of Rutland and Devonshire in another chariot, the grenadier guards and the yeomen of the guards, and followed by a corps of the horse

guards...

A booth had been erected at the east end of St. Paul's church-yard, for the children of Christ-church hospital, being a royal foundation, to pay their respects to their majesties. As soon therefore as their majesties coach came opposite this booth it made a stop, and the senior scholar of the grammar school in the hospital, stepping up to the side of it, most humbly addressed the king in the following manner.

Most august and gracious sove-

reign,

From the condescension and goodness, which your majesty displays towards even the meanest of your subjects, we are emboldened to hope you will accept the tribute of obedience and duty which we poor orphans are permitted to present

you.

Educated and supported by the muniscence of a charity, founded, enlarged, and protected by your royal predecessors, with the warmest gratitude, we acknowledge our inexpressible obligations to its bounty, and the distinguished happiness we have hitherto enjoyed under the constant patronage of former princes. May this ever be our boast, and our glory! Nor can we think we shall prefer our prayer in vain, whilst with earnest but humble supplications, we implore the patronage and protection of your majesty.

To our ardent petition for your princely favours, may we prefume, dread fovereign, to add our most respect the congratulations on your auspicious marriage with your royal confort. Strangers to the dif-

quietude which often dwells within the circle of a crown, long may your majesties experience the heartfelt latisfaction of domestick life; in the uninterrupted possession of every endearment of the most tender union, every bleffing of conjugal affection, every comfort of parental felicity. And may a race of princes, your illustrious issue and descendants. formed by the example, and inheriting the virtues of their great and good progenitors, continue to fway the British scepter to the latest posterity,"

As foon as he had finished, the boys in a grand chorus chanted, God fave the king, Amen. After which, the senior scholar delivered two copies of the speech to the king and queen, who received

them most graciously.

But what was most remarkable, were the prodigious acclamations and tokens of affection shewn by the populace to Mr. Pitt, who came in his chariot, accompanied by earl Temple. At every stop the mob clung about every part of the vehicle, hung upon the wheels, hugged his footmen, and even kissed his horses. There was an universal huzza; and the gentlemen at the windows and in the balconies waved their hats, and the ladies their handkerchiefs. The fame, I am informed, was done all the way he passed along.

I need not trouble you with an account of the city-protession, (which was now left at liberty to shew itself) as it differed very little from that which you and I saw together, and has been seen for many years the same.

The lord mayor's state-coach was drawn by fix beautiful irongrey horses, richly caparison'd, and adorned with ribbons, and all

the companies made a very grand appearance. But the armourers and braziers, the skinners, and the filhmongers companies, were the only companies that had something like the pageants exhibited of old on the occasion: The first were marked by an archer riding erect in his car, having his bow in his left hand, and his quiver and arrows hanging behind his left shoulder, and a man in compleat armour. The skinners were distinguished by feven of their company being dreffed in fur, having their skins painted in the form of Indian princes. The fishmongers pageants confifted of a statue of St. Peter finely gilt, a dolphin, two mairmaids, and two fea-horfes, which had a very pleasing effect.

The procession having passed me, I posted away along the back lanes, to avoid the crowd, and got to Guildhall some time before the lord mayor could reach thither. I had procured a ticket, through the interest of Mr. ---, who was one of the committee for managing the entertainment, and a mazarine. You will wonder 'what this' appellation can mean, and what new dignity our friend has arrived at. You must know, it is a fort of nick-name given to the common-council men, on account of their wearing mazarine blue filk gowns upon this occafion. When I had got in, I foon found out my friend, who informed me of the following particulars: he told me, that the doors of the hall were opened at nine o'clock, for the private admission of fuch ladies into the galleries, who were favoured by the gentlemen of the committee, and confequently got the best places: that at twelve they were again opened, for "the general reception of all

who had a right to come in: that particularly at the entrance of Mr. Pitt and lord Temple, there was a loud and universal clap. which was continued for fome time. The galleries prefented a very brilliant show of ladies; and among the company below were all the officers of state, the principal nobility; and the foreign amballadors, among whom I could not but particularly remark the rich and fingular dreffes of the Algerine and Tripoline ambaffador and his fon. It was past fix before the lord mayor came in; when immediately dispositions were made for the reception of their majesties, and the royal family. The sheriffs did not alight from their chariots, but went to Mr. Barclay's, to conduct the royal family to the hall. A temporary paffage (enclosed at the fides and top) had been made leading to the hallgate, and this was lined by the mazarines, many of them with candles in their hands: the aldermen not on the committee, in their fearlet gowns, flood across the hall, to the steps leading to the King's. bench, and were supported by the band of gentlemen pensioners, with their axes in their hands. At the bottom of these steps stood the lord mayor and lady mayorefs, with the aldermen and commoners who were of the committee for conducting this entertainment, to receive each of the royal family as they came in.

After waiting about half an hour in this order, come the princes. Amelia, then (at some intervals) the duke of Cumberland, the three young princes, the princes owager of Wales, and lady Augusta, and after that the duke of York, all

01

of them being received with great clapping, &c. They waited in the body of the hall until their majesties entered it. Notice being now given, that their majesties coach was near, the lord and lady mayoress, with the aldermen, ad--anced to the great door of the hall, and waited there to receive them. At their majesties entrance the lord mayor kneeling, presented the city-fword, which being returned, he carried it before the king, the queen following with lady mayoress behind her. The musick had struck up, but was drowned in the acclamations of the company: in short, all was life and joy; even their giantships Gog and Magog seemed to be almost animated.

Their majesties were pleased, with wonderful condescension, to return the compliments that were paid to them, and, in express terms, declared their admiration at the fplendor and magnificence that every where furrounded them, as had also the rest of the royal family. The committee then conducted the royal family to the council chamber, the commoners thereof going first, the aldermen next; after them came the duke of Cumberland, and the four princes; then the great officers, with white staffs; then his majesty, the queen, the princess dowager, lady Augusta, princess Amelia, and fellowed by the queen's attendants, &c. Their majesties being entered the council chamber, Sir William Moreton the recorder, made the compliments of the city in a speech, the aldermens ladies and daughters were presented, and had the honour to be faluted by his maiefly, and to kifs the queen's hand,

and the number of city-knights was increased by the honour of knighthood being conferred on the two sheriffs, messieurs Nash and Cartwright, and the lord mayor's brother, heretofore Mr. Thomas Fludyer. After flaying here for about half an hour, the royal family returned into the hall, and were conducted to the upper end of it, called the huftings, where a table was provided for them. It is where you have feen the drawing of the lottery. This table was fet off with a variety of emblematick ornaments beyond description elegant, and a superb canopy was placed over their majesties heads at the upper end. It was almost nine before the dinner (or rather fupper) was served up to the roy+ al family, who all fat at the fame table, and no other person with them. One particular I cannot help acquainting you with, viz. that the ladies in waiting upon the queen had claimed a kind of right by custom to dine at the same table with her majesty; but this was over-ruled, and they dined at my lady mayores's tables; which. by the bye, were no less than three in number, and ferved in the most elegant manner, in the apartment called the King's-bench. Other ladies of diffinction, not accommodated there, had an entertainment at the town-clerk's house. The lord mayor, aldermen, and their ladies, had a table spread for them in the lower hustings. A table for the privy-counsellors, ministers of state. and others of the nobility, was on the right-hand, as you ascend the upper hustings; another for the foreign ministers on the left. At the upper end of each of these two last mentioned tables was placed

[240] ANNUAL REGISTER

half a fide of roast-beef, in one of which was fluck a flag with the royal arms; and in the other a flag with those of the city. The mazarines (I have already explained the term to you) were not overlooked by those of their brethren, who had no small share in conducting the whole of this entertainment: for they had eight tables (as well as I can recollect) allotted to them in the body of the hall, at the end where my lord mayor's table was. The judges, ferjeants, &c. dined in the old councilchamber. attendants upon all the company were plentifully regaled in the court of common pleas. I should enclose you a topographical map, in order for your rightly understanding the various places of action; but let it fuffice to tell you, that the ground was properly marked out, and the commissaries were much more than not deficient in providing the alimentary supplies for each party.

The feven aldermen of the committee, fet on the dishes, and attended the royal table. The lord mayor flood behind the king (as we may fay) in quality of chief butler, while the lady mayoress waited on. her majesty in the same capacity; but were, foon after the royal family were feated, defired by their majesties to go to dinner. The entertainment confifted of three courses, besides the desert. To say that it was elegant, sumptuous, and all that, is faying fomething and nothing: It is but justice to acquaint you, that the committee were wholly difinterested, and took care, that every bottle of wine should have the name of the person who ferved it, pasted on the side; with an intent, as we may reasonably prefume, to be a check upon

the venders, as also that every one might have the liberty of calling for this or that person's wine, whichever he liked best.

When the fecond course was bringing on to the royal table, the common cryer, standing before the royal table, demanded filence; and then proclaimed aloud, that his majesty drank to the health and prosperity of the lord mayor, aldermen, and common-council, of the city of London, and the trade thereof—and added thereto, that her majesty also drank confirming the same, whereupon the band of musick immediately played the march in Judas Maccabeus, accompanied by the side drum.

The common cryer then came to the lord mayor's table, at the lower end of the hall, and the mufick ceasing, he again demanded silence, and proclaimed, that the lord mayor, aldermen, and common-council, drank health, long life, and a profperous reign, to our most gracious fovereign king George the third, upon which the musick immediately played the latter part of Mr. Handell's coronation anthem, God Save the king, &c. The mulick again ceafing, the common cryer demanded filence a third time, and proclaimed, that the lord mayor, aldermen, and common - council. drank health, and long life, to our gracious queen Charlotte, upon which the band played again. The healths of the rest of the royal family were in order drank at my lord mayor's, and the other tables, but not in the same ceremonious publick

I must not forget to tell you, that the grand service of plate at the king's table was entirely new, and made by Mr. Gilpin. The city

ex-

exchanged with him their old plate for his new, to do honour to this

grand occasion.

Their majesties with the royal family retired directly after their repass, to the council chamber, where they had their tea. In the mean time every thing was removed; and the hullings, where they had dined, the floor of which had bein covered with rich carpeting, was again covered afresh, and prepared for the ball, which was to enfue. On the return of their majesties, and as foon as they were seated under their canopy, the ball was opened by the duke of York and lady mayorefs. Other minuets fucceeded, by the younger branches of the royal family with ladies of distinction. It was now about 12 o'clock, when his majesty signified his intentions of going; and the hurry and confusion without doors, in bringing up the carriages, rendering it impossible for the royal family to observe the same order in returning as in coming to the city, the procellion back was confequently irregular. Their majesties waited half an hour before their coach could be got up, and after their departure the princess dowager was several minutes in the temporary passage, (nor could she be prevailed on to return into the hall) waiting for her's. The rest of the royal family followed them as fait as their coaches could be brought up; the lord mayor, with the sword of state carsied before him, the sheriffs and gentlemen of the committee, conducting them to the half-gate. Their majesties did not reach St. James's till two. In going under the gateway one of the glasses of their coach was broke by the roof of a centrybox, but happily no mischief forlowed.

VOL. IV.

His majefty and the queen were pleafed to do fingular honour to Sir Samuel Fludyer, lord mayor, at their departure, as well as to the lady mayorefs.

The rest of the company did not separate till after three, and the whole was concluded with the utmost regularity and decorum.

The queen's eafy, elegant, and condeficending behaviour made an impression on the whole company, and the joy of seeing our young and beloved sovereign so completely happy in his royal consort might easily be read in every countenance.

Upon the whole, it must be confessed that this entertainment at Guildhall, as well for the magnificence and profusion that attended it, as for the regularity and decorum with which it was conducted. did great honour to the metropolis. Champagne, Burgundy, and other valuable wines were to be had every where, and nothing was fo scarce as water. Even the ladies in the galleries' had an elegant collation provided for them, to go to as they pleased, in a separate apartment. His majesty himself was pleased to declare, that, to be elegantly entertained, he must come into the city. The foreign ministers in general expressed their wonder; and one of them said in French, that this entertainment was fit only for one king to give to another.

The houses were illuminated in all the streets, both in the city and Westminster, leading to St. James's; and some of them were adoined with curious transparent devices of the initial letters of their majesties names, and of lamps so disposed as to represent a crown, particularly Mr. Adams's, his majesty's optician, but all manner of danger-

R

ou

rous or noisy fire-works were strictly forbidden.

You will hardly believe, that the crowd in fome places was very near as great at the return of the royal family as at their coming. Mr. Pitt too was attended with the fame acclamations all along quite to his own house.

own house.

Before I conclude, I cannot but in justice take notice of the excellent discipline observed by the citymilitia, who were drawn out more for ornament than use on this occafion. I do not hear of any loss that they fustained, except that fome of them were disabled by drinking too plentifully on account of their hard duty. The officers made a fine flow, having exchanged their usual bobs, and full-bottoms, for queues, ramilies, and majors, My neighbour, Mr. Holkins the cheefemonger, I hardly knew again, his head was fo metamorphofed.

By looking over the number of losts, (among which was a militiaman's musquet) in the Daily Advertiser of next day, I find all the mob did not come merely to see the show. Some accidents, you may suppose, must have happened.

A man was killed by a large coping stone, which some persons on the roof of a house happened to push out, as they were leaning

against it.

Underneath you have the bill of fare ferved up at the royal table:

I remain, &c.

Bill of Fare, as ferved up at the Royal Table in Guildnall, on Lord Mayor's Day; by Meffrs. Horton and Birch.

KING and QUEEN. Rach four fervices and removes.

First service.

Confishing of turrenes, fish, venifon, &c. Nine dishes.

Second service.

A fine roaft; ortolans, quails, knotts, ruffs, pea chicks, &c. Nine diffies.

Third fervice.

Confisting of vegetable and made dishes, green pease, green morrelles, green truffles, cardoons, &c. Eleven dishes.

Fourth service.

Curious ornaments in pastry, jellies, blomonges, cakes, &c. Nine dishes.

Eight of the ROYAL FAMILY.

Four on the right hand of the king,

and four on the left.

Each four services before them, as follows:

First service.

Confisting of venifon, turtle, foups, fish of every fort, viz. dorys, mullets, turbots, bets, tench, foals, &c. Seven dishes.

Second fervice.

Ortolans, teals, quails, ruffs, fnipes, partridges, pheasants, &c. Seven dishes.

Third fervice.

Vegetable and made dishes, green pease, artichokes, ducks tongues, fat livers, &c. Nine dishes.

Fourth service.

Curious ornaments in cakes, both favoury and fweet, jellies and blomonges, in variety of shapes, figures, and colours. Nine dishes.

On the table between each fervice was placed near 100 cold ornamentals, and a grand filver epergne, filled with various kinds of fhell-fish of different colours.

Hot and cold dishes 414. The

defert not included.

STATE

STATE PAPERS.

His majesty's most gracious speech to both houses of parliament, March 3d, 1761, recommending a law for making the commissions of the judges perpetual, during their good behaviour, notwithstanding any future demise of the crown, &c.

My lords and gentlemen,

Pon granting new commissions
to the judges, the present
state of their offices fell naturally

under confideration.

In consequence of the act passed in the reign of my late glorious predecessor king William III. for settling the succession of the crown in my family, their commissions have been made during their good behaviour; but, notwithstanding that wise provision, their offices have determined upon the demise of the crown, or at the expiration of six months afterwards, in every instance of that nature, which has happened.

I look upon the independency and uprightness of the judges of the land, as effential to the impartial administration of justice; as one of the best securities to the rights and liberties of my loving subjects; and as most conducive to the honour of the crown; and I come now to recommend this interesting object to the confideration of parliament, in order that such farther provision may be made for securing the judges in the enjoyment of their offices, during their good behaviour, notwithstanding any such demile, as shall be most expedient.

Gentlemen of the house of commons, I must defire of you, in particular, that I may be enabled to grant, and establish, upon the judges, salaries as I shall think proper, so as to be absolutely secured to them, during the continuance of their commissions.

My lords and gentlemen,

I have nothing to add, but my thanks for the great unanimity and application with which you have hitherto carried on the public bufiness; and to defire you to proceed with the same good disposition, and with such dispatch, that this fession may soon be brought to a happy conclusion.

To this speech the lords made the following address:

Most gracious lovereign,

L, your majesty's most dutiful and loyal subjects, the lords spiritual and temporal, in parliament assembled, return your majesty our humble thanks for your most gracious speech from the

throne.

The tender concern which your majesty is pleased to express for the rights and liberties, of your people, and for the impartial administration of justice, fills our minds with the fincerest gratitude. We look upon your wife and just fentiments, concerning the independency and uprightness of the judges of the land, as the strongest proof of what your . majesty has formerly declared to us, in words the most affectionate that ever came from the throne, that the civil, and religious rights of your fubjects are equally dear to you with the most valuable of your royal pre-[R] 2 rogatives.

rogatives. At the same time, nothing can be a nobler instance of your true greatness of mind, than to esteem these principles, as they truly are, the most conducive to the honour of the crown,

We will not fail to take into our confideration this, important object of the continuance of the judges, notwithstanding any demise of the crown; and to do every thing, on our part, to make your majesty's public-spirited intentions effectual: happy in having an opportunity to do this by your majesty's free and voluntary recommendation; and forming the most ardent vows, that the event, wherein the effect of such a provision will be experienced, may by the goodness of providence to these kingdoms, he removed for a long course of years.

Permit us, on this occasion, to renew to your majesty the most unfeigned affurances of our inviolable duty and affection; and to express our thankful acknowledgments for your gracious approbation of our proceedings hitherto. Nothing can equal our zeal for your majesty's support; nor shall any thing be wanting, that depends upon us, to bring this session to a speedy and happy conclusion, answerable to your

majesty's just expectations.

His majesty's most gracious answer.

My lords,

Thank you for this very dutiful, grateful, and unanimous address. I am very glad, that what I have laid before you, gives you somuch satisfaction.

The commons resolved likewise,

nemine contradicente.

That an humble address be prefented to his majesty to return his majesty the most humble thanks of this house, for his most gracious speech from the throne.

To express the grateful sense,

which this house has of his majesty's attention to an object so interesting to his people as the impartial administration of justice, and the integrity and independency of the judges of the land; and to affure his majesty, that his faithful commons see, with joy and veneration, the warm regard and concern; which animate his royal breaft, for the fecurity, laws, liberties, and properties, of his subjects; and that this house will immediately proceed upon the important work, recommended by his majesty with such tender care of his people; and will enable his majesty to establish the salaries of the judges, in so permanent a manner, that the same may be enjoyed, during the continuance of their commissions.

To return his majesty the sincere acknowledgments of this house, for his gracious acceptance of the services of his faithful commons, and to assure his majesty, that they will proceed with unanimity and dispatch to finish the remaining business of this session of parliament.

On the 4th of March this address was presented, to which his majesty was pleased to give this most

gracious answer:

Gentlemen of the bouse of commons, "I thank you for this dutiful and unanimous address. The sense you express of my sincere intention to do what is for the good of my people, gives me the highest satisfaction."

His majesty's most gracious speech to both houses of parliament, March 19th, 1761, on putting an end to the session.

My lords and gentlemen,

Cannot put an end to this feffion, without declaring my entire fatsfaction in your proceeding s during

during the course of it. The zeal you have shewn for the honour of my crown, as well as for my true interest, and that of your country, which are ever the fame, is the clearest demonstration of that duty and affection to my person and government, of which you fo unanimously affured me at your first meeting. Nothing could so much add to the pleafure which these considerations afford me, as that I am how able to acquaint you with the great progress made of late by the combined army in Germany, under the command of prince Ferdinand of Brunswick. I formerly told you, that the nature of the war, in those parts, had kept the campaign there fill depending; and it now appears, to the furprize of my enemies, that the superior ability, and indefatigable activity of my general, and the spirit and ardour of my officers and troops, have greatly profited of this perfeverance, notwithstanding all the difficulties ariling from the feafon.

By your affiltance, I have taken the best care to recruit that army in an effectual manner; and have made such a disposition of my sleet for the next summer, as may most advantageously defend my kingdoms; protect the commerce of my subjects; maintain and extend our possessions, and acquisitions; and

annoy the enemy.

As in all my measures I have nothing in view but the security and selicity of my dominions, the support of my allies, and the restoring of the public tranquility, I trust in the divine providence to give a happy issue to our farther operations.

Gentlemen of the house of commons, "I cannot sufficiently thank you for your unanimity and dispatch, in providing for the expences of my civil government, and the honour and dignity of the crown: and I

think myfelf as much obliged to you, for the prudent use, which, in framing that provision, you have made of my confent to leave my own hereditary revenues to such disposition of parliament, as might best conduce to the utility and satisfaction of the public, as for what more immediately concerns my-

In making my acknowledgments for the large and extensive supplies which you have granted me this session, I am at a loss whether most to applaud your chearfulness in giving, or your wisdom in proportioning them to the extraordinary occasions of the public, notwithstanding those uncommon burthens, which I heartily regret. No care shall be wanting on my part, to see them duly applied to the national ends for which you intended them.

My lords and gentlemen,

The expiration of this parliament now drawing very near, I will forthwith give the necessary orders for calling a new one; but I cannot take my leave of you, without returning my thanks for the many eminent proofs you have given of your fidelity and affection to my family and government, and of your zeal for this happy and excellent constitution.

During this parliament, the flame of war was kindled by the injurious encroachments and usurpations of our enemies; and therefore it became just and necessary on our part. In the profecution of it you have given such support to my royal grandfather and myself, and such affishance to our allies, as have manifested your publick-spirited concern for the honour of the nation, and the maintenance of its undoubted rights and possessions, and been attended with glorious successes, and great [R] 3 meeting acqui-

acquisitions, in various parts of the world; particularly the entire reduction of Canada, a conquest of the utmost importance to the Jecurity of our colonies in North America, and to the extension of the commerce and navigation of my subjects.

May God Almighty grant continuance to these successes! The use which I propose to make of them is, to fecure and promote the welfare of my kingdoms, and to carry on the war with vigour, in order to procure to them the bleffings of peace, on fale and honourable conditions for me and my allies; to which I have been always ready to

Firm in these resolutions, I do. with entire confidence, rely on the good dispositions of my faithful subjects in the choice of their representatives; and I make no doubt but they will thereby demonstrate the fincerity of those affurances, which have been for cordially and univerfally given me, in the loyal, affectionate, and unanimous addresses of my people.

Then the lord chancellor, by his majesty's command, said, My lords and gentlemen,

It is his majesty's royal will and pleasure, that this parliament be prorogued to Tuefday the feventh day of April next, to be then here held; and this parliament is accordingly prorogued to Tuesday the seventh day of April next.

His majesty's most gracious speech on opening the present parliament, Nowem. 6, 1761.

My lords and gentlemen, T the opening of the first parliament, summoned and elected under my authority, I with pleafure take notice of an event, which has made me compleatly happy, and given universal joy to my loving fubjects. My marriage with a princels, eminently distinguished by every virtue and amiable endowment, whilst it affords me all posfible domestick comfort, cannot but highly contribute to the happiness of my kingdoms; which has been, and always shall be, my first object in every action of my life.

It has been my earnest wish, that this first period of my reign might be marked with another felicity; the restoring of the blessings of peace to my people, and putting an end to the calamities of war, under which fo great a part of Europe fuffers. But though overtures were made to me, and my good brother and ally the king of Prussia, by the several belligerent powers, in order to a general pacification, for which purpose a congress was appointed; and propositions were made to me by France for a particular peace with that crown, which were followed by an actual negotiation; yet that congress hath not hitherto taken place, and the negotiation with France is entirely broken off.

The fincerity of my disposition to effectuate this good work has been manifelted in the progress of it; and I have the consolation to reflect, that the continuance of the war. and the farther offusion of christian blood, to which it was the defire of my heart to put a stop, cannot with

justice be imputed to me.

Our military operations have been in no degree suspended or delayed; and it has pleased God to grant us farther important successes, by the conquelts of the illands of Belleisle and Deminica; and by the

reduction

reduction of Pondicherry, which hath in a manner annihilated the French power in the East Indies. In other parts, where the enemy's numbers were greatly superior, their principal defigns and projects have been generally disappointed, by a conduct which does the highest honour to the diffinguished capacity of my general prince Ferdinand of Brunswick, and by the valour of my troops. The magnanimity and ability of the king of Prussia have eminently appeared, in refishing such numerous armies, and furmounting

fo great difficulties. In this fituation, I am glad to have an opportunity of receiving the truest information of the sense of my people, by a new choice of their representatives. I am fully perfuaded you will agree with me in opinion, that the steady exertion of our most vigorous efforts, in every part where the enemy may still be attacked with advantage, is the only means that can be productive of fuch a peace, as may with reason be expected from our successes. It is therefore my fixt resolution, with your concurrence and support, to carry on the war in the most effectual manner for the interest and advantage of my kingdoms; and to maintain, to the utmost of my power, the good faith and honour of my crown, by adhering firmly to the engagements entered into with my allies." In this I will perfevere, until my enemies, moved by their own losses and distresses, and touched with the miseries of so many nations, shall yield to the equitable conditions of an honourable peace; in which case, as well as in the profecution of the war, I do affure your no confideration whatever shall make me depart from the true interefts of these my kingdoms, and the honour and dignity of my

Gentlemen of the bouse of commons, I am heartily forry, that the necessity of large supplies appears so clearly from what has already been mentioned. The proper estimates for the fervices of the enfuing year shall be laid before you; and I defire you to grant me fuch supplies, as may enable me to profecute the war with vigour, and as your own welfare and fecurity, in the present critical conjuncture, require; that we may happily put the last hand to this great work. Whatfoever you give, shall be duly and faithfully applied.

I dare say your affectionate regard for me and the queen, makes you go before me in what I am next to mention: the making an adequate and honourable provision for her support, in ca'e she should survive me. This is what not only her royal dignity, but her own merit calls for; and I earneftly recommend it to your confideration. *

My lords and gentlemen,

I have fuch a confidence in the zeal and good affections of this parliament, that I think it quite fuperfluous to use any exhortations to excite you to a right conduct. will only add, that there never a fituation in which unanimity, firmness, and dispatch were more necessary for the fafety, honour, and true interest of Great Bri-

^{*} The grant to the late queen, in case the should survive his mejesty, was 100,000l. per annum, will Somerset-house, and the Lodge in Richmond-1 and.

The humble address of the right bonourable the lords Spiritual and temporal in parliament affembled, presented to his majesty, Nov. 7, 1761.

Most gracious sovereign,

E, your majesty's most du-tiful and loval subjects. the lords spiritual and temporal in parliament affembled, beg leave to return your majesty our humble thanks for your most gracious speech from the throne.

It is impossible to approach your royal presence at this time, without making our first offering to your majesty, of our most joyful congratulations on the auspicious occasion of your royal nuptials. We want words to describe how warmly we are affected with an event fo highly interesting to your majesty, and to all your faithful subjects; or to express our gratitude to your majesty for giving us a queen, who, whilst she complears your happiness, promises, by every virtue and amiable accomplishment, the greatest addition to that of your people. May heaven grant the longest duration to this felicity, and may it be attended with a numerous progeny, to transinit the great examples of their illustrious parents, and perpetuate the bleffings of your reign to future ages.

We thankfully acknowledge your majesty's goodness in communicating to us that overtures had been made by the feveral belligerent powers, in order to a general pacification; and by France, for a particular peace between your majesty and that crown, whereupon a negoriation had followed, which is fince entirely broke off. No other proof could be wanting to us, that the continuance of the war, and the

effusion of christian blood, cannot, with any shadow of justice, be imputed to your majesty, besides the known generofity and benevolence of your innate disposition.

Your royal wisdom has appeared in nothing more, than in not fuffering your military operations to be suspended or delayed: and we beg leave to congratulate your majesty on the present signal successes of your arms. Besides the important conquests with which they have been bleffed, your enemies have, in other parts, been made once more to feel, that superior numbers cannot avail them against the superior capacity and conduct of your confummate general prince Ferdinand of Brunswick, and the unshaken bravery of your officers and troops. We cannot see, without admiration, those repeated proofs of magnanimity and ability, which your great ally, the king of Pruffis, though furrounded with fo many difficulties, has given to the world.

Your majesty's sentiments cannot fail to have the greatest weight with us, because we are fure that they proceed upon wife principles, founded in the love of your people. It is therefore from conviction, that we declare our humble concurrence in your opinion, that it is necessary fleadily to exert our most vigorous efforts in every part, where the enemy may still be attacked with

advantage.

We beg your majesty to accept the strongest and most affectionate affurances, that we will, with the greatest zeal and ardour, and at the hazard of every thing that is dear to us, fland by and support your majesty in prosecuting the war in the most effectual manner, for the interest of your kingdoms, and in

performing, to the utmost of 'your power, your engagements to your allies; nothing being more evident than that this is the only method to procure fuch equitable and honourable conditions of peace, as may, with reason, be expected from our fuccesses.

We should be greatly wanting to ourselves, as well as to your majesty, if we did not testify our particular thanks for your paternal goodness, in having so expresly declared, that both in carrying on the war, and in making peace, no confideration whatfoever shall make you depart from the true interests of these your kingdoms, and the honour of your crown.

This resolution, so truly worthy of a British monarch, and so engaging to all your loyal fubjects, calls for adequate returns on our part. Penetrated with the liveliest fense of your unbounded tenderness and concern for our welfare, we do, from the bottom of our hearts, affare your majesty, that we will, with the utmost duty and zeal, correspond to that confidence which your majesty reposes in us, being fully persuaded of the necessity of unanimity, firmness, and dispatch, in the present critical fituation; and animated thereto by the gracious admonition of the best of kings.

His majesty's most gracious answer.

My lords,

I Thank you for this very dutiful and loyal address. The joy which you express upon my marriage, and your affectionate regard for the queen, give me the highest Satisfaction. I make no doubt but your ready concurrence in my sentiments, and the becoming zeal which you have so unanimously declared for carrying on

the war with vigour, will have a good effect both upon our friends and enemies, and frengthen my hands, to pursue such measures as may be most conductive to the true interests of my kingdoms.

The address of the house of commons, presented Nov. 16.

Most gracious sovereign, 7 E, your miljefty's most dutiful and loyal subjects, the commons of Great Britain in parliament affembled, beg leave to return your majesty the most humble and hearty thanks of this house for your most gracious speech from the throne.

Permit us, at the same time, to offer to your majesty our warmest congratulations on the joyful and auspicious event of your royal nuptials, with a princess descended from an illustrious protestant line, distinguished by the most eminent graces and endowments, and worthy to be the royal partner of your throne, by possessing every virtue that can adorn it.

We beg leave also to express our just sense of that affectionate regard which your majefty has thewn for your people, by confulting, on this most important and interesting occasion, as on every other, their happiness, and that of their posterity. And we affure your majeffy that, with hearts, full of gratitude, for this fignal instance of your royal attention to the welfare of your fubjects, and thoroughly fenfible of the exalted merit of your illustrious confort, your faithful commons will not fail to make fuch honourable and ample provision, as may enable her to support her royal dignity with proper lustre, in case she should survive your majesty;

jesty; for the long continuance of whose life we shall never cease to offer up to the divine providence our most ardent vows.

Allow us, Sir, to return our fincere and humble thanks to your majefly, for your tender concern for the prosperity of your people, in wishing to restore to them the blessings of peace; and to declare that we cannot too much admire that humanity, so becoming your royal breast, which, amidst the successes of your own kingdoms, feels for the calamities of other nations.

We are fully persuaded, that those beneficent dispositions which induced your majesty to consent to the appointment of a congress, for a general pacification, and to enter into a negotiation with France for a particular peace, could not have failed of the desired effect, if the enemy, influenced by the same motives, had shewn the same good intentions, and would have complied with such conditions as were requisite for the accomplishment of

that falutary work.

We do most gratefully acknowledge your majesty's vigilance and firmness in not suffering the hopes or expectations of peace to produce the least suspence or relaxation in the exertion of your arms. And we congratulate your majesty on those happy successes, which, under the good providence of God, we must ascribe to the wisdom and vigour of your majesty's measures, to which we owe the reduction of Dominica, the conquest of Belleisle, atchieved with fo much reputation to the British arms, and the destruction of the enemy's power in the East-Indies, by the acquifition of Pondicherry, their last remaining settlement of any strength in those countries.

The wife and able conduct of his ferene highness prince Ferdinand of Brunswick, whereby he hath fuccessively defeated the projects of the enemy, and hath prevented their making that progress, which, from their superior numbers, they expected, together with that gracious approbation which your majesty hath been pleased to express of the valour of your troops, cannot but give the highest satisfaction to your faithful commons; and they fee, with just admiration, the repeated proofs, in every campaign, of that unshaken resolution, and of those astonishing efforts which, alone, could have enabled your majesty's great ally, the king of Prussia, to resist the numerous forces of his enemies.

We beg leave to affure your majesty, of our intire concurrence and support in the most effectual profecution of the war, for the interest and advantage of these kingdoms; and in maintaining, to the utmost of our power, the good faith and honour of your majerty's crown, and the engagements entered into with your allies; and that we are truly fenfible, that the constant care and attention of your majetly to pursue the most vigorous measures in every part where any fuccessful impression can still be made upon the enemy, are the only means to attain that defirable object, an honourable and a fasting

We receive, with the deepest gratitude, that most endearing expression of your majesty's unbounded goodness and affection towards this your native country, in the folemn declaration which your majesty has been pleased to make, that, as well in the prosecution of the war, as in

the

the conclusion of the peace, no confideration whatever shall induce you to depart from the true interests of these your kingdoms, and from the honour and dignity of your crown.

Your majefty may be affured that your faithful commons, will chearfully grant fuch supplies as the nature and extent of the several services shall be found to require; firmly relying on your majesty's wisdom and justice, that they will be applied with the strictest ecconomy, and in such a manner as may most effectually answer the great ends for which they shall be granted.

We do with great truth affure your majesty, that it is our most earnest desire, that this first parliament convened by your royal authority, may, by their conduct, give your majesty a happy proof of the zeal, the loyalty, and the af-

fection of your people.

Sensible of the difficult criss in which we are assembled, we are determined to concur, with the greatest firmness and unanimity, in whatever may contribute to the welfare, may tend to defeat the views and expectations of our enemies, and may convince the world that there are no difficulties which your majesty's wisdom and perseverance, with the affistance of your parliament, cannot surmount.

His majesty's answer. Gentlemen,

I Return you my hearty thanks for this very dutiful and affectionate address. The early proofs of your most cordial attachment to me and my family, upon the occasion of my marriage, and the particular regard and attention which you express for the

queen, in a manner that so nearly concerns her, cannot but give me most sensible satisfaction. The assurances of your steady and vigorous support, must add the greatest weight to my endeavours for the public good; and will be the surest means of bringing the war in which we are engaged to such a conclusion as is the constant object of my wishes; and will most effectually provide for the honour, happiness, and security of my kingdoms.

The speech of his excellency George Dunk, earl of Halifax, lord lieutenant general, and general governor of Ireland, to both houses of parliament, at Dublin, October 22,

My lords and gentlemen,

Have the honour of his majety's commands, to meet his first parliament in Ireland: I obey them with intire satisfaction, from an affurance that your deliberations will be influenced by the same principles of loyalty and affection to your sovereign, and of zeal for the prosperity of your country, which have so long diffinguished the parliaments of this kingdom.

The loss of our late most gracious fovereign, at a time when not only the fecurity of his own dominions, but the welfare of Europe, seemed so essentially to depend on the continuance of his life, must have affected you in the

most sensible manner.

Your grief however has already been alleviated, and your loss repaired by the succession of his majesty, not only to the throne, (his legal inheritance) but to the duty, affection, land confidence of his subjects, as unbounded as the greatest

Of

of his predecessors have ever posfessed in the most fortunate periods

of their reign.

This parliament happily commences with the accession of a king bred under the influence and formed by the example of a prince, who uniformly tempered prerogative with law; and whose glory it was, in the exercise of his power, to proted the rights and liberties of his

people.

You can be no stranger to his majesty's most gracious declaration, that the preservation of the constitution in church and state, and the inforcing a due obedience to the laws (not more necessary to his own authority than to the liberties of his people) shall be the first and constant object of his care. And I have it particularly in command to declare to you, that his subjects of this kingdom are fully and in every respect comprehended in these affurances.

His majetty's wife choice of a royal confort; eminent for her perfonal virtues and endowments, and descended from an house so illustrious for its attachment to the protestant cause, dislays in the clearest light his paternal care, not only to preserve to us, but transmit unimpaired to our posterity, the blessings of his reign, liberty, and pure religion.

When confider the security of our present, and the prospect of our future happings; and when I see you animated, as I am persuaded you are, with every sentiment which loyalty and gratitude can inspire; I affore myself of a session of parliament, that will be distinguished by its uninterrupted harmony, and by its effective zeal for the support

of the honour and dignity of the crown. Such dispositions steadily adhered to, cannot fail, under his majesty's paternal influence, to preferve you an happy, and to establish you an opulent and a flourishing people.

Gentlemen of the house of com-

mons,

I have ordered the proper officers to lay before you the feveral accounts and estimates: from which you will be enabled to judge of the provisions necessary to be made for the support of his majesty's government, and for your own security. The means of making these provisions, (which, I hope, will be expeditiously adjusted) I doubt not will, on your part, be such as shall be most suitable to the circumstances of this country; on mine, you may depend upon the utmost frugality.

You will take into your confideration the feveral incidental charges of the military establishment, as it now stands, of which exact estimates cannot be formed; and also that a large sum will be wanted for the effectual repair of the barracks; a work which cannot be delayed.

I must observe to you, that notwithstanding the authority given by the vote of credit of the last parliament, the sum of two hundred thousand pounds only has been raised; a circumstance of economy which cannot fail to give you satisfaction.

My lords and gentlemen,

The improvement of your natural advantages ought to be the object of your most serious attention. Agriculture, the surest support of every state, deserves at all times your highest regard, to the end that, through your wisdom, the skill and industry of the inha-

bitants

bitants of this country may fully correspond with the bounty of providence in their favour.

To encourage, regulate, and improve, which will of course extend, your manufactures and commerce, will, I am sure, be your continual care. Your linen trade has long been the object of publick encouragement; but much still remains to carry to its full extent a manufacture, for which there is so large a demand; which is so various in its branches; and which, with due attention, might be rendered as considerable a source of wealth to the whole, as it is now to part of this kingdom.

There is no object more worthy our attention, than our Protestant charter schools. Notwithstanding the peaceable demeanour of the Papists in this kingdom, it must always be your duty, and your interest, to divert from error, by every effectual, though gentle method, the deluded followers of a blind religion. And these institutions merit your support and protection, not only as schools of religion, but as seminaries of useful arts and virtuous industry.

Let me now, in the most earnest manner recommend to you, that, after so many honourable events abroad, and so many joyful events at home, neither jealousies nor distrusts, neither publick heats, nor private animolities, may disturb that tranquillity which is desirable at all times, and at this season is peculiarly necessary to your welfare.

As to what regards myfelf, you shall always find me not only ready, but sollicitous, to contribute whatever my authority, my credit, or my experience can furnish for these salutary purposes. And I can with

truth affure you, that I shall in no degree sulfil the intentions, nor merit the approbation, of my royal master, but by studying the peace and welfare of the kingdom which his majesty hath committed

to my care.

I am sensible the situation, in which I am placed, is as arduous as it is important: but I bring with me the clearest intentions for your fervice. To maintain the honour, and to promote the service of the crown, are duties from which I will never depart: to forward the profperity, and to preferve the conflitution of this country, are objects of which I never will lose fight. And there is nothing I more fincerely wish, than that the interests of both kingdoms may be as thoroughly understood, as they are inseparably connected. There is no point I shall more diligently labour-And I must now assure you at the opening of my administration (what the progress of it will, I hope, demonstrate) that I have no end or ambition, but to be able to reprefent, in the warmest manner, to his majesty, the zeal and unanimity of his subjects in this kingdom, and to carry with me, on my return into the royal presence, the good opinion, the affection, the hearts of the people of Ireland.

A short view of the cause and conduct of the war, and a negotiation for a peace, as represented by the French in their Historical Memorial, published by authority.

HE present was between France and England, had at first America only for its object; but a considerable part of Europe has been since involved in it.

The limits of Acadia and Canada, which by the treaty of Aix la Chapelle, were left to the discussion of commissaries to be named by the two potentates, were made a pretence by England for commencing hostilities, and for taking two French ships, the Alcide and the Lys, at the very time when the duke de Mirepoix, the French amabassador in the midst of peace, and under the fanction of the law of nations was treating at London to prevent a rupture.

This act of violence was an indignity to France, which her honour obliged her to repel by force.

If England had intended only to establish the possessions of the two crowns in North America upon a firm footing, the would, as France has done, have endeavoured to prevent the powers of the continent from taking part in a war that was wholly foreign to them; on the contrary, she endeavoured to renew the famous league which was formed against Lewis XIV. upon the accession of Philip V. to the throne of Spain, and to perfuade all the courts of Europe that they were as much interested in the limits of Acadia, as in the fuccession of the Spanish monarchy.

In confequence of the first hostilities, which happened in 1755, the king of France pacified his neighbours, restrained his allies, and gave all the powers to understand that his sole view was to restrain the English within due limits, and that they ought to regard the differences about America with the

most impartial neutrality.

England took advantage of this pacific conduct, she knew that the empires queen of Hungary might

disappoint it, and she made no doubt of bringing that princes into all her views; but the empress rejected her proposals from the same principles of equity as those from which France acted, and chose rather to run the risk of an unjust war, which was the natural and foreseen consequence of the treaty between England and Prussia.

France and the empress queen entered into an alliance purely defensive, on the first of May, 1756, which was prior to the king of Prussia's invasion of Saxony, and they hoped this alliance would have prevented a war on the continent of Europe, but they were disappointed; for England having now armed the king of Prussia, he immediately indulged his passion for war, which inability only had restrained before, by the invasion of Saxony, and the attack of Bohemia.

From this time two diffine wars subsisted; one between France and England, which, in the beginning, had nothing in common with the war in Germany; and the other between Prussia and the empress queen, in which England was interested as an ally of Prussia, and France, as guarantee of the treaty of Westphalia, and as ally of the court of Vienna by the defensive treaty of the first of May.

France, in all the engagements the was conftrained to make with the confederate powers, was careful not to blend the differences of America with those of Europe, and as the was defirous to reftore publick tranquillity, the judged if un apper to blend interests, so diftant and complicated, by treating

OF.

of them jointly in a negotiation for

a general peace.

France went yet farther, and with a view to prevent a direct land war in Europe, she proposed the neutrality of Hanover, in the year 1757, but his late majesty refused the proposition, and sent his son, the duke of Cumberland, into his German dominions, who, at the head of an army composed entirely of Germans, was ordered to oppose the march of the forces, which France, in pursuance of her engagements, should send to her allies, who were attacked in their dominions.

This army finished the campaign of 1757, with the capitulation of Closter-Seven, to which the duke of Cumberland consented: but the English, notwithstanding, broke this capitulation within a few months, upon a pretence that the army which capitulated belonged to the elector; but that the army which broke the capitulation, though it was the same army, was from that time to be confidered as belonging to the king of England*; thus the army commanded by prince Ferdinand is become an English army: the elector of Hanover, the duke of Bruswick, and the Jandgrave of Heffe, their forces and their countries have been blended together in the cause of England, so that the hostilities in Westphalia, and lower Saxony, have had, and still have the fame object as the hostilities in America, Asia, and Africa, viz. the disputes concerning the limits of Acadia and Canada.

France being from this time

obliged to support a war both by fea and land against England, has afforded no farther fuccour of troops to her allies to carry on the war, but has only undertaken to preserve for the empress queen, the places on the Lower Rhine, which were conquered from the king of Prussia in her name. The war in Westphalia, therefore, is not carried on for the interest of the allies of France, but is purely English, and is carried on only because the army of England in that part, defends the possessions of England, and her allies.

Thus, the war of France with England, is, in its origin, distinct from the war of the empress with Prussia; yet, there is now a connection between the two wars, arifing from the common engagement between France and Austria, not to make a separate peace with the common enemy, but by mutual consent. This engagement was abfolutely necessary for the security both of Austria and France, for it would be dangerous to France for the king of Prussia to join his forces with those of prince Ferdinand against her, and to the empress for these forces to join against her, and the princes of the empire in alliance with France.

The year 1758 produced no event which might give room for a negotiation of peace, yet France made use of the mediation of Denmark, to inform England of her perseverance in the pacific disposition which she had before discovered, but the answer of England was haughty and negative, and de-

^{*} See the History of the War, Vol. 1. chapter 4. 6. also State Papers, page 182.

[246]

flroyed all hopes of a negotiation:

In 1759, the courts of London and Berlin transmitted a declaration from the Hague, to the ministers of France, Vienna, and Ruffla, importing, that to put a flop to the calamities of war, they were ready to fend plenipotentiaties to treat of peace wherever it flould be judged most convenient*, with those whom the belligerent powers should authorife on their fide.

This declaration made no mention either of Sweden, or the king of Poland, elector of Saxony, two powers who were principally interested in the war, and France was obliged to wait an answer from Petersburgh, in order to transmit in common, a counter - declaration, which the distance between the countries, necessarily delayed longer than France could have wished. At length it was transmitted to the following effect:

" That Spain having offered her " mediation, with respect to the " war between France and Eng-" land, and that war having no-" thing in common with the war " between Russia, Austria, and her " allies, and the king of Prussia,-" France is ready to treat with England fo far as the herfelf is " concerned, thro' the good effices es of Spain.

"That with respect to the war, which directly concerns Prussia, " it is declared, by France, Austria, " and Russia, that they are disposed to concur fir appointing a coner gress; but as they cannot enter " into any engagement relative to peace, without their allies, it will.

is be necessary that England and " Pruffia, should invite to the con-

" gress, all the powers at war with "Prussia, particularly the king of

"Sweden, and the king of Po-

" land."

To this counter-declaration, England and Prussia never made any reply. As in this declaration, France separated her war with England, wherever carried on, from the war in Saxony and Silefia, and as Spain had offered her good offices; the hoped a separate peace might be negotiated at London; she therefore directed the count de Affry, her ambassador, at the Hague, to confer with Gen. Yorke, England's envoy extraordinary, on the fubject: they did accordingly confer. but their conferences proved, that England was averse to an accommodation. The ment of the set we

France, however, was not yet difcouraged, but, in 1761, declared her pacific inclinations to her allies, and finding them willing to concur in any measures for peace, all the confederate powers agreed to transmit a declaration to London, of the

following purport: " That France, Austria, Russia, Sweden, and Poland, had unanimoully agreed to invite England and Prussia, to a negotiation for peace, and accordingly proposed a congress at Augsburg, or any other place in Germany, that England and Prussia might deem more convenient; and declared they had fiready made choice of plenipotentiaries, in expectation that England and Pruffia would do the fame."

But as great delay and perplexity were foreseen at a congress, where

^{*} See this declaration, Vol. ii. p. 267.

he interests of America were to be reated at the same time with those of Russia, Austria, Sweden, Saxony, and Prussia, France pressed for a separation of the two wars, by a separate memorial, accompanied by a letter from the duke de Choiseul to Mr. Pitt.

In the letter, the duke only mentions the general pacific dispositions of France and her allies. In the memorial, France proposes to agree with England, that, with respect to the particular war between them, the two crowns shall remain in posfession of what they have conquered from each other; and that the fituation in which they shall stand on the 1st of September 1761, in the East Indies; on the 1st of July 1761, in the West Indies, and Africa; and on the 1st of May following in Europe, shall be the position that shall ferve as a basis to the treaty which may be negotiated between the two powers. But that nevertheless, as England may think these periods or epochas too near or too distant, France will enter into a negotiation when the intention of England shall be known.

These pieces were dated March 25, and England had then conquered from France, Cape Breton, all Canada, Guadaloupe, Marigalante, Goree, and Senegal: what had been done in Asia was not known, and the expedition against Belleisle

had not taken place.

France had conquered Minorca, had repaired some part of Dunkirk, and in Germany was in possession of Hanau, the landgraviate of Hesse, and the town of Gottingen in the electorate of Hanover; but was not likely to keep possession either of Hesse or Gottingen till the 1st of May.

Wesel and Gueldres, could not Vol. IV.

be comprized in the offer of mi possible to, because they, with the dependent countries, belonged to the

empress queen.

All Europe was aftonished at the facrifices which France was disposed to make to England; France was reproached by her friends, and no one doubted but that England would prefer the quiet possession of her conquests, and the repose of her allies in Germany, to the continuation of the war.

In an answer from Mr. Pitt, to the duke de Choiseul's letter, and in a memorial dated April 8, 1761, on the part of England in answer to that of France, the terms proposed by the letter and memorial are agreed to, except that nothing is expressly faid with respect to the epochas, only that no epocha can be fixed for the day of figning the treaty, and that in Mr. Pitt's letter. there is an unnecessary declaration, that England will not defert Prussia, It is also proposed in the memorial, that a French minister be sent to London.

In an answer from the duke de Choiseul to Mr. Pitt, dated April 19, he says, France has appointed the count de Choiseul, her ambassador at Augsburg, and that he is to repair thither in July; that France will also suffill her engagements with her allies, and that it being thought expedient to prevent delay and misunderstanding, by fully explaining the intentions of the powers previous to the congress, France has explained her intentions by a memorial, accompanying this letter.

In the memorial, dated also April 19, France declares, that though in a former memorial, she mentions the wars as distinct, yet she did not

[S] mean

mean that the peace of Germany could take place, without adjusting the difference between France and England, and expresses her confidence, that her allies will make neither peace nor treaty without her confent; observing, that she meant only to separate the discussion of the two wars. She observes, also, that the basis of her proposition for the flatu quo is necessarily connected with the epochas proposed, because if the epochas are distant, such events may happen as may make it impoffible to acquiesce in the uti possidetis. France, therefore, recalls the whole proposition, if England rejects the epochas annexed to it. France also hopes England will fend a minister to her court.

Mr. Pitt, in his answer to the duke, dated the 28th of April, acquaints him that England had nominated the earl of Egremont, lord viscount Stormont, and Sir Joseph Yorke, her ambassadors at the congress; and that they were to repair to Augsburg in July.

In the memorial accompanying

this letter, and of the same date, France is acquainted that Mr. Stanley will be fent to her when M. Buffy comes to England; and it is observed, that the basis of the proposition, uti possidetis, made by France, is not necessarily connected with the epochas, or periods proposed, because France, in the same memorial in which the proposition. is made, offers to negotiate about those very periods in these words: " Nevertheless, as England may " think that the proposed periods are " too near, or too distant, France " will enter into a negotiation on " that point when the intentions of " England shall be known. *" The

other matters relative to a peace.

After some necessary forms had been settled, M. Bussy set out for England, and Mr. Stanley for France, and both arrived in due

memorial, therefore, contains an of-

fer to treat about these epochas, and

time

The allies of France, though uneafy at this measure, did not obthruch it.

* Of this memorial the author of the historical account says, that it contains arguments with respect to the epochas, which are far from being just, because, says he, though France did offer to negotiate, with respect to the epochas, yet it is certain, that the proposition of uti possible was connected with these epochas, whether the courts agreed they should be distant or near, and that if they could not agree concerning the epochas, the proposition of uti possible is dropped with the negotiation: but it is easy to see that this is a disingenuous quibble; it is true, that if the epochas could not be agreed upon, the proposition uti possible is dropped, but it is not true that the agreement of England to the epochas, now proposed by France, was made the basis of that proposition, for if that had been the case, the alteration or confirmation of these epochas would not have been referred to a negotiation; the argument, stripped of French chichane, and exhibited in plain English, is this:

1. The basis of the proposition uti possidetis, is certain epochas to be agreed upon

by the two powers in a future negotiation.

Scptember, July, and May, are epochas mentioned by France, and submitted to a future negotiation.

Therefore the epochas September, July, and May, are the bass of the propositions uti possible to the propositions and possible to the proposition of the proposition

M. Buffy's instructions were in substance as follows:

Ist. To demand whether the periods annexed to the proposition of fatu quo, are accepted, if not, what

others were proposed.

2d. To declare that the war of France with England was distinct from that of Austria with Prussia; confequently that, exceptWefel and Gueldres which belonged to the empress, France was at liberty to evacuate Gottingen, Hesse, and the county of Hanau, but that this evacuation was to depend on two conditions, 1st. That England should give fecurity that the army of prince Ferdinand should be disbanded, and not ferve against the allies. 2d. That England should agree to some restitution which should be judged reasonable as an equivalent for such evacuation.

Mr. Stanley, at his first conference after his arrival in France, declared, in the name of his court, that England would support her allies with efficacy and good faith. The French minister answered him in a manner equally concife, that France would also fulfill her engagements with her allies; but that as the peace between the empress queen and Prussia was to be negotiated at Augsburg, the differences between those powers was not the subject on which the French and English ministers had been reciprocally dispatched. about 13.

The subsequent conferences passed in discussing the proposed epochas, but the English minister both at London and Paris, eluded giving a

positive answer.

And England refolved on the enterprize against Belleisle, after the memorial of France, dated March, in which the epochas were mentioned; and the expedition of fuccess from that expedition retarded a categorical answer relating to

them.

Belleisle, at length, was taken, and then Mr. Pitt gave M. Buffy a memorial, in which he fixes the epochas two months later than those proposed by France, viz. the first of July, September, and November following, and agrees that all subsequent conquests shall be immediately restored; but observes that as all epochas, which have no reference to the figning of fomething obligatory, are vain and illusive, England agrees to these only upon condition: 1st. That whatever shall be adjusted between the two crowns of England and France, relative to their particular war, shall be made obligatory and conclusive, independent of the negotiations at Augsburg, for terminating the disputes of Germany.

2dly. That a definitive treaty be figned before the first of next August: what relates to prizes at sea, to Belleisle, and to compensations, is referred to future negotiations.

The first of these conditions is contrary to the memorial of France, dated the 26th of March, which begins with this expression, "The most christian king is desirous, "that the particular peace of France with England, should be

" united with the general peace of Europe."

The fecond was very difficult, as the war extended over the four quarters of the globe, and as it was not known to France till the end of June.

To this memorial of England, France returned no specific answer, but verbally acquiesced as far as possible to the second condition, and,

[\$ 2] with

[260]

with regard to the first, France required the consent of Austria to conclude a separate peace with England.

Austria, to oblige France, confented, upon condition that, in the feparate accommodation, nothing should be sipulated contrary to her interests.

France then ordered a memorial to be prepared, including specific propositions for compensations, tho' England should first have explained herself on that head, as France made the first proposition of uti posfidetis. The epochas were not yet settled.

The propositions, or schemes of a treaty exhibited by France, were in substance as follows, dated July

15.

I. France cedes and guaranties all Canada to England for ever, upon four conditions: 1st. That the religion of Rome may be publickly professed and exercised there. 2dly. That the French may retire to French colonies with their effects, and have means of transportation procured by the English as cheap as possible and addy. That the limits of Canada and Louisiana be finally fettled; and, 4thly. That the French shall have the liberty to fish and dry cod on the banks of Newfoundland, and as a necessary shelter to their vessels, shall have Cape Breton as an entire sovereignty, a value to be fixed on this restitution, and France not to erect any fortification.

II. France shall restore Minorca 'as when taken.

III. England shall restore Gua-

daloupe and Marigalante.

IV. Two of the neuter islands. Dominica and St. Vincent, to remain as by treaty of 1660.

Lucia and Tobago referred to a negotiation, whether to remain neuter, or to be possessed by England, faving always the right of a third power.

V. The treaty concluded between Godeheu and Saunders shall be a basis for the establishment of peace

in Afia.

VI. England shall either restore Goree or Senegal, which she pleases, one being necessary to France for Negroes, and it being no advantage to England to have both.

VII. Belleisle shall be restored.

VIII. In confideration thereof. France will evacuate Hesse, and Hanau, the evacuation to be preceded by a suspension of arms between England and France, in all parts of the world, to take place on the day when the preliminaries are ratified.

IX. But, after this suspension, neither shall England assist Prussia, nor France Austria, with any part of their forces; France, however, cannot evacuate the countries which have been conquered, and are still governed in the name of the empress queen, without her consent.

X. If any farther conquest shall be any where made before the execution of the treaty, it shall be re-

stored without recompence.

XI. The captures made at fea by England before the declaration of war, except king's ships, to be restored, or recompence made for them, they having been contrary to the law of nations.

XII. France will guarantee the Protestant succession, if defired.

XIII. Prisoners on both fides sent

home without ranfom.

This sketch of a treaty was accompanied with a private memorial, in which France proposes, that

England

England shall terminate her differences with Spain, and invite her to guaranty the new treaty, and expresses her fears that these differences will otherwise occasion a fresh war both in Europe and America, by which France will be affected.

France having obtained the confent of the empress queen, for a feparate peace, and to slipulate that the would, after fuch peace, yield her no further fuccours, M. Buffy, in a note to Mr. Pitt, acquainted him, that this confent ha been obtained under two conditions:

Ift. That the empress should keep possession of the countries belonging to the king of Prussia.

2dly. That England would afford him no succour.

France thought it just and advantageous, both to herfelf and England, thus wholly and absolutely to withdraw from the war in Germany, and to fecure the intended peace against a new war, which the complaints of Spain might kindle, and, in which France would be oliged to take part, by proposing to adjust the differences between England and Spain, and invite Spain as guarantee, especially as Spain had before offered to act as mediator between the two crowns.

On the 23d of July all these pieces were laid before Mr. Pitt, who, in a conference, at the fame time, discovered a personal oppofition to peace; refused to agree to any of the articles of the memorial of propositions; entered very little into the motives of his opposition; expatiated with fome warmth on the memorial relating to Spain; rejected the note which concerned the allies in Germany with disdain, and concluded with faying that he would take the directions of the king his master.

In consequence of this, having returned the memorials concerning Spain, and Germany, to M. Buffy, he wrote him the following letter, dated July 24.

SIR,

' Having explained myself in our conference yesterday, with respect to certain engagements of ' France with Spain, relative to the disputes of the latter crown with Great Britain, of which your court never informed us, but at the very instant of making, as she ' has done, her first propositions for the separate peace of the two ' crowns; and as you have defired, for the sake of greater punctuality, to take a note of what passed between us upon to weighty a fubject, I here repeat, Sir, by his majesty's order, the same declaration, word for word, which I made to you yesterday, and again anticipate you with respect to the most fincere fentiments of friendship, and real regard on the part of his majesty toward the Catholic king, in every particular confistent with reason and justice. It is my duty to declare farther to you in plain terms, in the name of his majesty, that he will not fuffer the disputes with Spain to be blended, in any manner whatever, in the negotiation of peace between the two crowns; to which I must add, that it will be confidered as an affront to his majesty's dignity, and as a thing incompatible with the fincerity of . the negotiation, to make farther mention of fuch a circumstance,

' Moreover, it is expected that ' France will not, at any time, prefume a right of intermeddling in ' fuch disputés between Great Bri-* tain and Spain.

" These $[S]_3$

These considerations, so just and indispensible, have deter-

mined his majesty to order me to freturn you the memorial, which

occasions this, as wholly inad-" missible.

I likewise return you, Sir, as totally inadmissible, the memorial relative to the king of Prussia, as

' implying an attempt upon the

honour of Great Britain, and the fidelity with which his majesty will always fulfill his engagements

with his allies.—I have the honour " to be, &c.". Signed, PITT.

The stile of this letter, and the manner of returning the memorials, do not bear the marks of a conciliating temper; and the following answer to the memorial of propositions, are analogous to the letter. The answer is dated the 29th of July, and is in substance as follows:

i. England will never recede from her claim of the total and unconditional eession of all Canada, and its appurtenances, nor ever relax with regard to the full cession of Cape Breton and all other islands in the gulph or river of St. Lawrence, with the right of fishing in-Teparable from the possession of those coasts, and the canals or

streights that lead to them.

. 2. It can never be allowed, that whatever does not belong to Canada, shall appertain to Louisiana, nor that the boundaries of Louisiana shall extend to Virginia, or the British possessions on the Ohio; it not being proper that the intermediate countries, which form the true barrier, (bould be directly or indirectly ceded to France, even admitting them to belong to Louifiana.

3. Both Senegal and Goree shall

be ceded to England.

4. Dunkirk shall be reduced to the conditions in which it ought to have been put after the treaty of Utrecht; without this, no peace can be concluded, and upon this condition only England will confider of the restitution of the privilege granted to France by that treaty under certain restrictions, to fish and dry fish on part of the banks of Newfoundland.

r, England will consent to an equal partition of the four neuter

- 6. The island of Minorca shall be reftored.
- 7. And all that France has conquered from the allies of England in Germany, as well the territories belonging to Prussia, as to the electorate of Hanover.

8. England will furrender Belleisle, Guadaloupe, and Mariga-

lante.

9. The treaty between Saunders and Godeheu cannot be admitted as the basis for the establishment of a peace in Asia, because the state of affairs there is now much changed by the final reduction of all the French fettlements. The final fettlement of affairs there must be left to the East India companies of the two nations, confishent with the general intentions of their fovereigns.

10. The demand of restitution of captures before the war, cannot be admitted, for it is not founded on any particular convention, nor yet resulting from the law of nations; for the right of hostilities does not result from a formal declaration of war, but from the hollilities which the aggressor first offered.

10. The solemn treaties of Rad-

fladt and the Barrier, and the express condition of the cession of the Low Countries, will not allow France to keep possession of Ostend and Nieuport, they must therefore be immediately evacuated; no restitution on the part of England can take place till this is done, nor can any convention be set on foot for settling affairs in the East Indies.

12. The ceffation of arms shall take place on the ratification of the preliminaries or definitive treaty.

13. England having from the first overtures declared, that in case of a separate peace with France, she would, as an auxiliary, continue to affist Prussia with efficacy and good faith, to accomplish a general pacification in Germany, Great Britain and France shall both be free to support their allies in the contest for Silesia.

14. The prisoners shall be released in the usual manner, saving the terms that may subsist by some cartel or convention.

Such is the sketch of a treaty on

the part of England.

The first article deprives France of the liberty of fishing for cod, and this is restored but in part, and under certain restrictions, not explained by the 4th, which requires the demolition of Dunkirk.

The fecond looks as if England intended not only to keep possession of all Canada, but to make herself mistress of the neutral countries between Canada and Louisiana, to be nearer at hand to invade Louisiana when she should think proper.

The third totally deprives France of all fettlement in Africa for the

negroe trade, o

The ninth annihilates the French East India company.

The 7th and 13th feem to be

inconfishent; by the 7th, England proposes that France shall evacuate Germany; by the 13th, it is agreed, that the two crowns shall support their allies there.

These answers, and all others that have been made by England, during the negotiation, plainly shew that she is averse to all reconciliation, and the articles which declare the advantages she would secure, are clear, decisive, and even dictatorial; those which concern France are obscure, and subject to various constructions.

Yet France, unwilling to break the negotiation, ordered a reply to be made in the form of an ultimatum, to the following effect:

1. France consents to cede Canada in the most extensive manner. but infilts on the conditions, as to the religion and removal of her fubjects; , the will maintain her immemorial right of fishing in the gulph of St. Lawrence, and drying fish on the banks of Newfoundland, as agreed by the treaty of Utrecht; but this would be vain without shelter for the vessels: France therefore proposes the restitution of Cape Breton, or the ifle of St. John, or fuch other port without forification in the gulph, or within reach of it. as may answer that purpose.

2. France has not affirmed that all that does not belong to Canada belongs to Louisiana, but demands that all the intermediate nations be considered as neutral, independent on the sovereignty of both crowns, and a barrier between them; if the English minister had attended to M. Bussy's instructions, he would have seen that in this particular, France agreed with England.

3. As to Goree and Senegal; if Senegal cannot be fafely enjoyed without Goree, England will make on great facrifice in refloring Senegal, if at the fame time she keeps Goree, but as Mr. Stanley acquainted the duke de Choiseul, that some expedient might be found with respect to this article, France leaves it to a negotiation.

4 By the treaty of Utrecht, the cession of Newfoundland by France to England, and not the demolition of Dunkirk, is the compensation for liberty to dry fish on the banks of Newfoundland, yet France is willing to negotiate on the state of Dunkirk, soon as a convenient port shall be agreed upon, within, or within reach of the gulph of St. Lawrence, to be ceded to France as a shelter for her sishing vessels.

5. France confents to the partition of the Antilles, faving always

the right of a third power.

6. England offers Belleisle for Minorca, consequently supposes them equivalent; but France does not think them equivalent; therefore, England may retain Belleisle,

and France, Minorca.

7. France will evacuate all her conquests in Germany, since the breach of the treaty of Closter-Seven, which are connected with the British war, and may be separated from the war between Austria and Prussia, in consideration, that England shall restore Guadaloupe and Marigalante, but cannot surrender any place held in the right of the empress queen, without her consent, and this, therefore, ought to be referred to the congress at Augsburg.

8. Brance will accept Guadaloupe and Marigalante on the above con-

ditions

9 France agrees to England's proposition, concerning the East

Indies, tho' France has fulfilled the conditions of the treaty of Godeheu and Saunders, and England has not.

or amends, for the captures before

war was declared.

The empress queen enjoys full sovereignty in Ostend and Nieuport; France only lent her forces to secure them for her ally. England has no right to impose laws on Austria and France, contrary to their wills, who do not violate the treaties of Austria with Holland; France, however, never intended to keep these places after a peace.

12. France agrees to the cessation

of arms, as proposed.

13. As England has declared, that after she has made a separate peace with France, she will still vigorously and faithfully assist her ally for France also, declares, that she will also, in the like case, vigorously and faithfully assist her allies. But if England will agree not to support the king of Prussia, France will agree not to support his enomies. The proposition of leaving France at liberty to send forces into Silesia, is unfavourable to the empress queen, therefore, inadmissible.

14. France agrees to the articles

for restoring prisoners.

This memorial was accompanied with an answer by M. Bussy, to Mr. Pitt's letter, in which he says, that what related to Spain in the private memorial, was well meant, that it contained neither menace, nor offer of mediation. That the king his master, refers himself to Spain, for the manner in which it was received and remitted, but charges him to declare, that so long as Spain shall approve of it, he will

page real inters.

interfere with the interests of that crown, notwithstanding any repulse from the power that opposes his good offices. That as to the note, relating to the conditions, on which Austria confented to a separate peace between England and France, Buffy is ordered, by his king, to declare, that he will rather facrifice all the power that God has given him, than conclude any thing with his enemies, that may hurt his friends, and impeach the integrity in which he glories. He expresses, also, the astonishment of his court, at the stile of Mr. Pitt's letter, and. the tenor of the propositions; that, however, for the fake of peace, France is willing to forget the imperative stile, so unfit for negotiation, and to do every thing reasonable and just, to bring the negotiation to a happy iffue.

As the memorial concerning Spain was refented by the British ministry, Spain ordered her ambafsador here, to explain it to the sol-

lowing effect :

That it was intended with great integrity, merely to make the peace firm and lasting, that if the king of Spain had any other view, he would have given full scope to his greatness, and have spoken for himself, as became his dignity, and that he is associated to hear that England sees the memorial in a light different from that in which it was intended, and hopes she will concur, in every friendly view, for establishing a general and lasting tranquility.

M. Buffy received orders, to agree upon the limits of Canada and Louisiana, according to the English map, though unfavourable to France, to consent to the cession required by England, with respect

to Africa, provided the exportation of negroes, might by some safe and easy expedient, be confirmed to France, and to facrifice Dunkirk to the right of fishing in the gulph of St. Lawrence. But he was directed to present a memorial, urging many reasons for the restitution of the captures made before the war, to reprefent in its full force, the benefit that would arise, both to France and England, from the total defertion of the war in Germany*, and if England should refuse the conditions, now offered as an ultimatum, to wait for farther instructions.

The ultimatum arrived in London August 8. M Busty soon after wrote to Mr. Pitt, and in his answer, dated August 15, says, that, as to the stile of the ultimatum and letter, the king his master adheres both to the form and substance of them, he laments that peace appears by the proposals and conduct of France to be far distant, and retorts some charges of elusion and delay.

M. Buffy, and Mr. Pitt however, had a conference on the two ultimatums jointly, and on the 30th of August an answer to the French ultimatum was delivered, in which the French propositions are agreed to, except in the following parti-

culars:

1. The limits of Louisiana, as drawn in a note from M. Buffy to Mr. Pitt, dated 18th of August, cannot be admitted, because they, in one part, include vast countries, which Vaudreuil yielded to England, under the description of Canada; and, in another, extensive countries, and numerous nations, who have been always reputed to be under the protection of England.

2. The French that remove from

^{*} This does not look as if the war in Germany was a lofing game to England, and advantageous to France.

Canada, shall remove within a

year

3. England will grant to France the isle of St. Pierre, with its port, as a shelter for her sishing boats, provided the French do not sish on any part of the coast belonging to England, that they erect no fortification, nor keep troops there, that the vessels of no other nation shall be suffered to partake of the conveniency, that an English commissary shall reside there.

4. England infifts on the restitution and evacuation of all the conquests made by France over her allies, particularly of Wesel, and the territories of the king of Prussia.

5. England is inflexible in her refolution to fuccour Prufia as an auxiliary, and agrees, that France shall succour her allies in their particular contest for Silesia.

6. England refuses restitution of

captures before the war.

7. England infifts on the evacua-

tion of Oftend and Nieuport.

Mr. Stanley, in conferences with the duke de Choiseul, on the subject of these differences, appeared to be confined to the letter of the answers, therefore, no difficulty could be obviated, or obscurity cleared up. France, for this reason, sent a new memorial to England, as a final answer, the 9th of September.

The difference between the propositions contained in this memorial, and the requisitions of England in her answer to the French

ultimatum, are these:

That the French, who remove from Canada, may have eighteen

months instead of twelve. "

That with respect to the limits of Louisiana, the savage nations which lie between the lakes and the Missispi, and within the line traced

out, shall be neuter, under the protection of France; those without the line, shall be neuter, under the protection of England; the English traders shall not go beyond the line, but the Indians shall use their accustomed liberty.

France requires the guaranty of Anamabo and Akra, as a condition upon which she will guaranty Se-

negal and Goree.

France will demolish Dunkirk, except the trading port, which will not receive a frigate, and the cunette, which is necessary to the health of the inhabitants.

France will maintain a guard of 50 men on St. Pierre, to inforce the

police.

France cannot evacuate countries, which appertain to her ally, the

empress queen:

France abides by the 9th article of her memorial of propositions, and the 7th and 13th of her ultimatum, in reply to all articles of England's answer, which are distinguished above by figure 4 and 5, but will nevertheless treat of any fresh propositions which England may make, if not contrary to engagements.

France infifts on restitution of

captures before the war.

France, upon figning the preliminary, will give a declaration under her hand, that she never intended to bring Ostend and Nieuport under her dominion.

Upon the whole France offered:

1st, To guaranty Canada to England, in the utmost extent she required.

2dly, To demolish Dunkirk, provided the right of sishing and drying sish on the banks of Newfoundland, should be confirmed to her.

3dly, To restore Minorca for Guadaloupe and Marigalante.

4thly, To evacuate Heffe, Hanau, and Gottingen, provided one fettlement in Africa should be guarantied to her.

5thly, To leave the fettlement of affairs in the East Indies to be treated by the companies. And,

6thly, To leave England in pof-

session of Belleisle.

However, upon receipt of the last memorial of France, England without any reply, recalled Mr. Stan-

ley.

Thus the negotiation was broken off, which France imputes to England's positive aversion to peace, whom she charges with being less influenced by her real interests, and the preservation of mankind, than inflated with her successes, and greedy of the farther advantages she has in view. The historical memorial concludes with the following pa-

ragraph:

" " It is with regret that the king finds himself obliged to continue an opposition by force to the progress of the ambitious defigns of his enemies, and under an impossibility of procuring his people that repose which his majesty wished, for their welfare. The king trufts, that providence will disappoint those vast projects, which England scarce endeavours to disguise, and which threaten the fecurity of every potentate. His majesty, invariable in his pacific dispositions, will be always ready to . Concur in every expedient which may be judged proper to re-establish the public tranquility, and will make no difficulty of facrificing, even his own interests, to the glory and confolation of restoring peace; to his kingdom and to Europe."

Signed, Le Duc de Choiseul.

The French endeavouring through the whole of this negotiation, to prevail with us to agree, that both should withdraw their troops from Germany, and promise that neither fide should give affishance to their allies, in men, money, or any thing elfe, was extremely artful, as the king of France could privately affift Auftria with money, but the king of England could not affift Prussia with money without applying to his parliament; and if England had withdrawn all affiftance, and the king of Prussia had thereby been overpowered, those that had affisted him, at our defire, might, perhaps, have been included in the ban of the empire.

Paris, Nov. 24. To quiet the minds of the people, and at the fame time to justify M, Vaudreuil, it was thought proper to publish the following letter, which that gentleman wrote to the duke de Choiseul,

dated Cet. 30, 1761.

" My lord,

I was aftonished to fee, by the bistorical account of the memorial of the negotiations, between France and England, what I am charged with by the English, with regard to the limits of Canada. As it is entirely false and groundless, I shall give your grace a true account of what passed between Mr. Amherst and

me on that head.

When I capitulated, I traced out no limits whatever, and in all the meffages that passed between the English general and me, I made use of the word Canada only, Eight or ten days after the furrender of the country, he fent an officer to me for maps to inform him of the extent of the colony. If returned for answer, that I had none, my maps having been taken away with my

baggage at Quebec, in breach of the capitulation of that place; and the officer then shewing me a map, which he had in his hand, I told him the limits marked in it were not just, and verbally mentioned others, extending Louisiana on one side, to the carrying-place of the Miamis, which is the height of the lands, whose rivers run into the Ouabache; and on the other to the head of the river of the Illinois.

What I have the honour to tell you, my lord, is strictly true: I am not afraid that the English can produce any proof of the contrary; for nothing passed in writing on this head, nor was any line drawn on any map. I take the first opportunity to acquaint you with this, to prevent any surther im-

position.

Memorial presented to the States General, in regard to the Felicite frigate, by the count d'Affry, ambassador of Erance. (See p. 68.)

High and mighty lords,

OUR high mightinesses have been informed of what passed on the 24th ult, with regard to the French frigate Felicite, which being pursued and attacked by three English ships of war, was forced to shelter herself by running on shore off 's Gravesande.

It was before the eyes of a multitude of inhabitants of this country, whom curiofity carried to s'Grave-fande, that the captain of the English frigate, the Richmond, behaved on this occasion, in an unheard of manner. The captain of the French frigate being called to, to strike, made answer, that he would surrender on no terms, as he counted upon the safe-guard of the neutrality observed by your high

mightinesses in the present war. Regardless of this declaration, and in contempt of the most sacred laws, the captain of the Richmond took possession of the frigate, after cannonading her in fuch a manner that feveral of the balls came up a great way in the Downs. hoisted English colours on board the Felicite, took away every thing that could be removed, destroyed the masts and rigging which his cannon had spared; and finding he could no longer continue his outrages, with impunity, determined to fet fire to the frigate, which was done accordingly.

Upon notice of this to the king my master of these things, his majesty commanded me to ask your high mightinesses, to procure him restitution of the Felicite frigate with her cargo, and indemnissication for the loss which his majesty and the owners have sustained by this unjust violence of the English.

His majesty is not only perfuaded, that your high mightinesses, fensible of what you owe to yourselves, and to the honour of the republic, will require, from the court of London, reparation not less authentic than just, for the infult offered to your fovereignty, and to your neutrality, and for the violation of your territory on this occasion: but his majesty farther expects, from the equity and friendship of your high mightinesses, that you will take efficacious meafures in England to procure him due satisfaction.

I must not omit informing your high mightinesses, that the king my master is extremely sensible, not only of the orders given to prevent, if it were yet time, the insult offered them, and the pillaging and setting fire to the French frigate;

but

but also of the behaviour of the fubjects of the republic on that occasion, and the affistance his peo-

ple received from them.

The king, my master, hath the more ground to expect that the republic will take the most serious steps in this affair, as they have great reason to be pleased with that angular protection which the trade and navigation of their subjects enjoy in France. Your high mightinesses have a fresh proof of the king my master's favour towards you, in his ordering the ship Eendragt, with her cargo, to be restored, with damages and costs.

Hague, Feb. 16, 1761. Comte D'AFFRY.

The declaration of the French king to the court of Sweden, delivered by his ambassador at Stockholm, on the fourth of February, which Jeems to have laid the foundation of the negotiations that have fince been carried on for affembling a congress; and is in other respects a paper of Some importance.

HE most christian king, moved by the calamities of war, which are every where fufficiently known, thinks it his indifpenfible duty to inform his allies, and particularly the king and crown of Sweden, that his humanity, as well as his regard to that nation in particular over whom he reigns, makes him defirous that all his allies would concur with him in restoring peace to Europe.

As to the adjusting of the differences which concern France and Great Britain only, his majesty will abundantly shew his moderation on that head, when Great Britain discovers any disposition to listen to reasonable terms.

For which reason his majesty is principally defirous to lay before his very faithful allies, his fentiments of the German war; both as a guarantee of the peace of Westphalia jointly with the crown of Sweden, and relative to the treaties and engagements he hath entered into with the empress queen, the empress of Russia, and the king of Sweden.

In the course of this war, his most christian majesty and the crown of Sweden, have done their utmost to perform the obligations of their guaranty, both with regard to the support of the three religions established in the empire, and to the necessary measures for opposing. with a fufficient force, the invafions of the Prussians, and weakening the king of Prussia so much, as to leave no room to apprehend his future enterprizes. The Control of the Control

Nothing now remains to complete the full discharge of those obligations, but to procure indemnification to his majesty the king of Poland, and the empress queen. On this head, his majesty applies, with the utmost frankness, to the king and crown of Sweden, and to his other allies, in order to fettle those indemnifications on a solid footing, and to confult together on the nature of them, and the posfibility of their being obtained. And on this occasion his majesty thinks it indispensibly necessary to confider how far the indemnifications demanded may be confiftent with the interest of the guarantees of the treaty of Westphalia, as that; treaty doth not oblige them to facrifice the effential interests of their own dominions, to procure fuch ample indemnification as the injured powers may think themselves en-

However facred the engagements his majesty hath entered into, may be, still they are subject to the natural laws of possibility. As soon as the fecurity fought, appears to be an object not near, the allied powers ought to communicate to one another their inmost thoughts, in order to their taking, in concert, without breach of their engagements, a resolution to put an end, by a treaty of peace, to the calamities of war; and to prefer the welfare of their fubiects to the glory and advantages they may derive from continuing the war, especially as experience hath too often fhewn, that the most just and the best concerted schemes have, in an instant, been defeated by the caprice of fortune: a time a name

In the present situation of the alliance the king is of opinion, that common humanity and a regard to the general welfare, require his allies to concert with him a plan of pacification, to which all the members of the alliance may give their consent; and to labour to strengthen, if possible, the bands of alliance between France, the king and crown of Sweden, the empress queen, and the empress of Russia.

His majefty doth not think it possible for the events of the enfuing campaign to change the fituation of the alliance. An accumulation of distress to unhappy subjects, an additional depopulation of countries, the impoverishment of the sinances of several powers, and the greatest doubt, whether, after all these disasters and calamities, a peace can be made in Germany, more advantageous to the powers in the alliance, than at present: all

these things induce the king to declare, that he is constrained to lessen his subsidies, and that the prosecution of the war hath considerably diminished the sources of his sinances; so that his majesty cannot promise, in case the war should continue, an exact compliance with the letter of his engagements.

The fum of the whole is, That in return for the confidence which his majesty expresses towards the crown of Sweden, that crown would immediately declare its fentiments on this head; and that the king of Sweden, animated by a zeal equal to his majesty's, for the welfare of Europe, would confent to facrifice his personal interests, as his most christian majesty is determined to do; being otherwise firmly refolved, in case the enemies of the alliance should refuse to enter into his pacific views, to employ, jointly with his faithful allies, his whole force to compel them to it: and he earnestly entreats his allies, to redouble their efforts, to put themfelves in a fituation fuitable to their natural strength, and the great object in view."

Two days after the delivery of this memorial, the king of Sweden gave for answer, That it was his intention to join with the most christian king and his other allies, in proper measures for bringing to a happy conclusion the falutary work of peace.

The following are the most remarkable passages in a second memorial presented by the French ambassador at Stockholm, on the seventh of March.

^{1 1} S most christian majesty remains most stimly resolved to listen to no proposals for putting

an end to the war in Germany, without the knowledge and participation of his allies. The high allies ought to lay it down as their first and invariable principle, to go hand in hand in their political operations, that the union between them, and particularly between France and Sweden, may subsist in time of peace, as it has done during the course of a bloody war, from which we have derived very little advantage.

In the present situation of things one essential point, as well to Sweden as to France, and the other allied courts, is to continue to have the same way of thinking; it is particularly so to the two former powers, in quality of guarantees of the treaty of Westphalia, as being the first motive that induced them to employ

their forces in Germany.

As the empress queen, and the empress of all the Russias, have already explained themselves on the fatal consequences that may result from a farther profecution of the war, and the little probability that the events of the ensuing campaign will be more decifive than those of the former campaigns; and as the two empresses have even proceeded fo far as to declare, that they were ready to join in measures for restoring the tranquility of Europe, and would give up, for the welfare of their subjects, ra part of the indemnification they had a right to claim: all this gives room to hope that the well-known humanity and magnanimity of those two princesses will induce them to put a speedy end to the fufferings of their subjects.

In confequence of which the most christian king promises himfelf, that the king of Sweden's magnanimity will engage him, after the example of the two empresses, to give up something for the peace of Europe, and the happiness of the human race. His most christian majesty therefore only desires, that the king and crown of Sweden will, in conjunction with him, declare that they will set up no claim in Germany, but what relates to the satisfaction of their allies, as a consequence of their guaranty of the peace of Westphalia.

In this case his most christian majesty, in order to give the king and crown of Sweden a substantial proof of his friendship, and sincere desire to procure for them, as far as possible, some indemnistration for the losses they have suffered, will, immediately on the conclusion of a peace, enterinto a new substitute them, which shall be of such a

peace, enterinto a new lubildy treaty with them, which shall be of such a nature, as may, from year to year, while it lasts, make them amends for their losses by the present war.

The French ambassador asks, in the fequel of this memorial, whether it is not the opinion of the king of Sweden, as it is his most christian majesty's, that a suspension of arms should be immediately agreed to; and whether, to obviate many obstacles and inconveniencies, which are unavoidable in a congress, they might not hold two congresses; that is to fay, the allied courts might give their ministers, residing in France, the necessary full powers to treat of peace; and the adverse potentates might also send full powers to their ministers at London; fo that a negotiation for a general peace might be carried on with the king of England, and the ministers of his allies, directly by his most christian majesty, and the ministers of his allies. The ambaffador

enlarges

enlarges upon the advantages of this manner of treating, which would be the easiest; and concludes with asking the king and crown of Sweden, in confideration of the feafon's being fo far advanced, when every moment is precious, to give a speedy answer to every article of his memorial.

The following declaration, in the name, and on the part of her majefty the empress queen of Hungary and Bohemia, was made and figned at Paris, the 26th of March 1761, by ber minister at that court, the count of Starbemberg, and was delivered at London, the 31st of March, by prince Galitzin, envoy extraordinary from the empress of all the Russias.

Declaration of her majesty, the empress apostolick queen of Hungary

and Bohemia.

HE dispositions for peace, very agreeable to the fentiments of all the parties engaged in the war, which the king of England and Prussia shewed last year, having met with difficulties, which have prevented their fuccess, the courts of Vienna, Petersburgh, France, Stockholm, and Warfaw, are unanimously agreed to invite those of London and Berlin, to refume a negotiation, fo falutary for the happiness of the world, and which must interest the humanity of all the powers at war.

In this view, and in order to their being able to proceed to the re-establishing of peace, they propose the assembling of a congress, to which they think it may be proper to admit only the plenipotentiaries of the principal belligerent parties, with those of their allies. If the kings of England and Pruffla adopt this method, her majesty

the empress queen, the empress of Russia, the most christian king, the king of Sweden, and the king of Poland elector of Saxony, propole the city of Augsbourg, for the place of the congress, observing, that their majesties point out Augsbourg no otherwise, than as a town within diffance of all the parties concerned, which, from its fituation, appears to fuit with the convenience of all the states; and that they will not reject the choice of any other city in Germany, if their Britannick and Prussian majesties may deem it more convenient.

The empress queen, the empress of Russia, the most christian king, the king of Sweden, and the king of Poland elector of Saxony, declare moreover, that they have chosen the plenipotentiaries, who will be intrusted with the care of their interests at the congress, in hopes that the king of England, the king of Prussia, and their allies, will, on their part, speedily make choice of their respective ministers, that the negetiation may

not be deferred.

The simplicity of this declaration, which, for the general welfare, the courts of Vienna, Peterfburgh, France, Stockholm, and Warfaw, have determined to make to the courts of London and Berlin, gives them hopes, that their Britannick and Prussian majesties will be pleased, by a speedy anfwer, to make their fentiments known, upon an object so essential to the repose and happiness of Europe.

Done at Paris, the 26th of March, 1761, by order, and in the name, of her imperial, royal and apostolick majesty.

COUNT STARHEMBERG.

N. B.

N. B. A like declaration with this, in the name, and on the part of their majesties the empress of all the Russias, the most christian king, the king of Sweden; and the king of Poland elector of Saxony, has been made and figued on the fame day as this; to wit, that of the empress of Russia, by prince D. P. Galitzin; that of the most christian king, by the duke de Choifeul; that of the king of Sweden, by baron de Scheffer; and that of the king of Poland elector of Saxony, by M. de Fontenay; and they were all delivered at London at' the same time, that is to say, on the 31st of March, by prince Galitzin.

The following counter-declaration was figured at London, the 3d of of April, 1761, and was delivered on the same day to prince Galitzin, envoy extraordinary from the empress of all the Russias, to be transmitted by him to Paris.

Counter-Declaration.

HE dispositions of their Britannick and Prussian majesties, for the re-establishment of of the general tranquility of Europe, having been steady and sincere, could not have undergone any alteration, through the space of time, which has elapsed since their declaration of the 25th of November, 1759.

Their majesties, therefore, with satisfaction, accept the offer of the affembling of a congress at Augsburg, contained in the five declarations made at Paris, the 26th of March last, and delivered at London the 31st of the same month, in the name, and on the part of their majesties, the em-

press queen, the empress of all the Russias, the most christian king, the king of Sweden, and the king of Poland elector of Saxony.

The courts of London and Berlin equally acquiesce in the clause of this declaration, which relates to the rule, that is proposed to be laid down, in regard to the admission of the plenipotentiaries, who shall have a right to be re-

ceived at this congress.

For the rest, as their zeal for the advancement of the salutary work of a general pacification, perfectly corresponds with that which appears to animate the courts of Vienna, Petesburgh, Verfailles, Stockholm, and Warsaw, their Britannick and Prussian majesties will not delay to name in cessantly their plenipotentiaries, being disposed to concur, with one and the same pace, in every thing that may accelerate the opening of the congress, which has been offered to them.

In the name, and by order, of the king, London April 3, 1761. Butte.

N. B. The same counter-declaration as this, for the empress of Russia, the most christian king, the king of Sweden, and the king of Poland elector of Saxony, was made, and signed the same day as this: and they were all delivered at the same time, to prince Galitzin, to be transmitted by him to Paris.

Translation of the speech which M. de Boreel, the Dutch ambassador, made to the king, the 20th of June 1761, when he had a private audience to deliver his credentials.

T) SIRE,

SIRE.

HIER high mightinesses my lords and mafters have fo many motives to interest themselves in the fate of these kingdoms, that your majesty's accession to the crown gave them the highest pleafure: of which I am commanded to inform your majesty, and at the fame time to affure you of their respectful and inviolable attachment to your royal person, and of the finderity of their withes for the duration and prosperity of a reign which you have so happily beguns The gracious affurance, which your majetty hath already given of your friendship to the republic excited the warmest gratitude. Nothing could have given greater, confolation under the loss of the king your majesty's grandfather. The republica will always regret in him not only a faithful ally, but a true friend, whole affection never varied, and who added to the qualities of a great prince that integrity which would have done honour to a private man What a high fatisfaction it is for their high mightinesses to find in your majesty's person all those qualities, which whilst they so gloriously distinguished your illustrious ancestors made their people happy, and strongly attached the republic to them What great reafour have, their high mightinesses to promise themselves the most intimate union between two nations; who are bound by for many common interests to concur mutually in each other's advantage, and to despise the suggestions of a mistakenjealoufy har As their high mightinesses are fully sensible of the value of this union, they most ardently defire to maintain and flrengthen it. Being charged by them to give

your majesty assurances of this, and filled with the same sentiments myself, I shall do my utmost to answer the choice they have condescended to make of me, and to merit the continuance of that savour with which your majesty honoured me before you ascended the throne. If statter myself that the gratitude with which it inspired me will appear, from the whole of my conduct, to be equal to my prosound respect for your majesty's person, and your eminent qualities.

The Hon. Lieut. Gen. Yorke, having been appointed by his majefty and bassador extraordinary and plenipotentiary to their high mightis nesses the States General, and being admitted to the assembly of their high mightinesses, his excellency made on that occusion the following speech.

High and mighty lords.

EING commissioned to deliver to your high mightinesses the letter of the king my master, by which his majesty hath been pleased to honour me with the character of his ambassador extraordinary and plenipotentiary to you; he at the same time expressly commands me to renew to your high mightinesses, in his name, the assurances of his particular esteem, and invariable friendship for you.

The king, fince his accession to the crown, having received marks of your high mightinesses attention to his person, commands me to return you his thanks, and to renew to you, this day, by an extraordinary embassy, the most solemn affurances of the sincerity of those

fenti

fentiments with which I have already had the honour to acquaint you.

His majefty doth not content himself with giving your high mightinesses bare affurances of his friendship; in the midst of the successes with which it hath pleased providence to bless his arms, he forgetteth not the general welfare of Europe, and much less the interests of his good friends and allies.

He commands me to assure your high mightinesses, that he will always give the greatest attention to every thing that relates to the effential interess, the security and

welfare of the republic.

I am very happy, high and mighty lords, to be made choice of by his majesty in a manner so honourable for me, to be the interpreter of his sentiments, which ever since the beginning of his reign, have discovered him to be a monarch who inherits the virtues of his ancestors, giving, like them, his principal attention to the support of true religion, and public liberty.

The king still cherishes in the bosom of your republic, the illustrious offspring of the house of Orange, intrusted to his tutelage, and to yours: an object which forms an additional tie between him and

the republic.

I prefume to flatter myfelf, high and mighty lords, that after a nine years refidence here, the fincerity of my defire for a difinterested and indissoluble union between the two states is sufficiently known to your high mightinesses.

The events which have followed one another; in such quick succession for some years, sufficiently prove, how desirable this union is: I shall execute, with the most ardent

zeal, the commands of my august master, to contribute towards it; happy if my labours can procure me the good will of your high mightinesses.

Answer returned to the foregoing fpeech of Sir Joseph Yorke, by Baron Wassenaar de Catwick, prefident of the week, in the name of the States General.

SIR,

HEIR high mightinesses are extremely affected by the assurances of friendship and good will, which your excellency has just renewed to them in the name of his Britannic majety, in the character of his ambassador extraordinary and plenipotentiary.

Their high mightinesses are particularly penetrated with gratitude, on account of his majesty's having declared that he will, on all occasions, have at heart the interests, the safety, and the welfare of this

republica bagasai

These assurances cannot but engage their high mightinesses to a respectful and inviolable attachment to his royal person, and to offer up their most sincere prayers for the length and prosperity of his reign.

Their high mightinesses have a most lively sense of the necessity of maintaining the union which has so happily subsisted for such a number of years between Great Britain and their republic. Their utmost endeavours will be constantly exerted to strengthen the tyes of this union.

They are persuaded that the prince of Orange, who is so dear to all the inhabitants of these provinces, will most readily give his assistance towards this end, when he shall enter upon the functions of his posts.

In the mean time, it is a great fatisfaction to their high mightinesses [T 2] to to fee the friendship and attention to his majesty concur with those of his ference highness the duke of Brunswick, for their hereditarystadtholder.

Let me add, Sir, that their high mightinesses can affure your excellency, that the king your master could not have chosen any person for this extraordinary embassy, who could have been more agreeable to them, as they have had the satisfaction for so many years of seeing you reside with them on the part of his majesty with such distinguished approbation.

They will continue to give you proofs of their esteem and regard

upon all occalions. The trade to

Declaration of the most Christian king, deliwered to the diet of the empire by his minister the baron de Mackau.

HE king, my master, having been required, at the beginning of this war, by several princes of the empire, to take upon himself, in conjunction with the king of Sweden, the execution of the guaranty of the treaties of Westphalia, notified to the states affembled at Ratisbon, in the month of April 1757, what were his motives, and what conduct he proposed to hold when he took that charge upon him, of the weight of which he was very sensible.

The prefervation of the three religions established in Germany, the support of the Germanic laws and constitution, and the restoring peace on a solid and equitable sooting, were the objects to obtain which his majesty was willing to make the greatest efforts and very considerable sacrifices.

His majesty, in concert with his

Swedish majesty, hath since employed every method to attain to this salutary end: but he deplored the calamities under which Germany groaned; and if he was under a necessity of taking up arms for its defence, he thinks it no less proper to lay them down when he has performed all that could be required in justice from a zeal so disinterested.

It was with this falutary view that his majesty, jointly with the king of Sweden and the other powers his allies, proposed to the courts of London and Berlin to pave the way, by common confent, to a peace, by opening a congress, for which the city of Augsburg was thought most convenient: and as their Britannic and Prussian majesties agree to a proposal so conformable to humanity and his majesty's pacific views, he thinks himself obliged to notify it to the states of the German empire, agreeably to what was done when he found himfelf under a necessity of executing the guaranty.

He at the same time declares, that during the course of the negotiation he will not lose sight of the motives which determined him to take part in the war. The princes and states of the empire may depend on the formal assurances which his majesty hath already given, and which he now repeats; and he defires that the emperor and the empire would concur with him in restoring the public tranquility.

Ratisbon, June 22, 1761; bus Since this declaration was delivered, the Germanic body confider themselves as invited to the configres; which they ascribe to the court of Versailles. The same day a declaration of the very same import was delivered to the diet by the Swedish minister.

Decla-

Declaration of marshal Broglio to the inhabitants of Brunswic and Hanover on his late irruption into that country.

VHEREAS a great number of civil officers from the regency, and principal inhabitants of Brunswic and Hanover, have abandoned the usual place of their abode upon the entrance of his majesty's forces, not through fear of being ill treated or pillaged, fince it is known to all Germany the exact discipline which they observe, but through an evil defign, and in order to avoid the obedience they owe to our commands; and it being our duty to remedy fuch pernicious conduct as is wholly repugnant to the laws of war, we have thought proper to publish this declaration, that no person may plead ignorance thereof, but attribute to themselves the penalties they shall incur in default of a due obedience.

I. Be it ordered to the officers of the regency, and in general to all the inhabitants of Hanover and Brunswie, that they remain in their towns, villages, houses, and other places of abode, keeping their effects and cattle with them; or if any of them should be already departed, to return to their habitations within eight days of the pre-

fent publication.

II. Be it known to all officers aforefaid, who shall disobey this order, that their houses shall be pillaged and levelled to the ground; and if they are hereafter taken, they shall be punished in their perfons according to the exigency of the case.

III. As to the other inhabitants who shall leave their habitations, or that stray their horses and cattle, as is usual to do in the woods to prevent their being made use of in his

most Christian majesty's army, they shall be corporally punished as soon as taken; and the penalty of a certain sum shall be laid upon the district where they belong, in proportion to the number of beasts they shall so remove, which penalty shall daily increase till they are returned.

IV. And that the inhabitants shall have no pretence to refuse to provide such a number of carriages as shall be demanded of them by the proper officers of his most Christian majesty, be it ordered, that for the future, each district shall have in readiness fifteen carriages, to be drawn by four able horses, or oxen; which number shall be fixed upon every hundred houses throughout the country; and all persons disobeying shall be se-

verely punished.

V. It is well known that the inhabitants of this country are ordered by the regency to apprife the enemy of our approach, and for that purpose, conceal themselves in woods and passes, place themselves upon eminences, and make an alarm with bells when they fee us arrive; abuse and pillage sutlers and carriages that they find without defence, and in general hold a correfpondence with the enemy, ferving them as spies and guides to our prejudice. The duty of the em ploy with which his most Christian! majesty has been pleased to honour us, requires, that to prevent andpunish such enormous conduct, we use the utmost rigour and severity of the laws of war; it is therefore ordered to the regency of Hanover and Brunswic, to give notice to their respective districts and divifions, that every person on whom a letter is found directed to the ene. my, any ways relating to the ope-[T 3] rations

12787 ANNUAL REGISTER

rations of the army, or whoever Thall by any other means give fuch intelligence to the enemy, shall be immediately hanged; or whoever is found to affault or ill-treat any person in the French army, shall luffer the fame punishment and that every village where the bell is rung to apprife the enemy of our approach, or wherever the French troops shall be attacked. without one hour's previous notice given to their commander, shall be totally burnt; and the chief officer from the regency of such village or district shall be severely punished, besides a sufficient sum which shall be levied upon the estates of Hanover and Bruniwic, to indemnify the troops of his most Christian majesty for their damage therein.

VI. The officers of the regency shall cause these orders to be affixed and published in the most public places of the country, and be diligent in causing all persons under their directions to provide the necessary contributions, forage, and carriages, repair the roads, and in general to be obedient to the demands of his most Christian majesty's officers, in default of which to have their houses pillaged and

Tevelled to the ground.

For the due execution of these orders, the officers of the regency may be affilted with his most Christian majesty's troops, and by a perfect compliance therewith, they may depend on our protection.

Done at the head quarters, Sept. 8, 1761.

Signed, Le Marechal Duc de Broglio.

HEADS of the family convention of the boule of Bourbon.

Erfalles, December 24: The treaty of friendship and union, which the king concluded with the

king of Spain on the 15th of Aug 1761, under the denomination of a family convention, the ratifications of which were exchanged on the 8th of September following, is to be printed agreeable to the intention of their majesties: mean while it hath been thought proper to publish the following faithful abstract of it,

The preamble fets forth the motives for concluding the treaty, and the objects of it. The motives are, the ties of blood between the two kings, and the fentiments they entertain for each other. The object of it is to give stability and permanency to those duties, which naturally flow from affinity and friend-ship, and to establish a folemn and lasting monument of that reciprocal interest, which ought to be the basis of the desires of the two monarchs, and of the prosperity of their royal families.

The treaty itself contains twenty-

eight articles.

1 Both kings will, for the future, look upon every power as their enemy, that becomes the enemy of either.

2. Their majesties reciprocally guaranty all their dominions in whatever part of the world they be situated; but they expressly stipulate that this guaranty shall extend only to those dominions, respectively, of which the two crowns shall be in possession, the moment they are at peace with all the world.

3. The two kings extend their guaranty to the king of the Two Sicilies and the infant duke of Parma, on condition that these two princes guaranty the dominions of their most Christian and Catholic

majesties.

4. Though this mutual inviolable guaranty is to be supported with all the forces of the two kings, their

majefties

majelties have thought proper to fix the faccours which are to be first furnished.

5.6.7. These articles determine the quality and quantity, of these first succours, which the power required engages to furnish the power requiring. Phele fuccours confilt of thips and frigates of war, and of land forces both horse and foot. Their number is determined, and the posts and stations to which they are to repair.

8. The war in which France shall be involved in consequence of her engagements by the treaty of Wellphalia, or other alliances with the princes and states of Germany and the north, are excepted from the cases in which Spain is bound to furnish succours to France, unless fome maritime power take part in those wars, or France be attacked by land in her own country.

o. The potentate requiring may fend one or more commissaries, to fee whether the potentate required hath affembled the Ripulated fuccours within the limited time.

10. 11. The potentate required shall be at liberty to make only one representation on the use to be made of the fuccours furnished to the potentate requiring : this, however, is to be understood only of cases where an enterprize is to be carried into immediate execution; and not of ordinary cafes, where the power that is to furnish the succours is obliged only to hold them in readine's in that part of his dominions which the power requiring shall appoint: 12 3

12. 13. The demand of succours shall be held a sufficient proof, on one hand, of the necessity of receiving them; and on the other, of the obligation to give them.

The furnishing of them shall not, therefore, be evaded under any pretext; and without entering into any discussion, the Hipulated number of ships and land forces shall, three months after requisition, be confidered as belonging to the potentate requiring.

14. 15. The charges of the faid fhips and troops shall be defrayed by the power to which they are fent: and the power who fends them, shall hold ready other ships to replace those which may be lost by accidents of the feas or of war; and also the necessary recruits and preparations for the land forces.

16. The fuccours above ftipulated shall be considered as the least that either of the two monarchs shall be at liberty to furnish to the other c but as it is their intention that a war declared against either, shall be regarded as personal by the other; they agree, that when they happen to be both engaged in war against the same enemy or enemies, they will wage it jointly with their whole forces; and that in fuch cafes they will enter into a particular convention, fuited to circumstances, and settle as well the respective and reciprocal efforts to be made, as their political and military plans of operations, which shall be executed by common confent and with perfect agreement.

17. 18, The two powers reciprocally and formally engage, not to listen to, nor to make, any propofals of peace to their common enemies, but by mutual consent; and, in time of peace, as well as in time of war, to consider the interests of the allied crown as their own; to compensate their respective losses and advantages, and to act as if the

TI Abrenitto vienn

two monarchies formed only one

and the same power.

19. 20. The king of Spain contracts for the king of the Two Sicilies, the engagements of this treaty, and promises to cause it to be ratified by that prince; provided that the proportion of the fuccours to be furnished by his Sicilian majesty, shall be settled in proportion to his power. The three monarchs engage to support, on all occasions, the dignity and rights of their house, and those of all the princes descended from it.

21. 22. No other power but those of the august house of Bourbon shall be inserted or admitted to accede, to the present treaty. Their respective subjects and dominions shall participate in the connection and advantages fettled between the fovereigns, and shall not do or undertake any thing contrary to the good understanding subsisting between them,

23. The Droit d'Aubaine shall be abolished in favour of the sub-Ets of their Catholic and Sicilian majesties, who shall enjoy in France the same privileges as the natives. The French shall likewise be treated in Spain and the Two Sicilies, as the natural born subjects of these two monarchies.

24. The subjects of the three sovereigns shall enjoy, in their respective dominions in Europe, the fame privileges and exemptions as

the natives, and boom 25. Notice shall be given to the powers, with whom the three contracting monarchs have already concluded, or shall be reafter conclude, treaties of commerce, that the treatment of the French in Spain and the Two Sicilies, of the Spaniards in

. . . . e. which be ned pre-

France and the Two Sicilies, and of the Sicilians in France and Spain, shall not be cited nor serve as a precedent; it being the intention of their most Christian, Catholic, and Sicilian majesties, that no other nation shall carticipate in the advantages of their respective subjects.

26. The contracting parties shall reciprocally disclose to each other their alliances and negotiations, efpecially when they have reference to their common interests; and their ministers at all the courts of Europe shall we in the greatest harmony and musical confidence.

zy. This article contains only a flipulation concerning the ceremonial to be observed between the ministers of Trance and Spain, with regard to precedency at foreign

28. This contains a promise to

ratify the treat.

Such is in fabiliance, the treaty in quellion. No separate or secret article is added to it. The Ripulations of it cannot prejudice any out ciprocal guaranty is only those do minions of which the contracting powers shall be in possession at the epoch of a general peace. In short, all the conditions and clauses of this treaty, in which England is neither named, nor even defigned, have not the least connection with the origin, the object, or the events of the prefent war.

The king of Spain, to give a public testimony of the satisfaction he received from the conclusion of this family convention, has created the duke de Choifeul, who labour ed with fo much zeal to accomplish this great work, a grandee of Spain, and a knight of the golden flee e.

majelfy excused himself from a

From the London Gazette.

Translation of a note delivered to the
earl of Egremont, by the count
de Fuentes, December 25, 1761.

HE count de Fuentes, the Ca-

tholic king's ambassador to

his Britannic majesty, has just received a courier from his court, by whom he is informed, that my lord Bristol, his Britannic majesty's ambassador at the court of Madrid, has faid to his excellency Mr. Wall, minister of state, that he had orders to demand a positive and categorical answer to this question, viz. 'If Spain thinks of allying herself with France against England?' --- And to declare, at the fame time, that he should take a refusal to his demand, for an aggression and declaration of war, and that he should, in consequence, be obliged to retire from the court of Spain. The above minister of state answered him, that fuch a step could only be suggested by the spirit of haughtiness, and of discord, which, for the misfortune of mankind, still reigns but too much in the British government; that it was in that very moment that the war was declared; and the king's dignity violently attacked, and that he might retire how, or when he should think proper.

The count de Fuentes is, in confequence, ordered to leave the court and the dominions of England, and to declare to the British king, to the English nation, and to the whole universe, that the horrors into which the Spanish and English nations are going to plunge themselves, must be attributed only to the pride, and to the unmeasurable ambition of him who has held the reins of the government, and who, appears still to hold them, although by another hand: that, if his Catholic majesty excused himself from answer-

ing on the treaty in question between his Catholic majeffy and his most Chris tian majesty, which is believed to have been figned the 15th of August, and wherein, it is pretended, there are conditions relative to England, he had very good reasons; first, the king's dignity required him to manifest his just resentment of the little management, or, to speak more properly, of the infulting manner. with which all the affairs of Spain have been treated during Mr. Pitt's administration, who, finding himfelf convinced of the justice which supported the king in his pretenfions, his ordinary and last answer was, that he would not relax in any thing till the Tower of London was taken sword in hand.

Besides, his majesty was much shocked to hear the haughty and imperious tone with which the contents of the treaty were demanded of him: if the respect due to royal majesty had been regarded, explanations might have been had without any difficulty: the ministers of Spain might have faid frankly to those of England, what the count de Fuentes, by the king's express order, declares publickly, viz. That the faid treaty is only a convention between the family of Bourbon, wherein there is nothing that has the least relation to the present war: that there is in it an article for the mutual guaranty of the dominions of the two fovereigns; but it is fpecified therein, that that guaranty is not to be understood but of the dominions which fhall remain to France after the prefent war shall be ended: that, although his Catholic majesty might have had reason to think himfelf offended by the fire gular manner in which the niemoun rial was returned to M. Buffy, minister of France, which he had pre-

sented

fented for terminating the differences of Spain and England, at the same time with the war between this last and France; he has, however, diffembled, and, from an effect of his love of peace, caufed a memorial to be delivered to my lord Bristol, wherein it is evidently demonstrated, that the step of France, which put the minister Pitt into so bad humour, did not at all offend either the laws of neutrality, or the fincerity of the two fovereigns: that further, from a fresh proof of his pacific spirit, the king of Spain wrote to the king of France his cousin, that if the union of interest in any manner retarded the peace with England, he confented to separate himself from it, not to put any obstacle to so great a happinels: but it was foon feen that this was only a pretence on the part of the English minister, for that of France continuing his negotiation without making any mention of Spain, and propoling conditions very advantageous and honourable for England, the minister Pitt, to the great aftonishment of the universe, rejected them with disdain, and shewed at the same time his illwill against Spain, to the scandal of the same British council; and unfortunately he has succeeded but too far in his pernicious defign. 1809

This declaration made, the count de Fuentes defires his excellency my lord Egremont, to present his most humble respects to his Britannic majesty, and to obtain for him passports, and all other facilities, for him, his family, and all his retinue to go out of the dominions of Great Britain without any trouble, and to go by the short passage of the sea, which separates them from the con-

tinent.

Translation of the answer delivered to the count de Fuentes, by the earl of Egremont, Dec. 31, 1761.

HE earl of Egremont his Bri-L tannic majesty's secretary of state, having received from his excellency the count de Fuentes, ambaffador of the Catholic king at the court of London, a paper, in which, besides the notification of his recall, and the demand of the necessary passports to go out of the king's dominions, he has thought proper to enter into what has just passed between the two courts, with a view to make that of London appear as the fource of all the misfortunes which may enfue from the rupture which has happened ! in order that hobody may be miffed by the declaration which his excellency has been pleafed to make to the king, to the English nation, and the whole univerfe; notwithstanding the infinuation, as void of foundation as of decency, of the spirit of haughtiness and of discord, which, his excellency pretends, reigns in the British government, to the misfortune of mankind; and notwithstanding the irregularity and indecency of appealing to the English nation, as if it could be separated from its king, for whom the most determined sentiments of love, of duty, and of confidence, are engraved in the hearts of all his subjects; the faid earl of Egremont, by his majefty's order, laying alide, in this answer, all fpirit of declamation and of harshness, avoiding every offensive word, which might hurt the dignity of fovereigns, without flooping to invectives against private persons, will confine himself to facts with the most scrupulous exactness: and it is from this representation of facts that

the appeals to all Europe, and to the whole universe, for the purity of the king's intentions, and for the sincerity of the wishes his majesty has not ceased to make, as well as for the moderation he has always shewed, though in vain, for the maintenance of friendship and good understanding between the British and Spanish nations.

The king having received undoubted informations, that court of Madrid had secretly contracted engagements with that of Versailles, which the ministers of France laboured to represent, in all the courts of Europe, as offensive to Great Britain, and combining these appearances with the step which the court of Spain had a little time before taken towards his majesty, in avowing its consent, (though that avowal had been followed by apologies) to the memorial presented the 23d of July, by the Sieur de Bussy, minister plenipotentiary to the most Christian king, to the king's fecretary of state; and his majesty having, afterwards, received intelligence, scarce admitting a doubt, of troops marching, and of military preparations making in all the ports of Spain, judged that his dignity, as well as his prudence, required him to order his ambassador at Madrid, by a dispatch dated the 28th of October, to demand, in terms, the the most measured however, and the most amicable, a communication of the treaty recently concluded between the courts of Madridand Versailles, or at least of the articles which might relate to the interests of Great Britain, and, in order to avoid every thing which could be thought to imply the least slight of the dignity, or even the delicacy of

his Catholic majesty, the earl of Bristol was authorised to content himself with affurances, in case the the Catholic king offered to give any, that the faid engagements did not contain any thing that was contrary to the friendship which subfisted between the two crowns. or that was prejudicial to the interests of Great Britain, Supposing that any difficulty was made in shewing the treaty. The king could not give a less equivocal proof of his dependence on the good faith of the Catholic king, than in shewing him an unbounded confidence, in fo important an affair, and which fo essentially interested his own dignity, the good of his kingdoms, and the happiness of his people.

How great, then, was the king's furprize, when, instead of receiving the just satisfaction which he had a right to expect, he learnt from his ambassador, that, having addressed himself to the minister of Spain for that purpose, he could only draw from him a refulal to give a fatiffactory answer to his majesty's just requifitions, which he had accompanied with terms that breathed nothing but haughtiness, animosity, and menace; and which feemed fo strongly to verify the suspicions of the unamicable disposition of the court of Spain, that nothing less than his majesty's moderation, and his resolution taken to make all the efforts possible to avoid the misfortunes inseparable from a rupture. could determine him to make a last trial; by giving orders to his ambassador to address himself to the minister of Spain to defire him to inform him of the intentions of the court of Madrid towards that of Great Britain in this conjuncture, if they had taken engagements, or

formed

formed the defign to join the king's enemies in the present war, or to depart, in any manner, from the neutrality they had hitherto obferved; and to make that minister fenfible, that if they perfifted in refusing all fatisfaction on demands so just so necessary, and so interesting, the king could not but confider fuch a refufal as the most authentic avowal, that Spain had taken her part, and that there only remained for his majesty to take the measures which his royal prudence should dictate for the honour and dignity of his crown, and for the prosperity and protection of his people: and to re-call his ambaffador.

Unhappily for the public tranquility, for the interest of the two nations, and for the good of mankind, this last step was as fruitless as the preceding ones; the Spanish minister keeping no farther meafures, answered dryly, that it was in that very moment that the war was declared, and the

king's dignity attacked, and that the earl of Bristol might re-

" tire how, and when he should

And in order to fet in its true

" think proper."

light the declaration, "That, if "the respect due to his Catholic "majesty had been regarded, ex-" planations might have been " had without any difficulty, and that the ministers of Spain might " have faid frankly, as Monf. de "Fuentes, by the king's express " order, declares publickly, that " the faid treaty is only a con-" vention between the family of " Bourbon; in which there is no-" thing which has the least rela-" tion to the present war; and that " the guaranty which is theress in specified, is not to be under" flood but of the dominions. which shall remain to France " after the war." It is declared, that, very far from thinking of being wanting to the respect, acknowledged to be due to crowned heads. the instructions given to the earl of Bristol, have always been to make the requifitions, on the subject of the engagements between the courts of Madrid and Verlailles, with all the decency, and all the attention possible: and the demand of a categorical answer was not made till after repeated, and most stinging refusals to give the least satisfaction, and at the last extremity. Therefore if the court of Spain ever had the defign to give this fo necessary fatisfaction, they had not the least reason that ought to have engaged them to defer it to the moment, when it could no longer be of use. But, fortunately, the terms, in which the declaration is conceived, spare us the regret of not having received it fooner; for it appears at the first fight, that the answer is not at all conformable to the demand: we wanted to be informed, If the court of Spain intended to join the French, our enemies, to make war on Great Britain, or to depart from their neutrality; whereas the answer concerns one treaty only, which is faid to be of the 15th of August, care fully avoiding to fay the least word that could explain, in any manner, the intentions of Spain towards Great Britain, or the further engagements they may have contracted in the present criss. After a deduction, as exact as

After a deduction, as exact as faithful, of what has passed between the two courts, it is left to the impartial publick to decide, which of the two has always been inclined to

peace;

peace, and which was determined

As to the rest, the earl of Egremont has the honour to acquaint his excellency the count de Fuences, by the king's order, that the necessary passports for him shall be expedited, and that they will not fail to procure him all possible facilities for his passage to the port which he shall think most convenient.

Copy of the king of Spain's orders to the governors of the fea-port towns of that kingdom, for the detention of the English ships. Translated from the original Spanish.

Buen Retiro, Dec. 10, 1761. H Is majesty is pretty sure that the king of England has already, or will, in a few days, declare war, or cause hostilities to be commenced against his majesty's subjects: on this supposition, and until we are informed what conduct the English will observe in their rupture with Spain, which their injustice has occasioned, it is his majesty's will, that the ships of that nation that shall be found in any of the ports of his dominions shall be detained, declaring, at the same time, that this is only done to keep them as a deposit, and which is to be effected with the precautions that all concerned shall think proper to take for the preservation of the ships and cargoes, till his majesty finds that the king of England begins the war, agreeable to the regulations established among civilized nations, when they will be let at liberty: to put in execution this his majeffy's orders, and that nothing may be wanting to obtain

the true object thereof, it is neceffary that your lordship will make feizure of all the English ships, either men of war or merchantmen, that should be found in the ports of your jurisdiction, taking off their rudders, and securing their papers, to prevent their putting out to sea: care shall be taken that no ill treatment is offered to their crews, and that no hurt be done to their cargoes, taking what measures should be requisite to the satisfaction of their respective owners for their preservation.

It is likewise his majesty's pleafure, that an embargo shall be laid in all the ports of Spain (till new orders) on all ships or vessels of any nation whatsover, beginning with the Spanish ships, in order to hinder any intelligence that might be given to the enemy of this rupture, and to provide against the danger that, by such information, the Spanish men of war, or merchantmen, now at sea, would run of being seized by the enemy.

This order has no other exception, but that no obstruction or hindrance shall be put to the departure from this port of any vessel that Don Juan de Arraiga, or the ministers of the marine department, shall think proper to send out. The king trusts to your prudence and zeal for the due execution of his orders.

His majesty's declaration of war agains, the king of Spain.
GEORGE Rown in conducted

HE constant object of our attention, fince our accelfion to the throne, has been, if
possible, to put amend to the calamities of war, and to settle the

publick tranquility upon a folid and lasting foundation. To prevent those calamities from being extended flill farther; and because the most perfect harmony between Great Britain and Spain is at all times the mutual interest of both nations: it has been our earnest desire to maintain the firschest amity with the king of Spain, and to accommodate the disputes between us and that crown in the most amicable manner. This object we have fleadily purfued, notwithstanding the many partialities shewn by the Spaniards to our enemies the French, during the course of the present war, inconfiftent with their neutrality; and most essential proofs have been given of the friendship and regard of the court of Great Britain for the king of Spain and his family. After a conduct fo friendly, and fo full of good faith, on our part, it was matter of great furprise to us, to find a memorial, delivered on the twenty-third day of July last, by Monfieur Buffy, minister plenipotentiary of France, to one of our principal fecretaries of state, expressly relating to the disputes between us and the crown of Spain; and declaring that if those objects should bring on a war, the French king would be obliged to take part therein. Our furprise was increased, when afterwards, this unprecedented and offensive step, made by a power in open war with us, was avowed by the Spanish minister to our ambaffador at Madrid, to have been taken with the full approbation and confent of the king of Spain. But, as this avowal was accompanied with the most becoming apologies on the part of the king of Spain, and with affurances, that fuch memorial never would have

been delivered, if it had been fores feen that we should have looked upon it in an offenfive light, and that the king of Spain was at Ifberty, and ready, to adjust all his differences with Great Britain, without the intervention, or knowledge, of France; and foon after, we had the fatisfaction to be informed by our ambassador at Madrid, that the Spanish minister, taking notice of the reports industriously spread of an approaching rupture, had acquainted him, that the king of Spain had, at no time, been more intention cultivating a good correspondence with us; and as the Spanish ambaffador at our court made repeated declarations to the fame effect, we thought ourselves bound, in justice and prudence, to forbear coming to extremities. But the fame tender concern for the welfare of our fubjects, which prevented our accelerating precipitately a war with Spain, if it could possibly be avoided, made it necessary for us to endeavour to know with certainty, what were the engagements, and real intentions of the court of Spain. Therefore, as we had information, that engagements had been lately contracted between the courts of Madrid and Versailles; and it was soon after industriously spread throughout all Europe, by the ministers of France, that the purport of those engagements was hostile to Great Britain, and that Spain was on the point of entering into the war we directed our ambassador to defire, in the most friendly terms, communication of the treaties lately concluded between France and Spain: or of such articles thereof as immediately related to the interests of Great Britain, if any such there were; or, at leaft, an affurance

forance that there were none incompatible with the friendship subfifting between us and the crown of Spain. Our aftonishment and concern was great when we learnt, that fo far from giving fatisfaction upon fo reasonable an application, the Spanish minister had declined anfwering; with reasonings and infinuations of a very hostile tendency: and as, at the same time we had intelligence, that great armaments were making in Spain, by fea and land, we thought it absolutely neceffary to try, once more, if a rupture could be avoided; we therefore directed our ambassador to ask in a firm, but friendly manner, whether the court of Madrid intended to join the French, our enemies, to act hostilely against Great Britain, or to depart from its neutrality; and if he found the Spanish minister avoided to give a clear anfwer, to infinuate, in the most decent manner, that the refuling, or avoiding to answer a question so reasonable, could only arise from the king of Spain's having already engaged, or resolved to take part against us, and must be looked upon as an avowal of fuch hoftile intention, and equivalent to a declaration of war; and that he had orders immediately to leave the court of Madrid. The peremptory refusal by the court of Spain, to give the least satisfaction, with regard to any of those reasonable demands on our part, and the folemn declaration at the fame time made by the Spanish minister, that they confidered the war as then actually declared, prove to a demonstration, that their resolution to act offenfively, was to absolutely and irrevocably taken, that it could not be any longer dissembled, or denied.

The king of Spain therefore, having been induced, without any provocation on our part, to confider the war as already commenced against us, which has in effect been declared at Madrid; we trust, that by the bleffing of Almighty God on the justice of our cause, and by the affiftance of our loving subjects, we shall be able to defeat the ambitious designs, which have formed this union between the two branches of the house of Bourbon; having now begun a new war; and portend the most dangerous consequences to all Europe. Therefore, we have thought fit to declare, and do hereby declare war against the faid king of Spain; and we will, in pursuance of such declaration, vigoroufly profecute the faid war, wherein the honour of our crown the welfare of our subjects, and the prosperity of our nation, which we are determined at all times with our utmost power to preserve and support, are fo greatly concerned. And we do hereby will and require. our generals and commanders of our forces, our commissioners for executing the office of our high admiral of Great Britain, our lieutenants of our feveral counties, governors of our forts and garrisons, and all other officers, and foldiers under them, by fea and land, to do, and execute all acts of hostility, in the profecution of this war, against the said king of Spain, his vassals, and subjects, and to oppose their attempts; willing and require ing all our subjects to take notice of the same, whom we henceforth strictly forbid to hold any correfpondence, or communication, with the faid king of Spain, or his fubjects: and we do hereby command our own subjects, and advertise all other

other persons, of what nations foever, not to transport, or carry any foldiers, arms, powder, ammunition, or other contraband goods, to any of the territories, lands, plantations, or countries, of the faid king of Spain; declaring that whatfoever ship or vessel, shall be met withal, transporting, or carrying any soldiers, arms, powder, ammunition, or other contraband goods, to any of the territories, lands, plantations, or countries, of the faid king of Spain, the same being taken, shall be condemned as good and lawful prize. And whereas there may be remaining in our kingdoms divers of the subjects of the king of Spain, we do hereby declare our royal intention to be, that all the Spanish subjects, who shall demean themselves dutifully towards us, shall be safe in their persons and effects.

Given at our court at St. James's, the fecond day of January, 1762, in the fecond year of our reign.

GOD fave the KING.

The king of Spain's declaration of war, which was published at Madrid on the 18th of January.

The King.

A Lthough I have already taken for a declaration of war by England against Spain, the inconsiderate step of lord Bristol, the Britannic king's ambassador at my court, when he demanded of Don Richard Wall, my minister of state, what engagements I had contracted with France, making this the condition of his demand, or rather adding this threat, That if he did not receive a categorical answer, he would leave my court, and take

the denial for an aggression: and although, before this provocation was received, my patience was tired out with fuffering and beholding, on many occasions, that the English government minded no other law. but the aggrandisement of their nation by land, and universal defpotism by sea; I was nevertheless defirous to fee whether this menace would be carried into execution; or whether the court of England, fenfible of the inefficacy of fuch methods towards my dignity, and that of my crown, would not employ others that should be more suitable to me, and make me overlook all those insults. But the haughtiness of the English was so far from containing itself within just bounds, that I have just learnt, that on the fecond instant, a resolution was taken by the Britannic king in council, to declare war against Spain. Thus, feeing myself under the hard necessity of following this example, which I would never have given, because it is so horrible, and so contrary to humanity, I have ordered by a decree of the 15th instant. that war should likewise be immediately declared, on my part, against the king of England, his kingdoms, estates, and subjects; and that in confequence thereof, proper orders should be fent to all parts of my dominions, where it fhould be necessary, for their defence and that of my subjects, as well as for acting offenfively against the enemy.

For this end, I order my council of war to take the requisite meafures that this declaration of war may be published at my court, and in my kingdoms, with the formalities usual upon such occasions; and that in consequence all kind of hos-

tilities

filities may be exercised towards the English; that those of them who are not naturalized in Spain, may leave my kingdoms; that they may carry on no trade there; and that only those who are employed as artizans may be fuffered to remain: that for the future my subjects may have no dealings with those of England, nor with the estates of that crown, for any of their productions or fisheries, particularly cod, or their manufactures or merchandize; fo that the inhibition of this trade may be understood to be, and may be in fact, absolute and effective, and framp a vicious quality, and a prohibition of fale on the aforefaid effects, productions, fisheries, cod, merchandizes, and manufactures of the dominions of England: that no vessels whatsoever, with the above-mentioned effects on board, may be admitted into my harbours, and that they may not be permitted to be brought in by land, being illicit and prohibited in my kingdoms, though they may have been brought or deposited in buildings, baggage, warehouses, shops, or houses of merchants, or other private persons, my subjects or vassals, or lubjects or vaffals of provinces and states, with whom I am in peace or alliance, or have a free trade, whom, nevertheless, I intend not to huft, or to infringe the peace, the liberty, and privilege which they enjoy, by treaty, of carrying on a legal trade in my kingdoms with their ships, and the proper and peculiar productions of their lands, provinces, and conquefts, or the produce of their manufactories.

I also command that all merchants who shall have in their posfession any cod, or other sish, or produce of the dominions of Eng-Vol. IV.

land, shall in the space of sifteen days from the date of this declaration, declare the fame, and deliver an account thereof, either at my court, or elsewhere, to the officers who shall be appointed by the marquis de Squilace, super-intendant-general of my revenues; that the whole may be forthcoming; and fuch of the faid effects of which a list shall not be so delivered in the space of fifteen days, shall be immediately confiscated; two months, and no more, being allowed, for the confumption of those which shall be declared; after which time the merchants shall be obliged to carry the faid effects to the custom-houses. and, where there is no custom-house, to the houses that serve instead thereof, that they may be publickly fold by an officer or officers nominated for that end, or, if none should be appointed, by the judges, who shall give the produce of the fale to the proprietors; but none of the faid merchandizes, prohibited in the manner just prescribed, shall return to their warehouses shops.

I have given a separate commis fion, with all the necessary powers, to the marquis de Squilace, superintendant-general of my revenues, that in that quality he may fee that this prohibited trade be not fuffered, and that he may immediately issue such orders and instructions, as he shall think necessary for this important end; taking cognizance, in the first instance, in person, and by his sub delegates, of the difputes which shall arise on occasion of this contraband, with an appeal to, the council of finances in the hall of justice; except however what relates to contraband military flores, arms, and other effects be-

[U] . longing

[290]

longing to war, particularized in treaties of peace, the cognizance of disputes on these articles belonging to the council of war, and the military tribunals.

And I command that all that is above be observed, executed, and accomplished, under the heavy penalties contained in the laws, pragmatiques, and royal cedules, issued on like occasions in times past, which are to extend also to all my fubjects, and the inhabitants of my kingdoms and estates, without any exception, and notwithstanding any privileges; my will being, that this declaration of war shall come as foon as possible to the knowledge of my subjects, as well that they may guard their persons and effects from the infults of the English, as that they may labour to molest them by naval armaments, and by other methods authorized by the law of arms.

Given at Buen-Retiro, Jan. 16, 1762.

I THE KING.

Papers relating to the Surrender of Pondicherry.

Translation of Mr. Lally's proposals for the delivery of the garrison.

A E taking of Chandernagore, contrary to the faith of treaties, and of that neutrality which has always subsisted between all European nations, and namely, between the two nations in this part of India; and that immediately after afignal fervice which the French nation had rendered the English, not only in taking no part against them with the nabob of Bengal. but in receiving them into their fettlements, to give them time to

recover from their first losses (as anpears by the letters of thanks from Mr. Pigot himself, and from the council of Madras to that of Pondicherry) added to the formal refusal of fulfilling the conditions of a cartel, agreed upon between our respective masters, though it was at first accepted by Mr. Pigot, and the commissaries were named on both fides to go to Sadrast to settle amicably the difficulties which might occur in its execution, put it out of my power with respect to my court to make or propose to Mr. Coote any capitulation for the town of Pondicherry.

The king's troops, and those of the company, furrender themselves. for want of provisions, prisoners of war of his Britannick majesty, upon the terms of the cartel, which I reclaim equally for all the inhabitants of Pondicherry, as well as for the exercise of the Roman religion, the religious houses, hospitals, chaplains, surgeons, servants, &c. referring myfelf to the decision of our two courts for reparation proportioned to the violation of fo fo-

Accordingly Mr. Coote may take possession to-morrow morning at eight o'clock of the gate of Villenour; and after to-morrow at the same hour of that of Fort St. Louis; and as he has the power in his own hands, he will dictate fuch ulterior

dispositions to be made, as he shall

judge proper.

lemn a treaty.

I demand, merely from a principle of justice and humanity, that the mother and fifters of Rezafail be permitted to feek an afylum where they please, or that they remain prisoners among the English, and be not delivered up into Mahomet Ally Caun's hands, which are

Rill

still red with the blood of the hufband and father, that he has spilt, to the shame indeed of those who gave them up to him; but not less to the shame of the commander of the English army, who should not have allowed such a piece of barbarity to be committed in his camp.

As I am tied up by the cartel in the declaration which I make to Mr. Coote, I confent that the gentlemen of the council of Pondicherry, may make their own reprefentations to him, with regard to what may more immediately concern their own private interests, as well as the interest of the inhabitants of the colony.

Done at Fort Louis off Pondicherry, the 15th of January,

1761.

Signed, LALLY.

To colonel Coote, commander in chief of his Britannick majesty's forces before Pondicherry.

A true copy. Franc. Rowland, Sec.

Colonel Coote's answer to M. Lally's proposals.

THE particulars of the capture of Chandernagore having been long fince transmitted to his Britannick majesty, by the officer to whom that place surrendered, colonel Coote cannot take cognizance of what passed on that occasion; nor can he admit the same as any way relative to the surrender of Pondicherry.

The disputes that have arisen concerning the cartel concluded becluded between their Britannick and most Christian majessies, being as yet undecided, colonel Coote has it not in his power to admit, that the troops of his most Christian majesty, and those of the French East-India company, shall be deemed prisoners of war to his Britannick majesty upon the terms of that cartel; but requires that they surrender themselves prisoners of war, to be used as he shall think consistent with the interests of the king his master. And colonel Coote will shew all such indulgences as are agreeable to humanity.

Colonel Coote will fend the grenadiers of his regiment, between the hours of eight and nine o'clock to-morrow morning, to take poffession of the Villenour gate; and the next morning, between the same hours, he will also take poffession of the gate of Fort St. Louis.

The mother and fifters of Raza Saib shall be escorted to Madras, where proper care shall be taken for their safety; and they shall not, on any account, be delivered into the hands of nabob Mahomud Ally Cawn.

Given at the head quarters at the camp before Pondicherry, this 15th of January, 1761.

Signed, EYRE COOTE.

Articles proposed to colonel Coote by the chief of the Jesuits; to which no answer was returned.

HE superior council of Pon' dicherry, authorized by the count de Lally, lieutenant general of the armies of his most Christian majesty, and his commissary in India, to treat for the said town and its inhabitants, present the following articles to colonel Coote, commander of his Britannick majesty's troops on the coast of Coromander,

[U] 2

ARTICLE T.

Upon the reduction of the place. its inhabitants shall not in any wife be injured, their houses shall be preserved, and they shall retain all their effects and merchandize, with liberty of choice to convey them wherever they shall think proper, or to continue their dwelling in the faid town, as new subjects of his Britannick majesty; and they shall be treated as the old subjects have been treated; accordingly, those who have heretofore had possessions or advantages, shall not be deprived of them.

Art. II. They shall be maintained in the exercise of the Roman Catholic religion, in the same manner as has been practifed under the French government. The churches and the houses of the ecclesiastics and religious persons shall be preferved, together with every thing thereunto belonging whether they be fituated without or within the town. The missionaries shall have liberty of passing from place to place, and shall find, under the English flag, the same protection as under the French flag.

Art. III. Not only the buildings and houses, belonging to private persons, whether laymen, ecclesiafticks, or religious perfons, shall be left in the condition they are, but also the buildings belonging to the company, as well as the fort, the warehouses, and the walls of the town, with all the fortifications. until the date of these last, that is to fay, every thing of this kind, belonging to the company, shall be decided by the two respective courts.

Art. IV. The papers of the regiftry and notary office, on which depend the fortunes of the inhabitants, shall be fent to France without any obstacle, by such conveyances as they shall think fit who are now charged with them, and in whose possession they shall, in the

mean time, remain.

Art. V. The treatment herein before stipulated by the first article, for the inhabitants of Pondicherry. shall be extended to all the members of the council, company's agents, officers fettled in the faid town, and all others, who have been, or now are, in service of the company; and fo in like manner to the merchants, whether Armenians, or of any other nation, fet tled heretofore in Pondicherry for their trade.

Art. VI. The Creoles, or natives of Mauritius and of Bourbon, amounting in number to forty-one, including five officers, as well those who are in health, as those who have been wounded, or are invalids, having ferved as volunteers, and not being foldiers, should have the liberty of returning to their home by the first good opportunity they may find.

Art. VII. Safeguards shall be

granted to prevent disorder.

Art. VIII. All the foregoing articles shall be executed according to good faith.

A true copy.

FRANCIS ROWLAND, Secretary.

Translation of the supreme order, from the Mogul's Court at Dyhly, to Sciddee Ibrahim, of Rajapore, received March 19, 1761.

A copy of the Supreme order, to be respected by the world, under the seal of Safdar Jung Bahadoer, wister, received at Sahajanahad.

E it with delight observed, by our subjects of the said place,

and the world in general, that we have fent our enemies to the lower regions, by the mortal wounds of our skilful swords. They were surrounded at the camp of Singar, and prevented from being fupplied with any kinds of provisions or water, which obliged them at last to kill and eat their cows, whom they used to worship as the Almighty God, as alfo to fearch their dung for the grain they had eaten on. Thus unhappily fituated, they refolved to die rather than subject themselves longer to the miseries of famine, and accordingly on the 6th of Jamadelakhar, (or January 1761) their whole camp was ordered to be in readiness to make their last effort, which our officers and army, of zealous hearts, received with intrepidity, and returned as quick as lightning, and terrible as thunder. In a moment of time they dispatched them to Johannum, (hell;) this fe-parated the head of Vissvasraw, (the commanding officer) from his body, and cast it on the earth: Bhavoo or Sadobo was first wounded and then trampled to death by his own elephant; Mallarsie Holcar was cut down; Chingosie and Damasie are taken prisoners, and their inferior officers and feapoys were flain in numbers, impossible herein to express.

Twenty-two thousand of the enemy, male as well as female, have been made Moors, and distributed the handsomest of the women as concubines to our officers, and the others as slaves to our army; but the riches they have taken cannot be ascertained, the following is only part: fifty shousand head of cattle, one crow and three quarters of rupes, eleven thousand camels, five

hundred elephants, befides pearls, precious stones, &c. all which are laid at his majesty's feet.

Ye shall send copies hereof to all our cities, and publish this joyful news to the whole world. Praise be to God, the ungrateful enemy is cut off from the pleasures of life, as the stars fall from heaven.

Capitulation for the citadel of Belleisle, made June 7, 1761.

Preliminary Article.

HE chevalier de St. Croix, brigadier in the king's army, and command nt of the citadel of Belleifle, proposes that the place shall furrender on the 12th of June, in case no succours arrive before that time; and that, in the mean while, no works should be carried on, on either side, nor any act of hostility, nor any communication between the English besieging, and the French besieged.

Refused.

The entire garrison shall march thro' the breach with the honours of war, drums beating, colours flying, lighted matches, and three pieces of cannon, with twelve rounds each. Each soldier shall have sifteen rounds in his cartouch box. All the officers, serjeants, soldiers, and inhabitants, are to carry off their baggage. The women to go with their husbands.

Granted. In favour of the gallant defence which the citadel has made, under the orders of the chevaluer de St. Croix.

II. Two covered waggons shall be provided, and the effects which they carry shall be deposited in two covered boats, which are not to be visited.

[U 3] while The

294

The covered waggons are refufed: but care shall be taken to transport all the baggage to the continent by the shortest way.

III. Vessels shall be furnished for carrying the French troops by the shortest way into the nearest ports of France. by the first fair wind.

Granted.

IV. The French troops that are to embark, are to be victualled in the same proportion with the troops of his Britannick majesty; and the same proportion of tonnage is to be allowed to the officers and foldiers which the English troops have,

Granted.

V. When the troops shall be embarked, a vessel is to be furnished for the chevalier de St. Croix, brigadier in the king's army, to M. de la Ville, the king's lieutenant, to M. de la Garique, colonel of foot, with brevet of commandant in the absence of the chevalier de St. Croix. and to the field officers, including those of the artillery, and engineers; as also for the three pieces of cannon, as well as for the foldiers of the Gour Royale, to be transported to Nantz, with their wives, fervants, and the baggage which they have in the citadel, which is not to be visited. They are to be victualled in the same proportion with the English officers of the same rank.

Care shall be taken that all those who are mentioned in this article shall be transported, without loss of time, to Nantz, with their baggage and effects, as well as the three pieces of cannon, granted by the

first article.

VI. After the expiration of the term mentioned in the first article. a gate of the citadel shall be delivered up to the troops of his Britannick majesty; at which there shall be kept a French guard of equal number, until the king's troops shall march out to embark. Those guards shall be ordered to permit no English soldier to enter, nor no French foldier to go out.

A gate shall be delivered to the troops of his Britannick majesty, the moment the capitulation is figned; and an equal number of French troops shall occupy the same gate.

VII. A vessel shall be furnished to the commissaries of war, and to the treasurer, in which they may carry their baggage, with their fecretaries, clerks, and fervants, without being molested or visited. They shall be conducted, as well as the other troops, to the nearest port of

France. Granted.

VIII. Mess. de Taille, captain general of the Garde Coste, lamp major, two lieutenants of canoneers of the Garde Coste, and ninety bombardiers, cannoneers, ferjeants, and fusileers, Gardes Costes of Belleisle. paid by the king, shall have it in their choice to remain in the island as well as all the other inhabitants. without being molested, either as to their persons or goods. And if they have a mind to fell their goods, furniture, boats, nets, and, in general, any effects which belong to them, within fix months, and to pass over to the continent, they shall not be hindered; but, on the contrary, they shall have proper assistance, and the necessary passports.

They shall remain in the island under the protection of the king of Great Britain, as the other inhabitants, or shall be transported to the continent, if they please, with the

garrifon.

IX. M. Sarignon, clerk of the treasury of the French troops, the armourer, the Bourgeois cannoneers,

the store-keepers, and all the workmen belonging to the engineers, may remain at Belleisle with their families, or go to the continent with the same privileges as abovementioned.

Granted. To remain in the island, upon the same footing with the other inhabitants, or to be transported with the garrison to the continent, as they shall think proper.

X. The Roman Catholick religion shall be exercised in the island with the same freedom as under a French government. The churches shall be preserved, and the rectors and other priests continued; and, in case of death, they shall be replaced by the bishop of Vannes. They shall be maintained in their functions, privileges, immunities, and revenues.

All the inhabitants, without diflinction, shall enjoy the free exercise of their religion. The other part of this article must necessarily depend on the pleasure of his Bri-

tannick majesty,

XI. The officers and foldiers, who are in the hospitals of the town and citadel, shall be treated in the same manner as the garrison; and after their recovery, they shall be surnished with vessels to carry them to France. In the mean while they shall be supplied with subsistence according to the state which the comptroller and surgeons shall give in. Granted.

XII. After the term mentioned in the preliminary article is expired, orders shall be given that the commissaries of artillery, engineers, and provisions, shall make an inventory of what shall be found in the king's magazines, out of which, bread, wine, and meat shall be furnished to

fablish the French troops to the moment of their departure.

They shall be furnished with necessary subsistence till their departure, on the some footing with the troops of his Britannick majesty.

XIII. Major Gen. Craufurd, as well as all the English officers and foldiers, who have been made prifoners fince the 8th of April, 1761, inclusive, shall be fet at liberty after the figning of the capitulation: and shall be disengaged from their parole. The French officers of different ranks, volunteers, serjeants, and soldiers, who have been made prisoners since the 8th of April, shall also be fet at liberty.

The English officers and foldiers, prisoners of war in the citadel, are to be free the moment the capitulation is figned. The French officers and soldiers, who are prisoners of war, shall be exchanged according to the

cartel of Sluys.

All the above articles shall be executed faithfully on both sides, and such as may be doubtful shall be fairly interpreted. Granted and some

After the fignature, hostages shall be fent on both fides, for the security of the articles of capitulation.

Granted.

All the archives, registers, public papers, and writings, which have any relation to the government of the island, shall be faithfully given up to his Britannick majesty's commissary: two days shall be allowed for the evacuation of the citadel; and the transports necessary for the embarkation, shall be ready to receive the garrison and their effects. A French officer shall be ordered to deliver up the warlike stores and provisions; and, in general, every thing which belongs

[U/4]

to his most Christian majesty, to an English commissary appointed for that purpose. And an officer shall be ordered to fhew us all the mines and fouterains of the place.

> S. Hodgson. A. Keppel. Le Chevalier de St CROIX.

The terms of peace to be granted to the Cherokee Indians.

ARTICLE I. A LL English prisoners, negroes, horses and cautle, in their possession, shall be delivered up immediately to colonel Grant.

II. Fort Loudoun and the cannon belonging thereto, now lying a t Chote, shall be delivered up to any persons sent to take charge of them; and any forts shall be built hereafter in the Cherokee nation, when the fame is thought necessary by the

English.

III. The Cherokees shall not admit any Frenchmen into their nation; and if any should come, the Cherokees shall assit us, at least shall not pretend to interpose their protection, to prevent us, when we think proper to apprehend the Frenchmen.

IV. Any Indian, who murders any of his majesty's subjects, shall be immediately put to death by the Cherokees, as foon as the murder and murderer are known in the Cherokee nation, and that the head or fcalp of the murderer be brought to the commander of the next English fort. ... 6

V. The Cherokees shall not hunt to the eastward of Twenty-fix mile river, nor the English to the westward of it, to prevent any quarrels or mischief that may be occasioned from the hunting parties meeting in the woods.

VI. To prevent as much as may be any disturbances that may arise between the Cherokees and the white people on the Back-Settlements, no CherokeeIndian shall come down into this province, within the limits of Twenty-fix mile river, on any pretence what loever, without fome white person in company, or unless by the order or permission of this government; and that all white men, whether French or English, who have been amongst the Cherokees, and have aided and affifted them during the late war, shall be delivered up.

VII. The Cherokees shall not molest the creatures belonging to, nor trespals on the grounds necessary for planting pasturage for the use of the garrison of forts built, or to

be built, in their nation.

VIII. The Catawbas and Chickefaws to be comprehended in this peace.

IX. That all the Cherokee prifoners we have taken shall be restored.

X. Our friendship shall be granted to them; a firm peace shall be made and finally ratified in Charlestown; trade shall be renewed, and plenty of goods fent up to be exchanged for their skins, to supply their wants.

XI. And as equal justice is the furest foundation of a lasting peace, it shall be agreed, than when an Englishman naurders a Cherokee. the Cherokees shall not put him to death, but he shall be delivered to the officer of the fort, fent prisoner to Charles-town, and there tried according to our laws, and if found guilty to be executed in prefence of

fome Cherokees, if they defire to be prefent; and when the Cherokees think they are injured by the English in their nation, the Cherokees are not to take revenge themfelves, but shall make complaint to the commander of the next English fort, to be from thence transmitted to the English governor, who will right them therein, according to our laws; and when the Cherokees injure any English among them, on the complaint thereof, the Cherokees shall right the injured; thus the guilty will only be punished on both fides; thus friendship, peace, and trade will be preserved; but when they ceafe to observe this treaty, friendship, peace, and trade will also cease.

XII. That Attakullakulla communicate these stipulations to the nation on his return, and acquaint them, that in order to have these articles of peace sinally ratisfied and confirmed, so that our old friendship may be renewed, and last as long as the sun shines and rivers run; some of the headmen from the upper, the valley, the middle and lower settlements shall come down to Charles-town, and confirm these slipulations, and then settle such matters, as concern the trade to be carried on with their nation.

Account of a late conspiracy against the king of Prussia, published by authority.

the name of Wargotich, who has an estate near Strehlen, came often to the Prussian camp, where he was well received by the king of Prussia, and by the officers. He informed himself, with great exactness,

of every thing that passed in the army; and particularly, of the difpositions made of the troops in their quarters of cantonment; and, as the country thereabout was well known to him, he formed a project of furprising his Prussian majesty, in the night of the 1st of December. which was to have been executed in this manner: a small body of refolute cavalry were to penetrate, in the night, into the suburbs of Strehlen, where his Prussian majesty lodged, to which they were immediately to fet fire; and during the confusion that this must necessarily occasion, to endeavour to seize and carry off the king of Pruffia, which Waigotich thought was very practicable; as the quarters were, at that time, but flightly guarded...

The whole affair is reported to have been accidentally discovered by one of Wargotich's own fervants. who had often been employed to carry letters to a Popish priest, in a neighbouring village. These letters were directed to an Audrian lieut. col. and the priest had the care of transmitting them. The servant obferving, when his mafter gave him the last letter, he was uncommonly anxious about the fafe delivery of it, and appeared to be in great agitation of mind, began to fuspect that he was employed in a dangerous fervice; however, he took the letter, and promifed to deliver it as usual; but instead of that, carried it directly to Strehlen, where he put it into the hands of M. de Cruce. mark; the adjutant-general, who immediately fent out two small park ties of dragoons, to feize Wargotich and the priest, who were both made prisoners, but escaped afterwards. The trial of Wargotich, who has been dited to appear is actually.

carrying

carrying on before the tribunal called the Ober Ampt, in Breslau.

To the king's most excellent majesty.

The humble address of the lord mayor, aldermen, and commons of the city of London, in common council af-Sembled.

E pleased, most gracious so-vereign, to accept the cordial and respectful congratulations of your majesty's ever dutiful and loyal subjects, the lord mayor, aldermen, and commons of the city of London, in common council affembled, on the folemnization of your majesty's

most auspicious nuptials.

Warmly interested from every motive of gratitude, as well as duty, in whatever can affect your royal mind, we enjoy the highest satisfaction in the completion of our wishes, by your majesty's happy union with a princess of the most exalted merit; a princess, who, by her descent from an illustrious lineage (respectable for their firm and constant zeal for the protestant religion, and dear to us for their particular attachment to your majesty's royal house) and above all, by her own most eminent virtues, and amiable endowments, was most worthy to engage your majesty's esteem and affection, and to share the honours of the British crown.

We adore the divine goodness, that as in all your majesty's other conduct, fo more particularly in a choice of the highest importance to your majesty and your kingdoms, hath fo visibly guided and inspired your royal breaft. A choice, which we thankfully acknowledge the ftrongest and most acceptable proof of your majesty's paternal attention to improve the happiness and security of your people, and to render the fame stable and permanent to

posterity.

May the same providence long preserve your majesty, and your royal confort, to enjoy the fruits of this bleffed marriage, in an uninterrupted course of conjugal felicity, and in a numerous offspring, resembling their illustrious parents, in every public, as well as private. virtue. And may the imperial crown of these realms, be worn with undiminished lustre by their descendants, till time shall be no more.

His majesty's most gracious answer.

I Thank you most beartily for your dutiful and affectionate address. This fresh mark of your attachment to my person, and particularly the warm sentiments of joy and satisfaction which you express on the happy choice I have made of a queen for my confort, are most pleasing to me. The city of London may always depend on my unceasing care for their welfare and prosperity.

The humble address of the lord mayor, aldermen, &c. to her majesty.

Most gracious queen,

E, his majesty's ever dutiful and loyal subjects, the lord mayor, aldermen, and commons of the city of London, in common council affembled, humbly beg leave to express, in your royal presence, the exceeding great joy we feel at your majesty's safe arrival, so ardently wished for, and so impatiently expected; and at the fame time to congratulate your majesty's

mod

most happy nuptials with a monarch, whose early wisdom, fortitude, and piety, add lustre to the diadem he wears, and render him the darling, as well as father, of his people.

We do, with that honeft warmth and fincerity which characterize the British nation, humbly affure your majesty, that as the many virtues and amiable endowments which your majesty possesses in so eminent a degree, cannot fail to bless our beloved sovereign with every domestick happiness; so will they ever endear your majesty to a people, not more distinguished for their love of liberty, and their country, than for their inviolable loyalty and gratitude to those princes from whom they derive protection and prosperity.

Long may your majesty live to share the selicity you are formed to inspire. And may your majesty prove the happy mother of a race of princes, to transmit the glories of this distinguished reign to the

latest of our posterity.

Her majesty's most gracious answer.

I Thank you for your kind congratulations, so full of duty to the king, and affection to me. My warmest wishes will ever attend this great city.

The humble address of the people called quakers, presented October 30.

To George the third, king of Great Britain, and the dominions thereunto belonging.

May it please the king,
O accept our congratulaions
on the present happy oc-

the royal nuptials may be bleffed with felicity, as permanent and unmixed, as the joy they produce is universal.

From the evident marks we have feen of thy attention to the happiness of thy people, guided by an uniform steadiness and prudence, we are persuaded, that in thy illustrious confort are united those amiable qualities, which will alike contribute to the domestic happiness of our sovereign, and endear her to his subjects.

Impressed with such sentiments, we already regard the queen with duty and affection, and we trust it will be our constant endeavour to cultivate the like sentiments in those among whom we converse; promoting, by example, that dutiful submission to authority which renders government easy to the prince, and grateful to the people.

May it please the most High, by whose wisdom kings reign, and princes decree justice, to confirm every virtuous purpose of thy heart, and to replenish it with stability and fortitude superior to every exigency: long may he vouchsafe to continue thee a blessing to these nations, and thy descendants, the guardians of liberty, civil and religious, to many generations.

Signed on the behalf of the faid people in London, the 26th of the tenth month, 1761.

His majesty's most gracious answer.

THIS address, so full of duty and affection, is very agreeable to me. You may depend on my protection.

A letter

[300]

A letter from a right hon, person,

DEAR SIR, FINDING to my great fur-prize, that the cause and manner of my refigning the feals, is grossly misrepresented in the city, as well as that the most gracious and spontaneous marks of his majesty's approbation of my fervices, which marks followed my refignation, have been infamously traduced as a bargain for my forfaking the public, I am under a necessity of declaring the truth of both these facts, in a manner which I am fure no gentleman will contradict. A difference of opinion, with regard to measures to be taken against Spain, of the highest importance to the honour of the crown, and to the most effential national interests, (and this founded on what Spain had already done, not on what that court may farther intend to do) was the cause of my refigning the feals. Temple and I submitted in writing, and figned by us, our most humble fentiments to his majesty; which being over-ruled by the united opinion of all the rest of the king's fervants; I refigned the feals on Monday the 5th of this month *, in order not to remain responsible for measures, which I was no longer allowed to guide, Most gracious public marks of his majesty's approbation of my fervices followed my refignation: they are unmerited and unfollicited, and I shall ever be proud to have received them from the best of sovereigns, and see

I will now only add, my dear Sir, that I have explained these matters only for the honour of truth, not in any view to court return of confidence from any man, who with a credulity as weak as it is injurious, has thought fit halfilly to withdraw his good opinion, from one who has ferved his country with fidelity and fuccess; and who justly reveres the upright and candid judgment of it; little follicitous about the censures of the capricious and the ungenerous. Accept my fincerest acknowledgements for all your kind friendship, and believe me ever, with truth and esteem,

My dear Sir,

Your faithful friend, &c.

The answer of the hon, gentleman, to whom the above letter was addressed, is as follows:

DEAR SIR,

HE city of London, as long as they have any memory, cannot forget that you accepted the feals when this nation was in the most deplorable circumstances, to which any country can be reduced: that our armies were beaten, our navy inactive, our trade exposed to the enemy, our credit, as if we expected to become bankrupts, funk to the lowest pitch; that there was nothing to be found but despondency at home, and contempt abroad. The city must also for ever remember, that when you refigned the feals, our armies and navies were victorious, our trade fecure. and flourishing more than in a peace, our public credit restored; and people readier to lend than ministers to borrow; that there was nothing but exultation at home, confusion and despair among our enemies, amazement and veneration

among all neutral nations: that the French were reduced so low as to fue for a peace, which we, from humanity, were willing to grant; though their haughtiness was too great, and our fuccesses too many, for any terms to be agreed on. Remembering this, the city cannot but lament that you have quitted the helm. But if knaves have taught fools to call your refignation (when you can no longer procure the fame fuccess, being prevented from purfuing the same measures) a desertion of the public, and to look upon you, for accepting a reward, which can scarce bear that name, in the light of a penfioner; the city of London hope they shall not be ranked by you among the one or the other. They are truly sensible, that, though you cease to guide the helm, you have not deferted the veffel; and that, pensioner as you are, your inclinations to promote the public good, is still only to be equalled by your ability: that you fincerely wish success to the new pilot, and will be ready, not only to warn him and the crew, of rocks and quicksands, but to assist in bringing the ship through the storm into a safe harbour.

These, Sir, I am persuaded, are the real sentiments of the city of London; I am sure you believe

them to be such of,

Dear Sir, Your's, &c.

The above letters are most certainly genuine and original.

At a court of common council, held the twenty-fecond of October, motion was made for that court

to represent to their members, who ferve for this city in parliament (by way of instruction) their sense on the present critical conjuncture. Also another motion, that the thanks of the court be given to the right hon. Mr. Pitt, for the many and important fervices rendered to his king and country; and, a third, that the committee, in their thanks to Mr. Pitt, do lament his refignation, &c. These motions were agreed to unanimoufly, except the last, which, upon a division, passed in the affirmative; inine aldermen and one hundred commoners, to two aldermen and thirteen com-

The representation of the lord mayor, aldermen, and commons of the city of London, in common council assembled, to Sir Robert Ladbroke, Knt. Sir Richard Glynn, Knt. and Bart. William Beckford, Esq; and the Hon. Thomas Harley, Esq; this city's representatives in parliament.

E, the lord mayor, aldermen, and commons of the city of London in common council affembled, think it at this time our duty, as it is our natural and undoubted right, to lay before you, this city's reprefentatives in the great council of the nation, foon to be affembled in parliament, what we defire and expect from you, in discharge of the great trust and confidence we and our fellow servants have reposed in you.

utmoft

ntmost of your power and abilities, oppose all attempts for giving up such places as may tend to lessen our present security, or by restoring the naval power of France, render us subject to fresh hostilities from that natural enemy; particularly that the sole and exclusive right of our acquisitions, in North America and the sisheries, be preserved to us.

As the prefent happy extinction of parties, the harmony and unanimity of all his majesty's subjects, their zeal and affection to their native king, and the great increase of commerce, are most convincing proofs to us of this nation's ability still to carry on, and vigorously profecute the present just and necessary was; it is our defire that you concur in giving his majesty fuch suplies, as shall enable him to pursue all those measures, which may promote the true interest of his kingdoms, and place him above the menace of any power that may pretend to give laws, or prescribe limits, to the policy and interests of this nation: but as it is apparent, that our enemies flatter themselves with the hopes of exhausting our strength, by the immense expence in which we are at present engaged, we therefore require you, in the further profecution of this war, to support such measures as may frustrate those expectations, yet to act with the utmost vigour in the reduction of their remaining colonies, fo as to obtain a fafe and honourable peace.

The thanks were as follows:

Copy of the thanks to the right honourable William Pitt, from the court of common council, October 22, 1761.

" Refolved, That the thanks of this court be given to the right hon. William Pitt, for the many great and eminent fervices rendered this nation, during the time he fo ably filled the high and important office of one of his majesty's principal secretaries of state, and to perpetuate their grateful sense of his merits, who by the vigour of his mind, had not only roused the ancient spirit of this nation, from the pufillanimous state, to which it had been reduced: but, by his integrity and steadiness uniting us at home, had carried its reputation in arms and commerce to a height unknown before, by our trade accompanying our conquests in every part of the globe.

Therefore the city of London, ever stedfast in their loyalty to their king, and attentive to the honour and prosperity of their country, cannot but lament the national loss of so able, so faithful a minister, at

this critical conjuncture."

At a court of common council held the 29th Octob. the town-clerk reported his having waited on the right hon. William Pitt, with their resolutions of thanks; to which he had been pleased to return the following answer:

' Mr. Pitt requests of Sir James ' Hodges, that he will be so good to represent him, in the most re-

fpectful manner, to the lord may-

or, aldermen, and common council affembled, and express his high

fense of the fignal honour they

have been pleased to confer on him, by their condescending and

favour-

favourable resolution of the 22d of October; an honour which he receives with true reverence and gratitude, not without confusion at his own small deservings, while he views with exultation the universal public spirit dispersed through an united people; and the matchless intrepidity of the British sailors and soldiers, conducted by officers, juftly famed thro' all the quarters of the world: to this concurrence of national virtue, graciously protected by the throne, all the national prosperities (under the favour of heaven) have been owing; and it will ever be remembered to the glory of the city of London, that thro' the whole course of this arduous war, the great feat of commerce has generously fet the illustrious example of fleady zeal for the dignity of the crown, and of unshaken firmness and magnanimity. visite in which

Mr. Pitt received more addresses on this occasion from Dublin, York, Bath, and other places.

The king's most gracious speech to both houses of parliament, on the 19th of January, 1762, on occasion of his majesty having declared war against Spain.

My lords and gentlemen,

HAVE so often assured you of my sincere disposition to put an end to the calamities of war, and to restore the public tranquility, on solid and lasting soundations, that no impartial person, either at home or abroad, can suspect me of un-

necessarily kindling a new war in Europe. But, it is with concern, I acquaint you, that, fince your recess, I have found myself indispenfibly obliged to declare war against Spain. The causes are set forth in my public declaration on this decasion; and therefore I shall not detain you with the repetition of them. My own conduct, fince my acceffion to the throne, as well as that of the late king, my royal grandfather, towards Spain, has been fo full of good-will and friendship; fo averse to the laying hold of several just grounds of complaint, which might have been alledged; and so attentive to the advantages of the Catholic king, and his family; that it was matter of the greatest surprize to me, to find, that engagements had, in this conjuncture, been entered into between that crown, and France; and a treaty made to unite all the branches of the house of Bourbon, in the most ambitious, and dangerous defigns against the commerce, and independency of the rest of Europe; and particularly of my kingdoms.

Whatever colours may be endeavoured to be put upon these injurious proceedings of the court of Madrid, I have nothing to reproach myself with: and, though I have left nothing untried, that could have prevented this rupture, I have thought it necessary to prepare against every event. I therefore rely on the divine bleffing on the juftice of my cause; the zealous, and powerful affiftance of my faithful subjects; and the concurrence of my allies, who must find themselves involved in the pernicious, and extensive, projects of my enemies.

I leave these considerations with

you, full of the justest confidence, that the honour of my crown, and the interests of my kingdoms, are fafe in your hands.

Both houses having waited on the king, with addresses in answer to this speech, his majesty was pleased to return the following most gracious answers.

To the house of lords.

My lords,

"I return you my hearty thanks for this address. The affectionate affurances you give me of your support and affishance in the vigorous profecution of this necessary war, are very agreeable to me, and cannot fail of producing the most falutary effects?"

To the house of commons.

Gentlemen,

"I return you my hearty thanks for this seasonable and affectionate address: the affurances contained in it, give me the highest satisfaction, and your firmness and resolution to support me will, I trust, enable me to defeat the ambitious designs of our enemies, and most effectually contribute to that salutary end which we desire."

CHARACTERS.

THERE is nothing that man is found to take more pleasure in than variety; and of all the varieties be is capable of contemplating, those observable in his own species, especially the noblest part of it, the Joul or mind, are the most entertaining, as they certainly are the most interesting. It was for this reason we resolved to begin that part of this work, (calculated equally for amusement and instruction,) which is not merely historical, with the most striking characters we could procure, not only of individuals, but of nations and other considerable bodies of men.

In pursuance of this plan we gave in our last volume the character of a famous nation improved, if we may Say So, by one, filed a Philosopher, into brutes. In the present; we shall lay before our readers, as a suitable companion to it, that of a considerble number of men transformed by necessity into downright Savages. We mean the Buccaneers of America, in that their original situation from aubence they derived their name. Some amujement, and even utility, must, ave prefume, accrue from a comparison of such surprising effects of art and nature.

THE Spaniards had not been long in the possession of the West Indies and the continent of America, when other nations, especially the English and French, began to follow them there. But tho' the Spaniards were unable to people such extensive countries themselve, Vot. IV.

they were resolved that no others should do it for them; and therefore made a most cruel war on all those of any other nation, who attempted to settle in any of the Antilles or Carribee Mands. French however were at last lucky enough to acquire fome footing in the island of St. Christopher's; but by the time they began to subside into a regular form of government, the Spaniards found means to diflodge them. Upon this the wretched fugitives, confidering at how great a distance they were from their mother country, and how near to the island of Hispaniola or St. Domingo, the northern parts of which were then uninhabited, and full of fwine and black cattle, they immediately relolved to take possession of that country, in conjunction with feveral other adventurers of their own and the English nation; especially as the Dutch, who now began to appear in these seas, promised to supply them plentifully with all kinds of necessaries they might procure, in exchange for the hides and tallow by hunting.

These new settlers obtained the name of Buccaneers from their custom of buccanning their beef and pork in order to keep it for sale, or for their own consumption, the method of which will be presently described. But some of them soon grew tired of this new way of life, and took to planting, while many more chose to turn pirates, trusting to find, among those who remained on shore, a quick sale for all the plunder they

could make at fea. This new body of adventurers were called Freebooters, from their making free prey or booty of whatever came in

their way.

The colony now began to thrive at a great rate, by the cheap and easy manner in which the Free-booters acquired the greatest riches, and the profusion with which they distributed them among their old companions the Buccaneers and Planters for the merest trifles. This brought numbers of Settles from Old France in quality of indented servants, tho' they toiled rather like slaves during the three years for which they generally bound themselves.

Thus the colony confifted of four classes; Buccaneers, Freebooters, Planters, and Indented Servants who generally remained with the Buccaneers, or Planters. And these four orders composed what they now began to call the body of Adventurers. These people lived together in a perfect harmony under a kind of democracy; every freeman had a despotic authority over his own family, and every captain was a sovereign in his own ship, though liable to be discarded at the discretion of the crew.

The Planters settled chiefly in the little island of Tortuga on the northern coast of Hispaniola; but it was not long before some of them going, to the great island to hunt with the Buccaneers, the rest were furprised by the Spaniards, and all, even those who had surrendered at discretion in hopes of mercy, were put to the sword, or hanged.

The next care of the Spaniards was to rid the great ifland of the Buccaneers, and for this reason they assembled a body of 500 lancemen, who by their feldom going

fewer than fifty in a company, obtained the name of *The Fifties* from their enemies, whose manners and customs we shall now enter upon.

The Buccaneers lived in little huts built on some spots of cleared ground just large enough to dry their skins on, and contain their buccanning houses. These spots they called Boucans, and the huts they dwelt in Ajoupas, a word which they borrowed from the Spaniards, and the Spaniards from the natives. Though these Ajoupas lay open on all fides, they were very agreeable to the hardy inhabitants, in a climate where wind and air are so very defireable things. As the Buccaneers had neither wife nor child, they affociated by pairs, and mutually rendered each other all the fervices a mafter could reasonably expect from a fervant, living together in so perfect a community, that the furvivor always succeeded his deceased partner. This kind of union or fellowship they called S'emateloter [insailoring], and each other Matelot [failor], whence is derived the custom of giving, at least in some parts of the French Antilles, the name Matelotage [failorage], to any kind of fociety formed by private persons for their mutual advantage They behaved to each other with the greatest justice and openness of heart; it would have been a crime to keep any thing under lock and key, but on the other hand the least pilfering was unpardonable, and punished with expulsion from the community. And indeed there could be no great temptation to steal, when it was reckoned a point of honour never to refuse a neighbour what he wanted; and where there was fo little property, it was impossible there should be many disputes. If any happened.

ed, the common friends of the parties at variance interposed, and soon put an end to the difference.

As to laws, the Buccaneers acknowledged flone but an odd jumble of conventions made between themselves, which, however, they regarded as the fovereign rule. They filenced all objections by cooly answering, that it was not the custom of the coast, and grounded their right of acting in this manner, on their baptism under the tropic, which freed them, in their opinion, from all obligations antecedent to that marine ceremony. The governor of Tortuga, when that island was again fettled, though appointed by the French court, had very little authority over them; they contented themselves with rendering him from time to time fome flight homage. They had in a manner entirely shaken off the yoke of religion, and thought they did a great deal, in not wholly forgetting the God of their Fathers: We are furprifed to meet with nations, among whom it is a difficult matter to difcover any traces of a religious worship: And yet it is certain, that had the Buccaneers of St. Domingo been perpetuated on the fame footing they sublisted at the time we are fpeaking of, the third or fourth generation of them would have as little religion as the Caffres and Hottentots of Africa, or the Topinambous and Cannibals of America.

They even laid afide their surnames, and assumed nick-names, or martial names, most of which have continued in their families to this day. Many however, on their marrying, which seldom happened till they turned planters, took care to have their real surnames inserted in the marriage contract; and this practice gave occasion to a proverb,

still current in the French Antilles, A man is not to be known till be takes

a wife.

Their dress confisted of a filthy greafy shirt, dyed with the blood of the animals they killed, a pair of troufers still more nasty; a thong of leather by way of belt, to which they hung a case containing some Detch knives, and a kind of very short fabre called Manchette, a hat without any brim, except a little flap on the front to take hold of it by, and shoes of hogskin all of a piece. Their guns were four feet and a half in the barrel, and of a bore to carry balls of an ounce. Every man had his contract fervants, more or fewer according to his abilities, befides a pack of twenty or thirty dogs, among which there was always a couple of beagles. Their chief employment at first was ox-hunting, and; if at any time they chafed a wild hog, it was rather for pastime; or to make provision for a feat, than for any other advantage. But, in process, of time, some of them betock themselves entirely to hunting of hogs, whose slesh they buck canned in the following manner:

First, they cut the slesh into long pieces, an inch and a half thick, and fprinkled them with falt, which they rubbed off after twenty-four hours? Then they dried these pieces in stoves over a fire made of the skin and bones of the beaft, till they grew as hard as a board, and affumed a deep brown colour. Pork prepared in this manner will keep in casks a twelvemonth and longer, and when steeped but à little while in lukewarm water, become plump and rofy, and yield moreover a most grateful smell, either broiled or boiled, or otherwise dressed, enough to tempt the most languid appetite, and please the most delicate palate.

5 2

Thofe

Those who hunt the wild boar, have of late been called simply Hunters.

In hunting, they fet out at daybreak, preceded by the beagles, and followed by their fervants with the rest of the dogs; and as they made it a point never to baulk their beagles, they were often led by them over the most frightful precipices, and through places which any other mortal wouldhave deemed absolutely impassable. As soon as the beagles had rouzed the game, the rest of the dogs struck up and furrounded the beaft, stopping it, and keeping a constant barking till the Buccaneer could get near enough to shoot it; in doing this he commonly aimed at the pit of the breast; when the beaft fell, he ham-strung it, to prevent its rising again. But it has fometimes happened that the creature, not wounded enough to tumble to the ground, has run furiously at his pursuer, and ripped him open. But in general the Buccaneer feldom miffed his aim, and when he did, was nimble enough to get up the tree behind which he had the precaution to place himself. What is more, some of them have been seen to overtake the beaft in chace, and ham-string it without any further ceremony.

As foon as the prey was half skinned, the master cut out a large bone, and sucked the marrow for breakfast. The rest he left to his servants, one of whom always remained behind to finish the skinning, and bring the skin with a choice piece of meat for the huntsmen's dinner. They then continued the chace till they had killed as many beasts, as there were heads in the company. The master was the last, to return to the boucan, loaded like the rest, with a skin and a piece of meat. Here the Buccaneers found

their tables ready, for every one had his feparate table, which was the first thing, any way fit for the purpose, that came in their way, a stone, the trunk of a tree, and the like. No table-cloth, no napkin, no bread or wine graced their board; not even potatoes or bananas, unless they found them ready to their hands. When this did not happen. the fat and lean of the game, taken alternately, ferved to fupply the place. A little pimento, and the fqueeze of an orange, their only fauce; contentment, peace of mind, a good appetite, and abundance of mirth, made every thing agreeable. Thus they lived and spent their time, till they had compleated the number of hides for which they had agreed with the merchants: which done, they carried them to Tortuga, or some port of the great island.

As the Buccaneers used much exercise, and fed only on fresh meat. they generally enjoyed a good state of health. They were indeed fubject to fevers, but either fuch as lasted only a day, and left no sensible impression the day following, or .. little flow fevers, which did not hinder them from action, and were of course so little regarded, that it was usual with the patient, when asked how he did, to answer, "Very " well, nothing ails me but the "feyer." It was impossible, however, they should not suffer considerably by fuch fatigues under a climate. to the heat of which few of them had been early enough inured. Hence the most considerate among them, after they had got money enough for that purpose, turned Planters. The rest soon spent the fruits of their labour in taverns and tippling-houses; and many had so habituated themselves to this kind of

life,

life, as to become incapable of any other. Nay, there have been inflances of young men, who having early embarked through necessity in this painful and dangerous profession, persisted in it afterwards, merely through a principle of libertinism, rather than return to France, and take possession of the most plentiful fortunes.

Such were the Buccaneers of St. Domingo, and fuch their fituation, when the Spaniards undertook to extirpate them. And at first they met with great success; for as the Buccaneers hunted separately, every one attended by his fervants, they were easily surprised. Hence the Spaniards killed numbers, and took many more, whom they condemned to a most cruel flavery. But whenever the Buccaneers had time to put themselves in a state of defence, they fought like lions, to avoid falling into the hands of a nation, from whom they were fure to receive no quarter; and by this means they often escaped; nay there are may instances of single men fighting their way through numbers. These dangers however, and the fuccess of the Spaniards in discovering their boucans, where they used to furprife and cut the throats of them and their servants in their sleep, engaged them to cohabit in greater numbers, and even to act offensively, in hopes that by fo doing, they might at last induce the Spaniards to let them live in peace. But the fury with which they behaved whenever they met any Spaniards, ferved only to make their enemies more intent on their destruction; and assistance coming to both parties, the whole island was turned into a flaughter-house, and so much blood spilt on both sides, that many places on account of the carnage of

which they had been the theatres, were intitled, of the massacre; such as the hill of the massacre, the plain of the massacre; which names they retain to this day.

At length the Spaniards grew tired of this way of proceeding, and had recourse to their old method of surprize, which against enemies of more courage than vigilance was like to succeed better. This put the Buccaneers under a necessity of never hunting but in large parties, and fixing their boucans in the little islands on the coast, where they retired every evening. This expedient succeeded, and the boucans by being more fixed, soon acquired the air and consistency of little towns.

When the Buccaneers had once fixed themselves, as related, each boucan ordered fcouts every morning to the highest part of the island in order to reconnoitre the coast, and fee if any Spanish parties were abroad. If no enemy appeared, they appointed a place and hour of rendezvous in the evening, and were never absent if not killed or prifoners. When therefore any one of the company was missing, it was not lawful for the rest to hunt again till they had got intelligence of him if taken, or avenged his death if killed.

Things continued in this fituation for a long time, till the Spaniards made a general hunt over the whole island, and by destroying their game, put the Buccaneers under a necessity of betaking themselves to another course of life. Some of them turned planters, and thereby increased some of the French settlements on the coast, and formed others. The rest, not relishing so confined and regular a life, entered among the Freebooters, who thereby became a very powerful body.

The following particulars relating to the Indians of the Peninsula within the Ganges, and likewise to the country itself, must throw a great light on all the military transactions in that remote part of the world. They are extracted from Mr. Cambridge's history of the late war there, and notwithstanding their importance, have never before, that we can find, been taken notice of by any other writer. The manner, in which the Indians feed their horses, seems to deserve particular attention.

T T is generally supposed, that the peninfula within the Ganges is under the immediate government of the Mogul, and that his mandates from Delli are obeyed in the most remote parts of the coaft; but a great part of that vast peninsula never acknowledged any subjection to the throne of Delli, till the reign of Aureng-Zebe; and the revenues from those Indian kings, and Moorish governors, who were conquered or employed by him, have, fince his death, been intercepted by the viceroys, which his weaker fuccessors have appointed for the government of the peninfula; fo that at this time neither can the tribute from the feveral potentates reach the court of Delli, nor the vigour of the government extend from the capital to those remote countries. And ever fince the province of Indoftan was ruined by Nadir Shah, the weakness of the Mogul, and the policy and confirmed independency of the vice-roys, have confined the in-Haënce of the government to its inland department. War and a second

The nominal fovereign possesses a third only, and that the least valuable part of his empire. Bengal, the smallest but most fertile province, is governed by a vice-roy. The other division, called Deckan, extending from Balafore, or Jagonaut, to Cape Comarin, is also delegated by the Mogul to another vice-roy, of exceeding great power, having within his jurisdiction seven large territories, to which he has the undifputed right of nominating feven nabobs, or governors of provinces. In all parts of India there are still large districts, which have preserved, with the Gentoo religion, the old form of government under Indian kings, called Rajas. Such are Maissore, whose capital is Seringapatam, and Tanjore, whose capital is Tanjore. There are also among the woods and mountainous parts of the country feveral petty princes, or heads of clans, diffinguished by the name of Polygars. These are all tributary to the nabobs, and those to the vice-roys, . whose capital is Aurengabad. The Carnatic is that part of the Deckan, which comprehends the principal fettlements of the Europeans, Madrass, and Pondicherry, and also Arcot. To establish the government of Arcot, and to oppose the hostile intentions of M. Dupleix. the English East India company engaged in this war in support of Mahomet Allee Cawn.

The chain of mountains which runs through the peninsula from north to south, is the cause of an extraordinary phenomenon in natural history. The countries which are separated by these mountains, though under the same latitude, have their seasons and climate entirely different; for while it is winter on one side of the hills, it is

fum-

formmer on the other. On the coast of Malabar a S. W. wind begins to blow from the fea at the end of June, with continued rain. and continues four months, during which time the weather is calm and ferene on the coast of Coromandel: and toward the end of October, the rainy feafon, which they term the change of the monfoon, begins on the coast of Coromandel; at which time, the tempestuous winds beating continually against a coast, on which there are no good ports, make it so dangerous for the shipping to remain there for the three ensuing months, that it is scarce ever attempted. This is the cause of the periodical return of our ships to Bombay, where there is a secure harbour, and convenient docks.

Without fome explanations it will be difficult to conceive how a handful of Europeans should appear fo respectable in the field, when opposed to a multitude of Asiatics.

It is also difficult to conceive how fuch vast multitudes as the Asiatic armies frequently confift of, especially with to large a proportion of horse, can be subsisted, as every horseman has two servants, one to take care of his horse, the other to procure him forage, and all thefe are not only accompanied with their wives and children, but there always follows the camp a moveable town of shops, where every thing is to be fold as in their cities, some hundreds of elephants for state only, and a train of women (with their numberless retinue) belonging to the prince and the great officers.

To provide for all these, the whole country is put in motion, and the strictest orders are given for all provisions to be brought into the camp. By this means all the cities far and near are exhausted, but the

camp, for the most part, is plenti-

fully supplied.

The forage is procured in the following manner: Every horseman is allowed a man for the purpole, who is constantly employed in cutting turf, and washing the roots of it; and this is a more hearty food for a horse than grass. A shower of rain produces another crop in a few days time; and, in case of continued dry weather, they move their

camp to fresh ground.

They also feed their horses in the rice fields, and where meat is plenty, they boil the offal to rags, and mixing it with butter and some forts of grain, make balls of it, which they thrust down the horses throats. In a scarcity of provisions, they give them opium, which has the fame effect both on the horses and men, for at once it damps their appetites, and enables them to endure fatigue. The horses of the country are naturally fo exceedingly vicious, that they are not to be broke in the manage, and cannot be brought to act with the same regularity in the field, as a squadron of European cavalry. The Perfian horses being more gentle and docile, are greatly estsemed, and often valued at a thousand guineas. Those of India fell for fifty or a hundred.

Many of the Indians abstain from all kinds of animal food, and live chiefly, if not wholly, upon rice; and they have so great a veneration for cows, that they are all prohibited by their religion, from killing any of that species; therefore there generally is a fufficient supply of beef for the Mahometan soldiery, and the small proportion of Eu-

ropeans.

Their rivers, when they are not fordable, in the rainy feafon become torrents, being swelled to such a

de-

degree, that they are not to be paffed but obliquely, the landing place being frequently a mile below the place of embarkation, and heavy veffels, built of timber, could not be brought up against the stream to

ferve again.

They therefore make large boats of a kind of basket work, which they cover with skins. As there must be always great plenty of hides in so numerous an army, they are easily made. They are very light and manageable, and yet they will carry above fifty horse, and are capable of transporting the heaviest

artillery.

The Afiatics have an invincible dread of fire-arms, the true cause of which lies in the inexperience of their leading men, who never understood the advantages of discipline, and who have kept their infantry upon too low a footing. Their cavalry, though not backward to engage with fabres, are extremely unwilling to bring their horses within the reach of guns; so that they do not decline an engagement fo much through fear for their lives, as for their fortunes, which are all laid out in the horse they ride on.

Such of the natives as have been disciplined and encouraged by Europeans, and formed into a regular infantry, under officers of their own, and generally known by the name of Scapoys, have familiarized themfelves to fire-arms, and behaved well behind walls; and when we give them ferjeants to lead them on, they make no contemptible figure in the field.

Nothing is so ruinous to their military affairs as their false notions of artillery; they are terrified with that of the enemy, and soolishly put a confidence in their own; placing their chief dependence on the largest pieces, which they neither know how to manage nor move. They give them pompous and founding names, as the Italians do their guns, and have some pieces which carry a ball of 70 pounds. When we march round them with our light field pieces, and make it necessary to move those enormous weights, their bullocks, which are at best very untractable, if a shot comes among them, are quite ungovernable, and at the same time are so ill harnessed, that it occasions no small delay to free the rest from any one that shall happen to be unruly or

In war with the Afiatics alone, we have a much greater; advantage in their being fo very tenacious of their old manners, than in their want of bravery. Not only the prince himfelf, but every raja, who has command of all the forces he can bring into the field, be they more or less, always appears among them mounted on an elephant, and is at once the general and enfign, or standard of that corps, who keep their eyes constantly on him; and if they lose fight of him for a moment, conclude that all is loft. Thus we find, Aureng-zebe gained two battles by the treachery of those who defired his two victorious brothers to get down from their elephants, mount their horses and purfue the vanquished; their troops, missing them, immediately dispersed. The same practice, continued to this day, affords our engineers a fair opportunity of deciding the fate. of a whole detachment, by one well directed discharge of a fixpounder; and those enormous beafts, now feem to be brought into the field for no other end than to be a mark for our artillery.

Another

Another great obfacle to their fuccess in war, is their superstition, particularly their observance of

lucky and unlucky days.

Being fond of all kinds of beafts of prey, they keep great numbers of them, and often visit them before they give battle; and if they find them heavy and dull, they think it a bad omen, and a reason sufficient to postpone their intended design of an action; and on the other hand, the accidental fury of the animal is regarded as a happy omen. They have also a custom of matching two wild beafts, commonly elephants; and having given their own name to the one, and that of the enemy to the other, they bring them together to fight in presence of their army: But in this custom they are not altogether to be condemned for fuperstitious folly, fince they have the policy to make it a very unequal match, and to give their own name to the strongest.

But what is the greatest obstacle of all, to their becoming a military people, is, that those who have once had fuch fuccess in the field, as to obtain the name of Fortunate, being thereby confidered as invincible, and in consequence unmolested for a time, are willing to fave the needless expence of an army. reason there are few veterans, and most of their armies consist of an asfemblage of various people hastily brought together from different parts; fo that there can be no such thing as discipline, without which, numbers are but an impediment,

and bravery ineffectual.

Notwithstanding they have so severely suffered by being surprised in the night by the Europeans; they can never be brought to establish either order or vigilance in their camp: And when they have acted with us as allies, the most earnest remonstrances could never prevail with them to be sufficiently upon their guard, when in the neighbourhood of the French, or to quit their ground in the morning, to co-operate with us, in surprising the enemy.

At the close of the evening, every man eats an inconceivable quantity of rice, and many take after it some kind of foporific drugs; fo that about mid-night, the whole army is in a dead fleep. The confequence of these habits is obvious; and yet it would appear a strange proposition to an Eastern monarch, to endeavour to persuade him, that the fecurity of his throne depended upon the regulations of the meals of a common foldier; much less would he be prevailed on to restrain him in the use of that opium, which is to warm his blood for action, and animate his foul with heroism. It must fill the mind of an European foldier at once with compassion and contempt, to fee a heap of these poor creatures, folely animated by a momentary intoxication, crowded into a breach, and both in their garb and impotent fury, resembling a mob of frantic women.

And there is certainly an appearance of effeminacy in the Eastern drefs, which has at all times greatly contributed to lessen their military character with the European nations, who, from their own habits and prejudices, will naturally receive a strange impression, upon seeing a body of horse in filk or cotton robes.

There is, however, no character they are so fond of as that of a warrior; and as they have no other notion of government, they have

been.

been, from time immemorial, continually at war with one another,

A general account of the Canadians, from Charlevoix.

VERY man is possessed of the necessaries of life; but there is little paid to the king; the inhabitant is not acquainted with taxes; bread is cheap; fish and flesh are not dear; but wine, stuffs, and all French commodities, are very expensive. Gentlemen, and those officers who have nothing but their pay, and are besides encumbered with families, have the greatest reafon to complain. The women have a great deal of spirit and goodnature, are extremely agreeable, and excellent breeders; and these good qualities are, for the most part, all the fortunes they bring their husbands; but God has bleffed the marriages in this country in the same manner he formerly bleffed the patriarchs. In order to support such numerous families, they ought likewife to lead the lives of patriarchs; but the time for this is past. There are a greater number of noblesse in New France than in all the other colonies put together.

The king maintains here eight and twenty companies of marines, and three etats majors. Many families have been ennobled here; and there fill remain feveral officers of the regiment of Corignan-Salieres, who have peopled this country with gentlemen who are not in extraordinary good circumstances, and would be still less so were not commerce allowed them, and the right of hunting and sishing, which

is common to every one.

After all, it is a little their own fault, if they are ever exposed to want. The land is good almost every where, and agriculture does not in the least derogate from their quality. How many gentlemen throughout all our provinces would envy the lot of the fimple inhabitants of Canada, did they but know it! And can those who languish here in a shameful indigence be excufed for refusing to embrace a profession, which the corruption of manners and the most falutary maxims has alone degraded from its ancient dignity? There is not in the world a more wholesome climate than this: No particular distemper is epidemical here; the fields and woods are full of simples of a wonderful efficacy: and the trees distil balms of an excellent quality. These advantages ought at least to engage those, whose birth Providence has cast in this country, to remain in it; but inconstancy, aversion to a regular and affiduous labour, and a spirit of independence, have ever carried a great many young people out of it, and prevented the colony from being peopled.

These are the defects with which the French Canadians are, with the greatest justice, reproached. The fame may likewise be said of the Indians. One would imagine that the air they breathe in this immense continent contributes to it; but the example and frequent intercourie with its natural inhabitants, are more than fufficient to constitute this character. Our Creoles are likewife accused of great avidity in amassing; and, indeed, they do things with this view, which could hardly be believed if they were not feen. The journeys they under-

ويكالخالق

take, the fatigues they undergo, the dangers to which they expose themselves, and the efforts they make, furpais all imagination. There are, however, a few less interested, who dissipate, with greater facility, what has cost them so much pains to acquire, or who testify less regret at having loft it. Thus there is some room to imagine, that they commonly undertake fuch painful and dangerous journeys out of a tafte they have contracted for them. They love to breathe a free air; they are early accustomed to a wandering life; it has charms for them, which make them forget past dangers and fatigues; and they place their glory in encountering them They have a great deal of wit, especially the fair fex, in whom it is brilliant and easy. They are, besides, constant and resolute, fertile in refources, courageous, and capable of managing the greatest affairs.

. I know not whether I ought to reckon amongst the defects of our Canadians, the good opinion they entertain of themselves. It is at least certain, that it inspires them with a confidence, which leads them to undertake and execute what would appear impossible to many others, ... It must, however, be confessed they have excellent qualities. There is not a province in the kingdom where the people have a finer complexion, a more advantageous stature, or a body better proportioned. The strength of their constitution is not always answerable; and if the Canadians live to any age, they foon look old and decrepid. This is not entirely their own fault, it is likewise that of their parents, who are not fufficiently watchful over their children, to prevent their ruining their health at a time of life, when if it suffers it is seldom or never recovered. Their agility and address are unequalled; the most expert Indians themselves are not better marksmen, or manage canoes, in the most dangerous rapids, with greater skill.

Many are of opinion, that they are unfit for the sciences, which require any great degree of application, and a continued fludy. I am not able to fay whether this prejudice is well grounded, for as yet we have feen no Canadian who has endeavoured to remove it, which is, perhaps, owing to the dissipation in which they are brought up. But nobody can deny them an excellent genius for mechanicks; they have hardly any occasion for the affistance of a master, in order to excel in this science; and some are every day to be met with, who have fucceeded in all trades, without having ever ferved an apprenticeship.

Some people tax them with ingratitude, nevertheless they seem to me to have a good disposition; but their natural inconstancy often prevents their attending to the duties required by gratitude. It is alledged, they make bad fervants, which is owing to their great haughtiness of spirit, and to their loving liberty too much to subject themselves willingly to fervitude. They are, however, good masters, which is the reverse of what is faid of those from whom the greatest part of them are descended. They would have been perfect in character, if to their own virtues they had added those of their ancestors. Their inconstancy in friendship has sometimes been complained of; but this complaint can hardly be general, and in those who have given occasion for it, it pro-

ceeds from their not being accustomed to confirmint, even in their own affairs. If they are not eafily difciplined, this likewise proceeds from the same principle, or from their having a discipline peculiar to themfelves, which they believe is better adapted for carrying on the war against the Indians, in which they are not entirely to blame. Moreover, they appear to me to be unable to govern a certain impetuofity, which render them fitter for fudden furprizes, or hafty expeditions, than the regular and continued operations of a campaign. It has likewife been observed, that amongit a great number of brave men, who distinguished themselves in the last wars, there were very few found capable of bearing a superior. This is, perhaps, owing to their not having fufficiently learned to obey. It is however true, that when they are well conducted, there is nothing which they will not accomplish, whether by fea or land; but in order to this, they must entertain a great opinion of their commander. late M. d'Iberville, who had all the good qualities of his countrymen, without any of their defects. could have led them to the end of the world.

There is one thing, with respect to which they are not easily to be excused, and that is the little natural affection most of them shew to their parents, who for their part display a tenderness for them, which is not extremely well managed. The Indians fall into the same defect, and it produces amongst them the same consequences. But what, above all things, ought to make the Canadians be held in much esteem, is the great fund they have of piety and religion, and that nothing is

wanting to their education upon this article. It is likewise true, that when they are out of their own country, they hardly retain any of their defects. As with all this they are extremely brave and active, they might be of great service in war, in the marine, and in the arts; and I am of opinion, that it would redound greatly to the advantage of the state, were they to be much more numerous than they are at prefent. Men conflitute the principal riches of the fovereign, and Canada, should it be of no other use to France, would still be, were it well peopled, one of the most important of all our colonies.

The Epistle from the yearly meeting, held in London, by adjournments, from the 11th day of the fifth month, 1761, to the 18th of the same, inclusive.

To the quarterly and monthly meetings of friends and brethren, in Great Britain, Ireland, and elsewhere.

Dear friends and bretbren!

NDER a fense of that ancient love and life, whereby we were gathered to be a people, we tenderly salute you; earnestly desiring that grace, mercy and peace, through the knowledge of God the Father, and his beloved Son, may abound amongst you.

We have renewed cause, humbly to acknowledge the gracious condescension of the God of all our mercies, manifested to us in this our assembly, whereby our souls have been comforted in his presence, our hope in his salvation renewed, and the bond of true sellowship again

confirmed, under a fresh sense that it is his good pleafure we should be continued a people, to the praise of his great and ever worthy name. In a degree of this uniting virtue and holy influence, we have been enabled to transact the affairs, which have come before us, in much brotherly kindness and condescension, and strengthened to pursue the great object of the churches care, the promotion of spiritual health and vigour in every member of the body, that it may be presented holy and acceptable to him who hath called us to glory and virtue.

The amount of friends sufferings in England and Wales, brought in this year, being chiefly for tithes, and those called church rates, is three thousand two hundred and twenty-five pounds and upwards; those from Irelend, one thousand fix hundred and seventy-nine pounds and upwards. Against these and other demands, inconsistent with the gospel dispensation, the testimony of truth seems to spread, to the opening of the understanding of many, heretofore ignorant of our religious

The accounts received this year from the quarterly meetings in England, and the epiftles from Wales, Scotland, Ireland, Holland, New York, Penfylvania and New Jerfey, Maryland, Virginia, South Carolina, and Tortola, have afforded us fome comfortable observations, that harmony and concord subsit, in a good degree, throughout the churches; that a lively concern is maintained in many places, for the support of discipline, and for the promotion of truth and righteousness.

principles.

It likewise appears from these accounts, that divers are convinced of

that truth in which we have most furely believed, and have joined themselves to our religious community fince last year." We therefore earnestly entreat friends every where, to walk in the light, and manifest by a circumspect conversation in godly fear, that our testimony to the power and sufficiency of the divine Spirit, is founded on the everlasting gospel. Thus, no occafion of stumbling will be administered to the weak, but many, beholding among us the fruits of righteoufness, may have cause with us to glorify our Father who is heaven.

When it pleased the Lord to visit our predecessors in the truth, they were as sheep without a shepherd, without a place of feeding, or a fold of rest; scattered, as many are to this day, on the barren mountains of forms and traditions, yet inwardly hungering after fubstance, which they faw not how to obtain, it pleased the author of these secret strong desires, in his own time, to open to their understandings the nature of his kingdom, the spirituality of that worship which was acceptable to him, and the bleffed advantages of his gospel when received, not in word only, but in power.

As their minds were thus enlightened, an aweful fense of the Lord Almighty, the all-seeing Father of spirits prevailed therein, and led them from a dependence on outward performances, to a filent, solemn adoration in simplicity of heart, humbly waiting for that help, without which none can worship with acceptance.

In this frame of mind they were made fensible of the accomplishment of his promife, that " those who " wait upon him, should renew " their strength;" hereby they were

enabled

enabled to endure a fight of afflictions, to which they were exposed for the sake of their Christian testimony: For, against them it may be truly said, no occasion was found, but " concerning the law " of their God."

And, dear friends, as it hath pleased divine goodness, clearly to manifest amongst us the way of life and falvation, and to instruct us where and how to wait for him, prize, we befeech you, these pre-cious privileges; keep all your meetings in the name of the Lord, and let your minds be established in an humble waiting upon him with reverence and fear: fo shall strength be added to your strength, and being more closely united to him, you will experience the indwelling of his bleffed Spirit : And as an increase of access to the fountain of mercies is experienced, our advices to the constant attendance of meetings for religious worship, both on the first and other days of the week, will become less necessary. Our refort to them will be with diligence, and a careful observance of the hour appointed; our demeanour in them will manifest an humble and fingle trust in that power, which is " a "covert from the storms, a shelter " from the tempest, and as rivers of " water in dry places." So shall we be enabled, as watchful, circumspect fervants, to stand fast in our feveral stations, being preachers of righteousness to the world; and, as good stewards in the houshold of God, instruct, reprove, and restrain those under our care, with wisdom, long-fuffering, meeknefs, yet authority.

The neglect of this most important concern, of waiting upon the Lord for the renewal of strength to discharge every duty, hath been one great cause of declension, amongst many of us as a people, from that lively zeal and uniform piety, which are now, and ever have been, the fruits of the Holy Spirit! The sense whereof having deeply affected our minds, hath induced us to enlarge upon this subject.

And here we find it our concern, to revive a truth which is worthy of general remembrance; That no affectation of fingularity was the cause of a demeanour, both civil and religious, in our fore-fathers (or in the faithful of this day, different in many respects from the conduct of those among whom we dwell) they beholding the vanity, unprofitableness, and infincerity of the falutations, customs and fashions of the world; observing the examples of our bleffed Saviour and hisfollowers, with the frequent testimonies recorded in holy writ, to the necessity of a felf-denying life and conversation. together with the law, and the teftimony revealed in their hearts, retained in view the injunction of the Apostle, Not to be conformed to this world, but to be transformed, by the renewing of the mind, that we may prove what is that good, and acceptable, and perfect will of God. May an uprightness of heart, as in the fight of God, ever attend this fimplicity of appearance; that none, by a conduct inconfiftent therewith, may furnish occasion for the testimony to be evil spoken of or despised.

We conclude with an earnest recommendation of the Apostle's advice to the primitive believers; Finally, brethren, whatsoever things are are are true, whatsoever things are just, whatsoever things are just, whatsoever things are just, ever things are lovely, aubatsoever things are of good report; if there be any virtue, if there be any praise, think on these things.

The Grace of our Lord Jesus Christ be with you all. Amen.

Signed in and on behalf of the yearly meeting,

By WILLIAM FRY, Clerk to the meeting this year.

The following copy of an original letter from Quéen Elizabeth, to Heaton, Bishop of Ely, is taken from the Register of Ely.

Proud Prelate,

Understand you are backward in complying with your agreement; but, I would have you to know, that I who made you what you are, can unmake you; and if you do not forthwith fulfil your engagement, frock you.

Your's, as you demean yourfelf,

ELIZABETH.

Heaton, it seems, had promised the queen to exchange some part of the land belonging to the fee for an equivalent, and did so, but it was in consequence of the above letter.

An account of the magnificent table kept in the reign of King Charles I. before his troubles.

HERE were daily in his court 86 tables well furnished each meal, whereof the king's table had 28 dishes, the queen's 24; four other tables 16 diffies each; three other 10 dishes each; 12 other had 7 dishes each; 17 other tables had each of them five difnes; three other had 4 each; thirty-two other tables had each three dishes; and

thirteen other had each 2 diffies: in all, about 500 dishes each meal, with beer, wine, and all other things necessary. All which was provided most by the feveral purveyors, who by commission, legally and regularly authorized, did receive those provisions at a moderate price, fuch as had been formerly agreed upon in the feveral counties of England, which price (by reason of the value of money much altered) was become low, yet a very inconfiderable burthen to the kingdom in general, but thereby was greatly supported the dignity royal in the eyes of strangers as well as subjects. The English nobility and gentry, according to the king's example, were excited to keep a proportionable holpitality in their feveral country manfions, the hufbandman encouraged to breed cattle, all tradesmen to a chearful industry; and there was then a free circulation of monies throughout the whole body of the kingdom. There was spent yearly in the king's house of gross meat 1500 oxen, 7000 theep, 1200 reals, 300 porkers, 400 flurks or young beefs, 6800 lambs, 300 flitches of bacon, and 26 boars; also 140 dozen of geele, 250 dozen of capons, 470 dozen of hens, 750 dozen of pullets, 1470 dozen of chickens: for bread, 3600 bushets of wheat; and for drink 600 tun of wine, and 4700 tun of beer; moreover, of butter 46,640 pounds, together with fish, and fowl, venifon, fruit, and fpice proportionably: This prodigious plenty in the king's court, caused foreigners to put a higher value upon the king, and caused the natives, who were there freely welcome, to increase their affection to the king, it being found as necessary for the king of England

this way to endear the English, who ever delighted in feasting; as for the Italian princes by fights and shews to endear their subjects, who as much delighted therein.

Therefore, by fpecial order of the king's house, some of his majesty's servants, men of quality, went daily to Westminster-Hall in term-time, between eleven and twelve of the clock, to invite gentlemen to eat of the king's acates, or viands, and in parliament time to invite the parliament-men thereto.

But the circumstances of times being much altered, and the nobility, judges, and parliament-men, having mostly town-houses, the necessity for keeping the above grand table ceases, and the striking off the supernumerary officers, appears to be an act of the highest wisdom as well as frugality.

The last will of that great master of political arithmetic, Sir William Petty, Knight, founder of the noble family of Shelburne; containing a very curious account of his life, and affording a stronger character of him, perhaps, than could be expected from any other pen.

N the name of God, Amen. I Sir William Petty, Knt. born at Rumfey in Hantshire ||, do, revoking all other and former wills, make this my last will and testament, premising the ensuing preface to the same, whereby to express my condition, design, intentions, and desires, concerning the persons and things contained in and relating to my said will, for the better expounding any thing, which may hereafter seem doubtful therein,

and also for justifying, on behalf of my children, the manner and means of getting and acquiring the estate, which I hereby bequeath unto them; exhorting them to improve the fame by no worse negociations. In the first place, I declare and affirm, that at the full age of fifteen years I had obtained the Latin, Greek and French tongues, the whole body of common arithmetick, the practical geometry and astronomy, conducing to navigation, dialling, &c. with the knowledge of feveral mathematical trades, all which, and having been at the university of Oxon, preferred me to the king's navy; where at the age of twenty years, I had gotten up about threefcore pounds, with as much mathematicks as any of my age was known to have had. With this provision, anno 1643, when the civil wars betwixt the King and Parliament grew hot, I went into the Netherlands and France for three years, and having vigoroufly followed my studies, especially that of medicine, at Utrecht, Leyden, Amsterdam, and Paris, I returned to Rumfey, where I was born. bringing back with me my brother Anthony, whom I had bred, with about 10l. more than I had carried out of England. With this 70l. and my endeavours, in less than four years more I obtained my degree of M. D. in Oxford, and forthwith thereupon to be admitted into the college of physicians, London, and into several clubs of the virtuous; after all which expences defrayed, I had left 281, and in the next two years, being made fellow of Brazen Nose, and anatomy professor in Oxford, and also reader at Gresham College, I advanced my faid flock to about 400l. and with 1001. more advanced and given me to go for Ireland, unto full 500l. Upon the 10th of September 1652, Ilanded at Waterford in Ireland, physician to the army, who had suppressed the rebellion begun in 1641, and to the general of the fame, and the head-quarters, at the rate of 20s. per diem, at which I continued till June 1659, gaining by my practice 400l, a year above the faid falary. About September 1654, I perceiving that the admeasurement of the lands, forfeited by the aforementioned rebellion, and intended to regulate the fatisfaction of the foldiers, who had fuppressed the same, was most unsufficiently and abfurdly managed; I obtained a contract, dated 11th December 1654, for making the same admeasurement, and by God's blesfing, so performed the same, as that I gained about 90001, thereby; which, with the 500l abovementioned, my falary of 20s. per diem, the benefit of my practice, together with 6ol. given me for directing an after-furvey of the adventurers lands, and 800l. more for two years falary, as clerk of the council, raifed me an estate of about 13000l. in ready and real money, at a time when, without art, interest, or authority, men bought as much lands for 10s. in real money, as in this year 1685 yields 10s. per ann. rent, above his majesty's quit-rents. Now, I bestowed part of the said 13000l. in foldiers debentures, part in purchasing the earl of Arundel's house and garden in Lothbury, London, and part I keep in eash, to answer emergencies; hereupon I purchased lands in Ireland, with foldiers debentures, bought at above the market rates, great part whereof I lost by the court of Innocents, anno 1663 *; and built the faid garden, called Token-house-yard. in Lothbury, which was for the most part destroyed by the dreadful fire, anno 1666. Afterwards, anno 1667, I married Elizabeth, the relict of Sir Maurice Fenton, Bart. I fet up iron works and pilchardfishing in Kerry, and opened the lead mines and timber trade in Kerry; by all which, and fome ad vantageous bargains, and with fiving under my income, I have at the making this my will the real and personal estate following, viz. a large house and four tenements in Rumfey, with four acres of meadow upon the causeway, and about four acres of arable in the fields, called Marks and Woollfworth, in all

^{*} In 1663, he raised his reputation by the invention of the double bottomed thip, against the judgment of almost all mankind; for in July, when at fust the thip ventured from Dublin to Holyhead, the stayed there many days before her return, which made her adversaries infult, and discourse the several necessities why the must be cast away: but her return in triumph, with those visible advantages above other vessels, checked the derision of some, and encalmed the violence of others, the full point being clearly gained, that she could bear the sea. She turned into that narrow harbour against wind and tide, among the rocks and ships with fuch dexterity, as many ancient seamen confessed they had never seen the like. It appeared much to excel all other forms of thips in failing, carriage, and fecurity; but at length, in its return from a voyage, was destroyed by a common fate, and fuch a dreadful tempest, as overwhelmed a great fleet the same night; so that the ancient fabrick of thips had no reason to triumph over the new model; when of seventy sail, that were in the same storm, there was not one escaped to bring the news. A model of this ship is still kept in the repository of Gresham College, which he presented them, made with his own hands. Vol. IV. Contract and address about

about 30l. per ann. Houses in Token-house-vard, near Lothbury, London, with a leafe in Piccadilly, and the Seven Stars and the Blazing Star in Birching-lane, London, worth about 500l. per ann. besides mortgages upon certain houses in Hog-lane, near Shoreditch in London, and in Erith in Kent, worth about 201 per ann. I have three fourth parts of the ship Charles, whereof Derych Paine is mafter, which I value at 80l. per ann. As also the copper-plates for the maps of Ireland with the king's privilege, which I rate at 100l. per ann. in all 730l. per ann. I have in Ireland, without the county of Kerry, in lands, remainders, and revetfions, about 3100l. per ann. I have of neat profits out of the lands and woods of Kerry, 1100l. per ann. besides iron-works, fishing, and lead mines, and marble quarries, worth 600l. per ann. in all 4800l. I have as my wife's jointure, during her life, about 850l. per ann. and for fourteen years after her death about 2001, per ann. I have, by 3300l. money at interest, 320l. per ann. in all about 6700l. per ann.

The personal estate is as follows, viz. In cheft 6600l, in the hands of Adam Loftus, 1206l. of Mr. John Cogs, Goldsmith, of London, 125 11. in filver, plate and jewels, about 3000l. in furniture, goods, pictures, coach-horses, books, and watches, 1150l. per estimate in all 12,000l. I value my three chefts of original maps and field-books, the copies of the Downe-furvey, with the barony maps, and the cheft of distribution books, with two chefts of loofe papers relating to the furvey, the two great barony books, and the book of the history of the survey, all together at 2000l. I have due out of Kerry, for arrears of my rent and iron, before the 24th of June 1685, the sum of 1912l. for the next half year's rent out of my lands in Ireland, my wife's jointure, and England, on or before the 24th of June next, 2000l. Moreover, by arrears due 30th of April 1685, out of all my estate, by estimate, and interest of money, 1800l. By other good debts, due upon bonds and bills at this time, per estimate, gool. By debts, which I call bad, 4000l. worth perhaps 800l. by debts. which I call doubtful, 50,000l. worth perhaps 25,000l. in all 34,412l. and the total of the whole personal estate, 46,4121. So as my present income for the year 1685 may be 6700l, the profits of the personal estate may be 46411. and the demonstrable improvement of my Irish estate may be 3650l. per ann. to make in all 15,000l. per ann, in and by all manner of effects, abating for bad debts, about 28,000l. whereupon I fay in grofs, that my real estate or income may be 6700l. per ann. my personal estate about 45,000l. my bad and desperate debts 30,000l. and the improvements may be 4000l. per ann. in all 15,000l. per ann. ut Supra. Now, my opinion and defire is (if I could effect it, and if I were clear from the law, cuftom, and all other impediments) to add to my wife's jointure three fourths of what it is now computed at, viz. 6371. per ann. to make the whole 15871. per ann. which addition of 6371. and 850l. being deducted out of the aforementioned 6700l. leaves 5113l. for my two fons; whereof I would my eldest son should have two thirds. or 3408l. and the younger 1705l. and that after their mother's death, the aforefaid addition of 6371. should

should be added in like proportion, making for the eldest 38321. and for the youngest 19161. And I would that the improvement of the estate should be equally divided between my two fons; and that the personal estate (first taking out 10,000l, for my only daughter) that the rest should be equally divided between my wife and three children; by which method my wife would have 15871. per ann. and gocol. in personal effects; my daughter would have 10000 l. of the Craem, and good, more with less certainty; my eldest son would have 3800l, per ann, and half the expected improvement, with good. in hopeful effects, over and above his wife's portion; and my youngest son would have the same within 1900l. per ann. I would advise my wife in this case, to spend her whole 15871. per ann. that is to fay, on her own entertainment, charity, and munificence, without care of increasing her children's fortunes; and I would she should give away one third of the abovementioned good, at her death, even from her children, upon any worthy object, and dispose of the other two thirds to such of her children and grandchildren as pleased her best, without regard to any other rule or proportion. In case of either of my three children's death under age, I advise as follows, viz. if my eldest, Charles, die without issue, I would that Henry should have three fourths of what he leaves, and my daughter Anne the rest. If Henry die, I would that what he leaves may be equally divided between Charles and Anne; and if Anne die, that her share be equally divided between Charles and Henry.

Memorandum, That I think fit to

rate the 30,000 l. desperate debts at 1000 l. only, and to give it my daughter, to make her abovementioned 10,000l. and 9000 l. to be full 20,000 l. which is much short of what I have given her younger brother; and the elder brother may have 3800l. per ann. 9000l. in money, worth 900 l. more, 2000 l. by improvements, and 13001. by marriage, to make up the whole to 8000l. per ann. which is very well for the eldest son, as 20,000l. for the daughter.—He then leaves his wife executrix and guardian during her widowhood, and in case of her marriage, her brother James Waller and Thomas Dance; recommending to them and his children to use the same servants and instruments for management of the estate, as were in his life-time, at certain falaries to continue during their lives, or until his youngest child should be twenty-one years, which would be the 22d of October 1696, after which his children might put the management of their respective concerns into what hand they pleased. And then proceeds -I would not have my funeral charges to exceed 300 l. over and above what fum I allow, and give 150l. to fet up a monument in the church of Rumfey, near where my grandfather, father, and mother were buried, in memory of them, and of all my brothers and fifters. I also give 51. for a stone to be set up in Lothbury church, London, in memory of my brother Anthony, there buried about the 18th October 1649: I also give 50l. for a fmall monument, to be fet up in St. Bride's church, Dublin, in memory of my fon John, and my near kinfman John Petty; fuppofing my wife will add thereunto for her excellent cellent fon SirWilliam Fenton, Bart. who was buried there 18th March 1670-1; and if I myself be buried in any of the faid three places, I would have 1001. only added to the above-named fums, or that the faid 1001. Shall be bestowed on a monument for me in any other place, where I shall die. As for legacies for the poor I am at a stand; as for beggars by trade and election I give them nothing; as for impotents by the hand of God, the publick ought to maintain them; as for those who have been bred to no calling nor estate, they should be put upon their kindred; as for those, who can get no work, the magistrate should cause them to be employed, which may be well done in Ireland, where is fifteen acres of improvable land for every head; prisoners for crimes, by the king; for debt, by their profecutors; as for those who compassionate the sufferings of any object, let them relieve themselves by relieving such fufferers, that is, give them alms pro re nata, and for God's fake relieve those several species abovementioned, where the abovementioned obligers fail in their duties; wherefore I am contented that I have affifted all my poor relations, and put many into a way of getting their own bread, and have laboured in publick works, and by inventions have fought out real objects of charity; and do hereby conjure all, who partake of my estate, from time to time to do the same at their peril. Nevertheless to answer custom, and to take the furer fide, I give 201, to the most wanting of the parish wheren I die, As for the education of my children, I would that ray daughter might marry in Ireland, defiring that fuch a fum

as I have left her, might not be carried out of Ireland. I wish that my eldest son may get a gentleman's estate in England, which, by what I have gotten already, intend to purchase, and by what I presume he may have with a wife, may amount to between 2 and 3000l. per ann, and buy fome office he may get there, together with an ordinary fuperlucration, may reasonably be expected; fo as I defign my youngest son's trade and employment to be the prudent management of our Irish estate for himself and his elder brother, which I suppose his said brother must consider him for. As for myself, I being now about threefcore and two years old, I intend to attend the improvement of my lands in Ireland, and to get in the many debts owing unto me; and to promote the trade of iron, lead, marble, fish, and timber, whereof my estate is capable; and as for studies and experiments, I think now to confine the same to the anatomy of the people and political arithmetick; as also to the improvement of ships, land carriages, guns, and pumps, as of most use to mankind, not blaming the studies of other men. As for religion, I die in the profession of that faith, and in the practice of such worship, as I find established by the law of my country, not being able to believe what I myself please, nor to worship God better than by doing as I would be done unto, and observing the laws of my country, and expressing my love and honour to Almighty God, by fuch figns and tokens, as are understood to be fuch by the people with whom I live, God knowing my heart, even without any at all; and thus begging the Divine Majesty to make me what he would have me to be, both as tof aith and good works, I willingly refign my foul into his hands, relying only on his infinite mercy and the merits of my Saviour, for my happiness after this life; where I expect to know and fee God more clearly, than by the study of the scriptures, and of his works I have been hitherto able to do. Grant me, O Lord, an easy passage to thyself, that as I have lived in thy fear, I may be known to die in thy favour. Amen.

[In 1667 he married Elizabeth, daughter to Sir Hardress Waller, of Castletown, in the county of Limemerick, and widow of Sir Maurice Fenton; and dying at his house in Piccadilly-street, Westminster, of a gangrene in his foot, occasioned by the swelling of the gout, 16th December 1687, was buried in the church of Rumsey, near the bodies

of his father and mother.]

The two following pieces, besides presenting in a very amiable light the virtues of the excellent men who wrote them, may likewise give us some idea of the great perfonages to whom they were addressed.

A Letter from Monf. de Fenelon, Archbishop of Cambray, to his Pupil, the Duke of Burgundy, Father to the present French King.

FFfpring of St. Lewis, imitate your forefather. Be, like him, mild, humane, easy of access, affable, compassionate, and liberal. Let your grandeur never hinder you from condescending out of goodness, to the lowest of your subjects, to put yourself in their place; yet so, that this goodness may never weaken your authority, nor lessen their respect. Study men continually; learn to make use of them, without making them your mafters: fearch the whole world for merit. It is commonly modest and retired; virtue does not pierce the throng to shew itself; it is neither forward nor greedy, and is content to be forgotten. Suffer not yourfelf to be befet by infinuating flatterers. Make it known that you love neither praises nor mere cringing addresses. Shew no considence, but in those who have the courage to contradict you with respect, and who love your reputation better

than your favour.

It is time for you to shew the world a maturity and vigour of mind, proportioned to the present exigence. St. Lewis was, at your age, the delight of the good, and the terror of the bad. Let it be seen that you have thoughts and sentiments becoming a prince. You must make yourself beloved by the good, seared by the bad, and esteemed by all.

There is nothing weak, melancholy, or constrained, in true piety; it enlarges the heart; it is simple and lovely; it becomes all things to all men, that it may gain all. The kingdom of God does not confift in a scrupulous observation of little punctilios; it confifts in the exercise of the virtues proper to each man's state and vocation. A great prince is not to ferve God in the fame manner as a hermit; or a private man. St. Lewis purfued the true interest of his nation, of which he was the father as well as the king. In all the principal affairs he faw every thing with his own eyes. He was diligent, provident, moderate, upright, and steady in his negociations, infomuch that strangers trusted no less to him than his own subjects. Never did prince fhew greater wifdom in ordering and governing his people, and in the measures he took to make them good and happy. He tenderly loved and placed a confidence in those who deserved it; but was steady and firm in correcting even those whom he loved most. He was noble and magnificent according to the manners of his time, but without pomp and luxury: his expence, which was great, was ordered with

fo much economy, that it did not hinder him from difburdening all his demesnes.

Be the heir of his virtues before you inherit his crown. Invoke him with confidence in your necessities. Remember that his blood flows in your veins, and that the same spirit of faith by which he was sanctified ought to be the life of your heart. He looks down upon you from heaven, where he prays for you, and where he desires you may one day live and reign with him in God. Unite your heart with his. Conserva, sili mi, præcepta patristui.

[After the death of this prince his cabinet was found full of fuch

letters.]

Mary, the present Queen of France, and the hundredth of the same name in that kingdom, is the daughter of Stanislaus, formerly King of Poland, and now Duke of Lorrain. At the departure of that Princess from her father's dominions for the court of France, in the month of August, 1725, King Stanislaus gave her the following advice.

TEARKEN, my dear child. and lend an ear to what I shall fay; You must now forget your people, and the house of your father. I borrow the words of the Holy Spirit to bid you farewel; since in the event of this day I only confider the providence of God, whose powerful hand has conducted us beyond all human prudence, speculation, policy, and even expectation itself; it only belongs to that Divine Wisdom to raise itself above our imaginations, to confound our views by the decrees of its Providence, and to raife its own glory by miracles.

C 4

You are now become queen of France, and your condition is the highest in this world: it is the same of your virtues that has raised you to this choice. Consider, the most precious jewels of your crown are going to shine, and to be represented in so clear a light, that the least slaw will easily be perceived.

I shall lay before your eyes three rocks, against which the virtues of the greatest heroes have often split.

The first is a supreme degree of grandeur, which raifes us up to idols, and makes us forget our humanity, and which renders us odious to man, and disagreeable to God; by which we are fo intoxicated, that we cannot fee the dangers which may fuddenly throw us down. Carry yourself according to the rank which is due to you, still considering that all your grandeur confifts in the glory of God. Humble yourfelf by continually remembering how little you are before his eyes, and think that true greatness confifts in the eminence of your fentiments, in nobleness of heart, in the combat of your passions, and in the conquering of yourself.

The fecond thing is, that profperity may be the more dangerous to you, because it is a thing altogether unknown to you; and having been acquainted with nothing but misserve now as a useful lesson to instruct you not to abuse your present good fortune, nor be so insatuated with it, as to forget that prosperity

fometimes deceitful; and when ive ourfelves up intirely to the thoughts of it, we do not keep in that equal temper of it to becoming in perlegree.

6 flattery; the attempts of which you will find unavoidable, the opposing them difficult, but the conquest of them safe and glorious.

Represent yourself, my dear child, as furrounded with a number of people, preffing to make their court to you; there will not be one of thele who will not be ready to obey you, to facrifice his life and fortune for your fervice; and yet, perhaps, you will not meet with any who will tell you truth, left, in doing fo; they should displease you, and risque their preferment: thus, though in the midst of persons the most attached and devoted to your interest, you are left to yourfelf, and have nothing to depend upon but your own good fense and reason. may eafily avoid the infection which comes from the poison of flattery, if we are not prevented by felf-love, which is the only thing that can give us a relish of it. You must confider it as an incense, which is good for nothing but to make us giddy with its deceitful odour.

You will posses the greatest science in the world, if you can judge the true characters of persons, and can distinguish real merit. This is the point of the greatest importance. You will, no doubt, meet with persons, both in the court and in the kingdom, worthy of your esteem. It is to such you should pay your confideration; it is a recompence to support merit, and chastise vice. You will also meet with persons who will be for recommending themselves by a certain forwardness, supported by nothing except a passionate defire of being great; give fuch to understand, that you know them, and that they are only worthy of your contempt, for they will be incorrigible, should you give them the least indulgence.

There

There are persons whom we hate, and others whom we love, we know not why: the first of these is an injustice, and the last a weakness.

In fine, all this will lead you to one great maxim, which I recommend to you above all the rest; this is, to confider your confidence as a treasure above all price, and which you may eafily lofe if you use it indiscreetly: it is a thing you owe to none but the king and the duke +, who is the depository of all his commands. Should you partake it with a 'third, it will lose merit with the two first, and you will have no right to expect the trust of the king or of the duke, upon whom your happiness and tranquillity must hereafter depend.

Let there be no person about you, be they ever fo dear to you, who shall have reason to think that you are without referve in respect to them; for if you impart a secret which is not of absolute necessity, to any person, you characterize that person with the name of your favourite, or a confidant; the confequence of which is, that from being their mistress you become their flave; they will direct and command you, fometimes according to their interest, sometimes according to their humours, but never with justice. However, this should not hinder you from hearing good advice, without prejudice to persons, judging only of their sentiments.

As to the rest, you must consider that the voice of the people is the voice of God; therefore you must conduct yourself in such a manner, as if you were to give an account of your actions to the meanest of

your subjects, and as if the public were to be your judge, since they will be continually on the watch to observe you. This has been the opinion of all wise men; it is the public that must render you immortal in your prosperity; its censure is dangerous, and its approbation to be courted and esteemed.

Confider that a great king is now become your husband; that he gives you his hand, in hopes of finding in you comfort and ease in all his cares; that you will be the companion of his labours, a faithful friend, a virtuous wife, and a great queen.

Our religion, of which this kingdom is its great support, opens its bosom to receive you, and considers you as its most powerful protectress your subjects look upon you as their mother, fince the person of the Monarch in whom they live, is

committed to your care.

You must answer the king's hopes, by your tenderness of his person; by an entire complaisance to his will; by your natural sweetness in complying with his defires; and by a resignation to his sentiments. Let it be your will to please, and your pleasure to obey him. Avoid every thing that may give him the least disgust; and let his honour and interest be the only objects of all your studies.

Regard your religion with all the zeal that is due to it; the goodness of God in a particular manner obliges you to it; and your own piety is a fecurity to me that you will do fo.

Be not too inquisitive in matters of religion; the doctrine of your

† The Duke of Orleans, Prince of the Blood, and Regent of France, during the French King's minority.

catechism

catechifm is the fafest; follow that, and avoid fearthing into things that are not the province of your fex.

Take care that you are not feduced by an outward appearance of fanctity; the world is so wicked, that religion is continually used as a cloak for ambition and interest. In these cases you must moderate your zeal, lest it should mislead you, and hinder you from feeing those snakes in the grass. Without entering into useless argument, teach religion by true piety, as our Saviour has commanded us, and correct the manners of your court by your own good example.

Answer the hopes of your subjects by justice and clemency, by fupporting merit, by extirpating vice, by comforting the afflicted, and by protecting the oppressed; Let these duties be your daily employment, and drive from your thoughrs all those things that may engage you to meddle in the affairs of the government. The wifdom of the king and council will not stand in need of your affistance: and never bufy yourself, unless where the glory of God, the person of the king, and the safety of your own people, are immediately concern-

I give God thanks that I find nothing in you that wants correction; and as I think you are inclined to no vice, I apply my counsel to your virtues. Bounty and generofity are the two distinguishing beauties of a great foul; but when they exceed certain bounds, they lose their merit; and as I know them both to be natural to your temper, you must take care to keep them within their due limits, left they should degenerate into faults.

The first, if it be too general, may give an authority to crimes. and hinder the course of justice. The fecond, if it be done with profusion, loses its name, and becomes contemptible. Let the motive of the first be christianity and goodnature: of the fecond, charity and true merit.

It only remains for me to tell you, my dear child, that as my daughter, you are indebted in gratitude to the duke, and as queen of France, you owe him your confidence. The trust that the king reposes in him, his prudent government, his difinterestedness for the good of the kingdom, and his friendship for me, are, I hope, sufficient ties to make you remember the infinite obligations you are under to him, and to induce you to follow his wholesome advice.

Employ all your care to keep up an union in the royal house of France; nothing can be more glorious or advantageous to the flate.

In fine, remember your father and mother, as well as those who have been attached to us in all our adverfities; you know their number is fo small, that they cannot eafily be forgot: and fince all our wishes, by the grace of God, are accomplished in your person, it only remains for us, night and day, to offer up our vows to heaven, 'to pour down its bleffings upon you.

To fum up all: praise God; be charitable to your neighbour; love the king; abhor vice; know your felf, in your good fortune; be firm in all accidents; and support yourfelf in misfortunes, if any should fall upon you; refift the snares of the world; correct errors by clemency, and crimes by justice; en-

courage merit by just rewards; and, in order to live and reign happy, judge of all things without passion or prejudice.

The History of Professor Du Val, a very extroardinary Genius.

M. Du Val, professor of history and geography in the academy of Luneville, is the fon of a peafant, and born in Burgundy, but came into Lorrain when a child, and was employed as a shepherd at a village near Nancy. His thirst after knowledge appeared in his very childhood, and having no other means of gratifying it, he made a collection of fnakes, toads, &c. amused himself with examining these creatures, and was continually asking the neighbouring peafants why those animals were formed in fuch a particular manner? but the answers he received were generally fuch, as left him lefs fatisfied than he was before. He once happened to see in the hand of another country boy, Æsop's Fables with cuts, which made him still more defirous of learning than before. He could not read; and the other boy, who was capable of gratifying his curiofity, was feldom in a humour to explain the animals, &c. represented in the cuts. this diffress he determined to make himself master of that introduction to knowledge, however, great the difficulties that attended it might prove. Accordingly he faved whatever money he could get, and gave it to other boys who were older than himself, for teaching him to read. Having, with incredible diligence, attained his end, he happened to meet with an almanack,

in which the 12 figns of the zodiac were delineated. These he looked for fo constantly, and withfuchattention, in the heavens, that at last he imagined that he actually traced fuch figures there: and though he was mistaken in this and several other particulars, yet many of his observations were fuch, as few others are found capable of, even after receiving regular instructions,

As he once passed by a print shop at Nancy, he observed in the window a map of the world, which opened a field for new speculations; and having purchased it, he employed many hours every day in perusing it. At first he took the degrees on the equator for French leagues, but upon confidering that in coming from Burgundy to Lorrain, he had travelled many fuch leagues, though on his map that distance seemed to take up a very little spot, he was convinced of the impossibility of his first conjecture, But it must have been with incredible labour, and at the same time is a fignal proof of his extraordinary genius, that he acquired a thorough knowledge of these and many other fignatures on the feveral maps, which, as his purse could afford it, he afterwards procured.

His inclination for filence and retirement made him weary of living among the noify peafants boys; and induced him to visit some hermits who had their cells in a wood, about half a league from Luneville, and undertake to wait on them, and tend fix or eight cows which they kept. These hermits were, however, grossly ignorant; but Du Val had an opportunity of reading feveral books he found in their cells, and of getting many difficulties, that occurred to him,

folved

folved by persons who came to visit these hermits. All the money he could scrape together in his mean circumstances was laid out in books and maps; and observing, on some of the latter, the arms of feveral princes, as griffins, spread-eagles, lions with two tails, and other monsters, he enquired of a foreigner, whether there were any fuch creatures in the world? Being informed that these marks belonged to a particular fcience called heraldry, he minuted down this word before unknown to him, and hurrying with all fpeed to Nancy bought a book of heraldry; and by that book, without any other help, he became a master of the fundamental

principles of that science.

In this course of life Du Val conrinued till he arrived at his one and twentieth year, when, in the autumn of 1717, he was discovered watching his charge in the wood, and fitting under a tree with his maps and books about him, by Garon Pfutschner. This gentleman was then governor to the young prince of Lorrain, who happened to hunt that way. The baron thought a herdfman, with fun-burnt, lank hair, dreffed in a coarfe linen frock. with a heap of maps about him, for extraordinary a fight, that he informed the prince of it, who immediately rode towards the place, and put several questions to Du Val about his way of living. Du Val shewed, by his answers, that he was already master of the grounds of several fciences. Upon which the prince offered to take him into his service, and told him that he should go to court. But Du Val, who had read in some books of morality, that the air of a court was infectious to virtue; and had also observed when

he had been at Nancy, that the lacqueys of great men were a riotous, debauched, quarrelfome fort of people, frankly answered, " That he " chose rather to look after his " herd, and continue to lead a quiet " life in the wood, with which he " was thoroughly fatisfied, than " to wait on the prince;" but added, " That if his highness would give him an opportunity of read-" ing curious books, and of making himself master of more learn-" ing and knowledge, he was ready " to follow him, or any body elfe." The prince was highly pleafed with his answer; and, when he returned to court, prevailed on the dake his father to fend this extraordinary herdsman to the Jesuits College at When he had Pont-a-Mausson. finished his studies at that seat of learning, the duke permitted him to take a journey into France for his further improvement; and, foon after his return, gave him a professorship in the academy of Luneville, with a pension of 700 livres a year, and also made him his own librarian, which is worth 1000 livres a year more, besides a handsome apartment.

He is of a most engaging modesty and politeness, and so far from being ashamed of his former low condition, that he takes a pleafure in relating the successive and gradual rife of new ideas in his mind, and the pleasing tranquillity and uninterrupted content he enjoyed in a fituation, in all appearance, mean and despicable. He still keeps an apartment in the hermitage from whence the duke raised him to his present condition; and, to perpetuate his memory of the transaction, has had his picture drawn, in which he is represented just as the was, when

diff

discovered by baron Psutschner, under a tree, with a landscape of the place, and the prince talking to him: this piece he has obtained leave to hang up in the duke's library.

An anecdote of Bishop Burnet.

BISHOP Burnet was famous for that absence of thought which constitutes the character of what the French call l'Etourdie. All the world knows, that at Paris, about the year 1680, several ladies of quality were imprisoned on sufpicion of poisoning, and among the rest, the counters of Soissons, niece of cardinal Mazarin, and mother of the famous warrior Prince Eugene of Savoy. In the latter end of Queen Anne's reign, when the prince came over to England, bishop Burnet, whose curiosity was as eager as that of any woman in the kingdom, begged of the duke of Marlborough, that he might have the fatisfaction of being in company with a person whose same resounded through all Europe. The duke complied with his request, on condition that he would be upon his guard against saying any thing that might give disgust; and he was invited to dine with the prince, and other company, at Marlboroughhouse. The bishop, mindful of the caution he had received, resolved to fit filent and incognito during the whole entertainment, and might have kept his refolution, had not Prince Eugene, seeing him a dignified clergyman, taken it in his head to ask who he was. He no sooner understood that it was Dr. Burnet, of whom he had often heard, than he addressed himself to the bishop,

and, among other questions, asked when he was last at Paris? Burnet, fluttered by this unexpected address, and still more perplexed by an eager defire to give the fatisfaction required, answered with precipitation, that he could not recollect the year, but it was at the time when the countess of Soissons was imprisoned. He had scarce pronounced the words, when his eyes meeting those of the duke, he instantly recognized his blunder, and was deprived of all the discretion he had left. He redoubled his error by asking pardon of his highness; he stared wildly around, and feeing the whole company embarrassed, and out of countenance, retired in the utmost confusion.

The Life of Mons. Fontaine.

PONTAINE, the celebrated French poet, and one of the first-rate genius's of his age, was born at Chateau-Thierri in Champaigne, the 8th of July, 1621, of a good extraction. At the age of nineteen he entered amongst the Oratorians, but quitted that order eighteen months after. He was twenty-two years of age before he knew his own talents for poetry; but hearing an ode of Malherbe read, upon the affaffination of Henry IV. he was so taken with admiratian of it, that the poetical fire, which had before laid dormant within him, feemed to be enkindled from that of the other great poet. He applied himfelf to read, to meditate, to repeat. in fine, to imitate, the works of Malherbe. The first essays of his pen he confided to one of his relations, who made him read the best Latin authors, Horace, Virgil, Terence, Quintilian, &c. and then the best compositions in French and Italian. He applied himself likewife to the study of the Greek authors, particularly Plato and Plutarch. Some time afterwards his parents made him marry a daughter of a lieutenant-general, a relation of the great Racine. This young lady, befides her very great beauty, was remarkable for the delicacy of her wit, and Fontaine never composed any work without consulting her. But, as her temper was none of the best, to avoid dissension, he feparated himfelf from her company as often as he well could. The famous duchels of Bouillon, niece to cardinal Mazarin, being exiled to Chateau-Thierri, took particular notice of Fontaine. Upon her recall he followed her to Paris, where, by the interest of one of his relations, he got a pension settled upon him. He met with great friends and protectors amongst the most diftinguished persons of the court, but madame de la Sabliere was the most particular. She took him to live at her house, and it was then that Fontaine, divested of domestic concerns, lived a life conformable to his disposition, and cultivated an acquaintance with all the great men of his age. It was his custom, after he was fixed at Paris, to go every year, during the month of September, to his native place of Chateau-Thierri, and pay a visit to his wife, carrying with him Racine, Defpreaux, Chapelle, or fome other celebrated writers. When he has fometimes gone thither alone by himself, he has come away without remembering even to call upon her; but feldom omitted felling fome part of his lands, by which means he foundered away a confiderable fortune. After the death of madame de la Sabliere he was invited into England, particularly by madame Mazarin, and by St. Evremond, who promifed him all the sweets and comforts of life; but the difficulty of learning the English language, and the liberality of the duke of Burgundy, prevented his voyage.

About the end of the year 1692 he fell dangeroufly ill, and as it is customary, upon these occasions, in the Romish church, he made a general confession of his whole life to P. Poguet, an oratorian; and, before he received the facrament, he fent for the gentlemen of the French academy, and in their presence declared his fincere compunction for having composed his Tales; a work he could not reflect upon without the greatest repentance and detestation; promising, that if it should please God to restore his health, he would employ his talents only in writing upon matters of morality or piety. He furvived this illness two years, living in the most exemplary and edifying manner, and died the 13th of March, 1695, being 74 years of age. When they stript his body, they found, next his skin, a hair shirt, which gave room for the following expression of the younger Racine:

Et l'Auteur de Joconde est orné d'un Cilice.

Fontaine's character is remarkable for that fimplicity, candour, and probity, feldom to be met with; of the obliging disposition; cultivating a real friendship with his brother poets and authors, and, what is very rare, beloved and esteemed by them all. His conversation was neither gay nor brilliant, especially when he was not among his intimate friends.

One day, being invited to dinner at a farmer-general's, he eat a great deal, but did not speak; rising up from table very early, under pretext of going to the academy, one of the company represented to him that it was not yet a proper time. Well, fays he, if it is not, I will stay a little longer. He had one fon by his wife in the year 1660. At the age of fourteen, he put him into the hands of M. de Harlay, the first prefident, recommending to him his education and fortune. It is faid, that having been a long time without feeing him, he happened to meet him one day visiting, without recollecting him again, and mentioned to the company that he thought that young man had a good deal of wit and understanding. When they told him it was his own fon, he anfwered, in the most tranquil manner, Ah! then I am very well contented with him. An indifference, or rather an absence of mind, influenced his whole conduct, and rendered him often insensible to the inclemency of the weather. Madame de Bouillon going one morning to Verfailles, saw him, abstracted in thought, fitting in an arbour; returning at night she found him in the same place, and the same attitude, although it was very cold, and had rained almost the whole day. He carried this simplicity so far, that he was scarce sensible of the bad effects some of his writings might occasion, particularly his Tales. In a great fickness his confessor exhorting him to prayer and almsdeeds: As for alms-deeds, replied Fontaine, I am not able, having nothing to give, but they are about publishing a new edition of my Tales, and the bookfeller owes me a hundred copies; you shall have them to fell, and distribute their amount amongst the poor. Another time P. Poguet exhorting him to repent of his faults. If he has committed any, cry'd the nurse, I am sure it is more from ignorance than malice, for he has as much fimplicity as an infant.

One time having composed a Tale, wherein he made a profane application of those words of the gospel, " Lord, five talents thou " didft deliver to me," he dedicated it, by a most ingenious prologue, to the celebrated Arnauld, telling him, it was to show to posterity, the great esteem he had for that learned doctor. He was not fensible of the indecency of the dedication, and the profane application of the text, till Boileau and Racine reprefented it to him. He addressed another. by a dedication in the fame manner, to the archbishop of Paris. Fables are an immortal work, exceeding every thing in that kind, both ancient and modern, in the opinion of the learned. People of tafte, the oftener they read them, will find continually new beauties and charms, not to be met elsewhere. The descendants of this great poet are exempted in France from all taxes and impositions, a privilege which the intendants of Soissons to this day think it an honour to confirm to them.

Letter from M. Voltaire to the Abbé Trublet, author of some admirable essays, who had sent bim his speech at his admission into the French Academy.

SIR, Ferney. OUR letter and generous procedure prove you not to be my enemy, whatever grounds of fuffurpicion of it your book seemed to afford: I chuse much rather to believe your letter than your book. You had said in print, that I made you yawn, and I declared in print that you made me laugh; the result of which is, that you are not easily tickled, and that humour is not my talent. However, between yawning and laughing, you are become my dear brother; so, like good Christians and good academicians, we must forget and forgive.

I like your speech very well, fir; and am still better pleased with your goodness in favouring me with a copy. As to your letter, Nardi parvus onyx eliciet cadum. You'll excuse my quoting Horace; your heroes Mess. de Fontenelle and de la Motte, I think, were not over fond of him. I must plainly tell you, that I was born with as little alloy of ill-nature as yourfelf, and am, at the bottom, a good kind of man. Indeed, some late reflections that little was got by being such, have given me fomething of a sportive vivacious turn, and, I am told, it promotes health. Besides. I have not thought so highly of myself so as always to overlook fome celebrated enemies, who for forty years together have fuccessively been clandeflinely and openly labouring my ruin; had I traversed them in obtaining a mitre, or a place of farmergeneral, they could not have used me worse, so that if at length I have given them a rap on the knuckles, it was out of pure modesty. I thought them precifely on a level with me, and fo, as Cicero fays, in arenum cum equalibus descendi,

Be perfuaded, fir, that wide is the difference I make between you and them; but I remember that, in Lewis XIV's, time, when I was at

Paris, my rivals and I were but mere dabblers, some in verse, some in prose, some half verse, half prose; indefatigable authors of slimsey compositions; solemn writers of trisles, sedulously weighing slies eggs in cobweb scales. I have seen little else than low hypocrify and deceit, and now have a thorough sense of the value of this low state; and in my sense of the lowness of every thing else, I imitate Horace's Vejanius.

Vejanius, armis
Herculis ad postem fixis latet, abditus
agro.

From this recess it is, fir, I most fincerely tell you, that I find the utile dulci in all your productions; that I heartily forgive any nips you have given me; that I am very forry I should ever have scratched you; that good-nature is preferable to banter; that your behaviour for ever reconciles me; and that I am with a real esteem, as if nothing had happened, my dear brother academician, very truly, without any compliment,

Your's, &c. Voltaire.

Abbe Trublet's Anfaver.

Paris.

Sir, and my very illustrious brother academician, a thousand thanks to you for the honour of your welcome answer; it is very courteous, and no less ingenious, and, what is better than both, it is gay and sprightly. It is a proof of the good state of your health, the only valuable possession which remained to be proved in you; long may you enjoy it, together with all the amenities and stame of your genius; this is the wish even of your very enemies; for amidst all their ran-

COUR

cour against your person, they are heartily fond of your works; all without exception, at least, if there are any to be excepted, I would not be in their case. I love the whole, both works and author; and am, with equal esteem and attachment, fir, and my most illustrious brother academician.

Your most humble fervant, TRUBLET.

Some years ago, befides private contributions, a Play was acted for the benefit of a grand-daughter of Milton; bere follows another instance of the happiness it sometimes proves to be descended from a person of fame.

Le Brun, Secretary to the Prince of Condè, had wrote to M. de Voltaire, recommending to him the remains of the family of the great Corneille, the reformer, the creator of the French theatre, and particularly a grand-daughter of that illustrious man; at the fame time inferibing an Ode to him. M. de Voltaire with pleafure embraced the opportunity of doing good to a family fo eminent for genius, and wrote the following letter to M. Le Brun.

"Had I gone about composing an answer in such fine verses as yours, four months would have been the soonest you cou'd have heard of me: I must therefore tell you, in plain prose, how much I admire your ode, and am pleased with your proposal. A veteran of the great Corneille, should by no means turn his back on his general's grand-daughter; but, after building seats and churches, and with poor relations on my hands to maintain,

Von. IV.

fmall is the refidue to affift, as one would wish, a person, whom the greatest men of the kingdom alone should have taken under their patronage. As for me, age is come upon me; but I have a niece who delights in all the arts, and in some of which she is not unexpert. If the person you speak of, and whom unquestionably you know, will accept of the most decent education with my niece, she will take a mother's care of her, and I will endeavour to be a father to her; at leaft, she should be no manner of expence or charge to her own. Her travelling charges shall be defrayed to Lyons, and let her be configned to M. Tronchin of that city, who will forward her to my feat; or one of her own fex shall meet her there with my equipage. If this fuits, I only wait her orders; and I hope shall, to the end of my life, thank you for giving me an opportunity of doing what should have been done by M. de Fontenelle. One branch of the young lady's education will be, to see us, sometimes, act a play of her grandfather's, and we shall set her to embroider the arguments of Cinna and the Cid.

I have the honour to be, &c. VOLTAIRE.

Original letters between M. de Voltaire and the Author of the Dialogues of the Dead.

MY LORD,

Have read the ingenious Dialogues of the Dead. I find (p. 134.) "That I am an exile, "and guilty of fome excesses in "writing." I am obliged (and perhaps for the honour of my country) to fay, I am no exile, because I have

not committed the excesses the author of the dialogues imputes to me.

No body raifed his voice higher than mine in favour of the rights of mankind; yet I have not exceeded even in that virtue.

I am not fettled in Switzerland, as he believes. I live in my own lands in France. Retreat is becoming to old age, and more becoming in one's own possessions. If I enjoy a little country house near Geneva, my manors and my castles are in Burgundy; and if my king has been pleased to consirm the pri-

dicted to my king.

If I was an exile, I had not obtained from my court many a paff-

vileges of my lands, which are free

from all tributes. I am the more ad-

port for English noblemen.

The service I rendered to them entitles me to the justice I expect

from the noble author.

As to religion, I think, and I hope he thinks with me, that God is neither a Presbyterian nor a Lutheran, nor of the low church, nor of the high church; but God is the father of all mankind, the father of the noble author and mine.

I am with respect, his most humble servant, VOLTAIRE *,

Gentleman of the king's chamber. At my castle of Tornex in Burgundy. ANSWER.

SIR,

T Have received the honour of your letter, dated from your castle of Tornex in Burgundy, by which I find I was guilty of an error in calling your retirement "an "exile." When another edition shall be made of my dialogues, either in English or in French, I will take care that this error shall be corrected; and I am very fory I was not apprized of it sooner, that I might have corrected it in the first edition of a French translation just published under my inspection in London. To do you justice is a duty I owe to truth and myfelf; and you have a much better title to it than from the paffports you fay you have procured for English noblemen: You are intitled to it, fir, by the high fentiments of respect I have for you, which are not paid to the privileges, you tell me, your king has confirmed to your lands, but to the noble talents God has given you, and the fuperior rank you hold in the republic of letters. The favours done you by your fovereign are an honour to him, but add little lustre to the name of Voltaire.

I entirely agree with you "That "God is the father of all-mankind;" and should think it blasphemy to

There cannot be a better comment on the above letter than the following paffage from Voltaire himself: — "Mr. Congreve had one defect, which was his "entertaining too mean an idea of his first profession, that of a writer, though it was to this he owed his fame and fortune. He spoke of his works as of trisles that were beneath him, and hinted to me in our first conversation that I flould visit him upon no other foot than that of a gentleman, who led a life of plainness and simplicity. I answered, that had he been so unfortunate as to be a mere gentleman, I should never have come to see him, and I was very "much disgusted at so unseasonable a piece of vanity." Letters concerning the English nation, p. 138, 189.

confine his goodness to a sect; nor do I believe that any of his creatures are good in his fight, if they do not extend their benevolence to These opinions I all his creation. rejoice to fee in your works, and shall be very happy to be convinced that the liberty of your thoughts and your pen upon subjects of philosophy and religion never exceeded the bounds of this generous principle, which is authorised by revelation as much as by reason; or that you disapprove in your hours of fober reflection any irregular fallies of fancy, which cannot be justified, though they may be excused, by the vivacity and fire of a great genius.

> I have the honour to be, fir, Your most humble servant.

Another letter from Mons. Voltaire to Lord Lyttelton.

JE ne peux vous remercier de ma main, étant malada n'en suis pas moins sensible à tout ce que vous me faites l'honneur de mander. Permettez moi seulement d'observer, que ce n'est point un, I Jay, que j'aie faite avoir des passeports à des seigneurs Anglais, c'est un, It is true. J'ai été assés heureux pour faire avoir des passeports au fils de Mr. Fox, et'à toute la famille de Mr. Cambel, aussi bien qu'à trois autres Anglais malades, que Mr. le Medecin Tronchin m'avoit recommendés; c'est pour moi un devoir et un plaisir, de rendre service à tout gentilhomme de vôtre nation; c'est le seul droit que j'aie à vos bontés, mais tout homme en a á every man derives the same from vôtre justice. J'ose donc vous suplier de vouloir bien faire imprimer

à la fin de vôtre livre, et dans les papiers publics, le petit billet cy joint. Vous ne voudriez pas que je mourusse avec la douleur de me plaindre de l'homme du monde que j'estime le plus.

J'ay l'honneur d'être, avec bien du respect, My Lord, vôtre très humble, et très obeissant serviteur.

Du Chateau de Ferney en Bourgogne, par Geneve, 10 Fev. 1761.

On s'est trompé à la page 134 des Dialogues en disant, que M. de Voltaire étoit banni de France pour fes ecrits. Il demeure en France dans la compté de Tourney, dont il est feigneur. C'est un terre libre en Bourgogne dans le voifinage de Genéve; il n'a point eté exile.

Translation of the above.

My Lord, Am not able to return you. thanks with my own hand, being indisposed; but am by no means less sensible on that account of the honour you do me by all your commands. Permit me only to observe, that it is not a bare $I \int ay$, that I have caused passports to be obtained for fome English gentlemen, but that It is true. I have been so happy as to procure passports for the fon of Mr. Fox, and all Mr. Campbell's family, as well as for three other fick Englishmen, who had been recommended to me by Dr. Tronchin. To me it is both a duty and a pleafure to ferve any gentleman of your nation; this is the only right I have to your favours, tho' your justice. I presume, therefore, entreating your lordship to be fo kind.

rend of your book, as well as in all the public papers, the annexed little billet. Your lordship would not, I am fure, have me die with a complaint in my mouth, against the perfon I esteem the most of any living.

was confidering whither to fend him, in order for his further qualification, a gentleman happened to come into the neighbourhood, and wanting to board in some reputable family, was recommended to Mr. Hutchinson the father, who told

I have the honour to be,
with much respect,
My Lord,
your most humble, and
very obedient servant.

Castle of Ferney in Burgundy, near Geneva, 10 Feb. 1761.

We were mistaken in page 134 of the Dialogues, in saying that M. de Voltaire was banished France on account of his writings. He still resides in that kingdom, in the county of Tourney, of which he is lord. This county is a free district in Burgundy, in the neighbourhood of Geneva; and the owner has never been exiled.

The Life of the late Mr. Hutchinjon, father of the Hutchinjonians. By Robert Spearman, Ejg; author of An Enquiry after Philosophy, and Theology; and of Letters concerning the Septuagint Translation and the Heathen Mythology.

OHN Hutchinson, an author, whose writings have made no inconsiderable noise in the learned world, was born at Spennythorn, a small village about a mile distant from Midlam in Yorkshire, A. D. 1674. His father, Mr. J. Hutchinson, was possessed of a little estate of 401. per annum, and determined to qualify his son for a steward to some gentleman or nobleman. He had given him such school learning as the place afforded; and whilst he

*

him, in order for his further qualification, a gentleman happened to come into the neighbourhood, and wanting to board in some reputable family, was recommended to Mr. Hutchinson the father, who told him he should be welcome to his house till such time as he could provide himself a place to his mind. As he found his guest to be both a fensible person, and a man of learning, he communicated to him his intentions concerning his fon; and the gentleman, who had taken a liking to the youth, agreed to instruct him in every branch of learning proper for the employment for which he was defigned, upon condition the father would entertain him in his house, whilst he should think proper to flay in those parts. which he engaged himself not to leave, until fuch time as he had completed his fon's education. The father chearfully agreed to the conditions, and his guest faithfully discharged them on his part, not only instructing him in such parts of the mathematics, as were more immediately connected with his deftined employment, but in every useful branch of that noble science, and at the same time furnished him with a competent knowledge of the celebrated writings of antiquity, and a fund of learning, which equally shewed the extensive erudition of the master, and the comprehensive genius of the scholar. Who this person was to whom our author was indebted for his education is not known, not so much as even his real name, as far as we can learn. He industriously concealed every circumstance relating to himself, and so effectually, that Mr. Hutchinfon himfelf, the father, though a very shrewd person, could never, by any means, make the discovery. But whoever, or whatever he was, he taught our author, as himfelf fays, as much as he could fee there was any use for either upon the earth or in the heaven, without poisoning him with any false notions fathered upon the mathematics. About the age of 19, A. D. 1693, our author went to be fleward to Mr. Bathurst of Skutterskelf in Yorkshire, and from thence to the earl of Scarborough, who would gladly have engaged him in his fervice; but his ambition to ferve the duke of Somerfet would not fuffer him to continue there: and he frankly acquainted his lordship with this his intention, and that he could flay with him no longer than a vacancy should happen in the duke's houshold. It was not long before this fell out; and our young steward foon distinguished himself in fuch a manner as to gain the chief stewardship, and the favour of that nobleman, who honoured him with greater marks of esteem and condescension, than he ever was known to shew to persons of his con-About the year 1700, Mr. Hutchinson was called to London to manage a law-fuit of confiderable consequence, between his grace of Somerfet and the old lord Wharton: which he follicited so effectually that it was concluded greatly to the fatisfaction, and advantage of the duke. During his attendance in town, he had an opportunity of gaining a proper knowledge of the world, and what was doing in it: and it was about this time he contracted an acquaintance and intimacy with the late Dr. Woodward, who was physician to the duke his master. Between 1702 and 1706, his bufiness carried him into several

parts of England and Wales, where he made many useful observations which he published in a little pamphlet, entitled, Observations made by J. H. mostly in the year 1706. This is written in the most methodical manner of any of his works, and has very useful marginal annotations, which were made by Dr. Woodward. Whilst he travelled from place to place, he employed himself in making that large and noble collection of fosfils, &c. which Dr. Woodward bequeathed to the univerfity of Cambridge. The Dr. had no notion of Mr. H's ability in any other way than that of a steward and a mineralist. Mr. Woodward consulted him about his private affairs (for he was not the best oconomist.) Woodward asked him to buy a coach-horse for him, and fometimes honoured him fo far as to prefide at a confultation when his horfes chanced to be out of order, which Mr. Hutchinson hath often, with a great deal of humour, ridiculed to his intimates; for no one had more mother wit when he chose to exert it. The Dr. used to correspond with Mr. H. whilst he was abroad: in some of his letters he wishes his horse might throw him now and then, left he should make too much haste, and leave any anxious fossil behind him. In others he defires him to digest the fosfils into classes, and to put in papers between each class or species, describing and ascertaining the class or species of each, before he packed them up, and fent them : and complains, that for want of this method, and the fossils being all jumbled together, without any fuch order, he was at a loss to distinguish one species from another, and unable to fort and place them in their proper classes in the catalogue, In D 3 one

one of his letters he tells him, that though a man possessed of mineral knowledge was every thing to him, vet this was not the case with others. and therefore advises him not to set himself up above his superiors, and to talk of matters above his sphere; it feems he had then begun to throw out hints in conversation against the Gravitarian system, which he ridicules in one of his pieces, with an humour not inferior to Lucian. And in all his letters, the Dr. treats Mr. Hutchinson in a very supercilious manner, and as a quite different person from what he afterwards found him to be. The natural hiftory of the earth, which the Dr. -had published before he and Mr. Hutchinson became acquainted, feems to have prejudiced our author fo much in his favour: and his collection of fossils was designed as materials for a work to prove the truth of the Mosaic account of the first formation of the earth at the creation, the reformation after the deluge, and of the deluge, to ocular demonstration. This the Dr. engaged to draw up, but feems never to have had any real intention of doing, only defigning to make this a pretence to engage Mr. Hutchinson more earneftly in collecting mineral materials, and at the last of getting the whole collection into his poffeffion. And the event justifies the sufficion. It does not appear that Mr. Hutchinson had any thoughts . at that time of commencing author. His natural refearches had afforded him an opportunity of discovering what were the real agents in nature, and that the scripture philosophy was the only true philosophy, and he was defirous his fellow-creatures should reap the benefit of his discoveries, and be fet

right in a point of that confequence. And to this end, he chose to make use of the pen of one who had already given an approved specimen of his abilities in that way. But when he found that the Dr. was playing fast and loose with him, he was then resolved to wait no longer, but trust to his own pen, and exert that capacity, and those talents in the fervice of his heavenly Lord and Master, for which he had so eminently and fuccessfully distinguished himself in the service of his earthly lord and master. Tho' he had great and daily reasons to suspect the sincerity of Doctor Woodward's intentions, yet he was unwilling, for a long while, to give too' much way to his suspicions: yet they put him upon his guard, and made him more and more earnest in his solicitations for the performance of the Dr's promise. The Dr. thus prest, in order to gain time, and quiet his clamours, was wont to shew him a large folio book, placed upon an upper shelf in his study, in which he told him the defired work was begun, and was in some forwardness; but he did not care to shew it him till it was completed, or at least till he had revifed what he had already wrote. This, for the present, filenced Mr. Hutchinfon's folications, but not his suspicions; and he was determined to try if he could not some way or other get a peep into this same folio. To this purpose, he used to visit the Dr. at those hours in which it was most likely to find him in his study. The Dr. conscious of his own, or jealous of Mr. Hutchinson's intentions, betrayed an uneasiness at these ill-timed visits, kept a watchful eye upon Mr. Hutchinfon, and was always wanting to get

him out of his study. This served only to increase Mr. Hutchinson's suspicions, and his eagerness to make the wished-for discovery; but the extreme caution of the Dr. for some time bassled all his endeavours. At last,

Quod optanti divûm promittere nemo Auderet, volvenda dies en attulit ultro.

For one day, whilft the Dr. and Mr. Hutchinson were together in the study, a servant came hastily in with a message, upon which the Dr. went out in an hurry, and inadvertently left Mr. Hutchinson alone, who did not flip the opportunity, but immediately feized and opened the book, found only a few heads of chapters and fuch like, scattered up and down, which, like Æneas's drowned mariners, apparent rari nantes in gurgite vasto. This disappointment, though not quite unexpected, put our author upon doing himself what he had in vain hoped from others. And that he might be more at leifure to profecute his fludies, he begged leave of the duke of Somerset to quit his service. The request at first piqued the pride of that nobleman; but when he was made to understand by Mr. Hutchinfon, that he did not intend to ferve any other mafter, and was told what were the real motives of his request, the duke not only granted his fuit, but made him his riding purveyor (being that time, as we think, mafter of the horse to king George the first) which he enjoyed to the day of his death. As there is a good house in the little Meuse belonging to the office of purveyor, a fixed falary of 2001. per annum, and the place a kind of fine-cure, Mr. Hutchinson's fituation and cir-

cumstances were quite agreeable to his mind, and he gave himself up entirely to a studious, and sedentary life, which being so opposite to his former way of doing, by degrees tendered, and broke his constitution, and at length laid the foundation of that diforder which carried him off. The duke also gave him the presentation of the living of Sutton in Suffex, near his feat at Petworth, to which Mr. Hutchinson presented the reverend Mr. Julius Bate, a gentleman well known to the learned world. In the year 1724, our author published his Moses's Principia, part 1st. in which he ridiculed Dr. Woodward's Natural history of the Earth, and his account of the fettlement of the feveral strata. shells, and nodules, by the laws of gravity, which he tells him every dirty impertinent collier could contradict and disprove by ocular demonstration. He also threw out fome hints concerning what had passed between the Dr. and himself, and the Dr's defign of robbing him of his collections of fossils. There is fo much humour runs thro' this piece, and another of his, called, A new Account of the Confusion of Tongues, that it hath often been wondered, that these two were not more taken notice of, merely for that vein of witty irony which they From this time to his contain. death he continued publishing a volume every year, or every other year; which, with the manuscripts left behind, were published 1748, in 12 vols. octavo. 'An abstract of his works was also published 1752. Dr. Woodward did not take any notice of our author's piece, as thinking himself secure, and proof against the attacks of a writer of so little note as Mr. Hutchinson, And

D 4

he knew himself to be safe, whilst gravity stood its ground, which from the number and interest of its allies. he thought was in no danger of being knocked on the head, as was the champion of the Philistines, by a naked youth with a nodule. He therefore resolved to abide by gravity and his first performance, and refused either to draw up and publish the observations which by agreement he had engaged to do, or to return the collection of fossils. Upon this, Mr. H. had recourse to law, and a bill in chancery was accordingly drawn, but whether filed, we are not certain. The Dr. in the mean time made his will, whereby he left the collection to the univerfity of Cambridge, of which the duke of Somerset was chancellor: and this perhaps might prevent Mr. Hutchinson from carrying matters to extremities. However, the Dr's death, which happened in 1728, put an entire stop to all proceedings of that kind. And our author, as himself complains in one of his books, was bereft, in a manner not to be mentioned, of those observations, and those collections, even of the credit of being the collector, and both are now loft for want of being reduced into order, and applied; and the papers, which still remained in his hands relating to these subjects, were rendered useless. a work to prove the truth of the deluge and reformation of the earth, as recorded by Moses, from the exuviæ of animals, vegetables, and other things preserved and found every where in the bowels, as well as near the furface of the earth, might have been of great fervice, and perhaps the means to convince those whom no other evidence would convince; yet his literary acquaint-

ance look upon the breach between Dr. Woodward and him as a very happy event: because, had the Dr. fulfilled his engagements, Hutchinson might have stopped there, and not have extended his refearches to the lengths he has done, and thereby deprived the world of writings which they deem invaluable. The former friends of Mr. Hutchinson, who were well acquainted with the interest he had with the duke, his capacity for businefs, and the opportunities which were in his power of making the most of his talents, were greatly furprifed at his quitting fo many advantages of acquiring a large fortune, not only by leaving his old place, but neglecting to make the most of his new one; and an old crony of his, meeting with him one day, very warmly remonstrated with him upon the occasion; to whom Mr. Hutchinson made this reply. "Sir, I know the value of money " as well as you, and how far it " will carry one: thus far and no " further. I therefore want fome-" thing that will carry me beyond " this line, this utmost bound of " money: and I trust I have now " chose that which will." His friend gave him no answer, but dropped his hand, which till then he had held in his own, and, like the lawyer in the gospel, went away grievously dissatisfied. In 1727, our author published the second part of Moses's Principia, which contains the fum and fubstance, or the principles of the scripture philosophy; and which, with the first part, is the only philosophical tract he published in his life-time. As fir Isaac Newton made a vacuum and gravity, the principles of his philosophy, our author on the contrary afferts. afferts, that a plenum and the air are the principles of the scripturephilosophy. The air he supposes to exist in three conditions, fire, light, and spirit. The light and fpirit are the finer and groffer parts of the air in motion: from the earth to the fun, the air is finer and finer, till it becomes pure light near the confines of the fun, and fire in the orb of the fun, or folar focus. From the earth towards the circumference of this fystem, in which he includes the fixed-ftars, the air becomes groffer and groffer until it becomes torpid and stagnate, in which condition it is at the utmost verge of this system; from whence the idea or expression of "outer darkness and blackness " of darkness," used in the New Testament, seems to be taken. The fun, which he places in the center, is the active vivifying agent, which by melting the spirit or grosser parts of the air into atoms, or finer parts, or æther, and issuing them out in light, fets the machine forward, and keeps it a going: for the light is pressed out by the influx of spirit, and the spirit is pressed in by the efflux of light; and so the whole matter of the heavens or air is perpetually changing conditions, and circulating. This doctrine of light and spirit, is in the main so like what fir Isaac Newton says in his queries, of his Ætherial Medium, that grows denser and denser from the sun to Saturn, and beyond (which he makes the cause of gravity and motion, and which is as contradictory to a vacuum and the vis inertiæ, as Mr. Hutchinson's light and spirit can be) that our author's account might at least lay claim to the fame indulgence with fir Isaac's, of passing for philosophical questions worthy of further examination. Sir Isaac Newton informs us, that he builds

his philosophy upon appearances: now, if these be a sufficient groundwork for fuch a superstructure, Mr. Hutchinson had infinitely more and better opportunities of judging by appearances than the other. His converse and frequent business under ground afforded him a feries of opportunities, as himfelf tells us, of making observations on the several various actions of the air, in its three conditions of fire, light, and fpirit .- To remark what these agents have done in the reformation of the earth after the deluge, and what they do in the fettled course of nature; and of confidering the dispofition and fituation of the parts of the earth, and of the several species of things in it; to make observations and experiments; of the operations of fire, and its effects upon and with various substances; to making obfervations upon light and spirit in all the various conditions and fituations. or places where they, happen naturally to be, and of remarking the various effects they have upon various subjects; of making observations upon water in all the fituations, motions, and courses it took at the reformation of the earth, and fince naturally has taken, or takes: and by these means of coming at the knowledge of what things were Agents, and the manner of their agency; which were Patients, and the manner in which they were acted upon, which were Causes, which Effects. And this method of judging from appearances, and fuch a course of experiments, must be acknowledged to be far superior to any of those upon which fir Isaac Newton built his gravitation fystem, and his doctrine of light and colours. In the one case, the appearances were those of Nature, made and exhibited by

herfelf: in the other, many of them were fuch as can, or do scarce ever happen in nature. The swinging of a pendulum (the palladium of gravity) has not perhaps a parallel case in nature. The extracting or feparating the light from the spirit by a prism, or refracting the light by bubbles, have not a parallel case, except it be in the rain-bow, and fuch like. The experiments made with the load stone, tale, or amber, arise from the texture of these bodies, which is different from that of most other bodies, and the bodies themselves are only found in masses of fmall fizes. The other experiments of the effects produced by spirit or light upon mixing small parcels of extracted fluids or substances, are fuch as scarce one of them ever happened, or will happen in nature, Justice to the person whose life we are writing, obliges us to make this remark, which we hope can give no just cause of offence to any one. In the Introduction to the Second Part of Moses's Principia mentioned above, Mr. Hutchinson hinted, that the idea of the Trinity was to be taken from the three grand agents in the fystem of Nature, fire, light, and fpirit; which are three conditions of one and the same substance, and wonderfully answer in a typical or fymbolical manner to the three perfons of one and the same effence. This flruck the late celebrated Dr. Samuel Clarke fo forcibly, that he fent a gentleman to Mr. Hutchinfon with compliments upon the performance, but that there was one proposition which he hoped was not true, and defired a conference with him about it. Mr. Hutchinson sent him word by the gentleman, that the book had been a work of much labour and time, and when he had confidered it longer, it would be

foon enough then to talk of a conference. The Dr. fent again, that he understood the substance of the book, but only wanted to confer about that proposition. Mr. Hutchinfon fent for answer, that he intended shortly to explain that hint, and prove it fully. The Dr. not fatiffied with this, still continued his folicitations for a conference, which Mr. Hutchinfon as constantly refused, but let him know, that if he pleased to write any thing against that proposition, he would foon convince him of it, and withal, that he had been too forward in writing upon subjects which he had not duly confidered. Dr. Clarke died May 17, 1729. Some time in the year 1712, Mr. Hutchinson pleted a machine of the watch-kind. for the discovery of the longitude at fea. It was referred to fir Isaac Newton and other persons qualified to confider and examine pretenfions of that kind, and was by them approved; and Mr. Hutchinson even obtained testimonials under their hands. of the perfection and usefulness of his machine. But when application was to be made to parliament, he was fome way or other dropped by those who had promised to support his pretentions: and nettled with the disappointment, he seems to have laid aside this, and several other things of this fort, and to have destroyed all his papers concerning them. Two of these watches were found after his decease, the one put together, the other not; but no papers or notes relative to them were to be met with, any more than the manuscript map of the world, which the late Mr. Whiston, in his Longitude and Latitude, &c. mentions in these words. "I have also very if lately been shewn by Mr. Hutch-" infon.

finfon, a very curious and inquisi-* tive person, a copy of a manuscript " map of the world, made about eighty years ago, taken by him-" felf from the original, wherem the variation is reduced to a " theory, much like that which Dr. " Halley has fince proposed, and in general exactly agreeing to his observations.—But with this ad-" vantage, that therein the northern of the internal load-stone is " much better stated than it is by "Dr. Halley-its place then being, s according to this unknown very " curious and fagacious author, a-" bout the meridian, &c. which an-" cient and authentic determination " of its place, I defire my reader " particularly to observe." This method of discovering the longitude proposed by Mr. Hutchinson, is allowed, by the best judges, to be the eafiest to understand and practise of all others; requiring no depth of aftronomy," onicety in observations or calculations, and fo is even to the common failors the most practicable. For if a watch could be exactly kept to an even motion, and so shew the hour at any one certain place at land; the comparison of the time known by that watch with the apparent time at the ship, known by the fun or stars, or another watch regulated by them, would discover the longitude from the place to which that first watch was adjudged, in time; and by following fifteen degrees of the equator to an hour, may be found in degrees also. And Mr. Hutchinson had so contrived and framed the fprings, wheels, and pivits, &c. of his watches, as not in any confiderable degree to be influenced by heat, cold, moisture, and drought, and also to be capable of that degree of exactness which is re-

quifite to answer the purpose. And it is the opinion of those who know most of this affair, that a machine of the watch-kind bids the fairest of any method for the discovery of the longitude. Mr. Hutchinson had been accustomed every year to take a month's refreshment or so in the country near London, but the year he died he denied himself this benefit, and fat close at his studies during the fultry months of June and July, in order to prepare The second Part of the Data of Christianity for the press against the winter; and had even neglected his constant exercise of riding in Hyde-Park. But, at length, one day mounting his horse, the beaft, pampered by the mistaken kindness of his keeper, and not being rode for some time by his master, was so fretful and unruly, that Mr. Hutchinfon had fome difficulty to keep his feat, which however he did, but the irregular fallies of the horse, and the sudden jerks given to his body by them, occasioned an overflowing of the gall, which confined him to his bed, and put a period to his life in about fixteen days time. Upon the Saturday after the accident, Mr. Fraser of St. Martin'slane, who was his apothecary, advised him to send for Dr. Mead; but unluckily the Dr. was gone to Windfor. However, his fon-in-law, (Sir Edward Wilmot, bart.) came immediately, and prescribed bleeding, but Mr. Hutchinson, contrary to the earnest solicitations of the friends he had then with him, chose to defer it till he should see Dr. Mead. On the Monday following, the Dr. waited upon Mr. Hutchinfon, blamed him for not being bled, but told him he would fend him to Mofes (meaning to his fludies, two of his books being entitled Moses's Princi-- pias

pia) to which Mr. Hutchinson, tak. ing it in the other fense, answered in a muttering tone, for his voice was affected by his illness, ' I be-' lieve, Doctor, you will.' In a day or two after this he seemed to be in a fair way of recovery, and was able to converse about his literary affairs with his favourite Mr. Iulius Bate, who, upon being made acquainted with Mr. Hutchinson's illness, came with all haste from his living in Suffex to attend him. But this bright gleam was of short continuance, for an intimate friend of his, who lived a little distance from London, coming to town the middle of the week following to fee him, found him in a very weak and dangerous way, fitting in the room, which he made his study, and seeming as if he had been buly among his papers. He had fent Mr. Bate out, and was alone. He told this gentleman Dr. Mead had used him ill, that he had forbad his attendance. and called in another physician (Dr. Pellet we think.) He much wished he could live to give more evidence; but there is enough, fays he, to a literary friend, raising his voice, if you and the rest of you be not desicient on your parts. He recommended Mr. Julius Bate to this gentleman's friendship, with a strict charge not to fuffer his labours to become useless by their neglect. When he left Mr. Hutchinson, which was at the door of his bedchamber, to which he had prevailed upon him to retire, Mr. Hutchinson taking his hand, faid, " Farewel, you " will fee me no more." On the Sunday following, August 28, 1737, in the morning, he departed this life, aged 63. Thus died this memorable person, unnoticed even in the news-papers, except by an informa-

tion to the public, that a place was become vacant by his death. borrow the words of an old acquaintance of his, "Without confidering "him as an author, few persons " deferved better of mankind than "he did. If superior talents for "bufiness, and the indefatigable " earnestness in prosecuting it. If " the nicest address, joined with the " ftrictest probity, of which he gave "many shining instances in conduct-" ing the fuit between the duke his " master, and the old lord Wharton: "if these be qualifications, which " merit any regard, few had a larger " share of them than Mr. Hutchin-" fon. If the collection of fossils " left by Dr. Woodward to the uni-" versity of Cambridge, be of any "value, of any fervice, or de-" ferve the notice of that learned " body, let them remember, that "they owe the whole to the abi-" lities and industry of Mr. Hutch-"infon. And, perhaps, had a due " regard been paid to his machine " mentioned above, the world would " also have been indebted to him " for the discovery of the longi-" tude.

"Fas fit ut hos spargam flores, ani"mamque Sepulti

"His Saltem accumulem donis, et

" Munere."

A report has lately been industriously propagated, that Mr. Hutchinson recanted the publication of his writings, to the late Dr. Mead, a little before his death. How improbable such a report seems to be, appears from what has been related above of the conference which one of his friends had with him, not four days before he died, and some days after

the Dr. had been dismissed by him as a physician. For Mr. Hutchinfon would never have been fo folicitous about the publication of the papers left behind him, had he, as this report would infinuate, repented of those already published in his, This person is living, life-time. and ready to testify the truth of what is here related. The following letter wrote by the reverend Mr. Julius Bate to a friend, with their leave to publish it, may serve as a refutation of this report.

DEAR SIR,

' I am greatly furprifed at a story a lady, it seems, propagates, at Epsom, that Mr. Rowe told her, that Dr. Mead told him, that Mr. Hutchinson apprehended his writings would do mischief, and that upon his death-bed he recanted the publication of them. The Doctor is dead, but Mr. Rowe, I hope, 'living, and by what I could judge when I had the pleasure of being fintroduced to him by you, a man of great worth and merit, and if " he will justify the lady's story, it " must then lay upon the deceased Dr. Mead; to whom, I am firmly · convinced, as I can be of any negative, that no fuch words were spoken by Mr. Hutchinson, or any thing tending that way. I was with Mr. Hutchinson all the illness that robbed us of that invaluable 'life: and am positive Dr. Mead was never with him, but when I was by; and it was but few hours, day or night, that I was from him. Mr. Hutchinson had not been long ' ill when he took a disgust to Dr. . Mead, and forbad his further attendance; which the Dr. much wondered at, and seemed greatly to refent. Lucas, myself, and fome body elfe, I forgot who, were

flanding by the bedfide one day 'when Dr. Mead came in; and I believe it was the last time he was ' up stairs. " Mr. Hutchinson, says 'the Dr. among other things, " I " cannot help looking upon you as "one of the old prophets with his " disciples, standing about him with "concern and attention in their " faces, catching up the golden " words as they drop," for to that 'effect. "Doctor, says Mr. Hutch-"inson, if I am a prophet, what are " you? I have given you such evi-"dence-look to it before it is too "late." 'I well remember the ' compliment above; and it is hard-'ly to be supposed that Dr. Mead ' meant to call him a false prophet, 'who, no doubt, believed in the ' prophets: and would not make so bad a compliment to his patient as 'calling him a false one: nor did 'Mr. Hutchinson acknowledge him-' self as a false one, as now is said. I am very positive as to the puroport of the words above, and the 'filence it struck the Doctor into. ' His fentimehts and Mr. Hutchin-'fon's in religion were widely dif-' ferent, but I cannot think, that the Doctor could, out of resentment, or from any other motive; fling out ' fuch a ftory; and therefore, much question the lady having Mr. 'Rowe's authority; whom I should ' believe, that Dr. Mead told him 'fo, if he fays it. But that Mr. 'Hutchinson ever said any such thing to the Doctor, I as firmly ' disbelieve, and know to be false, ' as far as any negative of that nature can be known to be so. You 'may shew this to whom you please, ' and I think the above confutes the ' ftory; for the Dr. would hardly ' have complimented Mr. Hutchinfon with being a prophet, had

he acknowledged himfelf a deceiver. I am, &c. Arundel, Jan. Jul. Bate. 20, 1759.

The following character of the late Dr. Hales, may be relied upon in every particular, and it is to be regretted that we have not more particulars concerning his useful life from the same hand.

N Sunday Jan. 4, 1761, died at his parsonage-house at Teddington, univerfally lamented, in the \$3d year of his age, the reverend Dr. Stephen Hales, F. R. S. member of the royal academy of sciences at Paris, and clerk of the closet to her royal highness the princess dowager of Wales. If any man might ever be faid to have devoted his whole life to the public good of mankind, it was Dr. Hales. He possessed a native innocence and fimplicity of manners, which the characters of other men, and the customs of the world, could never alter; and tho' he often met with many unworthy objects of his kind and charitable offices, yet they never once lessened his natural and unwearied disposition of doing good and relieving diffress. His temper, as well as the powers of his understanding, were happily fitted for the improvement of natural philosophy, possessing, as he did, in an uncommon degree, that industry and patient thinking, which fir Ifaac Newton used modestly to declare, was his own only fecret by which he was enabled fo fortunately to trace the wonderful analysis of nature. Dr. Hales began his enquiries into natural knowledge very early in life, and he continued it uniformly as his darling amufement,

being engaged in experiments till within a few weeks of his death. His industry had likewise this farther excellence, that it was always pointed at the general good of his fellow creatures, agreeable to the unlimited benevolence of his heart; and being animated with the fuccess of some of his more useful discoveries, his knowledge appeared to every body near him to feed his mind with a nourishment which gave him, in the decline of life, and even in its last stages, that vigour and serenity of understanding, and clearness of ideas, which so few possess, even in the flower of manhood; and which he used often to say, he valued as the most perfect of all human pleafures.

His great invention of the ventilators, after much uncandid opposition, was at last universally adopted; and will be a lasting memorial what service even one man, in private life, may render to the community. His great merit did not pass unnoticed in his retirement at Teddington, her royal highness the princess dowager of Wales having been pleased unsolicited to appoint him to be her clerk of the closet, very wisely considering him as a valuable

acquifition to any court.

There were two things in his character, which particularly diftinguished him from almost every other man: The first was, that his mind was so habitually bent on acquiring knowledge, that, having what he thought an abundant income, he was folicitous to avoid any further preferment in the church, lest his time and attention might thereby be diverted from his other favourite and useful occupations.

The other feature of his charac-

ter

ter was no less fingular: He could look even upon wicked men, and those who did him unkind offices, without any emotion of particular indignation; not from want of difcernment or fenfibility; but he used to confider them only like those experiments which, upon trial, he found could never be applied to any useful purpose, and which he therefore calmly and dispassionately laid aside.

EPITAPH

Intended for Mr. Nasb's Tomb.

Here lyes

RICHARD NASH, Esquire,

Who died the 13th of February 1761,

Having lived to a great age,
In one continued scene of selicity.

For,

He was

Gay, innocent, humane, fagacious, pleasant,
Affable, courteous, charitable, debonnair,
Commode.

Countenanced and esteemed by the great,

Beloved by all,
Born to rule.
Illustrious Potentate!
By his superior address,
He established for himself an extent

He established for himself an extensive Monarchy over the pleasures of mankind.

Admirable Legislator !...

Whose laws were carried into immediate

Execution.

By the most cogent powers; Expediency and good sense. Venus, Cupid, and Comus, Were

In perpetual alliance with him.

The wars he waged, and the conquests

He made,

Over indecency, riot, and ill-breeding,

To the greatest conquerors.

He alone disarmed ferocity.

He civilized a rude age,

And

Taught British bluntness,
Humanity;
Urbanity.
His understanding

Was
Comprehensive, and just;
His figure singular, but comely and

royal.
In him, the female world
Lament

Their kind protector.

His attention to the fair fex,

Exceeded in tenderness

That of parent, husband, or brother.
Unmarried!

He watch'd over them with a lover's eye.
His extensive charity

Ever wish'd to cover
Every fource of female frailty.

Every fource of female frailty.

Mischief he abhorred,
But loved play.

He facrificed his time, He loft his money,

To increase the amusements of mankind.

A grateful age erected statues

The town of Bath is a monument

Of his address.

He revived architecture;

He made fociety fociable.

Proud Peers, folid Patriots, smooth Courtiers,

Lascivious

Lascivious Prudes, trifling Coquets, Grave Matrons, flippant Dowagers, All

Revered him.

The British provinces contend for the honour of his birth,

Each afferting their national failing, Center'd, Corrected,

Resplendent in him. Impotent posterity In vain shall fumble to make his fellow. Alas!

The afflicted Graces cry, Here lies RICHARD NASH, Whose bosom was ever open To every impression of generous virtue.

J. T. fec. & inv.

Letter from Oliver Cromwell to his Son-in-law Gen. Fleetwood, in its original spelling.

DEAR CHARLES,

Lthough I doe not foe often as is defired (by mee) acquaint you how it is with me, yet I doubt not of your prayers on my behalfe, that in all things I may walk as becometh the gospel. Truly I never more needed all helps from my Christian friendes than nowe; fain would I have my service accepted of the faincis (if the Lord will) but it is not foe, beinge of different judgments, and of each fort fome feekinge to propagate their owne, that fpirit of kindnesse that is to them all, is hardly accepted of any: I hope I can fay it, my life has been a willing facrifice, and my hope is for them all, yet it much falls out, as when the two Hebrews were rebuked, you knowe upon whome they turned theire displeasure: But the Lord is wife, and will, I trust, make manifest that I am no enemie. VOL. IV.

O howe easie is mercie to be abused! Persuade friendes with you to be very fober; if the day of the Lord be so neare (as some say) howe should our moderation appear! If every one instead of contendinge, would justify his forme by love and meeknesse, Wisdom would be justified of her children; but, alass! I am in my temptation ready to fay, O would I had winges like a dove, then would I flie away and be at rest! But this I feare is my haste.

I bleffe the Lord, I have somewhat keepes me alive, fome sparkes of the light of his countenance, and fome synceritye above man's judgment. Excuse mee thus unbowelling myselfe to you, and pray for mee, and defire my friendes to doe foe also. My love to thy dear wife, whome I indeed entyrely love, both naturally, and upon the best account; and my blessinge, if it be worth any

thinge, upon thy little babe.

Sir George Ascough having occafions with you, defired my letters to you on his behalfe; if hee come or fend, I pray you show him what favour you can; indeed his fervices have been confiderable for the state. and I doubt he has not beene anfwered with fuitable respect; therefore againe I defire you and the commissioners to take him into a very peculiar care, and helpe him foe fare as justice and reason will any waies afford: Remember my hearty affections to all the officers; the Lord blesse you all, soe prayeth

Your truly loving father,

O. CROMWELL. Aug. 22. 1653.

> E Letter

Letter from Oliver Cromwell to the Speaker of the House of Commons, on the taking of the fortress ef Basing-house, near Basingstoke, Hants.

Thank God, I can give you a good account of Basings. After our batteries were placed, we fettled the feveral posts for the storm. Col. Dalbert was to be on the north fide of the house, near the Grange; Col. Pickering on his left hand; and Sir Hardress Waller and Col. Montague's regiment next him. We flormed this morning at fix o'clock. The fignal of falling on was the firing of four of our cannon, which being done, our men fell on with great resolution and chearfulness. We took the two houses without any confiderable loss to ourselves. Col. Bickerigg stormed the new house, passed through and got the gate of the old house; whereupon they founded a parley, which our men would not hear. In the mean time, Col. Montague's and Sir Hardress Waller's regiments assaulted the strongest work, where the enemy kept his court of guard, which, with great refolution, they recovered, beating the enemy from a whole culverine, and from that work; which having done, they drew their ladders after them, and got over another work, and the house-wall, before they could enter. In this, Sir Hardress Waller, performing his duty with honour and diligence, was shot in the arm, but not dangerous. We have little loss: Many of the enemy our men put to the fword, and fome officers of quality. Most of the rest we have prifoners, amongst which is the marquis, and fir Robert Peake, and divers other officers, whom I have

ordered to be fent up to you. We have taken about ten pieces of ordnance, and much ammunition, and your foldiers a good encouragement. I humbly offer to you to have this place utterly flighted, for the following reasons: It will take about 800 men to manage it. It is not frontier. The country is poor about it. The place exceedingly ruined by our batteries and mortar pieces, and a fire which fell upon the place fince our taking it. If you please to take the garrison at Farnham, fome out of Chichester, and a good part of the foot which were here under Dalbeer, and make a strong quarter at Newberry with three or four troops of horse, I dare be confident it would not only be a curb to Dennington, but a fecurity and frontier to these parts, in as much as Newberry lies upon the river, and will prevent any incursion from Dennington, Wallingford, or Farringdon into these parts; and by lying there, will make the trade more secure between Bristol and London for all carriages. And I believe the gentlemen of Wiltshire and Hampshire will with more chearfulness contribute to maintain a garrison upon a frontier, than in their own bowels, which will have less safety in it. Sir, I hope not to delay, but march towards the west to-morrow, and be as diligent as I may, in my expedition thither. must speak my judgment to you, that if you intend to have your work carried on, recruits of foot must be had, and a course taken to pay your army; else, believe me, fir, it will not be able to answer the work you have for it to do. I entreated colonel Hammond to wait upon you, who was taken by a mistake whilst we lay before the garrison, which

which God fafely delivered to us to our great joy, but to his loss of almost all he had, which the enemy took from him. The Lord grant that these mercies may be acknowledged with all thankfulnefs. exceedingly abounds in his goodness towards us, and will not be weary untill righteousness and peace meet, and that he hath brought forth a glorious work for the happiness of this poor kingdom, wherein defires to ferve God and you with a faithful hand.

> Your most humble servant. O. CROMWELL.

Extract from the memoirs of the famous Isaac Darking, alias Dumas, executed at Oxford, on Monday the 23d of March, 1761, for a highway robbery near Nettlebed in Oxfordsbire.

HE was the fon of a cork-cut-ter, in East-cheap, London, but of too extravagant a disposition for a tradelman, and too fond of clubs. The almost innumerable clubs, and focieties, which diftinguish themselves, some by arch, and others by very significant appellations, quickly formed him into the facetious, good-natur'd fellow, who is falfely termed No one's enemy but his own: He fung his fong, told his ftory, was apt at fentiment, and drank his bottle chearfully: So that he was a respectable member of The Killers of Care, -The Silenians, -The Sons of Sound Sense, - The Sons of Nimrod, -The Bucks, -Bloods, - Snitchers, - Choice Spirits, - Senators, - Regulators,—A, b, c, darians,—Lumber Troopers, -Ubiquarians, -&c. -&c. -&c. The transition from this company, to that of the female world, is so natural, as to be rather

unavoidable; for a character of this kind, would be but half formed, divested of his mistresses. To support them, he was obliged to take to the road for money. In February 1758, he was tried at Chelmsford affizes, for robbing captain Cockburn, and received fentence of death; but the judge, in confideration of his youth, respited his execution; and he remaining in goal till the next affizes, the fentence was changed into transportation for fourteen years. Not long after this, a scheme was formed by some of the prisoners, to escape by murdering the keeper, turnkey, &c. but Darking, who was concerned, informed the keeper of it; who, for that favour, applied to Mr. Nugent, then a lord of the treasury, in Darkin's behalf, and obtained the king's pardon, on condition of his

ferving in Antigua.

He was brought to the Savoy, where he made many ineffectual efforts to escape, and was put on board a transport for Antigua; but fhe lying near three weeks in the Downs, he got a person for six guineas to promife to fetch him ashore, at midnight; but the wind changing, the vessel sailed, to his disappointment. When he joined the regiment at Antigua, he found the life of a foldier very disagreeable, therefore he resolved to desert; and by infinuating himself into the good opinion of the captain of a merchant ship lying there, and by large promises of gratuity at his landing in England, he was taken on board, and stowed down in the hold; but he being missed, the ship was sufpected and fearched, but without fuccess: still she was suspected, and again fearched, at which time Darkin appeared unnoticed among the crew in a failor's drefs.

When the ship arrived in Eng-

land, he returned to his old course his purse without further resistance. of robbing on the highway, particularly in the middle and west of England; but being at length fo notorious, he found it dangerous to continue much longer, therefore he entered on board the Royal George man of war, and foon got rated as a midshipman. Under leave of abfence from his ship he visited Bath feveral times, and committed feveral robberies, particularly that on lord Percival.

This robbery of his lordship was committed upon Sunday afternoon the 22d of June 1760, below the Devizes, by a fingle highwayman, dreffed in black, with a crape over his face, and mounted upon a black gelding, Upon his first coming up to the post-chaise he presented a pistol and demanded his lordship's money. His lordship at this time being in a hackney post-chaife and without a fervant, immediately gave him about 13 or 14 guineas, which money he put into his left-hand waistcoat pocket; but not being content, infifled on his lordship's delivering his purse, and threatened to blow his brains out if he refused to comply with his demands. this fecond attack his lordship seized the pistol, and in wresting it out of his hand dismounted the highwayman, and jumped out of the chaife to feize him. The highwayman having got clear of his lordship, attempted to run off, when finding himself closely pursued, he turned short and presented another pistol: upon this his lordship snapped his at the highwayman, but the priming having been scattered in the scuffle, it missed fire. The highwayman then advanced, and told him that his life was now in his hands, and therefore begged he would deliver

as a person of his rank could not be supposed to travel with so triffing a fum., His lordship affured him upon his honour, that he had no more money about him; that he had money in his portmanteau, but had not the key. The highwayman finding him refolute and intrepid, only begged his lordship would not appear against him if he should be fo unfortunate as to be apprehended, mounted his horfe, and then rode off.

At the enfuing Midfummer affize at Salisbury he was tried for the robbery before Mr. justice Wilmott, and charged with taking from lord Percival the fum of 12, 13, or 14 guineas, his lordship could not afcertain which. The principal evidence upon the trial were, lord Percival, and the driver of the chaife; neither of whom fwearing positively to his person, he was acquitted, tho' the chain of circumstances was so ftrong as to convince the court of his guilt. The money found upon him feemed to tally very exactly with his lordship's loss; in his pocket was found a piece of black crape: and the confusion which attended him at the time he was taken up. were strong presumptive proofs.

His defence, which was very artful, was, that being a native of the West-Indies, and quite a stranger in this country, he had loft his road in endeavouring to go the nearest way from Bath to Portsmouth; that night coming on, and himfelf much fatigued, he made to the first village for refreshment: That it was not to be wondered at, if he feemed confused when he came into the house. as he was a bewildered, benighted traveller. He said he had friends in England, but that they lived at

too great a distance to appear upon his trial: That he was a fea-faring man, was in the fervice at the taking of Guadalupe; and a black crape neckcloth was his customary dress: That he had purchased a pair of new pistols just before he left London, and had by accident loft one upon the road, that must have been picked up by the person who committed the robbery with which he then stood charged: And that the expressions which the landlord had fworn to, and which were apprehended to betray guilt, were occafioned by his furprize at being apprehended as a highwayman.

Upon his acquital, he immediately petitioned the court for a restitution of the money that had been taken from him, in which the court acquiesced, and it was immediately returned: But before he left the bar, Mr. justice Wilmott most pathetically warned him to avoid the like dangers for the future, and after fpeaking of the lenity of his profecutor, dismissed him. He discovered great impatience till he had got off his fetters and was discharged, which was about five o'clock in the evening, when he immediately fet out for London in a post-chaise.

While he was confined in Salifbury gaol, he was frequently vifited by the ladies, on whom he made fuch a fenfible impression by his obliging behaviour and genteel address, as to become the tea-table chat of the whole town. Immediately after his acquital at the affizes, some genius wrote the following song:

Certain Belles to Dumas.

OY to thee, lovely thief! that thou
Hast 'scap'd the fatal string;
Let gallows groan with ugly rogues,
Dumas must never swing.

Doft thou feek money? — To thy
Our puries we'll refign; [wants
Could we our hearts to guineas coin,
Those guineas all were thine.
To Bath in safety let my lord,
His loaded pockets carry;
Thou ne'er again shall tempt the road,
Sweet youth! if thou wilt marry.
No more shall niggard travellers
Avoid thee; — we'll insure 'em,

To us thou shalt confign thy balls
And pistol;—we'll insure 'em.
Yet think not when the chains are off,
Which now thy legs bedeck,

To fly; in fetters fofter far We'll chain thee by the neck.

Indeed, wherever he came he failed not to captivate the fair fex, on which he valued himself. And he was discovered by means of some letters directed to them, which he left at an inn, the keeper of which happened to be post-master, and where the person robbed by him had a little before called, and left a description of him and his horse.

After conviction, he delivered in a petition for transportation for life: when the judge acquainted him with his deplorable fituation, as follows: Young man, you have been arraigned upon an indictment for a robbery on the king's highway, and have been found guilty, after a full and candid trial. From your youth you might have expected to have lived many, many years; and from your education might have been a comfort to your friends and relations, and a fervice to your country: But your engaging in vicious and immoral courfes, hath at length brought you to this untimely end. A day of this fort you could not but have expected; and it hath now overtaken you. Happy would it have been for you, had your former deliver-E 3 ance,

ance, in a fituation fuch as this, been a memento to you to have altered your conduct.—I hope your present circumstances will have a better effect upon you, and induce you to repentance.—Make proper use of the time you have to live, in endeavouring to make your peace with God, for you will soon be in another world.

Your application to me for mercy, is quite in vain: It is not in my power to shew it. From the king only it is to be expected; of which, however, I can give you but little,

very little hopes."

From a perusal of his life we are just able to extract his character, which feems to be a medley of levity composed of virtues and vices; he had a large share of understanding, with a tolerable scholattic education. When in necessity, he was daring beyond credibility, and his courage was frequently restrained by his high notion of honour, which he defined from detesting a mean appearance, and an abhorrence of cruelty; he possessed a soul which, in every hazardous enterprize, overlooked all dangers and difficulties, and which was fo firmly attached to his doxies, that his shameful end must be imputed to his extravagance in their support; his conversation was agreeable, but rather trifling than fenfible. He was fond of an elegance in dress, and of being thought handsome; the character of Macheath was his delight, and with which he diverted himself while in Oxford goal. He suffered before he arrived at the age of twentyone, after a feries of robberies, by which he is faid to have gained not less than 600l, He behaved with great intrepidity at the gallows, preparing his neck for the rope, putting it on, and then throwing himfelf off the ladder, without giving the executioner the fignal agreed on to turn him off.

Some account of Theodore Gardelle, who was executed in the month of April of this year for the murder of Anne King.

Heodore Gardelle, a native of Geneva, was born in the year 1722. After improving a strong natural talent for painting both at home and in Paris, he came to London about two years ago, to improve his fortune. In the fummer of the year 1760, he lodged three months at Mrs. King's, who kept a house in Leicester-square, great part of which she let out ready-furnished. From Mrs. King's he removed to Knight's-bridge, where he continued about three months longer, and being then follicited for some pictures, which were wanted in haste, he came again to Mrs. King's for the conveniency of the persons that were to sit, and at first intended to stay there no longer than till he could procure another lodging in a convenient fituation. Here, however, he continued till February 1761, at which time the first floor was let to a gentleman whose name was Wright, who also had a garret for his fervant to lie in: Gardelle himself had the second floor, and the ground floor was occupied by Mrs. King, who kept only one servant. On the 12th of February, Mr. Wright being ill, was removed to his mother's in Grosvenor-square, and his servant went with him; there were then no perfons in Mrs. King's house but herfelf, Gardelle, and her maid.

Mrs. King appears to have been a gay showy woman, of a doubtful character, who dressed fashionably, and was chiefly visited by gentlemen: the maid came a few days only before Mr. Wright was removed.

On Thursday the 19th of February in the morning, the maid got up about feven o'clock and opened the fore parlour windows. There is a fore parlour and a back parlour, both have a door into the passage from the street door, and there is also a door that goes out of one into the other: the back parlour was Mrs. King's bed-chamber, and the door which entered it from the passage was secured on the inside by a drop-bolt, and could not be opened on the outfide when locked, tho' the drop-bolt was not down, because on the outside there was no key-hole. The door into the foreparlour was also secured on the infide by Mrs. King when the went to bed, and the door of the foreparlour into the passage was left open; when the maid had entered the fore parlour by this door, and opened the windows, she went to the passage door of the back-parlour where Mrs. King was in bed, and knocked, in order to get the key of the street-door, which Mrs. King took at night into her room. Mrs. King drew up the bolt, and the maid went in; she took the key of the street door which she saw lie upon the table by a looking-glass; and her mistress then shut the pasfage door and dropped the bolt, and ordered the maid to open the door that communicated with the fore parlour, which she did, and went out; she then sindled the fire in the fore parlour that it might be ready when her mistress arose, and about eight o'clock went up into Gardelle's room, where she found him in a red and green night gown at work. He gave her two letters,

a snuss-box, and a guinea, and defired her to deliver the letters, one of which was directed to one Mozier in the Hay-market, and the other to a person who kept a snuss-shop at the next door, and to bring him from thence a penny-worth of snuss.

The girl took the messages, and went again to her mistress, telling her what Gardelle had defired her to do, to which her mistress replied, Nanny, you can't go, for here is nobody to answer at the street door; the girl being willing to oblige Gardelle, or being for some reason desirous to go out, answered, that Mr. Gardelle would come down and sit in the parlour till she came back. She then went again to Gardelle, and told him what objection her missress had made, and what she had faid to remove it. Gardelle then faid he would come down, as she had proposed, and he did come down accordingly.

The girl immediately went on his errand, and left him in the parlour, shutting the street door after her, and taking the key to let herfelf in when she came back.

Immediately after the girl was gone out, Mrs. King, hearing the tread of fomebody in the parlour, called out, Who is there? and at the fame time opened her chamber door. Gardelle was at a table, very near the door, having just then taken up a book that lay upon it, which happened to be a French grammar; he had fome time before drawn Mrs. King's picture, which she wanted to have made very handfome, and had teized him so much about it, that the effect was just contrary. It happened unfortunately that the first thing she said to him, when she saw it was he whom she had heard walking about in the room, was fomething repreachful

E 4 1 2 about

about this picture: Gardelle was provoked at the infult, and as he spoke English very imperfectly, he, for want of a less improper expresfion, told her, with some warmth, That she was an impertinent woman. This threw her into a transport of rage, and she gave him a violent blow with her fit on the breaft, fo violent, that he fays he could not have thought fuch a blow could have been given by a woman; as foon as the blow was firuck, she drew a little back, and at the same instant, he fays, he laid his hand on her shoulder and pushed her from him, rather in contempt than anger, or with a defign to hurt her; but her foot happening to catch in the floor-cloth, the fell backwards, and her head came with great force against the corner of the bedflead; the blood immediately gushed from her mouth, not in a continued stream, but as if by different strokes of a pump; he instantly ran to her and stooped to raise her, expressing his concern at the accident; but she pushed him away, and threatened, though in a feeble and interrupted voice, to punish him for what he had done; he was, he fays, terrified exceedingly at the thought of being condemned for a criminal act upon her accufation, and again attempted to affift her by raifing her up, as the blood still gushed from her mouth in great quantities; but she still exerted all her strength to keep him off, and ftill cried out, mixing threats with her screams; he then seized an ivory comb with a fharp taper point continued from the back, for adjusting the curls of her hair, which lay upon her toilet, and threatened her in his turn to prevent her crying out; but the still continuing to cry out, though with a voice still fainter

and fainter, he struck her with this instrument, probably in the throat, upon which the blood flowed from her mouth in yet greater quantities, and her voice was quite stopped : he then drew the bed-cloaths over her, to prevent her blood from foreading on the floor, and to hide her from his fight; he stood, he fays, some time motionless by her, and then fell down by her fide in a swoon. When he came to himself. he perceived the maid was come in. he therefore went out of the room without examining the body to fee if the unhappy wretch was quite dead, and his confusion was then so great, that he staggered against the wainfcot, and hit his head, so as to raise a bump over his eye. As no person was in the house but the murdered and the murderer while the fact was committed, nothing can be known about it but from Gardelle's own account; the circumstances related above, contain the sense of what he related both in his defence, and in the account which he drew up in French to leave behind him, taken together as far as they are confistent; for there are in both feveral inconfiftencies and abfurdities, which give reason to sufpect they are not true.

But however that be, all was quiet when the maid returned, which, the fays, was in a quarter of an hour. She went first into the parlour where Gardelle had promised to wait till she came back, and faw nobody. She had paid 3s. and 9d. out of the guinea at the snuff-shop, where she delivered one of the letters, to the other she had no answer; and she laid the change and the snuff-box with the snuff she had fetched in it upon the table; then she went up into Gardelle's room and sound

nobody, and by turns she went into every room in the house, except her mistress's chamber, whither she neyer went, but when she was called, and found nobody. She then made fome water boil in the kitchen, made a bit of toast, and sat down to breakfast. In a short time she heard fomebody walk over head in the parlour, or passage, and go up stairs, but did not go to see who it was. When she had breakfasted she went and stirred up the fire in the parlour against her mistress got up, and perceived that the fouff and change had been taken from the table; the then went up stairs again to Gardelle's room, to clean and fet it to rights as the used to do, and it was now between ten and eleven o'clock. Soon after. Gardelle came down from the garret into his bed-chamber, which fomewhat furprized her, as he could have no business that she knew of in the garret. When she first faw him, which was about an hour afterwards, she says, he looked confounded, and blushed exceedingly, and she perceived the bump over his eye, which had then a black patch upon it as big as a shilling; he had also changed his dress, and had written another letter, with which he fent her into Great Suffolkstreet, and ordered her to wait for an answer; she went directly, and when she returned, which was in a quarter of an hour, the found him fitting in the parlour, and told him the gentleman would be there in the evening. He then told her that a gentleman had been in the room with her mistress, and that she was gone out with him in a hackney coach. It appears, by this, that Gardelle knew the maid was acquainted with her miffress's character. The maid, however, tho' she might have believed this story at another time, could not believe it now: the was not absent above a quarter of an hour; she had left her mistress in bed, and the time would not have permitted her receiving a gentleman there, her being dreffed, a coach being procured, and her having gone out in it; besides, when fhe came back, fhe knew Gardelle was in her chamber. This gave her fome suspicion, but it was of nothing worse than that Gardelle and her mistress had been in bed together. She went, however, and looked at the door of the chamber, which opened into the parlour, and which fhe had opened by her mistress's order, and found it again locked. About one o'clock Mr. Wright's fervant, Thomas Pelfey, came and told the maid at the door that the beds must be got ready, because his master intended to come thither in the evening, but did not go in. The maid still wondered that her mistress did not rise; and supposed that, knowing the came in from her errand while Gardelle was yet in her chamber, she was ashamed to fee her. Gardelle, in the mean time, was often up and down stairs: and about three o'clock he fent her with a letter to one Broshet, at the Eagle and Pearl in Suffolk-street. As he knew that it would be extremely difficult to conceal the murder, if the maid continued in the house, he determined that he would, if possible, discharge her: but as the girl could not write, and as he was not fufficiently acquainted with our language to draw a proper receipt, he requested Mr. Broshet, in this letter, to write a receipt for him, and get the maid to fign it, directing her to deliver it to him when he paid her; he he did not however acquaint her with his defign. When Mr. Brothet had read the letter, he asked her if the knew that Mr. Gardelle was to discharge her; she said no. Why, fays he, Mrs. King is gone out, and has given Mr. Gardelle orders to discharge you; for she is to bring a woman home with her: at this the girl was surprised, and fmiled, telling Broshet, that she knew her mistress was at home. The girl was now confirmed in her first thought, that her mistress was ashamed to see her again; and thus fhe accounted for the manner of her dismission. She returned between three and four to Gardelle, whom she found sitting in the parlour with a gentleman whose name fhe did not know: she continued in the house till between fix and feven o'clock in the evening, and then Gardelle paid her fix shillings for a fortnight and two days wages, and gave her five or fix shillings over, upon which she delivered him the receipt that Broshet had written, took her box and went away. the was going out, Mr. Wright's fervant came again to the door, and The told him that she was discharged, and going away; that her mistress had been all day in her bed-room, without either victuals or drink, and that if he staved a little after she was gone, he might see her come out : the man, however, could not flay, and Gardelle about feven o'clock was thus left alone in the house.

The first thing he did was to go into the chamber to the body, which, upon examination, he found quite dead; he therefore took off the blankets and sheets with which he had covered it, stripped off the shift, and laid the body quite

naked upon the bed; before this, he faid, his linen was not stained; but it was much stained by his removing the body. He then took the two blankets, the sheets, the coverlet, and one of the curtains, and put them into the water-tub in the back wash-house, to soak, they being all much stained with blood; her shift he carried up stairs, and putting it in a bag, concealed it under his bed; his own shirt, now bloody, he pulled off, and locked it up in a drawer of his bureau.

When all this was done, he went and fat down in the parlour, and foon after, it being about nine o'clock, Mr. Wright's fervant came in without his mafter, who had changed his mind, and was gone to a gentleman's house in Castle-street. He went up into his room, the garret, and fat there till about eleven o'clock; then he came down, and finding Gardelle still in the parlour, he asked if Mrs. King was come home, and who must fit up for her: Gardelle faid she was not come home, but that he would fit up for her.

In the morning, Friday, when Pelfey came down stairs, he again asked if Mrs. King was come home, and Gardelle told him that she had been at home, but was gone again. He then asked how he came by the hurt on his eye; and he said he got it by cutting some, wood to light the fire in the morning. Pelfey then went about his master's business, and at night was again let in by Gardelle, who, upon being asked, said he would sit up for Mrs. King that night also.

In the morning, Saturday, Pelsey enquired again after Mrs. King; and Gardelle, though he had pro-

felled

fessed to fit up for her but the night before, now told him she was gone to Bath or Bristol; yet, strange as it may seem, no suspicions of murder appear yet to have been conceived.

On Saturday, Mozier, an acquaintance of Gardelle's, who had been also intimate with Mrs. King, and had spent the evening with her the Wednesday before the murder, came by appointment about two or three o'clock, having promised to go with her that evening to the opera. He was let in by Gardelle, who told him that Mrs. King was gone to Bath or Bristol, as he had told Pelsey. This man, and another of Gardelle's acquaintance, observing him to be chagrined and dispirited, seem to have imagined that Mrs. King's absence was the cause of it, and that if they could get him another girl they fhould cure him: they were therefore kind enough to procure for him on this occasion; and having picked up a proflitute in the Hay-market, they brought her that very Saturday to Gardelle at Mrs. King's. The worthy, whose name is not known, told her Mrs. King was gone into the country, and had discharged her servant. Gardelle made an apology for the confusion in which the house appeared, and Mozier, or Muzard, as he is fometimes called, asked her if she would take care of the house: she readily consented; and Gardelle acquiescing; they left her with him. He asked her what her business was; she said she worked plain-work; he then told her he had some shirts to mend, and that he would fatisfy her for her trouble.

All this while the body continued as he had left it on Thursday night, nor had he once been into the room

fince that time. But this night the woman and Pelfey being in bed, he first conceived a design of concealing or destroying the dead body by parts, and went down to put it in execution; but the woman, whose name is Sarah Walker, getting out of bed and following him, he returned up stairs, and went to bed with her. In the morning, Sunday, he got up between feven and eight, and left Walker in bed, faying, it was too foon for her to rife; she fell afleep, and flept till ten; it is probable that in the mean time, he was employed on the body, for when she came down between ten and eleven, he was but beginning to light the parlour fire. He had spoke to her the night before to get him a chair-woman, and he was in so much confusion that he did not ask her to flav to breakfast: she went out therefore and hired one Pritchard as a chair-woman, at one shilling a day, victuals and drink: in the afternoon she brought Pritchard to the house, and found with Gardelle two or three men and two women: Gardelle went up with her and stayed by her while she made his bed, then the company all went out together. The chair-woman kept house, and about ten o'clock they returned and supped in Gardelle's room. She was then dismissed for the night, and ordered to come the next morning at eight. The next morning, Monday, the chairwoman was ordered to tell Pelfey the footman, that Walker was a relation of Mrs. King's, who was come to be in the house till Mrs. King returned; but Pelfey knew that she and Gardelle had but one bed, for when he came down on Monday morning, Gardelle's chamber door stood open, and looking in, he saw fome

fome of her cloaths. On Monday night Pelfey again enquired after Mrs. King, and Gardelle told him the was at Bath or Briftol, he knew not where; he always differed at times in his account of her, yet no fuspicion of murder was yet entertained. On Tuesday morning, Pelley, who was going up to his master's room, smelt an offensive smell, and asked Gardelle, who was shoving up the fash of the window on the stair-case, what it was; Gardelle replied, fomebody had put a bone in the fire; the truth however was, that while Walker was employed in mending and making some linen in the parlour, he had been burning some of Mrs. King's bones in the garret. At night, Pelfey renewed his enquiries after Mrs. King, and Gardelle answered with a feeming impatience, Me know not of Mrs. King, she give me a great deal of trouble, but me shall hear of her Wednesday or Thursday ; yet he still talked of fitting up for her, and all this while nobody feems to have suspected a murder.

On Tuesdays night he told Mrs. Walker he would fit up till Mrs. King came home, though he had before told her she was out of town, and defired her to go to bed, to which she consented; as soon as she was in bed, he renewed his horrid employment of cutting the body to pieces, and disposing of it in different places; the bowels he threw down the necessary, and the flesh of the body and limbs cut to pieces, he scattered about in the cock-loft, where he supposed they would dry and perish without putrefaction; about two o'clock in the morning, however, he was interrupted, for Walker having waked and not finding him, she went down stairs, and

found him flanding upon the flairs; he then, at her folicitation, went up with her to bed.

Wednesday passed like the preceding days, and on Thursday he told his semale companion, that he expected Mrs. King home in the evening, and therefore desired that she would provide herself a lodging, giving her, at the same time, two of Mrs, King's shifts, and being thus

dismissed, she went away.

Pritchard, the chair-woman, still continued in her office. The water having failed in the ciftern on the Tuesday, she had recourse to that in the water-tub in the backkitchen; upon pulling out the spiggot a little water run out, but, as there appeared to be more in, she got upon a ledge, and putting her hand in she felt something soft; she then fetched a poker, and preffing down the contents of the tub, she got water in a pail. This circumstance she told Pelsey, and they agreed the first opportunity to see what the things in the water-tub were; yet so languid was their curiofity, and so careless were they of the event, that it was Thursday before this tub was examined: they found in it the blankets, sheets, and coverlet that Gardelle had put in it to foak: after spreading, shaking, and looking at them, they put them again into the tub; and the next morning when Pelfey came down. he faw the curtain hanging on the banisters of the kitchen stairs; upon looking down, he faw Gardelle just come out at the wash-house door, where the tub stood. When Pritchard the chair-woman came, he asked her if the had been taking the curtain out of the tub, and she said, no; she then went and looked in the tub, and found the sheets had been

been wrung out. Upon this the first step was taken towards enquiring after the unhappy woman, who had now laid dead more than a week in the house. Pelsey found out the maid whom Gardelle had dismissed, and asked her if she had put any bed-cloaths into the water; she said, no, and seemed frighted; Pelsey was then also alarmed, and told his master.

These particulars also came to the knowledge of Mr. Barron, an apothecary in the neighbourhood, who went the fame day to Mrs. King's house, and enquired of Gardelle where she was. He trembled, and told him with great confusion that she was gone to Bath. The next day therefore, Saturday, he carried the maid before Mr. Fielding, the justice, to make her deposition, and obtained a warrant to take Gardelle into custody. When the warrant was obtained, Mr. Barron, with the constable, and some others, went to the house, where they found Gardelle, and charged him with the murder; he denied it, but soon after dropped down in a fwoon. When he recovered, they demanded the key of Mrs. King's chamber; but he faid she had got it with her in the country; the constable therefore got in at the window, and opened the door that communicated with the parlour, and they all went in. They found upon the bed a pair of blankets wet, and a pair of sheets that appeared not to have been lain in; and the curtain also which Pelfey and the chair-woman had feen first in the water-tub, and then on the banisters, was found put up in its place wet. Upon taking off the cloaths, the bed appeared bloody, the blankets also were bloody, and marks of blood appeared in

other places; having taken his keys, they went up into his room, where they found the bloody shift and shirt.

The prisoner, with all these tokens of his guilt, was then carried before Fielding, and, though he stifly denied the fact, was committed. On the Monday, a carpenter and bricklayer were fent to fearch the house for the body, and Mr. Barron went with them. In the necessary they found what he calls the contents of the bowels of a human body, but what were certainly the bowels themselves; and in the cock-loft they found the parts of generation, one of the breafts, some other mulcular parts, and fome bones. They perceived also that there had been a fire in the garret, and some fragments of bones, half confumed, were found in the chimney, so large as to be known to be human. On the Thursday before he had carried an oval chip-box to one Perronneau, a painter in enamel. who had employed him in copying, and pretending it contained colours of great value, defired him to keep it, faying, he was uneafy to leave it at Mrs. King's while the was abfent at Bath. Perronneau, when he heard Gardelle was taken up, opened the box, and found in it a gold watch and chain, a pair of bracelets, and a pair of ear-rings, which were known to be Mrs. King's. To this force of evidence Gardelle at length gave way, and confessed the fact, but figued no confession. He was fent to New Prison, where he attempted to destroy himself by fwallowing some opium, which he had kept feveral years; by him as a remedy for the tooth-ach. He took at one-dole 40 grains, which was for

far from answering his purpose that it did not procure him sleep; tho' he declared he had not once flept fince the commission of the fact, nor did he fleep for more than a fortnight after this time. When he found the opium did not produce the effect he defired, he fwallowed half-pence to the number of twelve; but neither did these bring on any fatal fymptom, whatever pain or disorders they might cause; which is remarkable, because verdigrese, the folution of copper, is a very powerful and active poison, and the contents of the stomach would act as a dissolvent upon them.

On the 2d of March he was brought to Newgate, and diligently watched, to prevent any further attempts upon his life. He shewed strong marks of penitence and contrition, and behaved with great humility, openness, and courtesy to

those who visited him.

On Thursday, the 2d of April, he was tried at the Old Bailey,; and in his defence, he infifted only that he had no malice to the deceased. and that her death was the confequence of the fall. He was convicted, and fentenced to be executed on Saturday the 4th. The account which he wrote in prison, and which is mentioned in this narrative, is dated the 28th of March, though he did not communicate it till after his trial. The night after his condemnation his behaviour was extravagant and outrageous; yet the next morning he was composed and quiet, and faid he had flept three or four hours in the night. When he was asked why he did not make his escape, he answered, that he feared fome innocent perfon might then fuffer in his stead. He declared he had no defign to rob Mrs. King, but that he removed

fome of the things merely to give credit to the story of her journey to . Bath; he declared too, that he never had any fentiments of love or jealoufy with respect to Mrs. King; though it is evident, his friends, who prescribed for his lowness of fpirits, supposed that he had. He affirmed, that he regarded the woman they brought him with horror, but that he did not dare to refuse her, left it should produce new sufpicions with respect to the cause of his uneafinefs. It is however certain, that he felt the ill effects of her company in more ways than one to his last hour. - He was executed amidst the shouts and hisses of an indignant populace, in the Haymarket, near Panton-street, to which he was led by Mrs. King's house, where the cart made a stop, and at which he just gave a look. His body was hanged in chains upon Hounflow-heath.

One reflection, upon reading this dreadful narrative, will probably rise in the mind of the attentive reader; the advantages of virtue with respect to our focial connections. and the interest that others take in what befalls us. It does not appear that, during all the time Mrs. King was misling, she was enquired after by one relation or friend; the murder was discovered by strangers, almost without solicitude or enquiry: the murderer was fecured by ftrangers, and by ftrangers the profecution against him was carried on. But who is there of honest reputation, however poor, that could be miffing a day, without becoming the subject of many interested enquiries, without exciting folicitude and fears, that would have had no rest till the truth had been discovered, and the injury, if any, had been avenged?

Some account of John Perrott, a hankrupt, who was lately hanged in Smithfield, for concealing part of his effects.

Ohn Perrott was born at Newport Pagnel, in Buckinghamshire, about fixty miles north of London, in the year 1723, being about 38 years of age at his death. His father died when he was feven years old, and his mother about two years afterwards, leaving him a fortune of about 1500l. After the death of his parents, he was by the direction of a guardian, placed in the foundation school of Gilsborough in Northamptonshire, where he continued five years: he was then, being about 15 years old, put apprentice to his half-brother at Hampstead in Hertfordshire, where he served out his time. In the year 1747, he came up to London, and began to trade for himself in foreign white lace, but kept no shop. In the beginning of the year 1749, he took a house, and opened a warehouse in Blow-bladder-street. About the year 1752, he removed from Blow-bladder-street to Ludgate-hill, where he opened a linendraper's shop, and dealt in various other articles, stiling himself merchant. From the time of his opening this shop, till the year 1759, he returned annually about two thoufand pounds; and was remarkably punctual in his payments. Having thus established his reputation, and finding that no credit which he fhould ask, would be refused him, he formed a scheme of abusing this confidence, which he began to put in execution by contracting for goods of different forts, to the value of 30,000l, the greatost part of which, amounting to the value of 25,000l. he actually got into his possession. In pursuance of his project, it was necessary to convert these goods into ready money as foon as possible; he therefore employed one Henry Thompson, (who had for three or four years acted as his agent, or broker) to fell them for ready money. Thompson, at this time, kept a little house in Monkwell-street, near Wood-street, whither the goods were fent in the dusk of the evening, and whither he invited fome of the principal traders to look at them, as goods configned to him from the places where they were manufactured. Perrot always fet a price upon them, which Thompson shewed to his chapmen, who usually fixed another price at which they would buy; at this price Thompson was always ordered to fell, though it was frequently is and 20 per cent. below prime cost.

When he had thus converted the goods he obtained upon credit into money, and before the time when he was to pay for them arrived, he fummoned his creditors together, who accordingly met on the 17th of January 1760, at the Half-moon tavern, in Cheapfide; where he ac quainted them that he was unable to pay the whole of what he owed, referring himself intirely to their pleafure, and promising to acquiesce in all such measures as they should propose, to pursue their own benefit and security.

This conduct, and these prosessions, had so plausible an appearance, that Perrott's creditors conceived a favourable opinion of him, notwithstanding the loss they were likely to suffer: it was however de-

termined, that a commission of

bank-

bankruptcy should be sued out against him, and Perrott having agreed, to cause himself to be denied the next day, to a person whom his creditors were to send to demand money, as the common and most ready soundation of commissions of bankruptcy; such a commission was issued against him on the 19th of January, the second day after meeting, and Perrott being found and declared a bankrupt, surrendered himself as such.

The 26th of the fame month, the 4th of February, and the 4th of March, were appointed for his appearance before the commissioners, to make a full disclosure of his estate

and effects.

On the 26th of January, he did not appear, and though he appeared on the 4th of February, and was fworn, yet he declared that he was not prepared to make a full discovery of his effects, and requested to have the time limited for that purpose enlarged, which request was granted.

But two of Perrott's creditors, having been at this meeting chosen assignees of his estate, they found upon an inspection of his accounts and affairs, fuch a deliciency and confusion, as gave them just reason to suspect his integrity; and it was now thought necessary to examine him as soon as possible. He was accordingly fummoned before the commissioners on the 26th of February, and then being hard preffed, he acknowledged that he had bought goods fince the year 1758, to the amount of 20,000l, and fold them himself, or by Thompson, for ready money, at 15 or 20 per cent. under prime cost; and that about five years before, he hired a house in Hide-street, near Bloomsbury-square, at 30l. per ann. rent, and surnished it at the expence of about 130l. that it was for a lady, and that be lived in it for about a year and a half, and then quitted it, and fold the furniture. And he swore also, that he had not since that time, any other house or lodging, or paid for the lodging of any other person.

An examination which produced fuch proof of the bankrupt's mifconduct, greatly increased the sufpicions of his creditors, that more knavery was intended; and, it appeared, that though he had kept regular books from 1752 to 1757, vet that at the end of that time they were in some confusion, and afterwards in total disorder. Neither were any traces to be discovered of accounts between him and Thompfon, notwithstanding the very large transactions between them, which was another reasonable cause to sufpect fraudulent designs.

These transactions between Perrott and Thompson, were thought a sufficient reason to summon Thompson before the commissioners; and, on the 1st of March he appeared, and deposed that he had sold goods for Perrott to a great value, at 15 or 20 per cent. under prime cost, and that he was ordered by Perrott not to declare the goods were bis.

It was also discovered, during this examination of Thompson, that on the third day after the commission was issued, Perrott sent to him by his apprentice a PAPER PARCEL, sealed with three seals, desiring he would take care of it; that he accordingly locked it up in his bureau; and seeing Perrott a day or two afterwards, was told by him, that it contained papers relating to pri-

vate

vate transactions between him and one Holt, of Newport Pagnel, in which his creditors had no concern: and that on Wednesday the 29th of February, the day after his first examination, Perrott redemanded this paper parcel, and again received it from Thompson, who never knew its contents.

In the mean time, Perrott knowing himself justly suspected, and apprehending that his creditors would now insist on his making a final discovery, on the 4th of March he applied to the lord keeper by petition, without the intervention or affent of his creditors, for enlarging the time limited for such discovery; and when the commissioners met on the 4th of March, he caused them to be served with the lord keeper's order for enlarging it 46

days.

In the mean time, farther information having been received of Perrott's particular connections, it was thought proper to examine one Patrick Donelly, a peruke-maker in Bell-yard near Temple-bar; upon whose examination, it appeared, that Perrott, about a fortnight after the commission issued against him, fent to him two large boxes, and one hair-trunk, which he faid contained wearing apparel, and defired that they might be kept for him till he could procure lodgings for himself; that in about a week these boxes were carried to the last house in a court in Queen square, Holborn, which was kept by a woman whose name was Ferne.

In order to purfue the track thus gradually found, Mrs. Ferne was examined the 28th of March by the commissioners, who met for that purpose; when, she declared upon her oath, that she had known the

VOL. IV.

bankrupt about a year, and that he had never put into her possession any bank notes, cash, or any other effects whatfoever, belonging to him, and that she did not know of any effects he had. Perrott himself being also examined at the same time, admitted his acquaintauce with Mrs. Ferne, but fwore that he had depofited no part of his property with her, except fome wearing apparel; and that the paper parcel, fealed with three feals, which he told Thompson contained accounts of private transactions between him and one Holt of Newport Pagnel, contained nothing but letters from the fair fex, which he had fince destroyed.

His creditors, however, still continued to treat him with great lenity; and Perrott, in order to facilitate his obtaining his certificate, formed a design of facrissing one of them to

the rest.

He was indebted to Mr. Edward Whitton of Northampton, in 4100l. and Mr. Whitton having expressed himself with some warmth of resentment, upon hearing Perrott was become a bankrupt, at the very time. when he pretended to derive great advantages from his business, in order to cajole Whitton to advance him more money, under the pretence of enlarging it: Perrott conceived a project, by which he could at once take off the weight of Mr. Whitton as a creditor, and by lessening the loss of the rest, dispose them to treat him more favourably. When Mr. Whitton therefore appeared to claim his debt of 41col. Perrott pretended, that no more than 15 or 1800l. was legally due to him, the rest of his demand being accumulated by usury and extortion: for that Whitton, whose debt was money lent, not only charged to

per cent. interest for the original loan, but had also charged interest upon interest at the same rate.

It is a fufficient refutation of this wicked calumny, in which the most flagitious injustice was complicated with the basest ingratitude, to say that the commissioners, after the most scrupulous and deliberate enquiry, allowed the whole of Mr. Whitton's debt to the fatisfaction of all the other creditors of Perrott's, though in direct opposition to his own folemn and repeated declarations upon oath. It should not, however, be concealed, that, to this very Mr. Whitton, Perrott was principally indebted for his introduction into trade, for his support in the course of it, and for the credit he afterwards obtained; that he declared to feveral persons, that whenever he wanted money, he could have it of Mr. Whitton, his dearest and most valuable friend, at four per cent. that Perrott, to ingratiate himself farther with this gentleman, made a will about the year 1757, in which he gave away 2000l. and made Mr. Whitton his executor, though he was not then worth one shilling; and stiled him his best and dearest friend, in letters written fo lately as 1758, to induce him to fell out stock at considerable loss, and put the money into his hands, upon pretence that his profit would enable him to pay lawful interest for it, and replace it whenever it should be required, at whatever price.

On the 19th of April, 1760, the 46 days expired, which Perrott had, by petition, procured to be added to the time limited for the disclofure of his estate and effects, and finish his examination. On this day, therefore, he appeared before the commissioners, and exhibited, apon oath, an account of his effects,

which, after giving him credit for all the money he had paid, and making him debtor for all the goods he had fold from his first entering into trade to his bankruptcy, left a deficiency of no less than 135131. He was therefore required to declare upon oath what was become of that fum, to which he replied. " That he lost 2000l. on goods which he had fold in the last year, 1000l. and upwards, by mournings, and that for nine or ten years, he was forry to fay, he had been extremely extravagant, and spent large sums of money.'

As Perrott, during this examination, had also sworn that he never gamed, and as the vast sum unaccounted for came into his hands only in the last year, it appeared scarce possible that it should, in that one year, be dissipated by any species of extravagance; if not dissipated, it was concealed, and Perrot, therefore, was the same night committed to Newgate for not having given satisfactory answers on his exa-

mination.

In Newgate he was conftantly vifited by Mrs. Ferne, who was always elegantly dreffed, and came in a chariot, or post-chaise, attended by a servant in livery, or a maid fervant, or both. They used frequently to dress a chop themselves, and Perrott condescended to clean his own knives; yet his folly and improvidence were so great, that at this very time he indulged himself and madam with green pease at sive shillings a quart.

After he had continued in Newgate fix weeks, he gave notice to the commissioners, that he would give a more satisfactory account of the deficiency in his estate, and being therefore brought before

To this account he added the most folemn affeveration upon oath, that he had not concealed any part of his estate and effects whatfo-

With this account the commisfioners being equally diffatisfied. they fent him back to Newgate. and some time after, he petitioned the lord keeper to be discharged: but his lordship, upon hearing the last deposition which Perrott it ought fit to annex to his petition, read, thought it so infamous, that he would not order any attendance upon it.

As the creditors had now no doubt of the concealment of great part of Perrott's estate, they advertised a reward of 20 per cent, for fuch part of it as should be discovered. In consequence of this advertisement one Sarah Reed came before the commissioners on the 20th of June 1760, and deposed, that she lived with Mrs. Ferne, as a servant, in the house of one Mrs. Trowers, in Brunswick-row, Queenfquare, till the then last October; that Perrott there became acquainted with Mrs. Ferne, and foon after took her to Derby, and at his return made her a present of 10 guineas in a purse: That the deponent in February 1760, went to pay a vifit to Mrs. Ferne, and was backwards and forwards about a fortnight; that, during this time, Mrs. Ferne being about to go out, returned in great hafte to lock a beaureau, faying there was 500l. in it, which the deponent believes to be Perrott's property, because Mrs. Ferne had been frequently so distressed for money,

money, as to employ the deponent to pawn her wearing apparel to difcharge her rent. That about this time, one Catharine Bowen, then fervant to Mrs. Ferne, told the deponent, that Mrs. Ferne had given her a parcel of papers, and defired her to hide them, which she did, behind the pictures and glasses in Mrs. Ferne's apartments, that they were so given her to hide because Perrott's assignees were expected to fearch the rooms. She deposed also, that, about a week before Perrott and Ferne were summoned to their examination, she went up with Catharine Bowen into the garret, where Bowen took up a cushion that lay in a great chair, and took out a packet of papers Sealed with three feals, and tied with packthread, which papers Bowen faid she believed to be bank notes, and re-placed where she found them. That, after Perrott and Ferne were gone before the commissioners, she and Bowen went to look for the papers, and they were gone; and, upon going to Mrs. Ferne's dreffing-room, found it locked, which it never used to be, and of which fhe took the greater notice, as she, Bowen, had received orders, that, if any persons should come to search the apartments, they should be Thewn those of Perrott only, and not those of Ferne.

However strange it may appear, that a person, entrusted with bank notes to a great value, should give them to a servant maid, to hide under cushions, and behind pictures, and, without any apparent motive, not only risque the loss of such notes by the dishonesty of the servant, but trust her with a secret of equal importance, by telling her they were secreted from a search

expected to be made by the injured creditors of a bankrupt, yet there was no reason to doubt but that this witness had seen a paper parcel sealed with three seals, which appeared to have been secreted, or that this parcel was any other than that which Perrott had entrusted to the care of Thompson, and concerning which he had already given different and inconfistent accounts.

In order to trace this important parcel still farther, Catharine Bowen was also summoned, and examined ; and though she denied that Mrs. Ferne ever gave her any papers to hide, or that she ever pretended she had so done, yet she admitted, that as the was brushing a chair in the garret, she found such a paper parcel; which she put there again; that fhe was then alone, and that about a week afterwards the fame parcel was found out by Sarah Reed, but fhe knows not by what means; that they converfed together about it, and faid to each other, that they believed it contained fomething of value: That the and Reed went up to look for it some time afterwards. and it was gone; and going to feek farther in Mrs. Ferne's dreffingroom, they found the door locked. which was unufual.

These depositions of Reed and Bowen sufficiently co-incided to leave no doubt of a concealment, nor of the place where it was made; yet these circumstances were not sufficient to enable the assignees legally to avail themselves of the powers with which they had been invested, to apply for search-warrants, or preser bills of indistment. Nothing farther was therefore done in the course of the proceedings, except making an order for a dividend of 5s. in the pound, till the

Sep-

September following, when Perrott caused himself to be brought up by a Habeas Corpus before Lord Mansfield, in order to be discharged. But his lordship, after having examined the affair, declared that the commissioners had done wisely and honestly in committing the bankrupt to prison; and that there he should remain till he had answered the questions they propounded to him to their satisfaction.

Perrott, however, on the 17th day of December following, petitioned the lord keeper a second time, alledging that he had finished and signed his sinal examination, as by law required, before such question had been propounded; and that, having sworn he had made no concealment, the commissioners had no right to confine him.

When the matter of this petition was heard before the lord keeper, he directed that the validity of the warrant upon which Perrott was committed, which was a question of law, should be determined in the

court of King's-Bench.

This point was accordingly argued before the court of King's-Bench, before which Perrott was again brought by Habeas Corpus, and the court was unanimously of opinion, that the warrant was legal, and therefore remanded him to prifon.

On the 13th of March, the lord keeper dismissed the petition, and declared himself to be of the same opinion with the court of King's-Bench.

Perrott hoped to prove, that, by the laws in force concerning bankrupts, the commissioners were obliged to receive, as true, whatever the bankrupt should please to swear at his sinal examination, and that they have afterwards no power of commitment; but finding himfelf difappointed, he submitted himself to another examination; and being brought before the commissioners on the 21st of March, and asked the fame question, he gave an account of his becoming acquainted with one Sarah Powell, otherwise Taylor, about fix years before, with whom he continued an intimate acquaintance till he became a bankrupt, but who died foon after, as he was informed about ten months ago, while he was a prisoner in Newgate. And he delivered in an account, upon oath, of his having remitted to this woman, from Christmas 1758 to Christmas 1759, though she was, during that time, by his own account, dying of a confumption, and was for that reason, in the country, fometimes at Weybridge in Surry, and sometimes at Bath, no less than 5000l. in cash and bank-notes. which he received of Thompson for the goods that he employed him to fell; at the fame time confessing, that, before this time. The had never cost him more than 100l, a year.

When he was asked, whether this woman, whom he supplied with no less than 5000l. in one year, kept any carriage, he faid, he could not tell. When he was asked, by what fervants she was attended, he anfwered, by a man and a maid, whose names he never knew; and he also declared, that though he saw her after her return from Bath, and perceived she was passed hopes of recovery, he never asked her how the intended to dispose of her effects, nor did he desire any person to attend her as a physician or apothecary, in her last illness, or even knew by whom the was attended:

3 that

that he visited her at her lodgings in streets, the names of which he has entirely forgot; and that he directed many letters to her he does not know where: But he said, that the paper parcel with three seals contained several of her letters, which he had since burnt; and that he did not disclose these particulars before, because it was her dying request that he should not.

As it was impossible to believe that Perrott, who, when this woman was in health and spirits, never spent more upon her than one hundred pounds in a year, should, when she was languishing in a consumption, and after his connection with Mrs. Ferne, send her so large a sum as 5000l. and as his account was in every other respect incredible, even to absurdity, the commissioners fent him back to Newgate, for the same reason as they first committed him.

Not, however, to fuffer the incredibility even of this account to rest upon its own extravagance and Enconfistency, an enquiry was made after this Sarah Powell; and it was discovered, by information of undoubted credit, that her true name was Rachael Sims; that she was the daughter of a tradesman at the Devizes in Wiltshire, and had been in keeping, and was deferted, when the first became acquainted with Perrott: that she took the name of Powell, because Perrott's linen was marked with a P; that he also went by the name of Powell, and passed for her husband at many houses and lodgings in town and country; that she contracted a habit of drinking, which was the cause of her death; that she had just reason to complain of Perrott's parsimony; and that, when she

died, she did not leave money enough to bury her.

Perrott, however, scrupled not upon the merit of the answer, false and incredible as it was, to cause himself again to be brought by Habeas Corpus into the court of King's-Bench to be discharged; nor did the court make any scruple to order him back from whence he came.

But Perrott was not yet discouraged, and hoping for better success in another court, he brought an action into the Common Pleas against the commissioners for false imprisonment.

In the mean time a reward of 40 per cent. was offered by advertisements often repeated, for the difcovery of any part of Perrott's estate, but without effect: It happened, however, that as Mr. Hewitt, one of Perrott's affignees, was walking one morning last June, upon the terrace in Lincoln's-Inn gardens, he observed a woman leaning over the wall, who had fomething fo disconfolate and forlorn in her appearance, that he could not refift his curiofity. to speak to her. Upon enquiring what was the cause of her present apparent diffress, she told him that she had been turned out of her service by one Mrs. Ferne, and that she knew not where to go. The name of Ferne immediatetly rendered his curiofity interested in a high degree, and he fent her to Mr. Cobb, who was clerk under Perrott's commission, to get her examined.

The examination of this woman, whose name was Mary Harris, was taken before justice Fielding on the 23d of June 1761, and was to this effect: That she had known Mrs. Ferne about four years; that when she sirst knew her, she was just come

from

from a fervice with Mrs. Herman, at the Tea-cheft in Watling-street, and lodged at one Jefferson's à grocer in Shire-lane, Temple-bar, where the deponent also lodged, and was her bedfellow: That her parents were poor people, who had had a little farm in Derbyshire of about 30l. a year; and that Ferne herfelf was without money, and in great want of cloaths and other neceffaries; that in February then last (Feb. 1761) Ferne called upon the deponent at her lodgings, and invited her to come to fee her; that fhe went to fee her the next day. and agreed to live with her as a fervant. That accordingly she went into her service on the 5th of March, and continued in it till the 4th of June following: That during this time, she had frequent discourses about one John Perrott, a bankrupt, and frequently faw a number of bank notes in her possesfron, to the amount of 4000l. That fhe told her all her fortune was owing to a person whose picture she fhewed, which she afterwards knew to be that of Perrott. That she went daily with her mistress to Newgate, where the often heard him and her mistress discourse how they would live when he got his discharge. Once in particular, her mistress told Perrott, that the house of Sir John Smith, Bart. in Queenfquare was to be fold, upon which Perrott, faid, " My dear, have you "a mind for it?" She replied, "Yes, "I can get it for 8 or gool." And he answered, " My life, if you " have a mind for it, I should like "it above all places in the world;" and in confequence of this conversation, Ferne went and bid ogol. for the house, and took the half of a bank note of 1000l. to pay for it, though she did not buy is, and told the deponent that the other half of the note was in the hands of Perrott; and that she frequently cut bank notes and kept half, and gave Perrott half, who kept an account of them.

In consequence of this information, Ferne's apartments, which were very extensively furnished, in particular, with a chamber organ, were fearched by virtue of Fielding's warrant; and, at the same time, Perrott's room in Newgate by virtue of a warrant from the commissioners.

In Ferne's possession were found the half of four bank notes, amounting in all to 1851, and the corresponding halfs were found at the bottom of Perrott's trunk, hid, or sewed up very carefully in a piece of rag, together with the figured moiety of another bank note for 1000l.

Upon this discovery, Ferne was carried before the justice, and examined concerning the bank notes, when she insisted they were her own property, and received from gentlemen as a gratuity for favours: but these very notes were, by the indefatigable diligence of those concerned, traced back into money paid to Thompson, for goods which he fold on Perrott's account.

After some subsequent examinations of Mrs. Ferne, and of one Martin Matthias, and one Pye Donkin, who acted as attornies for Perrott, which examinations all tend to prove that Perrott had deposited notes to a great value in Ferne's hands, and to expose the shameless perjury of Ferne, all proceedings were suspended till the

 Γ 4

trial in Sept. 1761. when it being proved, that the notes found in the poffession of Ferne and Perrott, were the produce of Perrott's estate, he was convicted, and received sentence of death.

From the time of his having been charged with a captial offence, he was put into irons; yet he feemed healthy and chearful, and expressed great confidence of being acquited.

After his conviction, he was removed from his chamber to a cell. where he contracted a cold and hoarseness, and became fretful. querulous and impatient. He had, however, even then formed a scheme of escaping from prison; and a party of failors were hired to come and rescue him in the day time, when brought down from the cells to the chapel, by fecuring the turnkey at the gate, forcing the keys from him, and then carrying off the prisoner. To facilitate the execution of this project, Perrott complained that the public prayers were not so frequent as they ought to be, and was very zealous to attend oftener at chapel; but some intelligence having been given to Mr. Akerman, that a rescue was intended, orders were fent down, that he should be more closely confined, and not permitted to be out of his cell any longer than he continued at chapel; the Ordinary also received a hint, not to visit him more than once a day in the day time, and at uncertain hours.

He was often urged to make a full disclosure of his effects, great part of which were still concealed, but he obstinately resused it, saying, be was to die, and that was atonement sufficient for the wrongs he had

committed.

When he was told the dead warrant was come down, he did not express such agony of confusion and terror, as is generally expressed on the occasion, but said, "the will of God be done." He performed such devotion, and heard such instruction, as are common to persons in his unhappy circumstances.

He was, in confequence of his own request, visited the day before his death by his assignees, to whom, however, he refused to answer particular questions relating to his estate, giving as a reason, that he had received the Sacrament. This reason for answering no questions, feems to prove that he had fecretly determined not to disclose his estate by answering truly; because, in this case, he avoided the crime of falsehood by being filent, though otherwife his answer would have co-incided with every part of christian duty, and his having received the Sacrament, would rather have been a reason for his answering them than not.

On the morning of his execution. he confessed the justice of his sentence, and acknowledged the injury he had done to his benefactor Mr. Whitton, and asked his forgiveness; he expressed great solicitude about what should become of his body, defiring it might be buried in the church of the place where he was born. To this he added another request, which was much more rational; he defired that the time might be enlarged in the chapel, and shortened at the place of execution. He was in chapel therefore from eight to three quarters after nine; the next half hour was employed in knocking off his irons, about ten minutes more were spent in taking leave of his fellow con-

vict.

vict, one Lee, who was condemned for forgery; and about a quarter after ten, he appeared pale and trembling at the door of the pressyard, and was immediately put into the cart.

As he was executed in Smithfield, his journey was not far, yet he often looked round with a kind of wild eagerness and despair, common to those in his situation, who consider every thing they behold, as an object, which they shall behold no more.

When he stood up under the gallows, he expressed yet greater horror and despair, but soon recovered fome degree of fortitude; and when the Ordinary first came into the cart to him, he found him looking about enquiring after his hearse, which he was foon fatisfied was at hand; he then sent a red checked handkerchief to Lee, by a person present, saying, he had promised it for a token; this, however, the wretch who received it, never delivered. After this, his mind seemed more composed, and some prayers being repeated, in which he feemed to join with great ardour, he was a-

He appears, by two letters, which are printed in the account of him, published under the inspection of his affignees, to have an inelegant, an illiterate, and in every respect a contemptible low understanding; yet, as is very common with such characters, he had a kind of low cunning, which like that of a lunatic, is always employed for an ill purpose; and which, not being sufficiently uniform in itself, and extensive with respect to its objects, is always ultimately disappointed.

bout 11 o'clock turned off.

An Account of John McNaughton, E/q; lately executed in Ireland for the murder of Mi/s Knox.

TOhn McNaughton, Efq; was the fon of a merchant at Derry. whose father had been an alderman of Dublin. To an outward form. which was perfectly engaging, he added the genteelest demeanor, so as to promise the very reverse of what was the real disposition of his foul, which was subject to every blast of passion! And though there was a great degree of love and foftness in his composition, yet when ruffled and opposed, he was suddenly transformed! all his feeming rationality instantly disappeared, and he became desperate and dangerous.

Mr. McNaughton was educated in Trinity College, Dublin. When of age he entered into a landed estate of fix hundred pounds a year in the county of Tyrone, which was left him by doctor McNaughton his uncle. The first vice he fell into was gaming, by which he very foon did great injury to his fortune; and though he continued (as most novices do who play with sharpers) in a constant run of ill luck, and was foon obliged to mortgage; yet his losses made no visible alteration in his temper. His pride kept him within due bounds there. All was placed with the polite M^c Naughton, and he lost his money to the very last, with that graceful composure that became the man who had a plentiful fortune to support it. But strong as his passion this way might be, it was not ftrong enough to fecure him against the attacks of love, and falling a victim to the charms of a young lady, he very speedily married her.

His very agreeable person and fost polite address, insured him success with the ladies; but as his character was generally known, the young lady's friends took all posfible care to secure her effects; and the lover was too eager to gratify his passion, and too rash in his temper, to trouble himself about the

disposition of fortune.

The reader may well suppose, that the unavoidable expences of a wife and fervants in Dublin (as he pursued his old course of gaming) must soon increase his difficulties. and introduce a new scene of troubles. It did so most fatally, as will appear by the following melancholy accident: A fheriff's writ was taken out against Mr. Mc Naughton for some large debt; and as he suspected the danger, he kept himself as secure at home as posfible, by which means the bailiffs could get no admittance. The creditor, or some other person concerned, hearing this, had influence enough with the high sheriff to prevail on him to go in person to Mr. M'Naughton's house and take him prisoner. As the sheriff went in a chair, and appeared like a gentleman, the fervants admitted him. and shewed him into a parlour where their master was alone; the sheriff told him he was his prisoner. On this McNaughton flew into a rage, and calling out for his piftols, he frighted his poor liftening wife to fuch a degree, that (being near her time) she fell in labour, and died in childbed.

The high sheriff was greatly and universally blamed for this seeming officious behaviour; but this dreadful consequence threw Mr. Me Naughton into such distraction, that he made several attempts up-

on his life, and was obliged to be attended and watched for fome months after. At his return from the country, after eighteen months absence, he appeared greatly altered, like a wretch worn out with grief; fo very fusceptible was that frail man of the excess of every passion: But this fatal accident. which was near coffing him his life. was attended with one good confequence, it immediately cut off all expence; and that long retirement into the country was of some service to his troubled fortunes, and gave him an opportunity at his return to Dublin, to appear there like himfelf, in some degree of splendor. Time, and the amusements and gayety of a court, are the best phyficians for every grief. There he renewed his old, and, no doubt, contracted new friendships, and kept most faithfully to his favourite vice, gaming, which he then purfued with great spirit.

Some few years before this, when Mr. M'Naughton had both character and interest in the world, he was appointed collector for the county of Colraine; but the public money foon became a dangerous commodity in the hands of a gamester; and when there began to be a large ballance against him, he not only lost that profitable employment, but was obliged to get one of his wife's relations to be fecurity for him, and it is faid that gentleman remains at this day in fome trouble on his account. The lofs of that employment was the first mark of public difcredit that befel

this unhappy man.

It was about four years ago, the period of his reviving from his troubles, that Mr. McNaughton made his addresses secretly to miss

Knex,

Knox, daughter of Richard Knox, esa; of Prohen, in the county of Derry, a gentleman possessed of an estate of about fifteen hundred pounds per annum; and as by the marriage-fettlement five thousand pounds had been fettled on the younger children, miss Knox, having only one brother and no fifter, she was entitled to the whole five thousand pounds, even though she disobliged her parents by marriage. We must add to this bait, the beauty, fweetness of temper, and other accomplishments of the young lady, which were remarkable. She was then (four years ago) about fifteen.

Mr. M Naughton, who was an intimate friend of her father's, and a constant visitor, soon obtained a promise from the young lady to marry him, if he could get her father's confent. He was foon after encouraged to talk with Mr. Knox on that fubject, who not only abfolutely refused his consent, and gave his reasons for it, but shewed his refentment by forbidding him his house. Mr. McNaughton then begged Mr. Knox would permit him to vifit as formerly (as he faid it would look strange to the world to be forbid visiting a family all the neighbours knew he had been so intimate in) and solemnly promifed upon his honour, never more to think of, or mention this affair; and added, that as he had not spoke of it to the young lady, Mr. Knox need never do it, and fo the affair would drop of itself. Thus were the father's eyes and ears once more fealed up by this artful man, who continued his addresses to the daughter, and told her Mr. Knox had promifed him his confent; but defiring, however, that no farther mention might be made of the affair for a year or two, till fome material business was decided. which he would acquaint him with. Thus he deceived the young lady, who now more freely gave way to his passion, and again promised she would marry him as foon as that confent was obtained. Thus he remained some time, constantly watching his opportunity to compleat his defign. One day being with miss Knox and a young gentleman (a very boy) in a retired room in the house, he pressed her to marry him, protesting he never could be happy till he was fure of her; and with an air of sprightly raillery, pulling out a prayer-book, he began to read the marriage fervice, and infifted on the young lady's making the responses, which she did, but to every one she always added, Provided her father consented. Some short time after this, miss Knox going to a friend's house on a week's visit, Mr. Mc Naughton being also an intimate there, foon followed her. Here he fixed his scene for action; here he claimed her and called her his wife, and infifted on confummation, which the young lady absolutely refused, and leaving the house, went directly and informed her uncle of the whole affair. On this Mr. Knox wrote a letter to Mc Naughton, telling him what a base dishonourable villain he was, and bid him avoid his fight for ever. Upon the receipt of this letter, Mc Naughton advertised his marriage in the publick news-papers, cautioning every other man not to marry his lawful wife. This was anfwered by a very spirited and proper advertisement from the father. with an affidavit of the whole affair from the daughter annexed.

Mr. Knox then brought an action against him in the prerogative court, to fet aside this pretended marriage, which was found only to be a contract; for the breach of which, the party can only be fued at common law, and condemned to pay costs and damages; besides, it is probable that the young lady's being under age, rendered this contract void in itself. At this time Mr. Mc Naughton was abfconding from his debts, and therefore could only appeal to the court of delegates, where the former decree was con-In confequence of this decree, judge Scott issued his warrant to apprehend him. McNaughton heard this, he wrote a most impudent threatening letter to the judge, and, it is faid, lay in wait to have him murdered, when he was last at the affizes there, but mis'd him, by the judge's taking another road. Upon this the judge applied to the lord chief justice, who issued out another writ against him, that drove him to England.

Mr. McNaughton returned to the country of Ireland in the fummer of 1761, and by constantly hovering round Mr. Knox's house, obliged the family to be upon their guard, and the young lady to live like a recluse. However about the middle of the fummer she ventured to a place called Swaddling-bar, to drink the mineral waters there for her health; thither this unhappy man followed her, and was feen in a beggar's habit, sometimes in a sailor's; thus disguised he was detected, and then swore in the presence of feveral that he would murder the whole family, if he did not get possession of his wife! and yet so infatuated were they, as to suffer him to get away once more to Eng-

land, where he was supposed to be by Mr. Knox at the time this

fatal event happend.

He remained in London till the month of October; and feveral of his acquaintance here with whom he spent his evenings have since obferved, that he was never eafy when alone with them, but when miss Knox was the subject; and he has often concluded by faying, he feared that affair would end in blood.

During his residence in London at this last visit, it is said, he gamed, cheated, borrowed money from all his acquaintance, and imposed on many by forged letters and false

tokens from their friends.

It founds fomething fevere to speak thus harshly of a gentleman, particularly one under misfortunes. But this truth must be observed. A man of worth and honour brought to distress by unforeseen accidents. may, and often does, maintain his integrity and good name, under a feries of misfortunes; whereas the man, reduced to poverty and distress by gaming, or any other extravagant vice, too often descends to mean actions; and he who commits a mean action is in great danger of committing a base one.

About the first of November last, this unhappy wanderer was feen sculking in the country of Ireland, and two nights prior to the murder was known to fleep with three of his accomplices at the house of one Mr. — a hearth-money collector. The morning of the 10th, the day the fact was committed, they all came with a fackfull of fire-arms to a little cabbin on the road fide. where Mr. Knox was to pass in his coach and fix. From this cabbin McNaughton detached one of them to go to an old woman that lived at

fome

some distance on the road side, under pretence of buying some yarn of her, but really to wait the coming up of Mr. Knox's coach, and enquire whose it was. When it appeared in fight, he asked that question, and was answered, that it was Mr. Knox, who, with his family, was going to Dublin. He then made her point to shew him how they fat, which she did; Mr. Knox, his wife, his daughter, and maid-servant. As soon as he had got this information, he ran off to inform McNaughton that the coach was coming, and to make ready; that he had looked into the coach, and that Mr. Knox was only attended by one fervant, and a faithful fellow a smith, who lived near him, and was foster-father * to miss Knox, one whom McNaughton could never bribe; for most of the other fervants had fuffered themselves to be tampered with, and when discovered, had been discharged. As foon as the coach came near the cabbin, two of the accomplices, armed with guns, prefented them at the postilion and coachman, which stopped the coach, while McNaughton himself fired at the fmith with a blunderbus; upon this, the faithful fmith, who luckily escaped the shot, presented his piece, which unfortunately missed fire, and gave McNaughton and one of his comrades an opportutunity to fire at the poor fellow; and both wounded him. Immediately upon this, two shots were fired at the coach, one by Mc Naughton himself, and another by one of his affiftants; and finding

that the passengers drew up the windows, he ran round, and fired into the coach obliquely, with a gun loaded with five balls, which all took place in the body of the unhappy miss Knox. The maid now let down the window, and scream'd out, her mistress was murdered. On hearing this, the only livery fervant that attended the coach, properly armed, came from behind a turf-stack, where he had hid himself, and siring at McNaughton, wounded him in the back; and about the fame time Mr. Knox from the coach fired one pillol, which was the last of eight shot fired on this strange and dreadful occasion!

Miss Knox was carried into the cabbin, where she expired in about three hours. The murderer and his accomplices fled, but the country was foon raised in pursuit of them, and amongst others some of Sir James Caldwell's light horfe, who were directed to fearch the house and offices of one Wenslow, a farmer, not far diftant from the horrid scene of action. But though fome of the family knew he was concealed there, they pretended ignorance; so that McNaughton might have escaped, had not the corporal, after they had fearched every place, as they imagined, without success, and were going away, bethought himself of the following stratagem. Seeing a labourer digging potatoes in a piece of ground behind the stables, he faid to his comrades in the fellow's hearing, "It is a great pity we cannot find "this murderer, it would be a good"

" thing

^{*} A character not much known or regarded in England, but in Ireland of no finall notice. That man's wife was wet nurse, and suckled miss Knox, from whence those poor people generally contract a faithful affection.

44 thing for the discoverer, he would get three hundred " certainly " pounds." Upon which the fellow pointed to a hay-loft. The corporal immediately ran up the ladder and forced open the door; upon which McNaughton fired at him and missed him. By the flash of the pistol, the corporal was directed where to fire his piece, which happily wounding him, he ran in, and feizing him, dragged him out, when they instantly tied him on a car, and conducted him to Lifford goal. Here he remained in the closest confinement, entirely deserted by all his friends and acquaintance, as appeared on the day of his trial, which commenced the 8th of December 1761, when he was arraigned, with an accomplice, called Dunlap &, before baron Mountney, Mr. justice Scott, and counsellor Smith, who went down upon a special commission to try them.

McNaughton was brought into court on a bier, rolled in a blanket, with a greafy woollennight-cap, the shirt in which he was taken (being all bloody and dirty) and a long beard. which made a dreadful appearance! In that horrid condition he spoke a long speech, pointedly, and sensibly! and complained in the most pathetic manner of the hard usage he had met with fince his confinement. He faid, "they had treated him " like a man under fentence, and " not like one that was to be tried. " He declared he never intended to " kill his dear wife (at faying which " he wept) that he only defigned to "take her away. That he would

" make fuch things appear upon

"his trial, as should surprize them

"all." But, alas! when his trial came on, all this great expectation which he had raifed in the mind of every one, came to nothing.

The trial lasted five days. The first day, the 8th, was spent in pleadings to put off the trial, and the reply of the counsel for the crown. During these debates, McNaughton often spoke with most amazing fpirit and judgment, and much more like an eminent lawyer than any of his counsel; and the result of that day was, that he should prepare his affidavit, which the court would take into confideration. Accordingly on the oth, he was brought into court again, and his affidavit read, in which he swore that some material witnesses for him were not to be had, particularly one Owens, who he faid was present all the time; but the judges, after long debates, were of opinion, that nothing sufficient was offered to put off the trial: however, to shew their indulgence, they would give him that day, and part of the next, to see if he could strengthen his affidavit by that of others. But when the new affidavit was produced on the 10th, it was unanimously and peremptorily resolved by the court, that he had not shewn sufficient cause to postpone his trial, and accordingly they gave him notice to prepare for it on the 11th, at eight o'clock in the morning.

The judges came on the bench at nine o'clock, and fat there till eleven at night, without flirring out of court. During the whole time of the trial, McNaughton took his notes as regularly as any of the lawyers, and cross-examined all the

W.f-

§ This man was delivered up by a miller, in whose mill he had concealed himfelf, on the lord lieutenant and council's offering a reward of 500l, for discovering any and each of M'Naughton's accomplices. witnesses with the greatest accuracy. He was observed to behave with uncommon resolution. His chief defence was founded on a letter he produced, as wrote to him by miss Knox, in which she desired him to intercept her on the road to Dublin, and take her away; but this letter was proved a forgery of his own, which after condemnation he confesses.

He took great pains to exculpate himself from the least design to murder any one, much less his dear wife (as he always called her); he declared folemnly, that his intent was only to take her out of the coach, and carry her off; but as he received the first wound, from the first shot that was fired, the anguish of that wound, and the prospect of his ill fuccess in his design, so distracted him, that being wholly involved in confusion and despair, he fired he knew not at what, or whom, and had the misfortune to kill the only person in the world that was dear to him; that he gave the court that trouble, and laboured thus, not to fave his own life, (for death was now his choice) but to clear his character from such horrid guilt, as defignedly to murder his better half, for whom alone he wished to live.

These were his solemn declarations, but the direct contrary was proved in court by several witnesses, whom he cross-examined with great spirit; and seemed to infinuate, were brought there to destroy him. And as the jury could only form their opinion on the testimony of the witnesses before them, who were examined on their oaths with the utmost care and solemnity, they brought him in guilty.

He heard their verdict without the least concern, telling them

They had acquitted themselves with justice to their country; and when Mr. baron Mountney pronounced the fentence upon him and his accomplice Dunlap, who was found guilty with him, though he did it in so pathetic a manner, as very visibly affected every one, McNaughton appeared with the same indifference as at the beginning of the trial, and only begged the court would have compassion on poor Dunlap. " He faid he was his " tenant; that he possessed a very profitable leafe, which was near " expiring; that he had promised " him a renewal, if he would " affift him in recovering his wife; "that he had forced his confent to " accompany him in that action. "He therefore begged of the court "to represent Dunlap as a proper " object of mercy. For his own life, " he faid, it was not worth asking " for; and, were he to chuse, death " should be his choice, since miss "Knox, his better half, was dead."

But when the unhappy man's plan for feizing the young lady and carrying her off, is properly confidered, what a scheme of madness does it appear! and how furprifing it is that he should get any wretches fo. blindly infatuated as to aid and affift him in fo wild and dangerous an undertaking! Was not the fackfull of fire-arms that were carried to the cabbin (and perhaps all loaded there!) enough to alarm them that murder might enfue? Do not most families, who travel with an equipage and fervants, go armed? and might not this be particularly expected of a family, that had particular fearsi

When the two armed parties met in open day, on fach a desperate business, what but murder could be

the confequence? and after the loss of two or three lives, suppose the affaulters had been conquerors, where must they have carried their prize? Would not the country have been raised? Would not they have been purfued? Besides, was not the young lady going to Dublin? A city that unhappy man was too well acquainted with. He knew it is fituated near the fea: that a wellconcerted plan laid there for carrying off the lady going home in a fedan chair from some visit, by bribing the chairmen, and having a boat ready on the quays, might with fome degree of probability have been executed.

But without all doubt, he made all his accomplices and affiftants believe, that his defign was only to take the young lady away, whom he declared to be his wife; but the contrary appeared on the trial. There it was fworn by one of the evidences, Mr. Afh, that this unhappy wretch had vowed long ago to murder Mr. Knox and his whole family; and this fast evidently appeared, that he had not made the least provision for carrying her off that day, nor once demanded her at the coach-lide.

Agreeable to the sentence, Mr. McNaughton, with his accomplice Dunlap, were executed on Tuesday the 15th of December 1761, near Strabane in the county of Tyrone. McNaughton walked to the place of execution, but being weak of his wounds, was supported between two men. He was dressed in a white slannel waisfcoat trimmed with black buttons and holes, a diaper night-cap tied with a black ribbon, white stockings, mourning buckles, and a crape tied on his arm. He desired the executioner to be speedy,

and the fellow pointing to the ladder, he mounted with great spirit. The moment he was tied up, he jumped from it with fuch vehemence, as fnapped the rope, and he fell to the ground, but without diflocating his neck, or doing himfelf much injury. When they had raised him on his legs again, he foon recovered his fenses; and the executioner borrowing the rope from Dunlap, and fixing it round M'Naughton's neck, he went up the ladder a fecond time, and tying the rope himself to the gallows, he jumped from it again with the fame force, and appeared dead in a minute.

Thus died the once universally admired M'Naughton, in the 38th year of his age! deserted by all who knew him, in poverty and ig-

nominy!

McNaughton not liking, he faid, either the principles or doctrine of the clergyman who first went to prepare him for death, because it feems, he made things too terrible to him, Mr. Burgoyne succeeded. As no carpenter could be found to make the gallows, the sheriff looked out for a tree proper for the purpose, and the execution must have been performed on it, had not the uncle of the young lady, and some other gentlemen, made the gallows and put it up. The sheriff was even obliged to take a party of foldiers and force a fmith to take off his bolts; otherwise he must have been obliged, contrary to law, to execute him with his bolts on. The spectators, who saw him drop, when the rope broke, looked upon it as fome contrivance for his escape, which they favoured all they could by running away from the place, and leaving it open. The populace would not probably have

have been fo well disposed towards him, had they known of his horrid defigns of murder; but they had been perfuaded that he only meant to get possession of his wife.

The foregoing account must naturally fuggest some resections on the high absurdity of those fathers, who, having handfome marriageable daughters, contract friendships with agreeable young gentlemen, and invite them to be intimates, without intending they should be husbands to, or wishing them to succeed with; their daughters! Are not the eyes, by such means, directed to their natural pleasing objects? And is not love most likely to be the certain and natural confequence? When they meet alone in the garden or the grove, will not love be their subject? How much more ridiculous and abfurd must such fathers appear, who, when the discovery is made, are furprized and exasperated, at what they themselves have brought about! It may be affirmed, that this very mistake has been the cause of more real mischiess, than any other that can be named. It were to be wished therefore, that all those, who have been guilty of fo great an error, would not only fincerely repent of, but publickly own it, as fuch a confession might prove a warning to others.

Some account of an extraordinary Impostor now living. Tuken from the foreign papers.

HIS person has already visited feveral parts of Europe, and imposed upon many people of rank and fortune. He called himfelf a Lutheran in-Italy, and at Malta, where he got money from VOL. IV.

feveral persons under the specious pretext of turning Roman Catholic. From thence he went to Zante, where he called himself a Swede, and contracted several debts. Going afterwards to Smyrna, he gave himself out in public for a Hangverian; but he told some people in pretended confidence that he was a Swede, and the natural fon of a great prince deceased. He took the name of Charles Frederick. Count de Taube; giving to understand that he had been obliged to fly his country for an affair of state: He staid two years at Smyrna, living on some generous persons, whom he likewise defrauded of sums of money. From thence passing to Constantinople, he acted the same part there for eighteen months. At last he quitted that place all of a fudden, in the month of September 1761. after contracting many debts, and carrying away fome jewels belonging to different ladies, and some diamond rings. He also took away a square gold snuff-box of English make, for rapee, which henever takes, and a gold watch made at Parist He speaks Italian tolerably well. but French, German, and English much better, and a little Swedish. He has been suspected to be a Jews because he reads and writes a little Hebrew; but he is otherwise illiterate, and very ignorant.

This man is of the middle fize, but rather under it; he is out in the right shoulder, has a clear complexion, large features, black eyes, black hair, which he wears in a bag or a queue; he walks fall, is about 28 or 30 years of age, and enriched with every vice, encept a passion for gaming; he plays very ill at games of commerce, and doth not play much at games of hazard.

NATURAL

NATURAL HISTORY.

Of animals living in Solid bodies.

N Toulon harbour, and the road, are found folid hard flones, and perfectly entire, containing, in different cells, fecluded from all communication with the air, feveral living shell-fish, of an exquisite taste, called Dactyli, i. e. Dates: To come at these fish the stones are broken with mauls. Also, along the coast of Ancona, in the Adriatic, are stones, usually weighing about fifty pounds, and fometimes even more, the outfide rugged, and eafily broken, but the infide fo hard, as to require a strong arm, and an iron maul to break them; within them, and in separate niches, are found fmall shell-fish, quite alive, and very palatable, called Solenes, or Cappe lunghe: The facts are attested by Gassendi, Blondel, Mayol, the learned bishop of Sulturara, and more particularly by Aldrovandi, a physician, of Bologna; the two latter speak of it as a common fact, which they themselves saw.

In the volume for 1719, of the academy of sciences at Paris, is the

following passage:

"In the foot of an elm, of the bigness of a pretty corpulent man, three or four feet above the root, and exactly in the center, has been found a live toad, middle-fized, but lean, and filling up the whole vacant space: no sooner was a passage opened by splitting the wood than it scuttled away very hastily; a more firm and sound elm never grew; so that the toad cannot be

fupposed to have got into it. The egg, whence it was formed, must, by some very singular accident, have been lodged in the tree at its first growth. There the creature had lived without air, feeding on the substance of the tree, and growing only as the tree grew. This is attested by Mr. Hubert, professor of philosophy at Caen."

The volume for the year 1731, has a similar observation, expressed

in these words:

" In 1719 we gave an account of a fact, which, though improbable, was well attested; that a toad had been found living and growing in the stem of a middling elm, without any way for the creature to come out or to have got in. M. Seigne, of Nantes, lays before the academy a fact just of the very fame nature, except that, instead of an elm, it was an oak, and larger than the elm. which still heightens the wonder. He judges, by the time requisite for the growth of the oak, that the toad must have subfifted in it, without air, or any adventitious aliment, during eighty or a hundred years. M. Seigne feems to have known nothing of the fact in 1719."

With the two foregoing may be claffed a narrative of Ambrose Paré, chief surgeon to Henry III. king of France, who, being a very sensible writer, relates the following fact, of which he was an eye-witness:

"Being, fays he, at my feat near the village of Meudon, and overlooking a quarry-man, whom I had

fet

fet to break some very large and hard stones, in the middle of one we found a huge toad, full of life, and without any visible aperture by which it could get there. I began to wonder how it received birth, had grown and lived; but the labourer told me, it was not the first time he had met with a toad, and the like creatures, within huge blocks of stone, and no visible opening or sissue."

Observations of living toads, found in very hard and entire stones, occur in several authors, particularly Baptist Fulgosa Doge of Genoa, the famous physicians Agricola and Horssius, and lord Verulam: others give very specious accounts of snakes, frogs, crabs, and lobsters, being sound alive, inclosed within blocks of marble, rocks, and large

ftones.

Without attempting to explain facts fo very abstruse and surprising, yet at the same time, so well authenticated, I shall only indicate the inferences arising from them.

1. That the testaceous and crustaceous sish, the toads, snakes, frogs, or at the least the eggs, whence these different kinds of animals proceeded, were lodged in the trees at their first growth, or in the soft mud, of which the stones were afterwards formed.

2. That these animals thus enclosed within trees or stones, or at least which came from eggs hatched in them, have subsisted there ever fince, that is 50, 100, 150 years, or perhaps even more, as less could not be required for the growth of the trees, or the formation of the stones where they were found.

3. That consequently they had lived there much longer than ani-

mals of the fame species when at liberty.

4. Yet, during all the time, their fole aliment has been the fap of the tree, or any moisture or liquor penetrating through the thickness of the stones.

5. That they lived there without any other air than what was contained within their feanty cells, which, even with regard to the shell-fish, these having a kind of respiration, deserves some enquiry; but borders on incredibility, with respect to frogs, toads, and snakes, whose sensible respiration seems to require much more air.

6. That to this exclusion of all external air, the animals, thus enclosed, might perhaps owe their longavity; at least this agrees with the idea of the celebrated Bacon, who, in his Historia vita et mortis, canon 18, lays down the following rule as confirmed by experience. Aer exclusius confert ad longavitatem, si aliis incommodis caveas.

7. Lastly, That instinct taught these animals to provide themseles beforehand with niches proportioned to their utmost growth; or at least, as they grew, they had the sagacity to enlarge their niches, either by repelling, or gradually abrading the sides which formed them.

These consequences, I am aware, may appear incredible, and I own not without some reason; but, incredible as they may seem, they must be admitted, if we admit the facts, whence they are deduced, be true; and after such vouchers and attestations, they are scarce to be questioned.

34. . .

Some account of the Mus Alpinus, Baubax, or Marmotte.

THE celebrated cardinal, Polignac, in his Anti-Lucretius, which was published about the year 1747, long after his death, has given a very extraordinary account of an animal, which he calls a Polish animal, and named Baubax. He fays, that thefe animals are of two kinds, fome black, and some of a yellowish red; that these two kinds keep separate, and make war upon each other, drawing up in large bodies, and encamping like opposite armies; that they engage, and fight desperately; and that the victors, whether the black or the red, take and carry away as many prisoners as they can; and, retaining them in captivity, employ them in domestic drudgery, and other flavish business; so that all the red which are found among the black, and all the black that are found among the red, are in a state of the most abject servitude. He adds, that when the master has made his hay, and other provision, ready to be carried home, he lays the flave upon his back, and loads him with the forage as we do a waggon, and then drags him by the tail to his fubterraneous habitation, and continues this practice till all the store is laid up.

This account caused great enquiry to be made after the animal, and the history of it was at last found in a book which the late Dr. Mead had in his library, entitled, Historia naturalis curiosa regni Poloniæ, magni ducatus Lithuaniæ annexarumqne provinciarum: In tractatus xx divis. Sandonnier 1721. Written by one Gabriel Rzaczinski, a jesuit.

Doctor Parsons, at the request of

the ingenious Peter Collinson, esq: examined this history, and found that Rzaczinski had classed this animal among fubterranean creatures, and given much the fame account of him as the cardinal has given, only that, instead of mentioning the two kinds fighting, and making flaves of the prisoners taken in battle, he mentions only, that each kind makes flaves of fuch of the other kind as they discover near their dwellings and magazines, as if they supposed them to be spies. It appeared alfo, that the animal called by Polignac and Rzaczinski, Baubax, is the fame which Ray calls the Mus Alpinus, and Marmota: the Marmotte of the Alps, which has been often carried about here in a box, and shewn by the Savoyards.

Mr. Collinson then determined to write to his friend Mr. Klein, secretary to the city of Dantzick, with a view either to get this account, so extraordinary, confirmed or refuted; and Dr. Mead, knowing his intention, requested that he would endeavour to procure for him a second part of Rzaczinski's history, which he heard had been published some

time after the first.

Mr. Klein, in his answer to Mr. Collinson, observes, that the same accounts of the Baubax, or Marmotte, had been given by Agricola and Spon, but that he himself always considered them as fabulous; for which, however, he seems to have no better reason than because they are wonderful, and relate that of the Baubax which has not been observed in any other brutes, and which seems to imply reason and reflection. But instinct, in many instances, directs brutes to do that which man does from reason; and

it feems as abfurd to deny what these authors affirm of the Baubax, merely upon a supposition that it must necessarily imply reason, as to deny what is notorious of the spider and the nautilus, upon a supposition that it must necessarily imply the knowledge of geometry and navigation. The fact depends, as all facts do, with respect to those who can know them only by the testimony of others, upon the credit of the persons who relate it, and the manner of the relation, whether from the writer's own knowledge, or from mere traditional opinion and report. Polignac's works was the labour of his life, affifted by the opinion of almost every man eminent for parts and knowledge, of his time: it is abfurd, therefore, to imagine, that he would admit any particulars of natural history, as foundations of argument, that were not well supported by the testimony of fufficient and credible witnesses. Klein, indeed, objects, that, among these animals, the labour of prifoners cannot be wanted to amass for the winter, because they continue eight months together in a dormant state, and have therefore no need of provisions; and because it is ridiculous to imagine they should drag their living cart by the wrong end, against the grain and direction of the skin and hair. to the first of these objections, it stands upon the fingle testimony of Klein, against that of Rzaczinski, Agricola, and Spon: as to the fecond, it is generally agreed, that these creatures are frequently found with their backs bare; and it is alfo related, by many authors of great credit, that beavers use each other as waggons in this manner, and that the conveniency of drawing by the

tail more than compensates for the disadvantages of drawing against the hair. Beavers are faid also to fight and take prisoners, and to condemn their prisoners to this drudgery, among others. Klein farther observes, that if they had need of winter stores, they might carry them in, more commodiously, in their mouths, affisted by their fore feet, as they can, like monkeys, walk upon two. This, however, is speculation opposed to fact; and the question here is to be determined, not by argument but testimony. It would be extremely acceptable to the public in general, and particularly to the curious, if fome of our curious readers would communicate what they know or have read upon the subject. Klein's account of the animal is as follows:

It is called, by Pliny, Mus Alpinus; in Savoy, Marmotte; in Germany, Murmelthier; in Poland, and other northern nations, Boback; and in France, Rat des

Alpes.

It is somewhat thicker than a common rat, is reddish while young, but of a dark colour when older; the hair is stiff, the feet short, the head contracted, and the nose as if divided, the mouth furnished with whiskers, like those of a cat, the teeth are like a squirrel's, and the voice is shrill, like that of a young whelp.

When it is wild, it eats grass, roots, herbage, and infects of various kinds; when tame, it subsists on bread and milk, meat and fruits; it uses its fore paws to convey its food to its mouth, like the squirrel, and growls while it eats or

drinks.

They

They play nimbly together like mice, running, leaping, and climbig the trunks of trees, and fome-

tim 'es walking upright.

A, the beginning of autumn they retire to caverns under ground, which th ey form in the shape of the letter Y, where they lie together in families upe'n little beds of straw, having closely stopped the avenues of their dormin ory, and continue torpid in a profound fleep till the approach of fpring, when, being revived by the warmth of the fun, they again come forth to the buiness and the pleasures of life.

In this animal, the circulation of the blood, which has scarce any ferum, and all the secretions, are exceeding flow; the omentum and intestines are flat, and they have only a fingle membranous ftomach; fo that, though they feed upon herbs, they do not chew the cud. Towards the gut cacum there are many annular valves, stretched as it were into branches; fo is the entrance of the ilion between the two coats. which retards the passage of the fæces, and causes them to be collected towards the cacum, there to remain during winter. Whether they sleep at all between the time of their quitting their subterraneous retirement in the fpring, and that of their return to it in autumn, we are not told.

Mr. Klein, in the conclusion of his letter, affures Mr. Collinson that this account is genuine; fays, he may communicate it to Dr. Mead, and promises to procure for him the 2d volume of Rzaczinski's work; which I think was afterwards done, and believe it is now in the British Muleum.

* The pound meant by M. Nollet, is what the French call poids de marc, of

eight ounces. † The day and nights at Naples, are not so unequal as here.

A particular description of an old Elephant brought from Persia to Naples. By the famous Abbé Nollet.

HIS monstrous creature was fent from Persia, as a present to the grand fignior, and by him presented to the king of the Two Sicilies, now king of Spain. It arrived at Naples in October, 174d, and died the beginning of the year 1755. After describing its shape and fize, Mr. Nollet fays, we may judge of the hugeness of its bulk. from its skin, which, after being taken off, weighed 2384 pounds weight *, or 74 1 stone, averdupois weight. It usually went to sleep upon its fide at fun-fet, and after fleeping three or four hours, it waked to feed: after having fed enough, it went directly to fleep again, and generally continued afleep till funrife +. It eat up every day 220 pounds of the dry straw of millet, 23 pounds of new bread, and 28 ounces of fugar mixed with as many ounces of butter, which was inclosed in two loaves, of two pounds each. and which they put whole into its mouth: but during the first 21 days of April, instead of the dry straw, they gave it daily 800 or 1000 pounds of green barley. For some time after its arrival at Naples, they made it drink every day about two quarts of brandy, for affifting its digestion, and probably to atone for the difference between the climate of Naples, and that of its native country; but, instead of the brandy, they afterwards substituted two bolus's, of the bigness of a nutmeg each, composed of 33 different forts of drugs, of fuch a hot nature, that one of these bolus's would have killed a man of the strongest constitution; yet this creature could not bear to be deprived of them, without becoming very uneasy, and loseing its rest.

As to this creature's usual drink, it was otherwise nothing but common water, of which it drank 400 quarts per day in winter, and in summer it went as far as 900, which it drank at three different hours, and each time at five, fix, ten, or a dozen different draughts, by pumping or sucking up the water with its trunk, carrying it to its mouth, and swallowing it at two or three gulps 1.

This elephant appeared to be fufceptible of every passion: it shewed gratitude and affection to those who had the care of it, seemed as if it hugged them with its trunk, and was fo docile as to obey them with readiness. They observed, that it had a fondness for a sheep, fell pretty often into a fit of melancholy, and had an extreme dread of pain, which made it take every imaginable precaution against being hurt, It was of the male kind; but the part which characterised its gender, was usually concealed, only when it was about to make water, that part came out to the length of two feet, then turned backwards, and directed the course of his urine between the two hind legs. In the fpring of every year he began to rut, or became proud, when it was more difficult than usual to govern him, and he even neglected his food; but what was most extraordinary, there issued, during that time, a warm liquor from his trunk, and an orifice opened at each temple, by the fide of his ear, from whence issued a dust-

coloured, coarse sort of matter, as thick as hog's-greafe: I have been affured, fays Mr. Nollet, that a matter of the same fort trickled down from another part. After his rutting was over, all these symptons ceased: perhaps they had never existed, had the animal an opportunity to fatisfy himself in the natural way. He was subject to cholicks. and diffempers in his legs, which his keeper understood, and they cured them in the same way as they do in other animals, but with a good deal of difficulty, for he was far from being a submissive patient, as they could not make him take any thing he did not incline to. But what was very fingular in an animal of fuch a prodigions fize and ftrength, whatever state or condition he was in, he was never heard to utter any fort of found or bellowing, only a fort of blowing, yet this he modulated in fuch a manner, that his keepers could from thence judge what he thereby meant to ex-

This, we must observe, is the more remarkable, as several travellers speak of the bellowings of elephants, when they are taken, and

also upon other occasions.

Cautions against suffering Lead-smelting-houses any where but in remote and desart places. By Dr. Linden.

nour to accompany a young lady of diffinction, my patient, to Bristol hot-wells. There, in walking with some company, I discovered a large cloud of smoke driven by a fouth-west wind over our heads.

‡ As the keeping of an elephant is so expensive, we may conclude, that no old, or full-grown one, will ever be brought here for a shew.

It arose from a cupola built on the opposite bank of the river Avon, which, upon enquiry, I sound belonged to a lead smelting-house; a muliance universally condemned, and universally neglected. That a manufacture so poisonous should be allowed to subsist in the vicinity of the decond medicinal spring in the kingdom, is so unaccountable, that, had I not seen it, I could scarce have believed it.

In countries regulated by a police, smelting-houses are built on barren grounds, near the sea shore; and the owners are obliged to rent a considerable track of land; and if their neighbours suffer in their cattle, planting, or herbage, they are compelled to pay the damage. Even in Wales, I have known instances of such nuisances indicted, and removed; and perhaps some effectual notice may be taken of this, when the public is sully ap-

prized of its effects.

The fmoke that exhales, night and day, from furnaces in which lead is finefied, is richly impregnated with a whitish substance, visible This substance precipito the eve. tates itself on the roofs of houses, and on vegetables, for almost a mile round, and is none other than a corrofive sublimate of lead, highly deleterious to animal life. It is indeed the worst poison in the mineral kingdom; I fay, the worst, because we are hitherto unacquainted with its antidote. These Flores Saturnini deftrog plants. 4 Cattle fed on grass thus impregnated, are ferzed with the beilon, a difeafe like the dry belly ach which destroys the labourers employed in fuch manufactures.

The nature of the fossil Asbestos as certained by the discovery of an artificial substance perfectly like it, lately made in France by Mr. Turbeville Needham. From the Philosophical Transactions.

HE Afbestos, or Amianthus, is an incombustible substance. divisible into fibres, of which a kind of linen has been made that fuffers no damage by fire. The proprietor of a forge in some part of France, not named, upon taking down his furnaces to repair them, found a great quantity of this substance at the bottom, which, like the native Amianthus, was capable of being manufactured either into incombustible linen or paper. Upon a farther enquiry, he discovered that both this and the native Asbestos, is nothing more than calcined iron, deprived of the Phlogistic, and that uniting the Phlogistic with this, or the fossil Amianthus, he can restore it any time to its primitive flate of iron.

Does not this, fays Mr. Needham, with the discovery of Lava, pummice stones, iron in a perfect state, and many other traces of fire observed in most of the mountains, particularly in all the great chains, and remarkably in all those under the equator, which are the highest on the globe, seem to indicate, that the dry land, with all its eminencies, was originally raised out of the waters by the force of subterraneous fire?

Descrip-

Pescription of a White Earth of which bread is made. From the German Ephemerides.

N the lordship of Moscaw, in the Upper Lusatia, a sort of White Earth is found, of which the poor, urged thereto, no doubt, by the calamities of the wars in those parts, now make bread. It is taken out of a hill where they formerly worked at faltpetre; when the fun has somewhat warmed this earth, it cracks, and fmall white globules proceed from it as meal; it does not ferment alone, but only when mixed with meal, M. Sarlitz, a Saxon gentleman, was pleafed to inform us, that he has feen persons who, in a great measure, lived upon it for some time; he affures us, that he procured bread to be made of this earth alone, and of different mixtures of earth and meal, and that he even kept some of this bread by him upwards of fix years: he further fays, a Spaniard told him, that this earth is also found near Gironne in Catalonia.

The practice of burning Sulphur in hog sheads for preserving wine, accounted for by a new and curious experiment.

If two or three drops of the oil of tartar are poured into haif a glass of very fine red wine, the wine will lose its red colour, and become opaque and yellowish as turned and pricked wine; but if two or three drops of the spirit of sulphur, which is a very strong acid, are afterwards poured into the glass, the same wine will intirely resume its beautiful red colour; whence the reason is

eafily perceived, why fulphur is burnt in hogsheads in order to preferve wine, fince it is not the inflammable part of sulphur that causes this effect, but its acid spirit, that enters and permeates the wood of the vessel.

An account of a very extraordinary degree of Artificial Cold produced at Petersbourgh, by Dr. Himsel. Extracted from an article in the Philosophical Transactions.

N the 14th of December, 1759, the weather was so cold at Petersbourgh, that the quickfilver in De Lisle's thermometer, fell to 250 degrees. On this day an artificial cold was produced by the mixture of spirit of nitre with fnow, as in Farenheit's experiment, and the thermometer being plunged in it, the quickfilver funk to 470 degrees. At this point it remained fixed in the open air near a quarter of an hour, and might have remained fo longer, but after that time it was carried into a warm room, where it soon began to rife. Upon a repetition of this experiment in the presence of several professors, the glass was broken as foon as the the mercury, which fell to 500 deg. appeared to be fixed, and it was found frozen into a folid malleable body, which being hammered, extended its surface like other metals, but recovered its fluidity foon after, being exposed to the open air, tho' the degree of natural cold was

This frozen quickfilver took up less space then when it was sluid, and sunk to the bottom of quick-

* Forty degrees below the freezing point in Farenheit's thermometer, is equal to 210 degrees of De Lisle's.

filver unfrozen; but all other fluids take up more space when they are frozen, than before, and their ice swims on the surface of the fluid matter of which it is the congealation.

Upon other repetitions of the experiment, when the quickfilver fell to 495 degrees, some spirit of the fea falt was poured into the mixture of spirit of nitre and snow, upon which the quickfilver fell to 554 degrees. Some more fnow being still added, and some oil of vitriol poured upon it, the quickfilver fuddenly funk to 1260 degrees. The ball was then broken, and the mercury found frozen to a folid body, and there is no wonder in that, fince it was frozen to a folid body when the mercury had fallen to 500. But in this experiment, the quickfilver, which still remained in the tube, was become folid, and appeared like a thread of filver wire, flexible every way, and fastened to the ball; the ball they forged into a flat circular form like a half crown, but at length it began to crack, and foon after became again fluid. During this experiment, the natural cold was 208. It is remarkable, that in an experiment made when the natural cold was 183 degrees, the quickfilver being taken out of a mixture in which it had fallen to 300, still continued to fall 100 degrees more, tho' after a certain time it liquified. This phænomenon the Russian philosophers have not accounted for; but it will not appear strange to those who know that intense cold is produced merely by evaporation, and that whatever is once wet, becomes colder as it is growing dry. Nothing more therefore is necessary to produce the

greatest possible degree of cold, than fpeedy evaporation often repeated upon the same substance. The spirit called Æther, is the most volatile now known, and if the bulb of a thermometer be dipped in this spirit, and as foon as taken out be blowed upon with a pair of bellows till it is dry, then dipped again, and blowed upon as before, in a quick and uninterrupted fuccession, the quickfilver will be foon frozen. the Russian experiments, the reports of travellers of hitherto unfuspected. veracity, are proved to be false; for they have affirmed, that they found the mercury frozen in their thermometers when the cold was equal to 200 degrees, but these experiments concur to prove that it does not become folid till it falls near 300 degrees lower. They affirm also, that the thermometer becomes useless, as foon as the quickfilver is frozen; but these experiments shew, that, though folid, it will yet descend with a greater degree of cold, for after it had fallen to 554 degrees, which is 54 beyond the point at which it freezes, it fell to 1260, which was 708 degrees lower upon producing a more intense degree of cold, by adding more fnow to the mixture, and pouring oil of vitriol upon it. It must, however, be obferved, that distilled mercury was used in these experiments, and that if the quickfilver be adulterated with lead, it may, perhaps, sooner become folid by cold, than if it is pure *..

This article has probably undergone two translations, one from the Russ into French, and one from the French into English, and accordingly it contains some obscurities and inconsistencies, which we

^{*} May we not therefore thus account for what the travellers just spoken of have advanced, concerning the mercury freezing so readily in their thermogeneters?

shall beg leave to mention, in hopes of feeing them cleared up in the next volume of that curious and uteful work from which this account is taken. We are told, that the quickfilver having fallen in the thermometer to 554 degrees, "in taking the thermometer from the mixture the quickfilver continued to fall in the open air, to the 552d degree:" but if 552 is not more than 554, the quickfilver in this case did not fall, but rise. We are also told that the professor, who, by adding fnow and oil of vitriol to the mixture, caused the mercury to fall from 554 to 1260 deg. is not fure "whether the ball might not have received fome crack, and the quickfilver thereby might have had liberty to fall the lower;" but as the quickfilver is supposed to have been frozen to a folid body, not only in the bulb, but the tube, when it was down at 554, it is not easy to conceive how a crack in the glass could cause it to descend 706 degrees more. The directions which are given to enable other philosophers to repeat these expeperiments are not expressed so clearly as could be wished; we are told it is necessary to use "fuming fpirit of nitre, or of fuch as is evaporated till the fumes become red, for common aqua fortis will not do." We are then directed to take "this fuming spirit of nitre, cooled as much as possible in liquifying fnow, and with it half fill a wine glass, throwing in as much snow at the same time, and stirring it till it becomes of the confistence of pap; then you have almost in an instant, the necessary degree for the congealation of quickfilver."

We are told also in one place, that." the greatest part of the ex-

periments agree in this, that the quickfilver becomes folid, when it falls in the thermometer 500 deg. more or less;" (i. e.) they agree that there is a certain degree of cold which they do not at all afcertain, that will freeze quickfilver; for the words more or less leave this degree in absolute uncertainty; and indeed we are told immediately afterwards, that these experiments " do not fo sufficiently agree as to deduce any thing certain about it:" It is, however, deduced from the fudden freezing of the quickfilver in a glass tube with artificial cold, "that the cold then produced ought to exceed 200 degrees:" But we are told in the relation of another experiment, " that the refult of a mixture was an augmentation of cold to 300 degrees, and that it must then happen that the surprifing degree obtained was necessary to congeal mercury;" from which it follows, that the degree of cold necessary to congeal mercury is 500 degrees more or less; that it must exceed 300 degrees, yet that at 300 degrees the surprising degree is obtained fufficient to congeal mercury.

An Account of a curious phænomenon observed by Abbé Nollet, in the year 1755.

N the tenth of September, 1755, about five o'clock in the evening, M. l'Abbé Nollet being on the road to Fontainbleau, observed, when he was near the abbey de la Saussaye that the sun appeared very pale through some light clouds, and that a sog rose from the west side of the horizon to the zenith and beyond it. The wind blew

blew very cold from the north, and foon after he perceived a kind of rainbow of about 120 degrees extent, the convex part of which was cowards the fun, and which feemed to be about the third part of a circle, of which the zenith would have been the center. This bow had all the colours of the iris, the convex part being red, and the concave blue; it faded by degrees, and in about a quarter of an hour wholly disappeared. Soon after M. Nollet observed in some white clouds, at equal distances to the right and left of the fun, two streaks, which feemed to be small portions of a circle, of which the fun was the center, and of which the diameter feemed to be about forty degrees. These streaks confisted only of two colours, red and vellow; the part next the fun was red, and the opposite part yellow: the segment that was to the right of the fun difappeared first, as that part of the fky first became clear; that on the left continued more than half an hour, that part of the fky continuing to be covered with white clouds. These phænomena seem to confirm the opinion of M. Mairan, printed in a memoir of the French academy of sciences in the year 1721, that all parhelia, though very different in appearance, are the same phænomena as the rainbow, and vary only by local circumstances, which cause them to fade in different portions at different times.

An Account of a burning well at Broseley in Shropshire; being part of a letter from the rewerend Mr. Mason, Woodwardian professor at Cambridge, and F. R. S. dated June 18, 1746.

A T Broseley in 1711 was a well found, which burned with

great violence, but it has been loss many years. The poor man in whose land it was, missing the profit he used to have by shewing it, applied his utmost endeavours to recover it; but all in vain till May last, when attending to a rumbling noise under the ground, like what the former well made, though in a lower situation, and about thirty yards nearer to the river, he happened to hit upon it again.

That you may have fome notion what it is, I will lay before you fuch an account of it as the curfory

view I had will permit.

The well for four or five feet deep is fix or feven feet wide; within that is another less hole of like depth dug in the clay, in the bottom whereof is placed a cylindric earthen vessel, of about four or five inches diameter at the mouth, having the bottom taken off, and the fides well fixed in the clay rammed close about it. "Within the pot is a brown water thick as puddle, continually forced up with a vielent motion, beyond that of boiling water, and a rumbling hollow noise, rifing or falling by fits five or fix inches; but there was no appearance of any vapour rifing; which perhaps might have been vifible, had not the fun shone so bright.

Upon putting down a candle at the end of a stick, at about a quarter of a yard distance, it took fire, darting and stashing in a violent manner, for about half a yard high, much in in the manner of spirits in a lamp, but with greater agitation. The man said that a tea kettle had been made to boil in about nine minutes time, and that he had left it burning forty-eight hours together without any sensible diminution.

I

It was extinguished by putting a wet mop upon it, which must be kept there a small time; otherwise it would not go out. Upon the removal of the mop there succeeded a sulphureous smoak, lassing about a minute, and yet the water was very cold to the touch.

The well lies about thirty yards from the Severn, which, in that place, and for fome miles both above and below, runs in a vale full 100 yards perpendicular below the level of the country on either fide, which inclines down to the vale at an angle of twenty or thirty deg. from the horizon, but fomewhat more or less in different places, according as the place is more or less

rocky.

The country confifts of rock, stone, earth, and clay; and as the river, which is very rapid, washes away the soft and loose parts, the next fuccessively slip into the channel, so as by degrees and in time to affect the whole Rope of the land; and as the inferior strata yield coal and iron ore, their fermentation may produce this vapour, and force it to ascend with violence through the chinks of the earth, and give the water the great motion it has. This might be obstructed in one place by the forementioned subsiding of the sloping bank, and might afterwards find vent in another, in like manner as happened at Scarborough a few years fince.

A gentleman writes, June 16, 1761,

WHEN I was there eight years ago, the cylinder had been taken up, or otherwise deftroyed; the well no longer appeared any thing else but a miry hole of clay. Other waters had been fuffered to mix with those of the burning spring, which, though they confiderably diminished the effect, did not however wholly destroy it; for, upon the application of a piece of lighted paper, a stream of clear flame shot up from the well, which very much refembled that of a tea-kettle lamp fed by spirits; but, as we could not keep out the other water, the flame presently went out of itself. I forget now to what cause they told us this shameful neglect was owing; whether to a contest between two rival claimants to the property, or whether the curiofity of the circumjacent inhabitants, &c. being fully gratified, it no longer attracted a concourse of visitants sufficient to reward the attention of the proprietor. - It were to be wished that fome of the gentlemen in that neighbourhood (which I have now left many years) would give us the present state of this wonderful phænomenon.

An Account of a dreadful typhon, which traversed South-Carolina in the month of May of this year, in a letter from Boston in New-England, dated June 1, 1761.

town, in South-Carolina, that on the 4th of last month, at half after two P. M. a most violent whirlwind, of that kind commonly known by the name of typhones, passed down Ashley river, and sell upon the shipping in Rebellion road with such fury and violence, as to threaten the destruction of the whole seet. This terrible phænomenon was first seen from the

town, coming down Wappo creek, refembling a column of smoak and vapour, whose motion was very irregular and tumultuous, and came with great swiftness. The quantity of vapour which composed this impetuous column, and its prodigious velocity, gave fuch a furprifing momentum, as to plough Ashley river to the bottom, and laid the channel bare: this occasioned fuch a fudden flux and reflux, as to float many boats, pettiaugers, and even floops and schooners, which were before lying dry, at some di-stance from the tide. When it was coming down Ashley river, it made a noise like constant thunder; its diameter, at that time, was judged to be about 300 fathoms, and its height about 35 degrees. It was met at White Point by another gust, which came down Cooper's river, but was not equal to the other; but upon their meeting together, the tumultuous agitation of the air was much greater, infomuch that the froth and vapour feemed to be thrown up to the height of 40 degrees, while the clouds that were driving in all directions to this place, feemed to be precipitated, and whirled round at the fame time, with incredible velocity. Just after this it fell upon the shipping in the road, and was fcarce three minutes in its passage, though the distance was near two leagues; there were forty-five fail in the road, five of which were funk outright, and his majesty's ship Dolphin, with eleven others, lost their masts, &c. The damage done to the shipping, which is valued at 20,000 l. sterling, was done almost instantaneously, and some of those that were funk, were buried in the water fo fuddenly, as scarce to give time to those that were below to get upon deck; and it is remarkable, that but four lives were loft in them. The strong gust which came down Cooper's river, checked the progress of that pillar of destruction from Wappo creek, which, had it kept its then direction, must have driven the town of Charlestown before it like chaff. This tremendous column was first feen about noon, upwards of fifty miles W. by S. from Charles-town, and has destroyed, in its course, several houses, negro huts, &c. on the plantations, and many, both white people and negroes, were killed and hurt; befides, many cattle have also been found dead in the fields. In feveral parts of its course it left an avenue of a great width, from which every tree and shrub was torn up: great quantities of branches and limbs of trees were furiously driven about, and agitated in the body of the column as it passed along. The fleet lying in the road ready to fail for Europe, was the largest and richest that ever cleared out from Charles-town. About four o'clock the wind was quite fallen, the sky clear and ferene, fo that it was scarce credible that such a dreadful scene had been so recently exhibited, were not the finking and dismasted vessels so many shocking and melancholy proofs of it. The finking of the five ships in the road was fo sudden, that it was a doubt whether it was done by the immense weight of this column pressing them instantaneously into the deep, or whether it was done by the water being forced fuddenly from under them, and thereby letting them fink fo low, as to be immediately covered and ingulphed by the lateral mass of water. Most

of the disabled ships were towed up to the town the next day, and captain Scott, of the Scarborough, is appointed to convoy those that are able to put to sea, in the room of the Dolphin.

An Account of the death of a woman killed by a fudden and imperceptible eruption from the earth.

Woman of the village of Bonne-Vallie, near Ventimillia*, aged about 37 years, was returning with four of her companions, from the forest of Montenere, each being loaded with a bundle of fmall flicks and leaves, which they had been gathering. As foon as they arrived at a place called Gargan, this woman, two of her companions being before, and two behind her, fuddenly cried out with great vehemence, and immediately fell down with her face towards the ground. The person that was nearest to her observed nothing more than usual, except a little dust that rose round her, and a slight motion in fome little stones that lay upon the fpot; they all ran immediately to her affiftance, but they found her quite dead; her cloaths, and even her shoes were cut, or rather torn into flips, and fcattered at the distance of five or fix feet round the body, fo that they were obliged to wrap her up in a cloth, in order to carry her to the village.

Upon inspecting the body, the eyes appeared fixed and livid; there was a wound on the left fide of the os frontis, which left the pericra-

nium bare, and there were also many superficial scratches upon the face in strait lines. The region of the loins was livid, and a wound was discovered there which had broken the os facrum; at fome distance there was another wound. and both these wounds were in right lines, and very deep. the left groin there was a wound which had divided all the teguments, and penetrated into the peritonæum; the epigastric and hypogastric regions were livid; the teguments and muscles of the right fide of the abdomen were destroyed, and had given way to the intestines; the os pubis was laid bare, and fractured, and the flesh was ftripped off quite to the hip, from whence the head of the os femoris had been broken off, and forced out of the focket, in which it is articulated; the muscles of the buttock and thigh were almost carried away, and what is yet more aftonishing, notwithstanding this loss of flesh, which could not be less than fix pounds, there was not the least drop of blood to be seen upon the fpot where the accident happened, nor the least fragment of the flesh that had been torn away.

It was supposed that this poor woman was killed by the eruption of a subterraneous vapour, which issued from the ground directly under her; a conjecture which seems the more probable, as, in the summit of the mountain Montenere, there are two chinks, from which smoke frequently issues, and at the foot of the mountain there is a sulphureous spring. It may easily be

[†] Ventimillia or Ventimiglia, is a town of Liguria in Italy, now subject to the Genoese; it is in the neighbourhood of the Alps, called originally Alb from their white appearance.

conceived that an exhalation, thrown off from the fire that burns under the mountain with great force, would make its way through the ground, and might produce the death of this unhappy person, with all its extraordinary appearances. Perhaps the eruption of these exhalations are more frequent than is generally imagined, and we have been ignorant of them only because no subject has happened to be present, upon which their effects could appear.

This most extraordinary relation was communicated by M. Morand to the royal academy of sciences in Paris, by whom it has been made

public.

An Account of the late Earthquakes in Syria. In a letter from Dr. Patrick Russel, dated the 7th of December, 1759. From the Philosophical Transactions.

HE spring of this year was unufually dry, the fummer temperate, and the autumn, though the rains came on towards the end of September, might be esteemed much drier than in other years. Aleppo river has been very low all the fummer; and its bed, from the first to the second mill, is, I believe, even now, still without water. This phænomenon I at first thought remarkable; but have been informed that the fcarcity of water complained of during all the fummer, was occasioned by driving the river into fome rice-grounds lately formed towards Antab.

On the morning of June 10, a flight shock of an earthquake was felt here, and as usual, soon forgot; having, so far as we know, been felt in no other place, in any

degree of feverity.

October the 30th, about four in the morning, we had a pretty fevere shock (indeed the most violent I ever felt) which lasted somewhat more than a minute, but did no damage in Aleppo. In about ten minutes after this first, there was a second shock; but the tremulous motion was less violent, and did not last above 15 seconds. It had rained a little in the preceding evening; and when the earthquake happened, the west wind blew fresh, the sky was cloudy, and it lightened.

This earthquake occasioned a little alarm amongst the natives, and even with the Europeans was the topic only for a day. But the fubject was foon revived, by letters from Damascus, where the same shock was felt by us at Aleppo, and feveral other successive ones. had done confiderable damage. From this time, we had daily accounts of earthquakes from Damascus, Tripoly, Seidon, Acri, and along the coast of Syria; but so exaggerated in some circumstances. and so inaccurate in all, that we only knew in general, that Damafcus, Acri, and Seidon, had suffered injury from the earthquake, though less than was at first given out.

Such flories circulating among the people, rendered them more fusceptible of alarm; and an occasion soon offered, where they feared, that the worst of their apprehensions were to be realized.

This happened the 25th of November. The morning had been ferene, fome clouds arose after noon, and the evening was remarkably hazy, with little or no wind. About half an hour after

fever

feven at night, the earthquake came on: the motion, at first, was gently tremulous, increasing by degeees, till the vibrations became more distinct, and, at the same time, fo strong as to shake the walls of the houses with confiderable violence; they again became more gentle, and thus changed alternately feveral times during the shock, which lasted in all about two minutes. In about eight minutes after this was over, a flight shock, of a few feconds duration, succeeded. The thermometer was at 50, and the barometer flood at 28-9, the mercury fuffering no alteration. There was little or no wind in the night, the fky clear, excepting fome heavy clouds, that hung about the moon. At a quarter after four next morning, we had another shock, which lasted somewhat less than a minute, and was hardly fo strong as that of the preceding The night of the 26th was rainy and cloudy. At nine o'clock we had a flight shock, of a few seconds. The motion here appeared to be very deep, and was rather undulatory than tremulous. 27th, cloudy and rainy. From midnight of the 25th, besides these now mentioned, four or five flighter shocks were felt; but I myself was sensible of none, till the morning of the 28th, when we had a short pulsatory shock. The same day, at two o'clock, we had a pretty fmart shock, lasting about forty seconds. From this time I was fenfible of no more, though others either felt or imagined feveral flight vibrations every day.

However violent this earthquake was, or rather by the frightened people of Aleppo, imagined to be, it is certain, that excepting a very few old walls, the city bears no fresh marks of ruin; none of the oldest minorets § have suffered. Its effects at Antioch were more formidable; many houses have been thrown down, and some sew people killed.

December 7. The earthquake of the evening of the 25th, has proved fatal to Damascus; one-third of the city was thrown down, and of the people numbers yet unknown perished in the ruins. The greater part of the furviving inhabitants fled to the fields, where they still continued, being hourly alarmed by flighter shocks, which deterred them from re-entering the city, or attempting the relief of such as might yet be saved, by clearing away the rubbish. Such was the purport of a letter I read this day, which was wrote from Damascus three days after the earthquake. Other accounts we have at this place, make the loss of the inhabitants amount to 30000; but, in circumstances of such general horfor and confusion, little accuracy can be expected, and the eaftern disposition to exaggeration reigns, at present, universally.

Tripoly has suffered rather more than Aleppo; three minorets, and two or three houses, were thrown down, while the walls of numbers of the houses were rent. The Franks, and many of the natives, have deserted the city, and remain in the fields.

At Seidon, great part of the Frank kane was overthrown, and fome of the Europeans narrowly escaped with their lives. Acri and Latakea have suffered little, besides rents in some of the walls: but

Saphet (eight hours from Acri) was totally destroyed, together with the greater part of the inhabitants.

Such are the most authentic accounts we have from abroad; how much they contribute to calm the minds of the people at Aleppo, you may easily imagine. Since the afternoon of the 28th, several slight shocks have been every day felt, and many more formed by the power of imagination: for my own part, I have fince that time perceived none, excepting one the evening of the 5th, which was pretty frong, but lasted not above twenty feconds. The weather, for these two days, has been gloomy and rainy; a change which people are willing to flatter themselves is favourable. It often lightens in the night, and thunder is heard at a great distance.

Extract of another letter from Dr. Patrick Ruffel, to Dr. Alexander Ruffel, dated at Aleppo, 29 March, 1760.

IN my last, of the 7th of December, I gave you a full account of the earthquakes, which have occasioned an universal panic all over Syria. There were several other shocks in December, and a few very slight ones in January: since which time, all has been quiet.

Excepting a few old houses, none of the buildings in Aleppo were actually thrown down; but the walls of a considerable number of houses have been rent.

We have had the wettest winter I ever saw in this country. The Coic has every where overslowed its banks, and is just now much higher than it has been known to rise for many years.

An Account of the dreadful earthquakes and eruptions, which happened last April 1761, in the island of Terceira, one of the Azores. In a letter from Mr. James Fearns, his majesty's consul there. To which are added, Dr. Mitchell's conjectures concerning the cause of earthquakes and volcanos in general.

OInce the last of November we have felt feveral earthquakes. and on the 31st of March the sea rose to a great height, and fell again fo low, that the quays were left dry; all the lighters and fishingboats that were hauled up into Potto Rico, were carried down into the bay, and broke to pieces upon the rocks. On the 14th of April, we had four small earthquakes; and on the 15th, about one in the morning, we were all raised out of our beds by a violent shock: from which time, the earth was almost continually trembling, till the evening of the 17th, when we had two other violent shocks, attended with noises like the discharging of can-These, though they increafed our fear, yet they feemed to have a good effect upon the earth; for afterwards tremblings were not fo frequent. The next morning news was brought that there was a great smoke seen about 3 leagues to the N. W. of this city, which was foon confirmed by noises like thunder at a distance, which seemed to proceed from the same place. Several people were fent to examine it, but so great were the tremblings of the earth, and the smoke and the noises, that they durst not approach near enough to give a regular account. This continued three days, in which we were continually alarmed with earthquakes, or the faid dreadful noises. On the 20th

we had three shocks that exceeded any we had yet felt, in which the noises were so loud, and the agitations of the earth fo violent, that every body thought it was opening under their feet; and foon after account was brought, that fire was burst out of the ground, about half a league to the eastward of the aforesaid smoke. This gave us new alarms, which were increased almost every hour, with accounts, that rivers of fire had iffued out of the volcanos, and that some of them directed their course towards this city. On the 23d I went to see it, and found, that the accounts we had heard were not exaggerated: the first fight of it was fo dreadful, that some of our company durst not proceed; but I was determined to approach as near as possible; and accordingly went forward, with a clergyman in that neighbourhood. When we were as near as we could go for the heat, we got upon an eminence, from whence we had a prospect of the whole. It is impossible for the imagination to form so horrible a fight as presented itself to our views from thence. There were three large volcanos, at a confiderable distance from each other (the mouth of one of them was at least fifty yards long) from all parts of which proceeded dreadful bellowings like thunder, and vast quantities of red hot stones and slakes of fire: and all round about was a large burning lake, out of which proceeded feveral rivers, the principal ones directing their courses about N. W. the larger stones fell generally near the place from whence they issued, but the smaller ones were thrown up to an incredible height, and by the wind were forced on one fide, which had already raifed three large

hills. The clattering of the stones in the air, the terrible thunderings from below the lake, rivers of liquid fire, and the earth continually shaking under our feet, produced a scene too dreadful to be described. When we had taken a view of this. we joined our company, and went to the N. W. fide to fee the rivers of fire: the three large ones were near a mile in breadth, and all directed their course towards the town of Biscouto. As the country was almost even, the motion of the two last was very flow; but the first had run near two leagues from the volcano, and was got into a more declining ground, which made its motion fwifter. It is impossible to express the consternation and distresses of the inhabitants of this part of the island, particularly those of Biscouto: the first river was almost entering their town, which they had already abandoned; and the two others that came behind, threatened to overwhelm the adjacent country; for they run in a head of at least four yards high, and left no fign of either tree or house that stood in their way. This was the the state of things on the 23d. But on the 24th, it pleased the Almighty to abate the force of the fire, and foon after the rivers began to have a flower motion: they moved along however, for feveral days, and part of the first entered the town of Biscouto, where it burnt about one third of the houses. and then directed its course into a valley on one fide, where it continued its motion four or five days, and then stopped. I ferd you this to fatisfy you for the present; when the rivers, &c. are cooled, I shall go again and examine them thoroughly, and then I shall give you a more regular account.

H 2

We cannot conclude these accounts of earthquakes and eruptions, without taking notice of what the Rev. Mr. John Mitchell, of Queen's College, Cambridge, has lately published concerning them. His conjectures are, that the immediate cause of earthquakes is a fubterraneous explosion, and that the cause of the subterraneous explosion is a quantity of water suddenly breaking in upon a subterraneous fire, by which a vapour is instantly produced, the quantity and elastic force of which are equal to all the phænomena of earthquakes: all his observations tend to confirm these conjectures, which feem perfectly to coincide with all the phænomena of earthquakes; and fuch phænomena are here faithfully and carefully collected, related and compared. In short, it is the best tract upon the subject that has yet appeared.

A description of Ingleborough, a mountain in Yorkshire, signed PASTOR.

With an indication of some other places remarkable for natural curiosities in the north of England.

Ngleborough is fituated in the weff riding of the county of York; the westerly and northerly part of it lies in the parish of Bentham; the easterly in the parish of Horton in Pibbledale; the foutherly in the parish of Clapham. It is likewise a part of four manors. The manor of Ingleton, to the west, belonging to Parker, esq; the manor of Newby, to the co-heirs of the late duke of Montagu; the manor of Clapham, to Josias Morley, esq; and the manor of Austwick, to James Shuttleworth, esq;

It is a mountain, fingularly eminent, whether you regard its height, or the immense base upon which it stands. It is near twenty miles in circumference, and has Clapham, a church town, to the fouth; Ingleton to the west; Chapel in the Dale to the north; and Selfide, a small hamlet, to the east; from each of which places the rife, in some parts, is even and gradual; in others, rugged and perpendicular. In this mountain rife confiderable streams, which at length fall into the Irish sea. The land round the bottom is fine fruitful paflure, intersperfed with many acres of limestone rocks. As you ascend the mountain, the land is more barren, and under the furface is peat-moss, in many places two or three yards deep, which the country people cut up, and dry for burning, instead of coal. As the mountain rifes, it becomes more rugged and perpendicular, and is at length so steep that it cannot be ascended without great difficulty, and in some places not at all. In many parts there are fine quarries of flate, which the neighbouring inhabitants use to cover their houses: there are also many loose stones; but no limestones; yet, near the base, no stones but lime-stone are to be found. The loofe stones near the fummit the people call geres stone. The foot of the mountain abounds with fine fprings on every fide, and on the west side there is a very remarkable spring near the fummit. The top is very level; but fo dry and barren that it affords little grass, the rock being but barely covered with earth. faid to be about a mile in circumference, and feveral persons now living fay, that they have feen races upon

apon it. Upon that part of the top, facing Lancaster and the Irish sea, there are still to be seen the dimenfions of an house, and the remains of what the country people call a beacon, viz. a place erected with stones, three or four yards high, ascended with stone stairs; which ferved in old time, as old people tell us, to alarm the country, upon the approach of an enemy, a person being always kept there upon watch, in the time of war, who was to give notice in the night, by fire, to other watchmen placed upon other mountains within view, of which there are many, particularly Whernfide, Woefall, Camfell, Pennygent, and Pennlehill. There are likewise discoverable a great many other mountains in Westmoreland and Cumberland, besides the town of Lancaster, from which it is distant about 20 miles. The west and north sides are most steep and rocky; there is one part to the fouth, where you may afcend on horseback; but whether the work of nature, or of art, I cannot fay. A part of the faid mountain jutts out to the north-east near a mile, but fomewhat below the fummit; this part is called Parkfell; another part jutts out in the same manner, near a mile towards the east, and is called Simon-fell; there is likewise another part towards the fouth, called Little-Ingleborough; the fummits of all which are much lower than the top of the mountain itself. Near the base, there are holes or chasms, called Iwallows, fupposed to be the remains of Noah's deluge; they are among the lime-stone rocks, and are open to an incredible depth. The springs towards the east all come together, and fall into one of

these swallows, or holes, called Allan Pott; and after passing under the earth about a mile, they burst out again, and flow into the river Ribble, whose head or spring is but a little further up the valley. The depth of this swallow or hole, could never be ascertained; it is about 20 poles in circumference, not perfectly circular, but rather oval. In wet foggy weather it fends out a fmoke, or mift, which may be feen at a confiderable distance. Not far from this hole, nearly north, is another hole, which may be eafily descended. In some place, the roof is four or five yards high, and its width is the fame; in other places not above a yard; and was it not for the run of water, it is not to be known how far you might walk, by the help of a candle, or other light. There is likewise another hole or chasm, a little west from the other two, which cannot be descended without difficulty: you are no fooner entered than you have a subterraneous passage, sometimes wide and spacious, sometimes so narrow you are obliged to make use of both hands, as well as feet, to crawl a confiderable way; and as I was informed, fome persons have gone feveral hundred yards, and might have gone much further, durft they have ventured. There are a great many more holes, or caverns, well worth the notice of a traveller: fome dry, some having a continual run of water; such as Blackside-Cove, SirWilliam's Cove, Atkinson's Chamber, &c. all whose curiofities are more than I can describe. There is likewise, partly south east, a small rivulet, which falls into a place confiderably deep, called Long-kin; there is likewise another swallow, or hole, called Johnson's Jacket-H 3

hole, a place resembling a funnel in shape, but vastly deep; a stone being thrown into it, makes a rumbling noise, and may be heard a confiderable time: there is also another, called Gaper-gill, which a good many springs fall in one stream, and after a subterraneous passage of upwards of a mile, break out again, and wind through Clapham, then, after a winding course of several miles, this stream joins the river Lon, or Lune; and, paffing by the town of Lancaster, it falls into the Irish sea: there are likewise, both on the west and north fides, a great many fprings, which all fall into fuch cavities, and bursting out again, towards the base of the faid mountain, fall likewise into the Irish sea, by the town of Lancaster; and what seemed very remarkable to me, there was not one rivulet running from the base of the mountain that had not a confiderable subterraneous passage. All the springs arose towards the summit, amongst the greet stones, and funk or fell into some hole, as soon as they descended to the lime-stone rocks; where passing under ground for fome way, they burst out again towards the base. There is likewife, to the west and north, a great many fwallows or holes, fome vaftly deep and frightful, others more shallow, all astonishing, with a long range of the most beautiful rocks that ever adorned a prospect, rising in a manner perpendicularly up to an immense height.

In the valley above Horton, near the base of this mountain, I observed a large heap or pile of greetfones all thrown promiscuously together, without any appearance of building or workmanship, which yet cannot be reasonably thought to be the work of nature; few

stones are to be found near it, thos it is computed to contain 400 of that country cart load of stones, or upwards. There is likewise another at the base north-east, in resemblance much the same, but scarce so large, and I was informed of several others up and down the country.

Pastor.

R. Rauthmell, in his Antiquitates Bremetonacæ, or the Roman Antiquities of Overborough (p. 61.) has, from Dr. Gale, given the following very fatisfactory and entertaining account of the derivation of this mountain's name, and the use of the beacon, the ruins of which are now visible upon its flat fummit.

"Bremetonacæ is a compound of three British words; Bre, Maenig, Tan; Mons, Saxeus, Ignis: which is, to express it in English, the rocky-hill fire flation; it e. the flation at Overborough had a fire upon a hill. And the word Ingleborough fignifies the fame thing in the Saxon tongue, which the word Bremetonacæ fignifies in the British. Hence we learn that the garrison of Overborough erected a beacon on the rocky hill of Ingleborough; and on that fide of the fummit which looks towards Overborough. In confirmation of this, the word Borough fignifies a fortified mount; i. e. Ingleborough, from its very name, denotes a fortification; and fo it was when it had Roman foldiers, as centinels detached from the garrison of Overborough." Ingleborough is about five miles from Overborough; but its prodigious height would have made it fit for a mons exploratorius, had the distance been almost double.

Those gentlemen, who have leisure and sense enough to desire

an acquaintance with the natural history of their own country, would do well to fet out from Lancaster, and from thence proceed to Cartmel, Windermeer, Ulverstone, Furness-abbey, Pile of Foudrey, Millum-Castle, Ravenglass, Whitehaven, Cockermouth, Boulness, and Carlisle; they would have frequent reason to lament the incredible ignorance or carelessiness of those who have undertaken to give an account of the curiosities of Great Britain.

One of the curiofities they would meet with in this tour, is a cavern upon a common belonging to a little village called Leck, in the N.E. part of Lancashire. The cavern itfelf is called by the neighbourhood Ease-gill-kirk. The entrance into it has the appearance of a pointed gothic arch, about 20 yards high, and proportionably wide. Within, it looks like a lofty spacious dome, variegated with fretwork, of almost every colour. There are several passages out of it, which lead under the hill; but one must have lights and clues to examine them with fafety and pleafure.

To the above places, A.B. in a letter from Cockermouth, dated Oct. 19, adds Kefwick in Cumberland, and its environs, of which he thus speaks.

Ature has with fuch a liberal hand lavished her graces on this sweet retirement, that here seems to be an assemblage of every thing that is beautiful, from every rural scene in the universe. Some of its finest groves have indeed been cut down within these few years; but in vain should I attempt to describe the beauties which remain,

which cannot be experienced but

by an actual furvey.

It would be unpardonable not to mention the black lead mine at the head of the valley of Borrodale, as being one of the greatest curiofities in England, or perhaps in Europe. Neither ought the falt spring to be past by, being very near the edge of the road, at the head of the lake. I have mentioned this part of the country chiefly on account of the prospects, with which every traveller, who has any taste for the wild and romantic, cannot but be highly delighted; the vallies of Enerdale, Buttermeer, Loweswater and Lorton, furnish us with some others of the same nature; but not perhaps quite fo beautiful or extenfive. But to the antiquarian I should point out several other as worthy of notice, fuch as Eleborough, near Maryport, where may be feen feveral pieces of Roman antiquities; and Wigton, near which place appear the vestigia of that famous Roman station, which has for many years gone by the name of Old Carlisle, where have been found a great number of very valuable antiquities, as votive altars, infcriptions, &c.

When our traveller has visited Carlisle, no doubt but he will have a defire to see what remains of the Picts wall, in this county. Many pieces of antiquity are to be seen at Netherby, Scaleby-castle, Brampton, Lanercost, and Irthington.

Corby is remarkable for the pleafantness of its situation; and, opposite to it on the other side of the Eden, Wetherall, where are some rooms dug out of the solid rock, in a place very difficult of ascent, supposed to have been the habitation

H 4

of some hermit; or, perhaps, places of security for the monks to retire to in time of danger. Near Penrith, a little below the confluence of the Eimot and Eden, is also a large grotto dug out of the rock, said to have been once a place of some strength, known by the name of Isis Parlish. And at Little Salkeld, not very far from thence, may be seen that great curiosity called Long Meg and her Daughters, not perhaps well accounted for by

any of our antiquarians.

When speaking of prospects, I ought to have mentioned that vaftly extensive and much admired one from Warnal, which takes in all the low country, and bounded on the north by Solway Frith, and a fine chain of Scottish mountains. Not far from hence, near - Denton's, esquire, is a petrifying spring. There is also another in the estate of sir William Dalston, at Uldale, out of, which have been taken feveral large and extremely curious petrifactions of moss, leaves, roots, &c. but it does not appear that this mutation would be produced in any substance but therein, but in a rotation of a prodigious number of years. some parts of the country are some mineral waters, much reforted to at the feafon, and feveral rich mines of lead, fome copper, &c.

Upon the whole, from what I have faid, it may appear that Cumberland is as well worth visiting, on several accounts, as most other counties in

England,

An account of that part of America, nubich is the nearest to the land of Kamtchatka, Extracted from the

Read before the Royal Society, Jan. 24, 1760.

THE continent of America, which now is known from 52 to 60° of north latitude, extends from the fouth-west to the northeast, every where almost at an equal distance from the Kamtchadalian fhores, viz. about 37 o longitude; for the Kamtchadalian shore, also, from the Kurilian Lopatka [the shovel] to cape Tchukotski, in a strait line (except where there are bays and capes) lies in the very same direction. So that one has ground to infer, that those two lands were once joined, especially in those parts, were lies cape Tchukotíki: for, between that and the coast that projects, which is found at the east, directly over against it, the distance does not exceed two degrees and a

Steller, in his Memoirs, brings four arguments to prove this:

1. The state of the shores, which, both at Kamtchatka and in America, are cragged.

2. The many capes, which advance into the fea, from 30 to 60 verifes

3. The many islands in the sea, which separate Kamtchatka from America.

4. The fituation of those islands, and the inconsiderable breadth of that sea.

The fea, which divides Kamtchat-

ka

description of Kamtchatka by Professor Krashennicost, printed at Petersburg, in two volumes, 4to. in 1759; and translated by Dr. Dumaresque, chaplain to the English factory at Petersburg.

From the neighbouring monastery.

ka from America, is full of islands, which lying over against the southwest end of America, extend towards the streights of Anian, in such an uninterrupted series as the Kurilian islands do towards Japan. That row of islands is sound between 51 and 54° of latitude, and lies directly east; and it begins not farther than 5 degrees from the Kamtchadalian shore.

Steller thinks, that Company's-land is to be found between the Kurilian and American islands (which many doubt of), if one setting out from the south-west extremity of America advance south-west: for, in his opinion, Company's-land must be the base of a triangle, which it forms with the Kurilian and the American islands. This seems not to be destitute of foundation, if Company's-land be rightly laid down on the maps.

The American land is in a much better state, with regard to climate, than the farthermost eastern part of Asia, though it lies near the sea, and has every where high mountains, fome of which are covered with perpetual fnows; for that country, when its qualities are compared with those of Asia, has by far the advantage. The mountains of that part of Afia are every where ruinous and cleft; from whence they have, long fince, lost their confist-ency, they have lost their inward warmth; upon which account, they have no good metal of any kind; no wood nor herbs grow there, except in the valleys, where is feen small brush-wood and stiff herbs. On the contrary, the mountains of America are firm, and covered on the furface, not with moss, but with fruitful earth or mold; and therefore, from the foot to the very top,

they are decked with thick and very fine trees. At the foot of them grow herbs proper to dry places, and not to marrhy ones; befides that, for the most part, those plants are of the same largeness and appearance, both on the lower grounds and on the very tops of the mountains; by reason that there is every where the same inward heat and moisture. But in Asia, there is so great a difference between them. that of one kind of plants growing there, one would be apt to make feveral kinds, if one did not observe a rule, which holds generally with regard to those places, viz. that in lower grounds herbs grow twice as large as on the mountains.

In America, even the sea-shores, at 60° latitude, are woody; but in Kamtchatka, at 51° latitude, no place set with small willows and alder-trees, is found nearer than 20 versles from the sea: plantations or woods of birch-trees are, for the most part, at the distance of 30 verstes, and, with regard to pitch-trees, on the river Kamtchatka, they are at the distance of 50 versles, or more, from its mouth. At 62°, there is no wood at Kamtchatka.

In Steller's opinion, from the aforementioned latitude of America, the land extends as far as 700, and farther; and the chief cause of the abovefaid growth of woods in that country, is the cover and shelter it has from the west. On the other hand, the want of wood on the Kamtchadalian shores, especially on the shore of the Penshinian sea, doubtless, comes from a sharp north wind, to which it is much exposed. That those parts which lie from the Lopatka, farther to the north, are more woody and fruitful, is owing to cape Tchukotski, and the land that has been observed over against it, by which those parts are sheltered

from the sharp winds.

For this reason also fish come up the rivers of America earlier, than those of Kamtchatka. The 20th of July, there has been observed a great plenty of fish in those rivers; whilst at Kamtchatka, it is then but the beginning of an abundant fishery.

Of berries they faw there an unknown kind of rasberries, which bore berries of an extraordinary big. mess and taste. As to the rest, there grow in that country black-berries, with feveral other kinds of berries, called in Russ, jimolost, golubitsa, brusnitsa, and shiksha, in as great

plenty as at Kamtchatka.

There are creatures enough, good for the support of the inhabitants of those parts; particularly seals, seadogs, fea-beavers, whales *, canis carcharias, marmottes [marmotta minor and red and black foxes. which are not so wild as in other places, possibly because they are not much hunted.

Of known birds, they faw there magpies, ravens, fea-mews, fearavens, swans, wild ducks, jackdaws, woodcocks, Greenland pigeons, and mitchagatki, otherwise called northern ducks. But, of unknown birds, they observed more than ten forts, which it was not difficult to distinguish from European birds, by the liveliness of their colours.

With regard to the inhabitants of those parts, they are such a wild people, as the Koriaki and Tchutchi. As to their persons, they are well fet, broad and firong shouldered,

The hair of their head is black, and strait, and they wear it loofe. Their face is brown, and flat as a plate; their nose is flat, but not very broad; their eves are as black as jet; their lips thick; their beard small; and their neck short.

They wear shirts with sleeves which reach lower than the knee; and they tye them up, with thongs of leather, below the belly. Their breeches and boots, which are made of the skins of seals, and dved with alder, much resemble the Kamtchadalian. They carry at their girdles, iron knives with handles, like those of the Ruffian boors. Their hats are platted of herbs, as with the Kamtchadalians, without a rifing top, in the shape of an umbrella; they are dyed in green and in black, with falcon's feathers in the fore part, or with some herb, combed, as if it were a plume of feathers. fuch as the Americans use about Brasil. They live upon sish, sea animals, and the sweet herb, which they prepare after the Kamtchatka manner. Besides this, it has been observed, that they have also the bark of poplar, or of the pine-tree, dried, which in case of necessity, is made use of as food, not only at Kamtchatka, but likewise throughout all Siberia, and even in Russia itself, as far as Viatka: also seaweeds made up into bundles, which in look and in strength, are like thongs of raw leather. They are unacquainted with spirituous liquors and tobacco; a fure proof, that, hitherto, they have had no communication with the Europeans,

They reckon it an extraordinary ornament, to bore, in feveral places,

* In Rufs, akul, or mokoia; in bigness it is inferior to the whale; and it is like it in this, that it casts no spawn, but brings forth young; upon which account, some reckon it a species of whale.

the

the lower parts of the cheeks, near the mouth; and in the holes they fet some stones and bones. Some wear, at their nostrils, slate pencils, about four inches long; fome wear a bone of that bigness, under the lower lip; and others a like bone on the forehead.

The nation, that lives in the islands round about cape Tchukotski, and frequents the Tchutchi, is, certainly, of the same origin with those people: for with them also it is thought an ornament, thus to in-

lay bones.

Major Paulutíkoi, deceased, after a battle which he once fought against the Tchutchi, found, among the dead bodies of the Tchutchi, two men of that nation, each of whom had two teeth of a fea-horfe under the nose, set in holes made on purpose: for which reason, the inhabitants of that country call them. Zubatui [toothed]. As the prifoners reported, these men did not come to the affiftance of the Tchutchi, but to fee how they used to fight with the Russians.

From this, it may be inferred, that the Tchutchi converse with them, either in the fame language, or, at least, in languages of so great affinity, that they can understand one another without an interpreter, confequently, their language has no fmall resemblance with that of the the Koriaki: for the Tchukotchian comes from the Koriatskian language, and differs from it only in dialect: nevertheless, the Koriatfkian interpreters can speak with them without any fort of difficulty. With regard to what Mr. Steller writes, that not one of the Russian interpreters could understand the American language, possibly that comes from the great difference in the dialect, or from a difference of pronunciation; which is observed, not only among the wild inhabitants of Kamtchatka, but also among the European nations, in different provinces. In Kamtchatka, there is hardly any fmall * oftrog, whose speech differs not [somewhat] from that of another that lies nearest. As for those small oftrogs, which are at fome hundreds of verites from one another, they cannot even understand each other, without trouble.

The following remarkable refemblances between the American and Kamtchadalian nations, have

been observed:

1. That the Americans resemble the Kamtchadales in the face.

2. That they eat the fweet herb, after the same manner as the Kamtchadales; a thing which was never observed any where else.

3. That they make use of a wooden machine to light fire with.

- 4. That, from many tokens, it is conjectured, that they use axes made of stones, or of bones; and it is not without foundation. Mr. Steller thinks, that the Americans had once a communication with the people of Kamtchatka.
- g. That their cloaths and their hats do not differ from the Kamtchadalian.

6. That they dye the skins with alder, after the Kamtchatkamanner,

Which marks shew it to be very possible, that they came from the fame race. This very thing, he rightly judges, may help also to folve that question, "Whence came

^{*} Offrojka, a small offrog, is a place fenced and fortified with a pallisade, made of trees, fixed perpendicularly in the ground, and cut sharp at the top; sometimes there are beams laid over each other. Oftrui, in Russ, signifies sharps

For though we should suppose, that America and Asia were never joined; nevertheless, considering the meanness of those two parts of the world at the north, no one can say, that it was impracticable for people from Asia to go over to settle in America; especially, as there are islands enough, and at so small a distance, which might facilitate not a little such a passage in order to settle.

Their armour for war is a bow and arrows. What kind of a bow it is, we cannot fay, as it did not happen to our people to see any; but their arrows are much longer than the Kamtchadalian, and greatly resemble the Tungusian and Tartarian arrows. Those, which came in the way of our people, were dyed black, and planed so smooth, that they lest no room to doubt of the Americans having also iron tools.

The Americans fail upon the fea in canoes made of skins, in the fame manner as the Koriaki and the Tchntchi. Their canoes are about fourteen feet long, and about two feet high. The fore part of them is sharp; and they are flatbottomed. Their inward frame confifts of flicks, which are linked together at both ends, and in the middle are pressed outwards, in a rounding or belly, with cross-sticks, which keep the fides at a proper diftance. The fkins, which they are covered with, all around, feem to be those of fea-dogs, dyed of a cherry colour. The place where the Americans fit is round, about two arthines (four feet eight inches) from the poop; there is fewed upon it the stomach of some great fifth, which one may gather and

loosen as a purse, with the help of thongs of leather, passed through fmall holes, at the edge. An American, fitting in that place, stretches his legs, and gathers round him the flomach abovementioned, that water may not fall into the canoe. With one oar, some fathoms long, they row on both fides alternately, with fuch a progressive force, that contrary winds are but a small hindrance to them: and with fo much fafety, that they are not afraid to go upon the water, even whilst the fea rifes in terrible furges. On the contrary, they look with fome terror upon our larger vessels, when they are toffed, and advise those, who fail in them, to beware, left their vessels should be overset. This happened to the boat Gabriel. which, some years since, was going to cape Tchukotski. As to the rest. their canges are so light, that they carry them with one hand.

When the Americans fee upon their coasts people whom they do not know, they row towards them, and then make a long speech: but it is not certain, whether this is by way of a spell, or charm, or some particular ceremony used at the reception of strangers; for both the one and the other are in use among the Kurilians. But before they draw near, they paint their cheeks with black lead, and sluff their nof-trils with some herb.

When they have guests, they appear friendly; they like to converse with them, and that in an amicable manner, without taking off their eyes from them. They treat them with great submission, and present them with the fat of whales, and with black lead, with which they used to besmear their cheeks, as was before observed; doubtless from a

notion.

notion, that fuch things are as agreeable to others as they are to themselves.

With regard to the navigation about those parts, it is safe enough in spring and in summer; but in autumn it is so dangerous, that hardly a day passes, but one has reason to fear being shipwrecked; for they (the Russians sent upon the sea expedition) experienced such a violence of winds and storms, that even persons who had served forty years at sea assured, with an oath, that they never saw such in their lives.

The marks by which they obferve there that land is near, are particularly the following confiderable ones: 1. When there appears a great quantity of different kinds of the (fo called) fea-cabbage, fwiming upon the water. 2. When one fees the herb of which, at Kamtchatka, they platt cloaks, mats, and bags, for it grows only on the feafhores. 3. When there begin to appear at fea, flights of fea-mews, as well as droves of fea animals, fuch as fea-dogs, and the like; for tho' fea-dogs have a hole open at the heart which is called foramen ovale, and a duct called ductus arteriosus Botalli, and, upon that account, may remain long under water, and confequently go to some distance from the shore, without danger, inafmuch as they can, at a greater depth, find food proper for them; nevertheless, it has been observed, that they seldom go farther than ten German miles from the shore.

The furest fign that land is near is, when there are seen Kamtchat-ka beavers, which live only upon crabs; and, from the make of their heart, cannot be under water above two minutes at a time: consequently, they cannot get food at the depth of 100 fathoms, or indeed at

a much leffer depth; upon which account they also breed always near the shore.

It remains to speak of some islands nearest to Kamtchatka, which are not found in a strait line with the above-mentioned, but north of them; especially of Berings island, which now is so well known to the inhabitants of Kamtchatka, that many of them go thither to catch fea-beavers, and the like sea animals.

That island extends from the S. E. to the N. W. between 55 and 600. Its N. E. end, which lies almost directly over against the mouth of the river Kamtchatka, is at about two degrees distance from the eastern shore of Kamtchatka; and its S. E. end is about three degrees from cape Kronotski. This island is 165 verstes long; but its breadth is unequal. From the S. E. end to a rock, which hangs perpendicularly over the fea, and is at 14 verftes distance from that end, the breadth of the island is from three to four verstes; from that steep rock to Suiputchei bay, it is five verstes ; from Suiputchei bay to Beaver's steep rock, it is fix verstes; at Whale's stream, it is five verstes; but from thence farther on, it grows gradually broader. Its greatest breadth, viz. 23 verstes, is over against the north cape, which lies 115 verstes from the above-mentioned end.

In general, it may be faid, that the length of that island is fo disproportioned to its breadth, that our author doubts whether there can be, in other parts of the world, any islands of such a shape; at least, he never heard or read of any such; and he adds, that the islands which they saw about America, and all the rows of them lying to the east, have the like proportion. This

This island confists of a ridge of rocks, which is divided by many vallies, that stretch to the north and to the fouth. Its mountains are so high, that, in clear weather, one may see them from about half the distance between the island and Kamtchatka. The inhabitants of Kamtchatka, of old times, thought there must be some land over-against the mouth of the river Kamtchatka, by reason that the sky appeared there always cloudy, though it were never so clear every where else about the horizon.

The highest mountains of the island do not measure above two

verstes in a perpendicular.

[Here follows a description of this barren rocky island, of which the following four pages are not to our present purpose. Then at page 136, the account proceeds thus.]

The fouth-west side of the island is of a quite different nature from the other, as to access: for though the shore there is more rocky and craggy, yet there are two places by which, in slat-bottomed boats, such as are the *Tfcherbotui**, one may not only land on the shore, but even advance as far as a lake, by the streams that slow from it. The sirst of these places is at 50 verses, and the other at 115, from the southeast end of the island.

This last place is very remarkable from the sea; for the land there goes rounding from the north to the west; and, at the very promontory, there runs a stream, which is the largest of any in that island; and, when the water is high, its depth is not less than seven feet. It runs from a great lake, which lies a verst and a half from its mouth; and because that stream grows deeper, the farther it is from the sea,

therefore one may conveniently go upon it in boats as far as the lake : and upon the lake there is a fafe station; for it is surrounded with rocky mountains, as with a wall, and sheltered from all winds. chief mark, by which one may know this stream from the sea, is an island, which is about seven verstes in circumference, and lies to the fouth at feven vertes distance from the mouth of the stream. The shore from thence towards the west. is fandy and low for five verftes: Round the shores, there are no rocks under water; which one may know from thence, because there are no breakers.

From the highest rocks of that island, one sees the following lands; at the south, two islands, one of which measures about seven verses in circumference, as was observed before; but the other is overagainst the very end of Berings island, at the south-west: it consists of two high and cleft rocks, of about three verses in circumference, and is at sourteen verses distance from

Berings island.

From the north-east end of Berings island, in clear weather, one may fee to the north-east, very high mountains covered with fnow, and their distance may be computed at 100 or 140 verstes. Those mountains our author thought, with better grounds, to be a cape of the continent of America, than an island: 1. Because those mountains, allowing for their distance, were higher than the mountains on the neighbouring islands. 2. Because that, at a like distance towards the east. one observes plainly, from the island, fuch like white mountains, from the height and extent of which all judged that it was the continent.

T-LOM

^{*} Large canoes, or boats, fomewhat refembling ferry-boats.

From the fouth-east end of Berings island, they saw to the south-east also, another island, but not very clearly: it seemed to lie between Berings island and some low part of the continent.

From the west and south-west sides, it was observed, that even in clear weather, there is a perpetual fog higher up than the mouth of the river Kamtchatka; and from thence, in some measure, they came to know the inconsiderable distance of the land of Kamtchatka from

Berings island.

North of the so often mentioned Berings island, there is another island, in length from 80 to 100 verses, which lies parallel to it, i. e. from the south-east to the north-west. The streights between these two islands, at the north-west, measure 20 verses, and at the south-east about 40. The mountains upon it are lower than the ridge of mountains in Berings island. At both ends of it, there are, in the sea, many rocks at low water mark, and perpendicular rocks like pillars.

With regard to the weather, it differs from that at Kamtchatka only in this, that it is more fevere and sharp: for the island has no shelter from any quarter; and, besides that, it is narrow, and without woods.

Moreover, the force of the winds increases to such a degree, in those deep and narrow valleys, that one can scarce stand upon one's legs. In February and April months, were observed the sharpest winds, which blew from the south-east and from the north-west. In the former case, the weather was clear, but tolerable; but in the latter case, it was clear indeed, but extremely cold.

The highest rising of the water happened in the beginning of February month, during north-west

winds: the other inundation was in the middle of May, occasioned by great rains, and by the fudden thawing of the snows. Nevertheless, those floods were moderate, in comparison with those of which there still remained undoubted marks: for there have been carried many trees, and whole skeletons of fea animals, to the height of thirty fathoms or more, above the furface of the sea sabove the common water mark, or level : from which our author judges, that in the year 1737, there happened likewife in this island such an inundation as that at Kamtchatka.

Earthquakes happen here feveral times in the year. The most violent that was observed, was in the beginning of February, which, during a westerly wind, lasted exactly fix minutes; and before it was heard a noise, and a strong wind, under ground, with a hissing, which

went from fouth to north.

Among mineral things, which are found in that island, one may reckon as the most remarkable, the fine waters, which, upon account of their pureness and lightness, are very wholesome: and this virtue of them was observed upon fick people, with advantage and the defired fa-With regard to the tisfaction. plentifulness of them, there is not a valley but what has a stream running through it; and the number of them all together exceeds fixty; among which there are some, which are from 8 to 12 fathoms broad: and fome are two, and fome even five fathoms deep, when the water is high; but there are few fuch, and the greater part of them is extremely shallow at the mouth; because that they have a very rapid courfe, on account of the steep slopes of the vallies, and that near the fea they divide into many rivulets.

USE-

USEFUL PROJECTS.

On the medicinal Uses of Hemlock. See our last Volume, page 105.

Observations concerning the different kinds of Hemlock growing in England, with rules for knowing and gathering that used and recommended by Dr. Storke of Vienna. By William Watson, M. D. F. R. S.

PR. Storke, who published at Vienna last year a treatise de Cicuta, has lately informed a correspondent in London, that fince the publication of that work he had received letters from almost every part of Europe, confirming his good opinion of the virtues of the Cicuta; and that he is about to publish a second treatife upon the fame subject, containing fiff more extraordinary relations of cures brought about by administering that plant. There is no doubt therefore but that endeavours will be made here to confirm the truth of the doctor's affertions; more especially, as some of the diseases, in which Dr. Storke found the Cicata attended with great fuccess, are such as are of all others the most shocking to human nature, and have, by too long experience, been found to give way to no other means.

Hence it is highly important to every one, more particularly to phyficians, that the very plant directed by Dr. Storke be administered, and no other in the place of it, either through inattention, or want of knowledge; as judgment in the physician is of no real fervice, unless

his prescriptions are faithfully prepared.

For these reasons it may not be improper to inform those medicinal practitioners, who are not converfant in botany, and who may, nevertheless, be desirous of trying the effects of the Cicuta, that at this time of the year [viz. April] there is another plant, growing in the fame places, and often mixed with it, fo much refembling it in appearance. as not without some attention to be diffinguished from it, which however greatly differs from it in fenfible qualities. Great care therefore ought to be taken that the one of these should be selected from the other.

As Dr. Storke has transmitted hither a specimen of the plant he has employed, no doubt can remain in ascertaining its species. It is the Cicuta vulgaris of the botanists, or

common hemlock.

The plant fo much resembling hemlock, is the Cicutaria vulgaris of the botanists, which, in some parts of England, is called cowweed, in others wild cicely. greatest resemblance to hemlock is in the fpring, before the stalks of the leaves of the hemlock are interspersed with purple spots, and therefore at that feafon more eafily mistaken for it: though even then the leaves of the hemlock fmell much stronger, are more minutely divided, and of a deeper green colour than those of the conv-weed. Afterwards, indeed, they are more eafily distinguished, as the cicutaria flowers at the end of April and beginning of May, and the cicuta not till June, when the other is past: To fay nothing of the flowering stalk of the cowweed being surrowed and somewhat downy; and that of Hemlock, smooth, even, and always spotted. These plants differ likewise very essentially in their seeds, which in the cow-weed are long, smooth, and black, when ripe; whereas those of Hemlock are small, channelled, and swelling towards their middle.

Besides the cow-weed, there is another plant in appearance very like the Hemlock, although widely differing from it in other respects; and, unless I am very greatly misinformed, quantities of this have been collected and fold in London for the Hemlock. This is more likely to be taken for the Hemlock in fummer or autumn, as it is an annuál plant, and is produced and flowers late in the feafon. plant here meant is the cicuta minor of Parkinson, or cicutaria tenuifolia of Ray. This however is easily diftinguished from Hemlock by its being of the colour and shape of parfley, its flowering stalks having no purple or other spots, and not having the strong smell peculiar to Hemlock.

To the two plants before mentioned may be added a third, which very frequently, more especially about London, grows along with, and is mixed with the Hemlock. This plant is called by the late excellent Mr. Ray, fmall Hemlock Cherwill with rough feeds; and is denominated by Casper Bauhin in his Pinax Myrrhis fylvestris seminibus asperis. This, like the cow-weed beforementioned, can only be mistaken for Hemlock in the spring. It may be distinguished then from it, Vol. IV.

by the leaves of the Myrrhis being more finely cut, of a paler green colour, and though they have fomewhat of the Hemlock smell, are far less strong, and have no spots. This plant flowers in April, and the seeds are ripe before the Hemlock begins to flower; and these seeds are cylindrical, rough, and terminated in an oblong point.

The leaves of Hemlock are most fit for medicinal purposes, as being in their greatest perfection when collected in dry weather from the middle of May to the time that their flowering stems begin to shoot: as by that time the plants will have felt the effects of the warm fun, have acquired an highly virose smell, and the stems of the leaves are covered with purple spots, an argument of the exaltation of their juices. And we should be attentive here to give them all advantages, as three degrees of latitude, and other circumstances of foil and fituation, may occasion a very sensible difference in the qualities of the same plant. An instance of which occurs in the plant under confideration, and may be one of the causes why the effects of the Hemlock have not been such here, as we are affured they are at Vienna, viz. Dr. Storke fays, that the root of the Hemlock, when cut into flices, pours forth a milky juice, which I have never seen it do here in England.

There are feveral vegetables, which, though they thrive here apparently well, their productions are nevertheless not the same as in other parts of the world, where the heat is more intense, and the summers of longer continuance. It would be extremely difficult here, tho

though the plants thrive very well, to produce from the white poppy or Cifius ladanifera, either the opium or the laudanum, the known production of these vegetables in other parts of the world. No art can make here the tragacantha pour forth its gum, the lentiscus its mastick, or the candle berry myrtle, of North America, its sebaceous concrete. To these might be added many others too tedious to mention.

In fuch mild winters as the last, the leaves of Hemlock may be procured in any part of them; but they are not to be depended upon; as their specific smell is then comparatively weak, their juices poor and watry, and they are wholly without spots.

A remarkable instance of the success of Hemlock in England; in a letter from a gentleman, who received the benefit of it.

OWEVER great at Vienna, and elsewhere, the success may have been from the use of Hemlock, it has not, as I am informed, been equal to the expectations of practitioners here. I therefore send you the success of its administration in my own case.

Having for many years been corpulent, and being obliged to fit many hours every day, occasioned, feveral years fince, my legs to swell, and frequently to become very hard and painful. At times, for these four years, this has increased, and several ulcers have broke out in both my legs, which, though they fometimes have been healed, they left my legs hard and swelled, and my tendons were so contracted from the calf to the heel, that I could not set my feet flat to the

ground without the greatest pain. I was constrained therefore to walk upon my toes, supported by sticks, Since Christmas last, my complaints grew worse, my legs swelled more, the ulcers broke out again, increafed in their number, extent, and foreness; and, notwithstanding all the means I could procure, they would not heal; infomuch, that by the beginning of May my legs and thighs were very greatly distended, extremely hard and painful, of a deep red colour, and numberless ulcers occupied both my legs from my knees to my ancles. Many of these were very large and deep, and furrounded by high callous lips, and gleeted a thin sharp humour, in such a quantity that it ran into my shoes, and upon the floor where I stood, and wherever it touched my flesh, it brought other ulcers. My feet were likewife prodigiously swelled, and I could scarce move my ancles, and not in the least my toes. My forrows did not end here, for upon lying down in my bed the warmth thereof made my ulcers yet forer, and excited fuch an itching all over my body, that I was constrained to leave my bed, and have fat upright in my chair great part of the night, not daring to lie down. The continuance in this posture made, if possible, my condition worse; as my legs grew more diftended, and confequently my ulcers increased in number, and the old ones became more foul, and greatly enlarged. Not only my legs and thighs, but my arms and head were swelled and inflamed. was hot and dry, and my spittle, which had for fome months been brackish, now became very falt. I had been in hopes that the difcharge

charge from my legs would have drained off the humours and relieved me, but I experienced the reverse; for the greater my discharge was, the more my complaints increased.

In this state I was in the beginning of May (1761,) and as I had taken a great deal of purging physic, had tried various applications, and had gone through such other regimen as had been directed, and remained nevertheless in this lamentable condition, I despaired of telief, and my life became almost

insupportable.

Under these circumstances, and believing myself to be in a great degree dropfical, I confulted Dr. Watson, who, after having weighed all the particulars, was of a contrary opinion, and directed me to lose twelve ounces of blood, and to take a cooling purge; he also prescribed that I should have my legs fomented every night and morning with a decoction of Hemlock for half an hour, and that a poultice made of the boiled herb, and beat up with oatmeal and lard, should be applied warm after each fomenting, from my knees to my ancles, and to be changed twice a day.

I must here observe, that as other plants are much like, and had in other instances been used for, Hemlock, the doctor was so obliging as to examine the herb I made use of, not only to satisfy himself of the identity of the herb, but likewise of its condition. I was also directed to abstain for the present from animal food, and to drink plentifully of milk and water, and of any other

diluting fluid.

The fecond night after these applications I slept in bed, which I had not done for a great while; and though I was frequently waked by the itching of my body, as well as by the fmarting of my alcers, I continued all night in bed.

At the end of a week, during all which time I found myself growing easier, my perspiration in the night was restored, which left me a confiderable time. My thighs, arms. and head changed their deep red colour for one less intense, and were quite reduced to their natural di-My itching was less; mensions. and my skin peeled all over my body; my spittle was less salt; my legs and feet continued in the same degree of distension, but were far less red and painful, and their discharge was confiderably decreafed. I could move the toes of one leg; but not of the other; the purge was repeated at intervals, and the fomentation and poultice continued. At the end of the second week, the skin of my thighs, and the upper parts of my body, was of its natural colour; my itching gone, and my fpittle was natural and tasteless. The swelling of my legs and feet was much less, and I could move the toes of the other foot. I had likewise a much freer use of the joints of my ancles than I had had for a confiderable time. The difcharge from the large ulcers was less in quantity and well concocted. their callous lips were foftened, and of a good colour, and they gave me little or no pain. Besides, these ulcers filled up apace, and a vast number of the small ones were entirely healed. Under these happy appearances, the fomentation and poultice were chearfully continued, as they were before directed.

Not to be too tedious in my recital, I must inform you, that at the end of a month, during which time

the discharge became less and less, every ulcer in both my legs was entirely filled up and healed, their callous lips were dissolved. and, from the subsiding of their tumours, my legs were less than they had been for some years. I was directed, therefore, to discontinue the fomentation, but as there were yet confiderable indurations in the lower parts of my legs, and upon my fhin-bones, the poultice was continued. This I wore for a fortnight longer, or thereabouts, when all my ulcers being firmly cicatrized, and the indurations softened, it was left off. Though my legs were quite well and reduced to their natural fize, the skin of them, from being fo long diftended, was foft and flabby: I was therefore directed to wear strait stockings, which was accordingly complied with. I could now fet my feet flat upon the ground, which I had not done for four years, could move my ancles and toes as well as ever, and I could walk with as much ease and freedom as ever I could in my life. I then was permitted to eat animal food, and to live as I was accustomed to do. However, as I am of a corpulent habit, by way of precaution I was directed to drink occafionally fome sea-water, which I have hitherto continued.

It is now three months fince I left off the poultice: my legs continue perfectly well, not so much as a pimple has appeared upon them this autumn, and I never was in better health in my life.

If, during this successful treatment, I had used a great variety of external and internal medicines, though I had been cured, I should not have known to which to have

attributed these salutary effects: a possibly every one of them might, in some degree, have conspired thereto; but as, throughout the whole, except fome purges, of which I had taken numbers before. I used nothing but the fomentation and poultice of Hemlock, as beforementioned. I cannot but attribute my cure principally to the virtues of the Hemlock, which I think in my case were very remarkable; and, as far as one instance will go, are a strong argument of its excellent effects. I pretend not to determine how far it has been useful in other cases, and under other directions; and I cannot here suppress my gratitude to Dr. Watson. for his humanity and kind attention to me during the continuance of my illness.

From my chambers, Yours, &c. New-Inn, Oct. 16. H. MITCHELL

An account of Doctor Storke's Second Essay on the medicinal nature of Hemlock.

HE Dr. in his first chapter fays, "Various disputes have arisen betwixt physicians and botanists, with relation to the Hemlock, I used for making the extract.

I gave a description of it from Morrison, that was sufficiently clear.

For which reason, I shall only remark in a few words, that my Hemlock was the cicuta major, vulgaris, maculosa sæcens.

Linnæus puts it under the name of conium feminibus striatis. See species plantarum, p. 243. N. 1.

Matthiolus describes it p. 272. C. Bauhin, 18. Tabern. 1170. Clusius Clusius calls, it cicutaria, major,

vulgaris, hist. 2. p. 200.

It is best gathered, for making the extract, before the flowers are

The root is not used for this purpose; but every other part of the

The expressed juice is boiled, often stirring it, in a glazed earthen veffel, with a flow fire, to the confistence of an extract.

It may be doubted however, whether apothecaries are not too follicitous about depurating this juice. For I would rather have it thick, and almost a pulpy extract.

An extract may be prepared, from a decoction of the dry herb; when it cannot be obtained from

the fresh.

But this is far less efficacious.

I am extremely forry, that some hundred pounds weight of the extract of Hemlock, prepared from the dry herb, unknown to me, were fent from Vienna into other countries; as the effect is neither fo great, nor so quick, as that of the extract prepared from the juice fresh expressed.

This herb was suspected of being poisonous by all apothecaries; and therefore, at first, they were not willing to prepare so great a store of it

as I defired.

And when they faw the pills every where wanted, they were not able to procure the fresh herb."

Amongst a variety of cases, all tending to establish the reputation of this medicine, (though wherein it failed, the doctor has not been for explicit) we shall select the 19th, as very extraordinary.

" A man of the age of thirtyfour, had for some years the glands of the neck schirrous; and so large, that the bigness of them on

each fide, exceeded that of a man's

This man made a monstrous appearance: as he feemed to have three heads.

All these glands being conjoined in one mass, cohered strongly.

There were large tumours, also, in the arm-pits; which rendered the motion of the arm painful, and almost impossible.

In the fore part of the thorax, a ichirrous mass extended itself from the neck, to the edge of the rib.

There were, moreover, ichorous ulcers, which eroded these schir-

In other places, where there were divisions in the fkin, foul cancerous fungusses were produced.

Besides, innumerable sinusses, and

fiftulas were discovered.

A-most violent cough harrassed the patient: nocturnal sweats wasted away his flesh, and strength: his respiration was difficult: his appetite prostrate: and his feet, arms, face, and whole body, puffed up with an cedematous swelling.

were, indeed, evident

figns of a true confumption.

Several physicians endeavoured to conquer this illness, by the most penetrating remedies, as well vegetable as mineral, but their attempts were in vain: or, rather, the patient grew worse for them.

I made this man, who was almost wasted away; panting for breath; and swelled all over; be carried to

my hospital.

Mr. Haffner, though he had oftten feen many very dangeroufly ill, cured by the fole use of Hemlock, yet gave up all hopes in this case.

I myfelf, to confess the truth, thought the man was loft; for a confuming fever, nocturnal fweats, a continual fatiguing cough, the

ftrength

ftrength almost exhausted, the swelling of the whole body, a cachexy of the humours, and troublesome respiration, presaged almost certain death.

However, I defired Mr. Haffner to apply externally the hemlock fomentation, and to wash the finusses and fistulas several times a day, with a weak insusion of it; a little honey of roses being added.

At the same time, I prescribed medicines which might promote expectoration; and, at the same time,

increase the strength.

By the fomentation alone, the ulcers were brought to be much cleaner; and the tumours were foftened.

In the space of twelve days, the patient had somewhat more strength; a freer respiration, and quieter nights.

1 therefore administered the hem-

lock internally, also.

For the common drink, I gave the decoction of barley, with a fourth part of milk mixed with it.

By the use of the hemlock, a copious spitting was obtained: and in the space of about four days, the whole body was less swelled; the urine was plentifully made; the evening sever and nocturnal sweats, were diminished; the indurations of the neck, ulcers, fistulas, and finusses, were all in a far better state; and the patient could bear to get out of bed.

We were greatly pleafed with the quick effect of this remedy, in so desperate a subject: and it encouraged us to proceed chearfully in the application, as well of internal as external remedies.

Within the space of a month from the time the patient first took the hemlock, the colour of his face was natural: the appetite was good: the evening fever was gone: the fweats were no longer perceived: the ftrength was nearly as it ought to be: the tumours of the neck were much lefs, and fofter: and the pus was very laudable in the ulcers.

Dr. Collins, together with myself, had the care of this patient. Mr. Haffner continued diligently his fomentations and injections in the day time; and, at night, applied the hemlock plaster.

In the space of fix months, the tumours of the neck were less by almost one half; and the patient could bend his neck every way, without

trouble.

The respiration was free: no cough remained; and the patient grew fat, and strong.

We now gave, daily, a whole dram of the extract of hemlock.

In the beginning of the third month, the patient took a dram and a half of the extract of hemlock

every day.

We continued this dose for three months: and, in that time, all the tumours were dispersed; the whole of the ulcers were covered with a cicatrix: the finusses, and fisus coalesced: and the whole neck returned to its natural state. The man was chearful, fat, and strong; nor did we ever perceive the least inconvenience from this dose.

A cure was, therefore, performed, by the help of hemlock, which nobody before could hope from it."

In his 4th chapter, Dr. Storke gives some corollaries, viz. 1. That the hemlock does not dissolve the blood into a putrid liquamen. 2. That it does not cause consumptions. 3. That it does not cause a dimness of sight. 4. That it does not take away the power of generation. He

alfo

also afferts, that it may be safely given in schirrusses of the abdomen. At the conclusion he inserts the solution assets as

lowing cautions.

"I have related many cases, in which hemlock is proper: but I do not, nevertheless, insist, that it should always be consided in alone.

Other medicines ought, on some

occasions, to be joined to it.

It is requisite, that a physician judictionally follow those proper intentions of cure, which arise from the particular state of the case.

The furgeon should externally change, add and take away; as reafon, founded on experience, di-

rects.

Many misunderstood my opinion of hemlock, from my first essay; as they thought, that I had offered a remedy, which I believed to be universal, and sufficient, when given alone, in all cases.

But I by no means meant fo,

I affirmed only, that the hemlock performed fuch things, which other remedies, in high reputation, could not.

It cures cancers, That, convinced by a great number of instances, I was certain of.

But I do not, nevertheless, affert that it will cure every cancer.

Nor do I affert, that the whole is to be rested only on the sole use of hemlock.

If out of a hundred patients, whom other physicians have dismissed, and declared to be incurable, I give relief to, or cure one, it suffices me; but the number of those, who may be cured, is much greater.

Mercury cores the venereal difease. But is it always found to have good effects? Does it always cure? How many thousands are there not, de-

stroyed by this disease?

The Peruvian bark removes intermitting fevers: and yet is not efficacious with all who have that diffeafe: are there not many to whom it is even injurious?

Must such medicines, therefore, be held as noxions or useless?

Skilful physicians judge the same of other remedies called specifick.

If there be fome, who from any idiolyncrafia, or from a complication of fymptoms, cannot bear the hemlock, let them avoid the use of it.

If the fymptoms, conjoined with the difease, require any other remedy, why should not that be administered along with the hemlock?

Purges are often necessary.

Bleeding is likewife very re-

quisite.

Hæmorrabages should not, however, be stopt by that means, in plethorick patients: for to such patients, they are of much greater benesst, than bleeding by venæsection.

But in fuch as are weak, they are quickly, and in the best manner, stopt by the agarick of the oak

The agarick should, neverthedless, be only applied to that place where the effusion of blood is made.

For if it be put over the whole ulcer, it is injurious to the wound; and often fatal.

Sometimes, befides the hemlock, antiphlogisticks, and refrigerants, are indicated.

This happens often in the gout and rheumatism.

Externally, fometimes emollients, fometimes digestives, and fometimes aftringents, are required.

Sometimes a passage ought to be opened to the matter, by means of the knife; as I have frequently observed in the spina wento/a

4 that

that the carious and corrupted parts might be separated from the found: and fometimes a funous should be cut off.

The internal and external use of hemlock prevents, with fufficient effect, any relapse in such cases.

But fometimes the callous lips of cancers, or fungous cancers themfelves, are wasted away, by the following remedy only.

Take of the powder of hemlock two drams and a half; and of the honey of roles

three ounces.

This medicament is fpread upon lint; and applied to the part affected, as often as the phyfician, or furgeon, judges necessary.

A method of preventing and removing Epileptic Fits; with some observations tending to prove the virtue of musk in preventing the Apoplexy.

NY person subject to the Epilepfy, may himself prevent a fit of it, if he has any the least previous notice of its coming, before he be altogether deprived of his fenses, by the following fimple experiment. Let him have always ready in his pocket a piece of metal, as broad as he is able to contain between his teeth when his jaws are stretched to the utmost: as foon as he feels the first symptom of the fit, let him immediately take this piece of metal, and open his teeth as wide as he is able, put the piece of metal between them, that so his jaws may be thereby kept at their utmost stretch for some time: this in about half a minute will make him come entirely to himself again, and prevent the coming on of the fit for that time.

After the fit is come on, the same experiment will also serve to remove it in a very fhort time: for if any bye-stander will take the piece of metal before described, and put it between the patient's teeth, and thereby force them open till his iaws are at the utmost stretch, the fit will immediately go off, and the patient very foon recover.

The certainty of this experiment, the person from whom this account is taken fays, may be depended on. The manner (fays he) in which I came to the knowledge of it was from the information of a gentleman of undoubted veracity; and as what he then told me may ferve to shew with what success the experiment had been made by others, I

shall briefly relate it.

He told me, " That when he was at Amsterdam some years ago, he happened one evening to be in company with feveral gentlemen, when one of the company happened to be seized with a fit of the Epilepfy; the other gentlemen present could not help being concerned at the accident; but an old officer of the army, who also made one of the company, without any concern, defired them to make themselves easy, for he should shortly cure him; and then taking a piece of metal out of his pocket, he went to the person then lying in the Epilepfy, and putting the piece of metal between his teeth, he forced them open with it, whereupon the person forthwith recovered. After they were again fet/down, they began to enquire of the officer how he could fo quickly recover the gentleman from the Epilepsy? He told them, that he was often obliged to go out at the head of a party, when the ene-

my happened to be but a small distance from their camp; and that as feveral of their men were liable to the Epilepsy, if any of them happened to be feized with it when they were thus out upon a party, they were obliged to leave them behind, where they often fell into the enemy's hands before they recovered: That for this reason, he had been long in fearch of fomething which might instantly recover them, and that he had at last fallen upon this method of forcing open their jaws with a piece of metal, which he had often tried fince, and had never yet known it to fail."

As it is undoubtedly the forcing open of the jaws, and not any virtue in the metal itself, which produces this effect, there can be no difference of whatever kind the metal is of. A crown piece, I believe, might do; but if made of iron or steel for the purpose, I think it would be more convenient if made of a square or oblong form, of about the thickness of a crown, and of such a breadth as to be exactly equal to the widest opening of the jaws. It may be proper also to observe, that one of the edges ought to be thin, that it may the more eafily enter between the teeth, when they are to be forced open by some other person; for the same reason it may be convenient to put a handle to it, like the handle of a key.

I have reason to believe that this experiment will not only remove the fit of the Epilepsy for that time, but also until the next time of its ordinary periodical return, without any apparent difference from what would have happened if the fit had been allowed to work itself off.

I have only to add, that I suppose

there are few liable to the Epilepsy, who may not, by means of this experiment, prevent its coming on in the day-time: I think there are fcarce any but who have as long warning of its approach, as might be fufficient for taking out a piece of metal out of their pocket, and putting it between their teeth.

. PHILANTHROPOS.

According to letters received this year (1761) by the Dutch ships from the Indies, several persons, and some of distinction, have died last year at Batavia, of the apoplexy, which is thought extraordinary: for though that distemper is as common in Holland as any where, yet formerly it was never heard of at Batavia; and this circumstance has been urged by very great physicians, as a strong argument in favour of musk, which was as much in use at Batavia, as difregarded in Holland and other parts of Europe, fince the the reign of Lewis XIV. whose queen had an aversion to that and all other perfumes, which circumstance gradually drove them out of all the courts of Europe.

An account of a Hydrophobia cured by an accidental bleeding by the temporal artery; communicated by Mr. Baldwin, Surgeon, at Farringdon, in Berks. With an account of a remedy, recommended as a most effectual cure against the bite of a mad dog; in the transactions of the Berne Society of Agriculture, Arts, and Commerce.

ALKING of canine madness. I the other day, an ingenious person in company related this fact. A woman, bit by a mad dog, and who had the dreadful hydrophobia upon her, was doomed, according to the old custom, to be smothered; but at the time her executioners appeared, she happened to have a small interval of reason, and made fuch efforts to escape, that she got out of their hands to the stairs-head; when, her foot flipping, she fell, and cut through the temporal artery, which bleeding freely, her friends did not attempt to stop it, concluding it would fave them their painful office, as in the end it did; for the woman, almost exhausted, gave evident figns of a recovery from the dreadful diftemper, and actually furvived it.

The remedy recommended in the Berne Transactions is no other than the herb Anagallis or Pimpernel gathered in July, suffered to dry, and pulverized; it may be given in the quantity of half a dram to that of a dram, in a simple distilled water of the same plant, or in After which the patient is to fast for two hours. One dose is generally sufficient; however, it may be repeated in eight or ten hours after with fafety.

Clarified butter or tallow, recommended as Specificks against the bloody flux, and defluxions on the eyes and breaft. In a letter from Aaron Hill, efq; to the earl of Chefterfield, September 27, 1747, on occasion of the bawock made by that disorder in the armies in Flanders.

Our Lordship will remember it [the specifick in question] where hinted first (if I mistake not) in a piece of Mr. Boyle's. The process (should your memory, by chance, not recollect it) is no more, than to take new-churned butter,

without falt, and, skimming off the curdy part when melted over a clear fire, to give two spoonfuls of the clarified remainder, twice or thrice within the day. And this hath never failed to make an almost instant cure in many (I am sure at least a hundred) cases. I have had myself the pleasure to relieve officiously by its effects; and who were persons, for the most part, at the point of death, and folemnly refigned to that last cure of every malady, by their physician's farewell fentence.

A long time after Mr. Boyle had published his experience of this noble medicine, from his frequent proofs of it in Ireland, where dyfenteries were too common accidents, there happened, at the fiege of Londonderry, fuch a general demonstration of its efficacy, as leaves a subsequent neglect of it no way to be accounted for, but from the reason I have just assigned it to. For when by the fatigues and wants of that brave garrison, they found themselves in greater danger, from the havock of the terrible disease. than from the efforts of the enemy. we are informed, by the describers of that memorable fiege, that the distemper stopt at once, upon the foldiers finding a concealed referve of casks of tallow in a merchant's warehouse, and dividing it among the companies, to melt with, and lengthen out, their short remainder of bad oatmeal.

An acquaintance of my own, a gentleman of the prescribing faculty, complained to me fome years ago, of the mortality of this diftemper, then an epidemic one, in London. I advised him to make trial of the mentioned help: to which he first objected, that he

could

could not fee upon what theory to ground a likelihood of fuch fuccess in using it. For answer, I referred him to a known experiment in fermentation, where, on barely throwing a little melted greafe (or a small quantity of animal oil) upon the furface of a working liquor, when in the highest foam, the curbed intestine motion finks to flatness in an instant; nor can it be recovered into a new head by any art our brewers or distillers are acquainted with. The added oleaginous particles obtunding the now checked faline ones in a manner little differing from the operation of the recommended process in the human stomach, when the vitiated hot ferment having had beginning, the incifive acrid falts are sheathed and made inactive by this opposite balfamic foftener; and thence passing on corrected through the gradual digestions, furnish a fit chyle for blunting the too stimulative acrimony. And hence arises not a temporary, not a palliative reliefbut a complete eradication of the peccant principle. For when the falts above described have lost their points, in the absorbing sheather, those united contraries (commixing oily with lixivious particles) compose; together, a new, soluble and saponaceous body, which dissolving readily into the ferum and lymphatic humours, is prepared to pass, by fweat, or even perspire insensibly through strainers, which (while separate) neither oils, nor falts, could have been fmall enough to have pervaded; and which must, therefore (though the blood could have been helped to throw them off upon the glands, or joints) have bred fuch obstinate concretion and obstruction there, as bring on gout,

fciatica, or rheumatism. But (thus) unless in cases of vessels, too much lacerated already, the cause being radically removed, it is no wonder the effect is answerable.

I have, therefore, not let flip this opportunity, with view to give occasion, from his recollecting it, to the most likely hand in Europe, to make generous use of its remembrance.

I don't know whether I should add, (and yet it is too remote from the immediate point in view, confidering how liable an army is. especially, where long entrenched in marshy situations, to defluxions on the eyes, or breaft) that, in whatever other case, of salts too sharp and active, none of the trite remedies, however tedious all of them, and some extremely mortifying, will be found of any use. comparatively with this plain and pleasant one, which need be taken, in the last named intentions, only to half the quantity, perfifting night and morning, for fome length of time, uninterruptedly.

On the benefit of issues in the gout, &c.

Smyrna, March 28, 1761.

Beg leave to acquaint those, who are afflicted with the gout, that they will find great benefit from iffues. The gouty humours are drained off by these outlets, and the fits are either prevented, or much alleviated. It is now almost feven years since I sirst experienced the good essects of issues on my gouty patients, and I have found them more or less beneficial to all; some continuing to this time entirely free from fits, and also enjoy a much better state of health than

before.

before. Others have only a very flight fit in the winter, which feldom continue fo long as a week; whereas, before the opening of issues, most of them were laid up with the gout fome months every year; among whom, there were two much incommoded with humours of chalky matter on some of the joints, who are now free from that inconveniency; these humours having suppurated and discharged their contents by little and little, so that the use of some joints was recovered, after having been bound up by thefe tumours for fome time. This to me feems to be a proof that the fupply of humours, which formed these tumours, was cut off by the discharge of the issues, and confequently proves the preventive effi-cacy of them, by draining off the gouty matter, which would otherwife be accumulated, after some time, to a quantity sufficient to cause a fit or fits.

I have always ordered these openings to be made above the knee, immediately above the garteringplace, which I have found to be a more convenient part for issues than below the knee. I am also convinced, from experience, that these drains in the lower extremities are particularly beneficial, (by giving a direction of the humours downwards) in preventing the gout from affecting the head, breaft, and stomach; a relief from the apprehenfion of which is generally very confolatory to every person threatened with that disease in these parts; even this advantage alone feemed to me a sufficient inducement for the use of them, and was my first motive to the trial of them, on one of my patients, in imminent danger, from the gout in the head and

breaft; in which case they gave such relief as engaged me to order them for those of my patients who were the most afflicted with this disease.

I have generally found that one iffue is sufficient to carry off or prevent the disease, except the fits are long, frequent and violent; in such cases I always defire that two issues

may be opened.

I imagine that every body will eafily be convinced of the necessity of such outlets in gouty bodies; and, I hope, that the benefit of them will be found on trial; their use is become so general here, that even the porters, almost to a man, have issue either in their arms or legs, and they find much benefit from them, for old achs from strains and for rheumatic and sciatic pains.

Though I know of no objection which can be made to the opening of issues for the gout, notwithstanding, I advise every person to consult the physician, who is best acquainted with his constitution, before he takes this step; perhaps some extraordinary circumstance may forbid the use of them.

As I have no other motive or view, in making this public, but that of the relief of those afflicted with the gout, I only beg the favour of those who try this method of cure, that they transmit to me an account of its effects for my surther information. Letters may be directed to Doctor Turnbull, in Smyrna, to be left at the Swordblade Coffee-House, London. Post paid to London. I am Sir,

your most humble,

and most obedient servant,
A. Turnbull.

P. S. I intended to have wrote more fully on this method of carry-

ing

ing off the gouty matter, and also to have added some observations on physic, which I have made, in the course of my practice, but am obliged to defer the publishing these observations for want of proper leifure.

On the virtues of lemon juice and coffee, as dissolvents of the stone. By Z, and Dr. Lobb.

T Have, for many years, suffered a great deal from a stone in one of my kidneys, for which I tried various remedies without fuccess; but being now cured, I cannot better shew my thankfulness to God for the ease I enjoy, than by publishing my case, as it may be the happy means of relieving others who are in the same melancholy condition.

It is, I believe, twelve or fourteen years fince I first perceived a pain, uneafiness, and weight in my left kidney, which gradually increafed till it made my life very uncomfortable. As I had known Mrs. Stephens's medicines to have. been very successful in many such cases, I applied to her, and took her remedies for fome years, and found myself much better and easier for them while I continued them, but whenever I left them off for any time, I had a constant return of the same complaints. Upon this I left them quite off, and tried feveral other things which were recommended to me, and generally found ease upon the first trial of every new medicine, but after leaving it off for any little time, my old complaints returned again. It is now above a year ago

fince I left off all these medicines. and took to lemon juice and water, with a little fugar, for my constant drink. I continued this method for near a year with some intervals, using two or three, and sometimes in hot weather four lemons every day. And I found myself grow daily easier, so that for many months I have had scarce any uneafiness in my kidney; and about fix weeks ago I had a great forcing to make water, when a kind of jelly came from me, which, upon examination, feemed to be the gluten, which probably connected together the folid parts of a stone.

I think it is the general opinion. of our physicians, that a stone in the human body confifts of earthy parts, with a little alcaline falt and air, which are connected together by a gluten or glue; and that the alcaline medicines, fuch as foap and lime, dissolve this glue, by which means the earthy parts separate from the rest, and come away infenfibly, but that acid medicines dissolve the earthy, &c. parts of the stone, and leave the glue untouched. And Dr Lobb in his treatife on dissolvents of the stone, shews us by experiments, that lemon juice will foften, and even dissolve a stone.

I bless God I am now quite easy and happy, and am fully fatisfied that I have got rid of a stone which gave me fo much uneafiness for many years; and which, if I may judge by the largeness of the glue which came from me, I believe was of the fize of a large Spanish nut.

The remedy I used was very pleasant and agreeable to me, especially in the fummer. I I generally squeezed the juice of a large lemon into a little above half a pint of foft water, and sweetened it to my taste; and whenever I was faint, or it was cold at my stomach, I added a little white wine to it. It never gave me the cholick, which I find lemons do to some persons, to whom, therefore, this remedy would be very improper.

If, upon this faithful narrative of my case, any persons should try it and be cured, I hope they will be so good as to acquaint the public of it, that it may encourage

others to try it.

June, 1761. Z

Dr. Lobb, after recommending in a letter the use of the above juice of lemons, and likewise of coffee, in the same disorder, from his own experience, concludes as follows,

MY diforder has neither confined me an hour at home, nor kept me any night from quiet fleep.

When I perceived the fymptoms of a stone in my bladder, I returned to the use of the coffee.

And on the account of my bloody water, I ordered my fervant first to make a tea with ground-ivy, and then to make my coffee with that tea, which rendered the slavour to me more agreeable: I put about one spoonful of milk to a quarter of a pint dish of coffee, and made it very sweet to my palate; I drink three dishes at breakfast, and two in the asternoon.

This liquor, we call coffee, as I have observed, does not stimulate as a diuretic, nor occasion a pale-coloured urine like water, but all the proper contents of urine come off with it.

Indeed, after drinking plentifully of tea, punch, cyder, &c. the urine often comes off colourles; and when it fo happens, the faline, the oleaginous, and other excrementitious parts of the blood are retained in it, till, by some other liquor or exercise, the urine is brought again to its proper colour.

When such a pale urine happens, the liquor before drank was improper for the person, or was taken in too large a quantity. This is commonly the case when disorders in the passions of the mind did not

precede.

It is a good rule for every man's observance, viz. to avoid such liquors as occasion a colourless urine; or to drink them in less quantity.

My drink at dinner is about half a pint of New-river water, with the juice of one lemon, and well sweet-

ened with fugar.

While my pains were very sharp, as well as frequent, I took half a common spoonful of a mixture made with four ounces of honey, and one ounce of the oil of olives.

I have carefully avoided all stimulating diuretics, and have used as much as convenient those forts of aliment which have a dissolvent

quality.

Through many months past, I have made no bloody water, and from this alteration in my case, and from the abatements of my other symptoms, I would hope that the stone in my bladder is less, though it is not gone.

I will only add, that it will give me a great fatisfaction if this paper proves beneficial to any that shall

read it.

Bagnio-court, THE. LOBB.

The

The Hypericum Campodarense of Columna, recommended to trial as a powerful vermifuge. By Dr. Hill.

Dog to whom Dr. Hill had given a dram and a half of the glandular part of the cups of the Hypericum Campodarense of Columna, voided, after a few hours, a flat worm, of a vast length. This was evidently occasioned by the herb; but whether it will discharge the common round worms, as well as the flat, and whether it will take effect in human, as well as brute bodies, are points yet to be determined by experience. Physicians, who feek the good of mankind, are requested to try. The plant is perfectly fafe and wholesome; and the virtues of the genus to which it belongs, in this way, are not unknown, though they have been overlooked. Bartholme has recorded the common Hypericum as a remedy against worms, with the title of prestantissimum; and Camerarius, long before, had celebrated it for the same purpose: after a trial of that kind, which seems too weak for the purpose, this species was chosen, because of its evidently greater strength; the scent being more refinous, and the glands of the cup, in which the principal virtue resides, vastly larger, and more prominent. The plant is a native of England, tho' not common; and may be easily raised in any quantity, if its virtues are found by more experience to deserve it.

Account of some antidotes against corresive sublimate mercury.

T is surprising the advantage of falts never occurred to any of

the gentlemen called to persons. who had taken corrofive fublimate mercury, and whose cases we have seen from time to time published. Common sea-salt, dissolved in the water which the patients drank, would instantly have precipitated the mercury, and thereby greatly abated its acrimony. As that is always ready, it ought constantly to be run to first, especially as in a large quantity it vomits, and when it comes not up, goes downward by stool; either way car-

rying off the mercury.

Volatile and fixed alcaline falts and spirits also precipitate mercury, spirits of salts of hartshorn, or salammoniac, falt of tartar and wormwood, &c. but as these can seldom be got on a sudden, the following articles may be used: pot-ashes dissolved in warm water (or cold till fome can be got warm) fo as not to be too acrid. Failing thefe, strain warm-water through ashes of beanstalks, broom, ash, or any other plant that can be foonest burnt: white and black foaps, containing these salts and oil, are very fit to be melted in all the water drank, or injected by way of glifter.

If none of these can be got, or in some cases thought not proper, any of the testacea, crabs eyes, crabs claws, shells of oysters, muscles, or eggs, coral prepared, or common chalk pounded or scraped into their drink, will precipitate the mercury; and as fome of them at the fame time add a mucus to the exexcoriated stomach and intestines, they may be used with advantage

at least.

As one or feveral of the above articles can easily be got, even in the country, your publishing this may fave the lives of fome, which otherwise would be lost.

The falts ought to be used at first, so long as the vomiting and purging is to be continued; then oyls, butter, fat broth, drank and injected, to comfort and soften these parts, after so much violence.

Cautions against the use of seggs.

Aving frequently seen children at play with seggs in their mouths, by blowing them, in order to make a noise; and others upgrown, who have used the juice thereof, for curing of the toothach; I hope an observation on its deleterious effects, will not be unacceptable to the publick, as it will give them a caution against its internal use.

One Sufannah Lindley, a girl aged 14, fnuffed up her nostrils (in imitation of fome, who had done fo for the tooth-ach) the quantity of a thimble-full of the juice of the root of the common fegg, about 3 o'clock in the afternoon of the 18th instant; and within half an hour after, began to be affected with a burning pain in her nostrils, and up to her head. Bye-and-bye she felt her arms and legs becoming benumbed, and the heat, &c. in her noffrils to increase; which continued until five o'clock, when her legs and arms became contracted, stiff, and firetched out, with much pain. She continued thus convulled for about half an hour, and then her contractions went off: nevertheless the extremities were very cold, and the still complained of a painful heat in her head and nostrils, until feven o'clock, and then her right knee began to shake most violently, and the feemed in general to be growing worse. Whereupon they had some advice, and were ordered to have fome warm milk and water fyringed up her nostrils, as soon as possible, in order to wash off the jaice that still adhered to the membranes thereof. But before they could get this done, she fell into another sit, the same as before; yet was instantly better, upon their throwing up the injection, and, aster repeating it about eight or ten times, the limbs perfectly relaxed, the pulse became regular, and the extremities recovered their natural heat.

About an hour after this she went to bed, slept well, and in the morning only complained of a slightish pain and heaviness in her head, which went quite off in the next night's sleep, and she has now connued quite well these several days past.

March, 1761.

Method of curing luxations of the spine, or broken backs.

His disease has been sometimes held to be incurable, not only by the ancient, but by the more expert modern furgeons too; but with how little reason, may appear from the following case, abridged from Bonetus's Medicina Septentrionalis Collectitia, p. 603. Three vertebræ of the loins were diflocated, or forced inward, with total loss of sense and motion in all the parts below. The cure was performed by extension, with cloths or fwaths under the arms and about the thighs; the former drawn by men, and the latter by a machine in another room, till the cracking bones give notice that the extenfion was enough. The bones then being fet, and the extension gradually lessened, the motion of some parts returned presently, and of all

parts,

parts, with fense, in due time; and after a strengthening plaister.

'Tis probable, this method may be improved by a fwathe put under the body opposite the luxation, to bring and hold together the broken parts in a ffrait line the better. In fome cases, this operation is most eafy; fince it needs only an even but strong extension, whilst the great ligaments and muscles will do the rest; and 'tis always far better to try a doubtful remedy, when fafe, than none, with certain death.

After this was written, much the fame directions, in the cafe, were found in Dr. Shaw's new practice of physic, p. 701: yet the importance of the matter, it was thought, would justify the present publication.

A. B.

An Account of a remarkable operation on a broken arm; fent to the Royal Society, by Mr. Charles White, Surgeon at Manchester. From the Philosophical Transactions.

Obert Elliot, of Eyam, in . Derbyshire, a very healthful boy of nine years old, had the miffortune, about Midsummer in the year 1759, by a fall, to fracture the humerus, near the middle of the bone. He was immediately taken to a bone-fetter in that neighbourhood, who applied a bandage and fplints to his arm, and treated him. as properly, as, I suppose, he was capable of, for two or three months. His endeavours, however, were by no means productive of the defired effect, the bones not being at all united. A furgeon of eminence in Bakewell was afterwards called in; but, as foon as he found he could be of no service to him, and as the VOL. IV.

cafe was very curious, he advised the lad's friends to fend him to the infirmary at Manchester: he was accordingly brought thither the Christmas following, and admitted an in-patient. Upon examination, we found it to have been a fimple oblique fracture, and that the ends of the bone rode over each other. His arm was become not only entirely useless, but even a burthen to him, and not likely to be otherwise, as there was little probability that it would ever unite. it being now near fix months fince

the accident happened.

Amputation was therefore proposed as the only method of relief: but I could not give my consent to that; for, as the boy was young. and had a good constitution, it was hardly possible that it could be owing to any fault in the folids or fluids, but that either nature was disappointed in her work by frequent friction, while the callus was forming; or rather, that the oblique ends of the bone, being sharp, had divided a part of a muscle, and fome portion of it had probably infinuated itself betwixt the two ends of the bone, preventing their union: whichever of these might be the case, I was of opinion, that he might be relieved by the following operation, viz. to make a longitudinal incision down to the bone. to bring out one of the ends of it. (which might be done with great ease, as the arm was very flexible) and cut off the oblique end, either by the faw or cutting-pincers; then to bring out the other end of the bone, and cut off that likewife; afterwards to replace them end to end, and then treat it intirely as a compound fracture.

The objections made by the other K

other gentlemen concerned, to this proposal, were, 1st, the danger of wounding the humeral artery by the knife; 2dly, the laceration of the artery, by bringing out the ends of the bones; and 3dly, that we had no authority for fuch an operation. As to the first, that was eafily obviated, by making the incision on the side of the arm oppofite to the humeral artery: the place of election appeared to me to be at the external and lower edge of the deltoid muscle, as the fracture was very near to the infertion of that muscle into the humerus; the danger of wounding the vessel not only being by that means a-voided, but, after the operation, while the patient was confined to his bed, the matter would be prevented from lodging, and the wound be eafily come at, to renew The second objecthe dreflings: tion will not appear to be very great, when we confider, that, in compound fractures, the bone is frequently thrust with great violence through the integuments, and feldom attended with the laceration of any confiderable artery; and, as this would be done with great care and caution, that danger would appear very trifling. third and last objection is no more than a general one to all improvements.

This method, which I have been proposing, was at last resolved upon, and I affisted in the operation, which was performed by a gentleman of great abilities in his profession, on the third of January, in the present year. The patient did not sose above a spoonful of blood in the operation, though the tourniquet was not made use of. When the operation and dressings were

finished, the limb was placed in a fracture-box contrived on purpose, the lad confined to his bed, and the rest of the treatment nothing different from that of a compound fracture.

The wound was nearly healed in a fortnight's time, when an erifipelas came on, and spread itself all over the arm, attended with fome degree of swelling; this, by fomentations and the antiphlogistic method foon went off, and the cure proceeded happily without any other interruption. In about fix weeks after the operation the callus began to form, and is now grown quite firm: that arm is as long as the other, but somewhat smaller, by fuch long-continued bandage; he daily acquires strength in it, and will foon be fit to be discharged.

March 17, Surgeon to the Infir-1760. mary at Manchester.

Extract from a pamphlet entitled, Obfervations upon the proper Nurfing, of Children. From a long feries of experience.

Child when it comes into the world, is almost a round ball, it is the nurse's part to assist nature, in bringing it to a proper shape. The child should be said (the first month) upon a thin mattras, rather longer than the child, which the nurse will keep upon her sap, that the child may always he straight, and only sit up, as the nurse slants the mattras. To set a child quite upright, before the end of the first month, hurts the eyes, by making the white part of the eye appear below the upper eye-lid. Afterwards

the nurse will begin to set it up, and dance it by degrees. The child must be kept as dry as possible.

The cloathing should be very light, and not much longer than the child, that the legs may be got at with ease, in order to have them often rubbed in the day, with a warm hand or stannel; and in particular the inside of them.

Rubbing a child all over, takes off fcurf, and makes the blood circulate. The breast should be rubbed with the hands, one, one way, and the other, the other wey, night

and morning at least.

The ancie bones and infide of the knees should be rubbed twice a day; this will strengthen those parts, and make the child stretch its knees, and keep them slat; which is the foundation of an erect and graceful person.

A nurse ought to keep a child as little in her arms as possible, lest the legs should be cramped, and the toes turned inwards. Let her always keep the child's legs loose. The oftener its possure is changed

the better:

The child should begin to walk upon a carpet or blanket, from three months old: the nurse must hold the child by the hips, that the movement in walking may come from that part, and not drag it by the arms.

Toffing a child about, and exercifing it in the open air in fine weather, is of the greatest service. In cities, children are not to be kept in hot rooms, but to have as much

air as possible.

Want of exercise is the cause of large heads, weak and knotted joints, a contracted breast, which occasions coughs and stuffed lungs, an ill-shapen person, and wadling gait, besides a numerous train of other ills.

The child's flesh is to be kept perfectly clean, by constantly washing its limbs, and likewise its neck and ears; beginning with warm water, till by degrees, it will not only bear, but like to be washed with cold.

Rifing early in the morning is good for all children, provided they awake of themfelves, which they generally do; but they are never to be waked out of their fleep, and as foon as possible, to be brought to regular fleeps in the day.

When laid in bed or cradle, their legs are always to be laid straight.

By this method most childrent may be taught to walk alone, quite strong and upright, by the ninth or tenth month. At all times, till they are two or three years old, they must never be suffered to walk long enough at a time to be weary.

Girls might be trained to the proper management of children, if a premium were given in free-fchools, workhouses, &c. to those that brought up the finest child to

one year old.

If the mother cannot fuckle the child, get a wholesome chearful woman, with a young milk, who has been used to tend young children. After the first six months, small broths and innocent foods of any kind, may do as well as living wholly upon milk.

A principal thing to be always attended to, is, to give young children constant exercise, and to keep

them in a proper posture,

With regard to the child's dress in the day, let it be a shirt, a petticoat of sine slannel, two or three inches longer than the child's feet;

K 2 with

with a dimity top, (commonly called a bodice coat) to the behind; over that a furcingle made of fine buckram, two inches broad covered over with fattin, or fine ticken, with a ribbon fastened to it, to the it on, which answers every purpose of stays, and has none of their inconveniences. Over this put a robe, or a slip and frock, or whatever you like best; provided it is fastenened behind, and not much longer than the child's feet; that their motions may be strictly observed.

After the first fix months, the child may wear shoes and stockings, provided the shoes are large enough, and very broad at the toes, that the feet may not be cramped.

Two caps are to be put on the head, till the child has got most of its teeth.

No leading-firings of any kind fhould be used till the child can go quite alone, strong and upright.

The child's dress for the night, may be a shirt, a blanket to tie on, and a thin gown to tie over the blanket.

Remarkable instance of the superior, merit of the horse-hoeing husbandry.

SIR.

Send you an account of a farming-wager in the neighbourhood of Glasgow, to be communicated to the public; the issue being, in my opinion, extremely interesting, and very worthy their attention. It was laid with a gentleman, who has for several years past kept a small farm near that city in the horse-hoeing husbandry way. The field consisted of ten acres, partly very good ground, partly indifferent or bad; and it had

carried eight crops, the ninth then standing, of which the last fix were wheat, without dung or any kind of manure whatever. Out of these ten acres one was to be picked, lying contiguous; and the wager was Produce or Not produce twelve bolls of clean dight wheat? The spot was accordingly chosen, and an acre measured off by a land-furveyor. It was cut down immediately after measuring, and the produce in the straw was twenty-one threaves, bating four sheaves, allowing twenty-four sheaves to the threave; which were fet upon a separate part of the field, to prevent mistakes; and afterwards carried home, and put into the end of a barn by themselves. The produce in clean dight wheat, when threshed out, was precifely one peck and a half short of fixteen bolls, Linlithgow measure.

It is proper to notice, that this crop was very much blacked or fmutted; but as the loss thereby could not be brought to any certain computation, feveral farmers were defired to view it when standing, in order to estimate what the loss might amount to; and their estimate run between a fifth and a ninth part of the whole: so that taking this loss at a medium, and supposing the crop had been free of fmut, it must have exceeded eighteen bolls; and this computation is not fully anfwerable to the ordinary produce from the fame number of threaves in former years. It cannot be expected the whole field, confidering the inequality of the foil, should produce a crop equal to this acre; but computing the whole according to the number of threaves, and the produce supposed the same with what is already threshed, it ought

to turn out about nine bolls per acre. The ridges are about five feet in breadth, and drilled upon the top with two rows of wheat, at nine inches distance; the quantity of feed was two pecks to the acre; and the intervals were ploughed four times during spring and summer, and the nine-inch partitions cleaned with the Dutch hand-hoe.

This experiment, Sir, bids fair for exciting both proprietors and farmers to a nearer confideration of their own interest; as by this method their out-field ground may be brought to equal, if not to exceed the now produce of their in-field, without any other expence than ploughing and cleaning from weeds: but the poorer the ground is, the more ploughing must be applied; and the farmer may be well affured, that the expence, upon the whole, does not exceed that of the common husbandry. The cleaning from weeds during the first two or three years of the management, may poffibly add a triffe to this expence; but as it decreases every crop, two shillings the acre will become a large allowance for both hand-hoeing between, and weeding the rows themselves.

The agreeable views this opens for the improvement of the country, not only in wheat but in many other crops, supported by this material consideration, that the farmer will no more be narrowed in his cultivation, by the over too small quantity of dung or manure he can make or obtain in his neighbourhood, are too many and too extensive to be included in the bounds of a letter; and therefore I shall only add, by way of encouragement, that the operation itself is so far from being difficult, that during the

late excessively rainy go-harvest, the like to which has not been seen for many years, thirty-eight acres of wheat have been ploughed, harrowed, and drilled (sive of them twice ploughed) with three horses only; and if the season had been savourable, half as much more might have been done with less trouble.

The scheme itself is no other, than what was published forty years ago by Mr. Tull, and very unwisely judged from some rash and ill-executed trials, to be a visionary project. It is certain, to my knowledge, that this gentleman's crops have been on the increasing hand for these fix years past, and have never yet been under five bolls per acre, upon an average, from a soil which in general is very far from

being naturally good.

As this is published solely for the benefit of the public, it may be proper to advise all beginners, not to exceed two or three acres in their trials, nor eafily to increase that quantity, till the operations are become familiar to the fervants. Good ground ought likewise to be chosen for this purpole, the expence of cultivation being the same in good as in bad ground, and the utmost care taken to clean the rows of all kinds of weeds. I think it best to begin with a fummer-fallow. If the foil be good, dung certainly is not necessary; if it be indifferent or bad, a little dung will no doubt hasten the fertility, but increase the expence, perhaps beyond the return: but be the ground what it will, more clear profit will always be got out of it by this method, than by the common husbandry, provided it lies fair for the plough.

I am, &c.

Note, That the Scotch acre makes about one acre, one rood, and one perch, English measure; and that the Scotch measure, called a boll, is equal to about three bushels and nine-tenths, Winchester measure.

Letter concerning the fattening of sheep with grains.

SIR,

Have very good information from Swithbottom, near Croydon in Surry, that Mr. Richard Wood of that place, farmer and brewer, fold two horned sheep lately to a butcher in that neighbourhood, whose carcasses weighed thirty-fix stone; they were excessive fat; but what is very extraordinary, they were fed with grains. There were great fums of money won and loft about their weight, and particularly by Mr. T. B. an eminent butcher of Croydon, who loft four times the value of the sheep. As the brewers grains are now become fo very valuable by this remarkable trial of feeding sheep, I apprehend that the great advantages that will accrue from thence to the brewer, may be adequate to the late additional duty: If so, then they will be enabled to fell their beer at the old price.

April 9, A Surry farmer. 1761.

not be confounded with the Nummularia, fo called on account of the figure of its leaves, which refemble a farthing, and which is known in medicine by its aftringent quality. That of which I treat, hath a quite contrary effect. I would class it however, with the shepherd's purse, bursa pastoris, two kinds of which are described by botanists, namely, the large and the small. I dare not affirm that it is of the large kind; but I am certain it is not of the oblong kind of bursa pastoris minor.

The plant Nummaria grows naturally in cultivated or uncultivated fields, but especially in those where white turneps have been fowed. It may be planted likewise with great fuccess, and in a good soil becomes taller and stronger than when it grows wild in the fields. It rifes commonly a foot and a half high. with three, five, ten, or fifteen branches; but I have found one in my kitchen garden three feet and a half high, with 181 leaves, which contained 511 grains of feed. The leaves of this plant lie two and two together, and are rolled up in fuch a manner, as to have the middle of a little bag which they form elevated. In this little bag is contained the feminal grain, which may be feen and counted when the leaves are ripe, because then they are yellow and transparent. The grains are in number from fix to eighteen, fomewhat smaller than turnep-feed: they appear through a microscope lengthened and broad, furrowed, and of a darkish brown colour. They give oil, although one-third less than the like quantity of linfeed. In fine, the plant, the leaves, and the feed, cast an intolerable bad fmell: the oil is ftinking, and my fervants are always

A Letter concerning the usefulness of the plant Nummaria, against the worms that destroy corn; and likewife of tobacco against wevils.

His plant, to which I give the name Nummaria, must

out of humour when I order them to burn the oil extracted from the Nummaria.

The Nummaria appears in May, and is ripe about the middle of June. In its maturity the leaves open and fcatter the feed; wherefore, in order to make a provision, it must be gathered a little earlier. By cultivating it, you may have it twice a year, if it is fown in March, and in the end of June; and this is very often necessary, because it doth not grow every year. It loves a particular temperature of air, of which I have no certain knowledge; but I am positive, whenever it begins to grow, it must not be diflurbed by any tillage: the more the earth about it is turned up, the more its maturity is retarded.

Upon examining the grain of the Nummaria, I found that it contained an oil. It happened, that some years fince I fowed about four acres of ground with turneps, not one of which grew up: but then, instead of these, I had such a prodigious quantity of the Nummaria, that one would have thought that my land had been fown with it, make amends in some measure for the loss of the turneps, I resolved to gather the Nummaria, and extract its oil. Accordingly I cleared the ground entirely of this plant, of which there were feveral waggon loads, and piled it up in my granary. In two days time, it heated, for which reason I spread it out as much as possible, that it might dry more easily; and afterwards it was threshed. It is not possible to conceive what an abominable stink it spread, not only in the granary, but also in the contiguous buildings; and even in the court-yard it was insupportable.

Several years before, fome rye full of white worms had been laid up in that granary: they were in fuch vast numbers, that at the usual feafon of the metamorphosis of infects, they crawled out of the heap, which they covered in fuch multitudes, that with a rake they were gathered in bushels; and yet, notwithstanding the heap of corn, feemed overspread with a yellowish living matter. When some time after the rye was carried away, the vermin did not abandon my granary; they had made a lodgement there; and in spite of all my efforts, and all the remedies I could procure, I could never exterminate them. The new corn brought in was always found, in four and twenty hours, covered with a white web, formed of the kind of filk which is foun by that vermin,

Disheartened by a thousand expensive and unprofitable projects, I became accustomed to that disagreeable object. I was even so indifferent, that when my granary was emptied of the Nummaria, and the rye was carried off, which I had feen before covered with white worms, I imagined, as none appeared at that time, that their metamorphosis had been advanced by fome cause to which I was a stranger. Upon reflection, however, I conceived some suspicion of the smell of the plant, and I resolved to make the experiment the first opportunity that should offer; and indeed it was not long till one prefented itself.

The following year I had some corn brought to me full of white worms: immediately I ordered the Nummaria to be sought for; and as only a small quantity of it could be gathered, I commanded a ring

K 4 Qr

or circle to be made with it round the heap of corn, which was very confiderable. It was trod upon, that it might diffuse the smell more strongly, and the success justified the idea I had conceived: the white worms disappeared, and fince that time, I have never perceived one in my granary. All my neighbours, to whom I communicated this discovery, have reaped the same advantage from it, and it is with pleasure I impart it to you, that the whole kingdom may be indebted to you for the same obligation.

As these worms are not found in all countries, every body is not acquainted with them; and amongst those who are, perhaps there may be some, who in order to get rid of them, would scarce expose themselves to the nauseous stink of the Nummaria; for we must acknowledge, that vermin destroys the corn but very little. These worms never attack it on the side of the shoot; they consume but a sisth part of the flour, and never communicate to it the least bad taste.

The corn, therefore, if fown, grows as well, and produces as plentiful a crop as any other; and if ground into flour, gives as good and as nourishing bread as one can defire, without the least danger to the health; a fact of which I am well affured by my own experience. But, besides that they diminish the quantity of the corn, they give it fo disagreeable a colour, that it is a difficult matter to fell it. The gain, therefore, is evident in exterminating and destroying them by a cheap and infallible remedy, far superior to others, which are often expenfive and ineffectual.

I forgot to inform you, that the

oil, the remaining substance after the oil is extracted, the leaves, the branches, the trunk of the Nummaria, are feverally endowed with the fame virtue as the whole plant, because they preserve the same fmell. I experienced this with one of my neighbours, in a year when that plant failed entirely. I ordered some to be boiled in water that distilled from a dung-hill, and after removing the wheat, we fprinkled plentifully the place where it had lain. When that place was well moistened, we let it dry, and afterwards put the wheat upon it. washed in like manner the second place which the wheat had occupied. In three days time no maggots or worms were to be feen.

The black worm, which gnaws the corn entirely, leaving nothing but the bran, is far more dangerous. I am not certain if the Nummaria destroys that insect or not, having never made the experiment: but I am inclined to believe, that it is an enemy to all vermin, for I could never perceive a caterpillar upon its leaves; and it is very probable, that with the white it destroys also the black worm, caterpillars, bugs, wood-lice, wevils, and a multitude of other infects, which infest and confume our most valuable effects. (Journal Oeconomique.)

M. de la Nux, of the isse of Bourbon, a correspondent of the academy at Paris, has advised M. de Reaumur to make use of tobacco either green or in rolls, as a preservative against wevils: these animals, who are apparently liquorish, will come to the tobacco from all parts, and as soon as they have eaten of it, they certainly die:

I demonstration of the accuracy of the trials made with Mr. Irwin's Marine Chair, for finding the longitude at sea, by Jupiter's Satellites. By M. De L'Isle, of the Royal Academy of Sciences at Paris, Fellow of the Royal Societies of London, Berlin, Stockholm, and Upsai, and late Principal Astronomer in the Imperial Academy at Petersburgh.

N the Journal Etranger, for the month of March, 1760, I meet with a short description of this Marine Chair, invented by Mr. Irwin, for observing the longitude at fea, wherein it is faid, that Mr. Irwin, on his return from a voyage he had undertaken to make trial of it, found that he was not mistaken above twenty-three miles, or about a third of a degree, in his estimate of the longitude, from the several observations he had taken; that is to fay, that, by means of his machine, he had obtained the longitude to a greater degree of precision than the act of parliament, made in England, requires.

As the Journal Etranger abovementioned recites the journal and particulars of these first observations, made with Mr. Irwin's Marine Chair, by Mr. Jeremy Sisson, I thought proper to examine into the exactness of them, by means of correspondent observations made at Paris and elsewhere, to supply the uncertainty of the calculus which Mr. Siffon had only to rely upon, he not knowing of any correspondent observations that had been taken. I have alfo compared his observations and their correspondent ones, with the position of the isle of Ushant, within fight of which Mr. Siffon observed, the 9th of August, 1759,

the fituation of that island being accurately known and determined by the triangles formed for confiructing the chart of France.

Mr. Sisson's observations confist of three emersions of Jupiter's Satellites, two of the second, and one of the first, observed the beginning of August 1759: I have not hitherto met with any observation correspondent to the first of the three, but only to the two others. fecond observation related by Mr. Sisson, is that of the first satellite, the 9th of August, in the evening. which he found to happen at fea, at 7 h. 55 m. 1 1 fec. I observed it at Paris, at the Hotel de Clugny, with a 22 foot telescope, at 8 h. 20 m. 42 fee, and M. Messier, with a Newtonian reflector, of four feet and a half long, which magnified 56 times, is feconds later *. By comparing M. Messier's observation with Mr. Siffon's, the place where the latter then was should be 25 m. 52 & sec. of time west of the meridian of Paris, or 16 m. 14 ½ fee west of the meridian of London, on supposition. that the distance of London from Paris, is 9 m. 41 sec. as marked in the Connoissance des Temps. Mr. Siffon makes the difference of longitude between London and his place of observation, 18 m. 16 sec. or 4 h. 34 m. 15 fec. and he adds, that his observation was taken in fight of Ushant. Now, according to the general chart of France, regulated by triangles, the isle of Ushant is west of the meridian of Paris, 7 d. 24 m. 33 fec. from whence taking 2 h. 25 m. for the distance from London to Paris, there remains 4 d. 59 m. 33 fec. for the longitude of the place of Mr. Sisson's observation

^{*} The translator observed it in Clerkenwell-close, London, at 8 h. 11 min. 14 fec. apparent time, with a reflector of 18 inches focal length, magnifying fifty-five times.

tion; west of London, which gives the longitude of the isle of Ushant, with respect to London, 25 m. 18 fec. lefs than it is marked on the chart of France. This difference of 25 m. is certainly but a minute erfor for an observation of the longitude, as it amounts to no more than 6 marine leagues. But, to reason a little further; probably the error might turn out still less, if we could introduce into the account, the bearing and distance the ship then was from Ushant, and the difference of the telescopes with which the correspondent observations were made: it is well known, that an emersion of the fecond fatellite may be feen 30 feconds fooner with a reflecting telescope of four feet, than with one of two feet, which would again diminish the error by about a third; and were we to suppose that the ship, which, according to the relation, was in fight of Ushant, was three or four leagues distant from it, the error would absolutely vanish.

Lastly, it is to be noted, that the longitudes marked on this chart, and calculated from a feries of triangles, as they are expressed in two columns, graved at the fides of the chart, were computed by M. Cassini, and his affiftants, under the hypothesis of a spherical earth; whereas they should be less in the hypothesis of an earth oblate towards the poles. Thus Mr. Siffon's observations agree better for the position of the isle of Ushant, with the figure which we now know the earth has, than with the determination deduced from the measure of the parallel of Paris in the hypothesis of a spherical earth. This is a proof of the goodness of Mr. Irwin's Marine Chair, and the

exactness that may be arrived at in the observations of Jupiter's satellites, made in it.

The other observation of the satellites by Mr. Sisson, of which we have a correspondent one, is the emersion of the second, on the 13th of August in the evening, which Mr. Sisson has noted at 11 h. 21 m. 54 fec. By an observation made at Vienna with a four foot Newtonian reflector, this observation should have happened at London, at ii h. 44 m. 35 fec. *; and confequently the place of his observation was west of London 22 m. 41 sec. Mr. Sisson marks this difference of longitude 24 m. 25 fec. not having had any correspondent observation, and being obliged on that account to refer to the tables.

Thus we fee plainly, that navigators are, for the future, to confider the invention of the Marine Chair, as one of the greatest benefits that can possibly accrue to their science. The knowledge of the longitude. which is fo effential a part of it, and fo long defired, is now brought to its utmost perfection, if, by this new means observations can be made as well at fea as at land. The heavens are continually offering proper phænomena for finding the longitude, and the greatest difficulty has, till now, been, how to observe them well. It is therefore of the utmost importance to be more and more fatisfied, by repeated trials of the goodness of this method. I make no doubt, that, in a short time, the navigators in general, jealous of the progress of their art, will dispute the glory of having first profited by fo excellent a discovery.

Useful

^{*} The translator observed it in Clerkenwell-close, London, at 11 h. 44 min. 51 sec. apparent time, with the same reslecting telescope.

Useful bints for Sailors and sea-

ATHING in the sea-water, in hot climates, is very wholesome when done with discretion. It should never be immediately after meals, for reasons obvious to those who are acquainted with animal nature and oeconomy. Bathing in, and drinking the falt water is a specific cure for scorbutic diseases. Cleanliness, and frequent washings, are very beneficial. Sir John Narborough preserved the health of his crew, in a long and unwholesome voyage, by obliging them to have strict observance of cleanliness, and particularly by washing themselves, and being careful to keep neat and sweet their vessels of cookery. Cleanliness also extends itself to apparel and bed cloaths, which should always, be with the strictest care observed, in the utmost state of possible purity. One instance of detrimental uncleanness, is, lying down to fleep, as feamen too frequently do, in all their cloaths: this should never be suffered; but, instead of being prevented, it is often encouraged, that they may be the more ready at a call. Much fleep in hot weather is hurtful: it' relaxes and enervates very greatly, and disposes the body to many disorders. It greatly behoves all feamen who have a due regard for felf-preservation, never to fleep upon deck, especially in the night, or when the air is moist: for obvious reasons. Let the breast be covered during fleep. It were perhaps, needless to admonish the prudent feaman never to fleep exposed to the fun, rain, or cold winds. Every seaman ought to have three fhirts, that he may be able, by keeping them duly washed, to thange once in three or four days. After linen has been washed in falt water, it should be rinced in fresh water; for the salt particles adhering to it, are hurtful to the wearer. The expence of fresh water would be but small, a hundred shirts may be rinced in a small pail of fresh water; but when it rains, even without that charge.

It is very important to the healthiness of ships, to be well provided with a plentiful flore of vinegar; if the seamen use it with all their victuals, the better; but especially with pork; and a little in their water too, particularly in hot climates, or intemperate weather.' Vinegar corrects evil effects from water inclining to putrefaction, and promotes greatly that falutary perspiration, which in hot climates prevents putrid fevers and inflammations. If vinegar fails, spirit of sea falt answers, in a very small quantity; nearly the same happy purpose, as vinegar does in a greater proportion. If a little shrub was provided for the use of the seamen after hard fatigue, instead of such other liquors as are commonly given to them, by generous and humane commanders, on these occasions, it would have a much better effect, as the vegetable acid in it gives it a superior efficacy against putrefaction.

On such occasions as sickness, how easily might seamen he supplied with good plenty of excellent and wholesome soup, by the help of a digester in Papin's manner? By this machine, with a lamp or candle, the bones of any kind of meat animals might be liquisted in a few minutes. How light of charge this engine? How plentifully and readily bones of cattle might be produced.

cured:

cured? How easily preserved if sliced or in powder? How quickly made potable? How wholesome and restorative such food would be to fickly people, as it is a noble and excellent broth, without the help of salt to preserve, I submit to the confideration of those who have more authority, and wish them to have the same benevolence to compassionate the miseries of seamen in distress.

It may feem a trifling matter, but it will prove greatly falutary to a fhip's crew, to make every man wash his mouth, every morning and night, with vinegar. This is particularly falutiferous in hot weather, and a fingular prefervative against the scurvy, and all putrid diseases. At the same time as such a diffusion of acid or antiseptic particles are diffeminated through the parts of a ship, they exert their antiscorbutic efficacy, to prevent or destroy the influence of putrescent or corrupt air, and to restore it to an wholefome state: by this practice also, the lungs and more tender vitals become sheathed or armed against the reception, or inhalation of the volatile particles of putrefaction; so that they either are repelled, or else intirely change their poisonous to a harmless quality. A man in such armour is fafe. - Fine grafs hay in rain water, makes a liquor which is perhaps one of the most excellent preservatives against, and remedies in, the fea-scurvy. It is a pleasant drink; hay is eafily preserved; and It may be made to occupy no great compass of room.

rine plants. I took a glass vessel. of an oblong form, and, having partly filled it with fea-water, I put therein a proper quantity of the alga marina, or sea-weed; the roots of fome of which were naked, and quite clear of any foreign body; but to the rest were still adhering the pebbles that ferved to support them in the sea. The vessel being then full, I fitted to it a glass-head, with its beak, to which I joined a receiver, without luting the joints. There distilled daily from these plants a small quantity of water, very fresh, very potable, and quite free from the ill taste, which waters distilled by fire usually retain.

This experiment shews the easiest, surest, and most natural method of making sea-water fresh, a matter of such singular utility to na-

vigators.

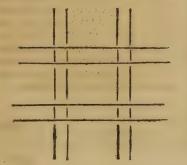

I doubt not but we may find other plants, among those growing either in the sea or on its shores, which may be more effectual for this experiment, and which yield fresh water in greater quantity, as rock-famphire, the braffica marina, or kali-kind, the fea-lentil, &c. Some of these plants may be tried, by examining their growth either in fea-water, or earth sprinkled with it. And hence, in some measure, the conjecture may be very probable, that the real primitive water, which might have existed before animals and plants, is fea-water; and that fresh-water is, for the most part, indebted for its origin to the vapours of plants, the respiration of animals, and the exhalations of the earth, attracted by the heat of the fun:

Amethod of making Sea-water potable.

SEA-WATER becomes fresh by making it pass through ma-

Chinese contrivance, by which a perfon, who does not know how to fwim, may easily keep himself above water. From a letter to the author of the seaman's preservative.

N the year 1730, I was passenger in a ship from Batavia to China, burthen about 400 tons, called the Pridae, Francisco Xavier commander, freighted by English, Chinese, and Portugueze. the coast of China we met one of those storms called a Tutsoon, (Tau fong) or a great wind, which carried away all our masts, bowfprit, and rudder; and in our hold we had fix feet of water, expecting every moment the ship would founder. - We consequently were confulting our prefervation: the English and Portugueze stood in their shirts only, ready to be thrown off; but the Chinese merchants came upon deck, not in a cork jacket, but I will call it a bamboo habit, which had lain ready in their chests against such dangers, and it was thus constructed; four bamboos, two before, and two behind their bodies, were placed horizontally, and projected about 28 inches. These were crossed on each side by two others, and the whole properly fecured, leaving a space for their body; so that they had only to put

it over their heads, and tie the same securely, which was done in two minutes, and we were satisfied they could not possibly sink.—The shape is given above.

Easy method of opening a way to the sight through turbulent waters.

PPOSITE to the famous baths of Balarue, on the coast of Provence, is Taur, or Hill-pond, fo called from its lying among hills; the word Tor or Taur in the Hebrew, Phenician, and Celtic, fignifying a mountain or hill: in the middle of it stands an insulated rock. known by the name of Rocairals. The foot of this rock, under the water, is covered with mytuli, or muscles, lepades, or goats eyes, balani, or fea-acorns, and echini, or fea-urchins, &c. ftrongly adhering to it. The fishermen, for tearing them off, made use of an iron hoop fomething sharpened at the upper edge and fastened to a pole; with which scraping the rock, the fish fall into a bag tied round the hoop.

I have been at this sport, and it gave me an opportunity of observing a fact, not unworthy notice. That the labour of scraping the rock may the better answer, it is necessary to discern the places where the shellfish, and especially the largest, most abound. This one would think no difficulty, the water being usually clear: yet it is not so easy as imagined; the least agitation occasions a fimmering formed of undulations, irregularly congested on one another, that amidit these inequalities, the rays of light, in their entrance and iffue, necessarily go through many refractions, unequal, and often opposite; hence a kind of shade on the the furface of the pond; that objects of a middling bigness are scarce difcernible at the depth only of two feet. To overcome an inconveniency fo detrimental to the fishermen's industry, experience has taught them a fure method, which perhaps mere naturalists would never have dreamed of; yet it is only to pour a drop of oil on the place where the fisherman would look. The oil, agitated by the motion of the water, spreads with a surprizing celerity, and by this horizontal dilatation, Suppresses and levels the crispated undulations, which obstructed the fight. The fishermen are very dextrous in taking advantage of this calm interval, which is foon over: but they renew it at pleafure, and at little expence, using only a single drop of oil at one time, and that of the worst fort.

This device throws a light on a passage of Pliny, histor, natural lib. 2. cap. 103. where that author, after saying, mare bleo tranquillare, i. e. that the sea is smoothed by throwing oil on it; he adds, that it is on this account divers carry some in their mouths, and by spurting it out when under water, are capable to see much better. Et. ob id urinantes ore spargere, quoniam mitiget naturam asperam maris, succenque deportet.

Method of edulcorating train-oil. By
Mr. Doffie.

Society for the Encouragement of Arts, Manufactures, and Commerce. Strand, July 15, 1761.

RDERED, that the processes communicated by Mr. R. Dosafe, for edulcorating train oil, as

now in the possession of the society; be published verbatim, with Mr. Dossie's explanatory notes at the bottom of the page, under his name.

PROCESS the FIRST.

For purifying oil in a moderate degree, without almost any ex-

pence.

Take an ounce of chalk, powdered pretty finely, and half an ounce of lime flacked by lying exposed to the air. Put them into a gallon of stinking oil: and having mixed them well together, by flirring, add half a pint of water; and mix that with them, alfo, by the fame means: When they have stood an hour or two, repeat the flirring, and continue the same treatment, at convenient intervals, for two or three days. After which fuper-add a pint and a half of water, in which an ounce of falt is diffolved; and mix them as the other ingredients, repeating the stirring as before for a day or two. Let the whole then stand at rest; and the water will fink below the oil; and the chalk subside in it to the bottom of the vessel; the oil will become clear, be of a lighter colour, and have confiderable less smell: but will not be purified in a manner equally to the effect of the other processes, below given: though as this is done, with the expence of only one ounce of falt, it may be practifed advantageoufly for many purpoles: especially preparatorily to the next method, the operation of which will be facilitated by it.

PROCESS the SECOND.

To purify oil without heat to a great degree.

Take a gallon of crude slinking oil, or of such as is previously pre-

pared

pared by the foregoing method, and add to it an ounce of powdered chalk. Stir them well together, feveral times, as in the preceding process; and, after they have been mixed some hours, or a whole day, add an ounce of pearl ashes, dissolved in four ounces of water; and repeat the firring as before. After they have been so treated for some hours, put in a pint of water, in which two ounces of falt are diffolyed, and proceed as before. The oil, and brine, will separate, on standing some days: and the oil will be greatly improved, both in fmell and colour. Where a greater purity is required, the quantity of pearl ashes must be increased; and the time before the addition of the falt, and water, prolonged.

If the same operation be repeated feveral times, diminishing at each time the quantity of the ingredients, one half, the oil may be brought to a very light colour; and rendered equally sweet in smell, with the

By this process, the cod oil may be made to burn; and when it is so putrid as not to be fit for any use, either alone or mixt, it may be so corrected by the first part of the process, as to be equal to that commonly sold; but where this is practifed in the case of such putrid oil, use half an ounce of chalk, and half an ounce of lime.

PROCESS the THIRD.

To purify oil with the affiftance of heat, where the greatest purity is required: and particularly for the woollen manufacture.

Take a gallon of crude sinking oil; and mix with it a quarter of an ounce of powdered chalk, and a quarter of an ounce of lime sacken-

ed in the air, and flir them together; and when they have flood fome hours, add a pint and a half of water, and two ounces of pearl ashes; and place them over a fire that will just keep the simmering, till the oil appear of a light amber colour; and has loft all smell, except a fopey; greafy, hot fcent. Then fuper-add half a pint of water, in which an ounce of common falt has been dissolved; and having boiled them half an hour, pour them into a proper vessel; and let them stand till the separation of the oil, water, and lime, be made, as in the preceding.

Where this operation is performed, to prepare oil for the woollen manufacture, the falt may be omitted; but the separation of the lime from the oil will be slower; and a longer boiling is necessary.

If this oil be required still more pure, treat it, after it is separated from the water, &c. according to the second process, with an ounce of chalk, a quarter of an ounce of pearl ashes, and half an ounce of salt.

PETER TEMPLEMAN, Secretary.

Observations on the above processis, by Mr. R. Dosse.

Observations on Process the First.

First, this process may be performed on any kind of sish or seal oil, that is putrid and stinking; and will improve it in smell, and most generally render it of a lighter colour, if before dark and brown. It will, also, conduce to the rendering those oils fitter for burning prostably, that are in their original state faulty in that point; but it will not meliorate them to the full degree they admit of, even with

heat; and should, therefore, be practised only where moderate im-

provement is required.

Second, after the oil is taken off from the dregs and brine; the dregs, which fwim on the brine, should be taken off also, and put into another vessel, of a deep form; and, on standing, particularly if fresh water be added, and stirred with them, nearly the whole remaining part of the oil will separate from the soulness; or, to save this trouble, the dregs when taken off, may be put to any suture quantity of oil, that is to be edulcorated by this method; which will answer the same end.

Observations on Process the Third.

First, This process may be advantageously performed on the train oil, called vitious oil, and the more putrid and foul it may be, the greater will be the proportionable improvement; especially if there be no mixture of the other kind of fish oils; particularly the feal; which do not admit of being edulcorated perfectly, by means of heat; but require other methods: but when the vitious oil is pure, however flinking it may be, the bad fmell will be removed by this process, duly executed, and the brown colour changed to a light amber; and these qualities will be much more permanent in this, than in any crude fish oil: as it will not, on account of the degree of purity to which it is brought, be subject to putrify again under a great length of time, whether it he kept open, or in close vessels. The oil, in this state, will burn away without leaving the leaft remains of foulness in the lamp; and being rendered more fluid, than before, will go further when used in

the woollen manufacture, than any other kind, and be much more easily scoured from the wool. If nevertheless, there be any branches of the woollen manufacture, which require the use of a more thick and unctuous oil, this may be rendered so, by the adding a proper quantity of tallow, or fat; of which a certain proportion will perfectly incorporate with the oil; the fluidity and transparency being still preferved, as well as all the other qualities that render it fuitable to the intended purpose. This may be the most beneficially done, by adding a proper quantity of the refuse grease of families, commonly called kitchen stuff: which, being put to the oil, when moderately heated, will immediately diffolye in it, and let fall also its impurities or foulness, to the bottom of the veffel: and it will be fo far from being any way disadvantageous, that it will, on the contrary, be profitable to the manufacturer; as there will be a faving of more than one half in the proportion of the kitchen stuff employed. As its common price is not half so great, as that of vitious oil; nor one third of that of the Gallipoly olive oil now used.

Second. The different qualities, and disposition of different parcels of vitious oil, with respect to edulcoration, render various proportions of the ingredients to be used necesfary. The quantities stated in the above process, are the least, which will effect the end, in general; and frequently greater will be required, but these may always be first tried; and, if it be found after fix or eight hours simmering of the mixture, that no gradual improvement is making in the fmell and colour, but that the oil continues the fame in those particulars: and remains also

mixed

mixed with chalk and lime, and in a thick turbid state, a fourth or third part of the first quantity of pearl ashes, should be added; and the simmering continued till the oil be perfect. It is proper, as the quantity of the water is leffened, by the evaporation, to make fresh additions from time to time, that there may be always nearly the original proportion.

Third, If it be inconvenient to give the whole time of boiling together, the fire may be fuffered to go out; and re-kindled at any distance of time; and if, in fuch case, a small proportion of pearl ashes dissolved in water, be added, and the mixture feveral times stirred, between the times of boiling, it will facilitate the

operation.

The time of boiling may be, also, much shortened, if the chalk, lime, and pearl ashes, be added some days before; and the mixture frequently stirred; or, if oil previously edulcorated, according to process No. 1. be taken, instead of crude oil.

Fourth, The oil remaining in the dregs may be recovered by the fame means, as are directed for process No. 1. in observation No. 2; and if they be duly performed, there will scarcely any waste at all be found in the oil by the operation.

Receipt to make Soup without boiling.

Boston, New-England, May 11,1761. (ET your leaches with hot water, put 20lb. of greafe into a kettle with two pails full of strong lye, fet it over the fire until the grease is well melted; then take a barrel, placing it in the yard, or any other open place, where the fun VOL. IV.

may come to it, and fill it two thirds full of strong lye, and put the melted greafe and lye into it, boiling hot, stirring it well together with a flick, and put in a pail full of weak lye every day, continuing the stirring of it until the barrel is full. and in about a week's time you will have excellent foap. The above method has been tried in this town of Boston, New-England, and found to exceed any common soap bitherto made by boiling, and will not be subject to any disagreeable smell by keeping: besides it will ease many worthy families from the confusion and vexation which usually attends the making of Soap in the old way.] which the

Method of making Sal Ammoniac in Egypt; as communicated to Dr. Linnaus, by his pupil Dr. Hasselquift who had been lately in those parts. From the Philosophical Transactions.

CAL Ammoniac is made from the foot arising from the burnt dung of four-footed animals, that

feed only on vegetables.

This dung is collected in the four first months of the year, when all their cattle, fuch as oxen, cows, buffaloes, camels, sheep, goats, horses, and affes, feed on fresh spring grass, which, in Egypt, is a kind of trefoil, or clover: for when they are obliged to feed their cattle on hay, and their camels on bruifed date kernels, their excrements are not fit for this purpose; but when they feed on grass, the poor people of Egypt are very careful to collect the dung quite fresh, and, for that purpose,, follow the cattle all day long, in order to collect it as it falls from them; and, if it is too moift,

they mix it with chaff, stubble, short firaw, or dust, and make it up in the form of cakes, about the same size and shape as it lies on the ground.

Then they fix it to a wall to dry,

till it is fit to be burnt.

For want of wood, which none but the rich in Egypt can afford to buy, they burn this dung through the whole country, and fell a vaft quantity of it to the falt-makers.

The excrements of the camel are not found at all preferable to any other; and its urite is never used for this purpose, although generally

reported to by authors.

The falt-workers pretend, that the human excrements, and those of goats, and sheep, are preferable to any other.

, The months of March and April is the only time they make the falt.

Sal Ammoniac is made in the fol-

lowing manner:

They build an oblong oven, about as long again as broad, of brick and moift dung, of fuch a fize, that the outfide, or flat part of the top of the arch, may hold fifty glass veffels, ten in length, and five in breadth, each veffel having a cavity left for it in the brick-work of the arch.

These glass vessels are globular, with a neck an inch long, and two inches wide.

These vessels are of different fizes, in different salt-works, containing from a gallon to two gallons; but in general are about eighteen inches diameter.

They coat each vessel over with a fine clay (which they find in the Nile,) and afterwards with straw; they then fill them two-thirds full of foot, and put them into their holes on the top of the oven.

They make the fire gentle at first,

and use the afore-mentioned dried dung for the suel; they increase the heat gradually, till they bring it to the highest degree, which the workmen call hell sire, and continue it so for three days and three nights together.

When the heat is come to its due degree, the smoke shows itself with a fourish smell, that is not unpleasant; and, in a little time, the falt sticks to the glasses, and covers the whole opening. The salt continues subliming, till the above-mentioned time is expired: then they break the glasses, and take out the salt, just in the same form, and of the same substance, that it is sent all over Europe.

At each falt-work they have a glass furnace, to melt the old glasses,

and make new ones.

Some account of the late Dr. Godfrey's machines for the immediate entinetion of fire; by his grandfon Mr. Ambrofe Godfrey. And likewife of the tryal made of it by the Society for the Encouragement of Arts, &c. and of another trial made in Sweden, of a fecret of the same kind discovered by Nr. Fuches, a German physician.

SIR.

PREQUENT mention hath been made of an invention perfected many years fince, by my late grandfather, for the immediate extinction of fire, of which an experiment is to be made before the Premium Society. The method, or machine, to be employed, confifts of a small portion of gunpowder closely confined; which, when animated by fire, acts by its elastic force, upon a proper medium, and

not only divideth it into the minutest atoms, but disperseth it also in every direction, so as immediately to extinguish any fire within a certain diffance. This medium is a liquor strongly impregnated with a preparation of antiphlogistic principles, which by their action upon burning materials, extinguishes the flames, and reduceth them in general to a state of a black coal; and by its opposite nature to fire, hinders the remaining sparks, notwithstanding the admission of the air, from kindling the flames afresh. By this means, the great point is obtained, in giving sufficient time for totally extinguishing any remains of fire.

They who prefume that water only will perform this, will find themselves greatly mistaken, as the draught of air will certainly rekindle the neighbouring materials, which are very fit to receive a fresh slame, the fire not being extinguished by the quantity of water, but rather (if I may be allowed the philosophy) by the artful expansion and rarefaction of its particles. There are feveral fizes of these machines, from five to fifty pounds weight, in a portable and rather small compass, and may generally be carried to any place where a man can go himself.

But though these machines will prevent great fires by a timely application, far be it from me to say, that they will extinguish them after they have reached a frightful height, and several houses, perhaps near a whole street, is in slames. The sloors must be standing, and access to the building safe, otherwise no person can be supposed to approach near enough to apply them in a proper manner. Every fire has its beginning, for the most part, in

fome apartment; and as foon as discovered, the family, instead of losing all presence of mind, should immediately apply one or more of these machines; which will then fully answer the intention. The proper time of applying them, supposes that they are ready at hand. It will be in vain to think of fetching them from any confiderable diftance, as it will then be too late for them to perform any important fervice, except indeed being the probable means of faving fome adjacent house, by extinguishing the flames as often as they break out, till the building first on fire is totally confumed, and by falling into ruins, leaves the other in perfect fafety.

Such are the effects of these machines. It is with pleasure therefore, that I obey the commands of the premium society, in submitting the invention to a fair experiment. Southampton-street, I am, &c. Covent-garden. Amb. Godfrey.

On the 19th of May 1761, at noon, Mr. Godfrey's most valuable experiment for extinguishing fire, was tried in the house erected for that purpose, near Mary-le-bone. Their royal highnesses the duke of York, prince William Henry, prince Henry Frederick, a great number of persons of rank and distinction, and many of the learned world, gave their attendance upon this fingular occasion. The house, which is of brick, confifts of three rooms, one above another, a flair-case, chimney, lath and plaister cielings, and a kind of wainfcotting round the rooms, of rough deal. Exactly at twelve o'clock the ground room, and that up one pair of stairs, were fet on fire, by lighting the faggots and

shavings laid in there for that purpole : in about fifteen minutes the wainfcot of the under room was thought to be fufficiently in flames, and three of the machines were thrown in ; which, by almost immediate and fudden explosions, instantaneously extinguished the slames, and the very smoak in that apartment in a few minutes totally difappeared. By this time, the firemen, &c. who had the care of throwing in the machines, gave an alarm that the stair-case had taken fire, and that it was necessary directly to go to work upon the next room, which was accordingly done, and with the same effect. The experiment, however, hitherto did not univerfally fatisfy, in the last instance more especially it was thought to be too hastily put in execution; and the populace, without-fide the paling, who were supposed to amount to near 20,000, and whose curiofity, from the very nature of their fituation, remained much diffatisfied, began to grow rather riotous, and talked of a fecond bottle conjurer. For the fake of the experiment, therefore, and to remove all manner of doubt, Mr. Godfrev confented to a third experiment in the upper room, which was entirely of wood. The flames were now fuffered to get to a confiderable height. and even the window frames destroyed, before the machines were thrown in, which, however, answered exactly as the former had done; and, being quite in fight of the out-standers, met with that univerfal approbation, which so noble an invention, it is hoped, will be found deferving of.

The experiment thus made by Mr. Godfrey's preparation for extinguishing fires, calls to remembrance, that, in the year 1734, the states of Sweden offered a premium of 20,000 crowns for the best invention of stopping the progress of accidental fires; when one Mr. Fuches, a German phyfician, a man of experience in his profession, made a preparation for that end, and the experiment was tried on a house built on purpose, of dry fir, at Legard island; in the building were placed several tubs of tar and pitch, and a great quantity of chips, all which were fet on fire; flames isfuing through the top of the house, windows, &c. when he threw in one of the barrels containing the preparation, which immediately quenched the flames; a fecond barrel entirely cleared the fmoak away; and the whole was executed to the fatisfaction of the spectators, and to the no small satisfaction of the inventor, who was about to return home, when unexpectedly the flames. broke out again, supposed to be occasioned by a small quantity of combustible matter being introduced. and fet on fire fecretly by some malicious person. Upon this the wrong-headed mob fell upon Mr. Fuches; and beat him most unmercifully, so that he narrowly escaped with his life. He foon after left the country, and never could be prevailed on (though strongly perfuaded by some of the most eminent citizens) to return.

It is faid, another experiment of the fame kind was tried this year (1761) in Holland, but rendered abortive through the perverseness

of the populace.

These machines of Mr. Godfrey.'s, it is evident, would be of great use in extinguishing fires on shipboard, and might be considered as a no less

necessary part of a ship's lading, than her stores or ammunition.

Use of gunpowder for extinguishing fires in chimnies.

T is well known that the inner parts of chimnies easily take fire; the foot that kindles therein emits a greater flame, according as the tunnel is more elevated; because the inferior air feeds the fire. If this air could therefore be suppressed, the fire would be soon extinguished. In order to this, some discharge a pistol into the chimney, which produces no effect; others' lay under the chimney a copper full of water; but the vapours that rife from it, far from extinguishing the fire, feem to give it new force. Water thrown into the chimney at top is equally of no effect, because it comes down through the middle of the tunnel, and not along the fides. It would be more adviseable to stop with dung the upper orifices of the tunnel for quenching the fire. But the furest and readiest method is, to take a little gunpowder, and, having humeded it with spittle for binding it, to form it into small masses, and so throw it into the hearth of the chimney. When it is burnt, and has produced a confiderable vapour, a fecond, afterwards a third are thrown, and so on; as much as is necessary. In a little time the fire is extinguished, and, as it were, choaked by this vapour; and cakes of inflamed foot are seen to fall from the tunnel, till at last not the least vestige of fire appears.

On the nature of glass mulick, lately come into such vogue; with some proposals for improving it.

ESIDES those tones which every elastic string produces by a vibration of all its parts, it is capable of another set of tones, in which only a part of the string is supposed to vibrate. These sounds are produced by the lightest touches, either by air, as in Oswald's lyre, or by rubbing the bow in the softest manner on the string of a siddle-

Analogous to these sounds are those produced by bells: in those last, besides those tones produced by their elliptical vibrations, there are a set of tones which may be brought out by gently rubbing their edges, and in which the whole instrument does not appear to vibrate in all its parts, as before.

Take, for inflance, a bell finely polished at the edges, or what will perhaps be more convenient, a drinking-glass; let the edges be as free from any thing oily as possible; then, by moistening the finger in water (I have found allum water to be best) and rubbing it circularly round the edge of the glass, you will at length bring out the tone referred to.

This note is possessed of infinite sweetness, it has all the excellencies of the tone of a bell, without its desects. It is loud, has a sufficient body, is capable of being swelled, and continued at pleasure; and besides, has naturally that vibratory softening which musticians endeavour to imitate, by mixing with the note to be played a quarter tone from below.

To vary these tones, nothing more is required than to procure L 3 fevera

feveral bells or glasses of different tones, tuned as nearly as possible, which may be done by thinning the edges of either; or, for immediate fatisfaction, the glasses may be tuned by pouring in water; the more water is poured in, the graver the tone will be.

Let us suppose then a double octave of those glasses, thus tuned, to be procured. Any common tune may be executed by the fingers rubbing upon each glass successively; and this I have frequently done, without the least difficulty, only chusing those tunes which are flow and easy. Here then are numbers of delicate tones, with which muficians have been, till very lately, unacquainted; and the only defect is, that they cannot be made to follow each other with that celerity and ease which is requifite for melody. In order to remedy this, I took a large drinking glass, and by means of a wheel and a gut, as in the electrical machine, made it to turn upon its axis with a moderately quick but equable motion; then moistening the singer as before, nothing more was required than merely to touch the glass at the edge, without any other motion, in order to bring out the tone.

Instead of one glass only turning in this manner, if the whole number of glasses were so fixed as to keep continually turning, by means of a wheel, it follows, that upon every touch of the finger a note would be expressed; and thus, by touching feveral glaffes at once, an harmony of notes might be produced, as in

an harpficord.

As I write rather to excite, than fatisfy the curious, I shall not pretend to direct the various ways this number of glasses may be contrived to turn; it may be fufficient to fav. that if the glaffes are placed in the fegment of a circle, and then a ffrop, as in a cutler's wheel, be fupposed to go round them all, the whole number will by this means be made to turn by means of a wheel.

Instead of the finger, I have applied moistened leather to the edge of the glass, in order to bring out the tone: but, from want of a proper elasticity, this did not succeed, I tried cork, and this answered every purpose of the singer; but made the tone much louder than the finger could do. Instead therefore of the finger, if a number of corks could be so contrived as to fall with a proper degree of pressure on the edge of the glass, by means of keys like the jacks of an organ, it is evident that in such a case a new and a tolerably perfect instrument would be produced; not so loud indeed as fome, but infinitely more melodious than any.

The mouths of the glasses or bells used in this experiment should not resemble the mouth of a trumpet, but should rather come forward with a perpendicular edge. corks used in this case should be smooth, even free from those blemishes which are usually found in them, and at the same time the more

elastic the better.

This is but a short account; my defign being to put some who have more leifure and abilities upon profecuting the completion of this instrument, the hint of which I owe to a very ingenious and learned friend, whose superiority of knowledge is his smallest merit.

Your's, M. B.

The notice is taken in the above account of the late Mr. Puckeridge, who entertained the town the beginning of the winter 1759, by playing some fine pieces of musick on a set of glasses tuned by water, and producing those Sweetest of tones by mere rubbing on the edge of the glasses with a wet finger. Since his death there has been an instrument composed of glasses, but in a better and much more convenient form than that he used, or than that proposed in the above account, which was contrived by a gentleman in London, who shewed it to his friends long before the above account was published.

Part of a letter from Paris, giving an account of a new wall-paint.

T Can't forbear adding to this letter already fo long, an invention which takes mightily here; there will now be no longer need of scraping old buildings, an artist having invented what he calls peinture à muraille, a wall paint, which being laid on a stone, however old or marred, immediately gives it all the appearance of newness, and neither the air nor wet will affect it fooner than if it were fresh taken out of the quarry. A trial of this paint has been made above a year ago, on an old pillar at the Louvre; and feveral times it has been rubbed and washed with a sponge, without the least impression made on the paint; what is more, some speci-mens of it have been left to lie in water a confiderable time, others under a spout, or exposed to the frost for some months, yet the paint stood the test of all: it has, if the expression may be allowed me, all

possible fixedness. After such trials the discovery must be applauded as effectual; and useful it is, as befides faving money and time, there will be no necessity of weakening old edifices, and chiefly hurting the fculpture by feraping them, this water-paint impregnating the flone without leaving any incrustation; but a decifive proof of its value is the following certificate of the Academy of Architecture, " Meff. Aubry and Perronnet, architects to H. M. being commissioned by the academy to examine the waterpaint, of which the Sieur Vallee has made trials at the Louvre in June 1759, and on the front of a private house, in Sentier-street, for giving old buildings a lafting appearance of newness; and they having in their report certified, that it gives to the oldest and most decayed buildings a fightly air; and that if as folid as to them it appeared, it must be exceedingly useful, especially for the outward facings of large edifices, the furface of the the old parts of which were frequently retouched with the chiffel to make them look like the new; which was a great deal more chargeable than this colouring of the Sieur Vallee, and required infinitely more time: that, besides in some cases, fuch freshenings were detrimental, injuring the decorations and altering their first properties, which must be allowed an objection of fome weight against those operations: the fociety has approved the Sieur Vallee's new wall-water-paints.

"I the underwritten, perpetual fecretary of the royal academy of architecture, certify the above to be a true extract from the register of

the faid academy.

CAMUS."

A liquor to wash old deeds and writings, &c. whereby they are rendered as legible as when first wrote, communicated by Mr. Holmes, keeper of the records in the Tower.

AKE five or fix galls, bruife them and put them into about a pint of the very best white wine, let it stand in the sun two days, you will by trial soon see whether it is too strong or too small; dip a brush into it, and wash the part wanted to be cleared up.

Description of a portable apparatus for examining all metalline and mineral ores, on the spot where they are found, by which mineral searches in such mountains where we ought to look for these natural productions, are greatly facilitated. In a letter from D. W. Linden, M. D. to John Bewis, M. D. A. R. B. S.

HIS apparatus confifts of a double pair of forge bellows, a lamp, and a box made of good ftrong crucible, or Stowbridge clay, fuch as the fmelting-pots of the glafs house are made of.

The bellows are of a common fize, the extreme measure 30 inches long, and a foot or 12 inches broad, they must be made very strong and

powerful, so as to blow with as much

force as possible.

The box is within about 6 inches deep, and about 4 inches diameter; in the front just in the middle a hole is contrived in such a manner as to receive the slame of the lamp, which, by the bellows, is to be played upon the matter or mineral to be tried, and in the bottom of the box is made a bed for charcoal, joined as close as possible, so that it has the appearance of one piece. The cover of this box is within half an inch as big as the lower part, but the fix

inches within are from the top of the cover to the bottom of the box; the cover is also filled with charcoal in the same manner as the bottom, that the matter to be assayed may be placed between the coals, for which purpose, with a knife, a suitable place is made in the charcoal, on the top, and on each side of the small holes for vent.

The lamp is made of iron, and must have a very good wick, at least an inch thick, if thicker it is better, must be well supplied with oil or grease, and there must be also some oil or grease put between the charcoal, with the matter you intend

to try.

Any flux may be made use of, but the best in this way of trying all kind of minerals, is borax powdered, to which one-eighth part of mercur, sublimat, corrosiv, is to be

added and well mixed.

When the ore or mineral is in the box between the coals with the flux, then place the burning lamp before the hole in such a manner that the flame may easily reach it, and, with the bellows, blow all the flame upon it; continue thus blowing till you see all the stuff you try in a liquid state; then let it cool, and examine the product.

N. B. Before you begin the operation with the lamp and bellows, the cover of the box must be fastened upon it, with an iron wire or screw made on purpose for it. In this manner all minerals may be proved, and their contents discovered with the greatest certainty, but by this means it cannot be ascertained what quantity they yield, that knowledge must be obtained from regular essays; the chief utility of this apparatus, is, to discover whether the mineral is worth a regular essay.

ANTI

ANTIQUITIES.

A disquisition on the custom of burning the dead.

OIR Thomas Brown, in his spirited treatife, entitled, Hydriotaphia, incidentally introduces the ancient usage of burning the dead. It were to be wished, that he, and all those who preceded him in the disquisition of so abstruse a theme, had confidered the subject, with a little more attention. One general error feems to have been adopted; that by fuch a precipitate diffolution, the æthereal flame, or foul of man, was purified by its disunion from the gross and servile bandages of matter. Heraclitus, it feems, was the first expositor of this doctrine; by whose means the practice became general in every region of Greece. According to him, fire was the predominant principle in the human fabrick; and that therefore by the reduction of the body to its first principles, the purity and incorruptibility of its magisterial parts were, by fuch means, better preserved. To this purpose is Euripides, in speaking of Clytemnestra,

- συεί καθήγνις αι δέμας.

There was indeed another opinion, which had its foundation in policy: which was, that by burning the body, all rage and malice, the general iffues of hatred and enmity, which often furvived their object, were checked and prevented. But

as this reason grew out of the custom, established along time before; so the custom, in its original, grew out of reasons, previous to those beforementioned. 'Tis matter of surprize, that so ingenious a writer as Sir Thomas Brown, should have imbibed the general opinion; and not rather have corrected it, by expatiating a little farther into that fruitful soil, where he would soon have discovered a clearer prospect.

Two confiderations then will arise here. The first relates to the the antiquity, and the fecond to the intention of this custom. Its antiquity rifes as high as the Theban war; where we are told of the great folemnity that accompanied this ceremony at the pyre of Meneceus and Archemorus, who were co-temporary with Jair, the eighth judge of Ifrael. Homer abounds with funeral obsequies of this nature. Penthefilea*, queen of the Amazons. we find, underwent this fiery diffolution. In the inward regions of Afia, the practice was of very ancient date, and the continuance long: for we are told, that in the reign of Julian, the king of Chionia t, burnt his son's body, and reposited the ashes in a filver urn: Coeval almost with the first instances of this kind in the East, was the practice in the western parts of the world §. The Herulians, the Getes, and Thracians, had all along observed it: and its antiquity was as

great, with the Celtæ, Sarmatians, and other neighbouring nations.

Under the fecond confideration then, cannot we turn up, and examine the earth a little about the roots of this custom, and see, if they do not fpread farther, than general observation has hitherto gone? Can we not deduce this pyral construction, the supremos bonores of this kind from our own feelings? Yes-the cuftom has its foundation laid deep in nature. An anxious fondness to preferve the memory of the great and good, the dear friend, and the near relation, was the fole motive that prevailed, in the institution of this folemnity. Wherefore Heraclitus, when he spoke of fire, as the master principle in all things (the custom of burning bodies existing long before his time) could not be supposed to lay down this doctrine, as a reafon for this custom, but as a persuafion, to ease the minds of those, who thought there was too much barbarity and inhumanity in the practice of it. Let us fee, if the ancients do not furnish us with fymptoms of this tenderness. Homer we see this confirmed.

— ή σαννυχ Θ άχλο 'Αχιλλευς Κρυσέε όμ με ππηςς έχων δέπος άμφικόπελλον,

Oivor auquoraneros xanadis xee,

δεῦε δὲ γαῖαν, Ψυχὴν πικλήσκων Πατεσκλή δειλοῖο. Iliad Y.

At Hecter's funeral, the preservation of the ashes was the principal concern of the friends and relations that attended.

Πρώτον μέν επ συρκαϊήν οβέσαν άθοπι οίνω Πάσαν, όποωον έπεχε συς ός μές νΘ αυτάρ Ος έα λευκά λέγουτο κασίγνητος εταιοί τε. Iliad Ω. 791.

The ashes, when collected and reposited in an urn, were preserved, as a memorial of the goodness or greatness of the party deceased, as an example to excite the same ardour in the minds of those who survived. These were kept in some convenient place, in the house of the next relation or friend. Achilles, we find, had the remains of his dear Patroclus in his tent.

'Εν πλισίησι δε δέντες εανώ λιτὶ κάλυ ζαν. Iliad Ω. fine.

Tibullus introduces the same custom, where he speaks of the mother's absence, whose duty it had been to have preserved her son's remains.

Non hic mihi Mater,
Qua legat in Mastos ossa perusta
sinus.

Thus it appears, that the reduction of the body to ashes, the urnal inclosure of those ashes, the frequent contemplation of them in the urn, were thought good expedients to keep alive the memory of those, who were in their lives most conspicuous in the walk of fame, These were the springs, from whence this custom issued. In the celebrated inflance of Artemifia. the fondness extended almost to a deification. A case this, not unlike what we experience in our own times: when a lock of hair, a ring, a feal, which was the property of a deceased friend, and which we have in our possession, is looked upon with reverence, and a peculiar pleafure in the contemplation.

E. BOCHART,

The antiquity of drinking healths.

T was a custom among the Greeks, and from them derived, like many others, especially of the religious kind, among the Romans, to make libations, to pour out wine, and even to drink wine in honour of the gods. Sometimes this ceremony was introduced to their meals, but, in their more so them entertainments, it was performed in the interval preceding the mense secundæ, which answers to our second course, or the desert.

This manner of venerating the Gods often occurs in the Classics, and confequently is too well known to want any farther en-

largement.

Servius and Potter, with other fcholiasts and antiquarians, may enable us to harangue very copiously over the glass, on these devout

effusions.

The grateful custom of drinking to the health of our benefactors, or of our acquaintance, is of a more obscure origin, though numberless instances of it are to be seen in the Grecian poets and historians, no less than in the Roman writers. Ovid, that 'easy and luxuriant genius, that happy proficient in all the literature his age afforded, introduces this usage in his metamorpholes, as of a very ancient date among the Greeks. Athenians, on the arrival of Thefeus from killing the Minotaurus, according to him, made public rejoicings, attended with a pompous entertainment, in which they congratulate his fafe arrival, and enlarge on his unparalleled exploits, which intitled him to a divine immortality,

Here then is the custom of drinking to the health and prosperity of superiors, by whom we have been benefited, or of our equals, with whom we live in reciprocal friendship, in vogue among the Grecians, so early as Theseus, in those remote ages, which are distinguished in history by the splendid appellation of the heroic ages; that is, many centuries before the commencement of the Christian æra. Neither, like us, were they wanting to pay this regard to strangers or foreigners of eminent rank and merit.

Asconius, explaining the meaning of more Graco bibere, (drinking after the manner of the Greeks.) fays, that it was their custom, in their libations, first to pay their devotions to the Gods, and then mention their friends in terms of efteem and affection, and wishes for their prosperity. Every time they venerated the gods, or wished health to their friends, it was in neat wine; nay, it was indiffenfible to this religious ceremony, for such it was accounted, to drink merum. that is, wine, not only undiluted with water, but without any other of the mixtures then used, as saffron, honey, &c.

Libations were effeemed more refpectful than drinking to the honour of the Gods, or welfare of their friends; and possibly from this distinction may be derived the omission of drinking to the healths of illustrious personages, especially where the nebility are not so near on a level with the commonalty, as they are in our well-constituted

The Roman gallants used to take off as many glasses to their miftresses, as there were letters in her

name,

name, according to Martial, who tays,

Let fix cups to Nævia's health

go round,

And fair Tustina's be with seven crown'd.'

An account of the first instruments for measuring time, introduced into Rome. From M. D'Arnay's priwate life of the Romans.

HE Romans were near four hundred and fixty years, without knowing any other division of the day than morning, noon, and night. The laws of the twelve tables even mention only fun-rife and fun-fet; it was not till fome years afterwards that an officer of the conful's proclaimed mid-day aloud, which the Romans then difftinguished only in fine weather, and by the height of the sun.

Pliny reports, on the credit of an ancient author, that the first infirument which the Romans had to divide the hours was a fun-dial. which L. Papirius Curfor placed in the court of the temple of Quirinus, twelve years before the war against Pyrrhus: but he feems to doubt the truth of this relation. weakens it himself; and to give something more certain, and better acknowledged, he fays, after Varro, that it was during the first Punic war that the first dial was exposed to public view at Rome, and placed upon a column of the tribunal of harangues. Marcus Valerius Meffala brought it from Sicily after the taking of Catana, thirty years after Papirius, the year of Rome 477.

Although this dial, drawn for the latitude of Catana, which was different from that of Rome, could

not show the hours justive vet as imperfect as it was, the Romans conformed to it for the space of ninety-nine years, till Quintus Marcus Philippus, who was Cenfor with Paulus Æmilius, gave them another more exact. This, of all the acts of his cenforship, was that which obtained him the greatest applause. These forts of clocks were of use only in the day, and in clear weather. Scipio Nafica, five years after, in the year of Rome 595, first brought into use, and placed under cover a water-clock, which shewed the hours equally by day and night. There were twelve in the day, and as many in the night, without distinction of sea-

Vitruvius attributes the invention of water-clocks to Ctefibius, a native of Alexandria; he lived under the two first Ptolemeys. The Romans had different kinds of them, which marked the hours in different ways. They called them borologium bibernum, winter clock, and fometimes also borologium nocturnum, night clock, in opposition to the dials, which were of no use in the night, and of very little in winter, when the rays of the sun are often intercepted by clouds.

To form an idea of these clocks, we may conceive a pretty large bafon filled with water, which, by a
little hole contrived in the bottom,
emptied itself into another vessel of
nearly the same capacity, in the
space of twelve hours; and where
the water rising gradually, brought
up perpendicularly a bit of cork,
or the figure of a genius pointing to
the hours, which were marked one
above another on columns or pilasters.

Thefe

These clocks were different from those which the ancients called Clepfydra. This was a glass filled with water, of a pyramidal figure, in form of a cone. The base was pierced, the upper orifice very narrow, and lengthened into a point; on the water swam a piece of cork bearing a needle to mark the hours, traced along the vase, by descending gradually as it ran out.

Dials, clepfydra and water-clocks were all the Romans knew. They were ignorant of the use of clocks with wheels. As useful as they are, many ages passed before the art of making them was discovered. We are even uncertain of the time, and the author of that invention. The present which the Calif Aaron Rachid made to Charlemain of a striking clock, was looked on as a wonder. Æginard fays, that it was a water-clock which marked the hours by the fall of some balls of metal upon a bell, and by fome figures of men, which opened and shut certain doors contrived in the clock according to the number of the hours.

On a medal of the emperor Claudius, bitherto unexplained.

Ooking lately into the cabinet of a curious friend, I found a medal, which, to the best of my remembrance, has not hitherto been explained. It immediately recalled to my mind a piece of history which points out the occafion of its being struck, and fully shews the design of it. The medal is of the emperor Claudius, the type and legend thus:

T: CLAVDIVS. CAESAR. AVG.

P. M. TR. P. IMP. P.P. Caput Claudii nud b. LIBERTAS AV-GVSTA. Figura muliebris stans, dextra tenens pileum.

What renders this medal the more distinguished, is, that the word libertas is not to be found on any imperial medal before; and how it should start up at a time when the thing it signified had so long been lost, makes it more de-

ferving our inquiry.

All historians agree, that the conspiracy against Caius Caligula, the predecessor of Claudius, was entirely of a private nature, altogether the effect of resentment of ill usage to the conspirators, particularly to Chærea, tribune of the Prætorian cohort. His death, therefore, caused the utmost confusion among all degrees of people at Rome, as the imperial government was at an end by no successor immediately appearing, neque conjurati cuique imperium destinaverunt. Suet. in Calig. c. 60. At this favourable juncture, the spirit of liberty, though so long depressed, began to discover and exert itself. The confuls and fenate appeared unanimous in afferting the common liberty; and, as a public proof of their intentions, they met, as in the days of the republick, in the capitol, which had never been done fince the dictatorship of Julius Cæfar, when some voted to abolish intirely the memory of the Cæfars, and to pull down the temples dedicated to them. Thus far Suetonius. Many more interesting particulars are related by Josephus, Antiq. Judaic. lib. 19. He gives us the noble spirited oration of Sentius Saturninus, one of the confuls, exhorting and imploring the fenate.

fenate to improve the present opportunity of restoring liberty to their country: he adds, that when Chærea, as præsect of the Prætorian cohort, to shew his sense of the supreme power being restored to the consuls, went to them for the word (which, for near an hundred years before, had been given by the emperors) they gave the word liberty.

Though the military power foon over-awed the fenate, and dashed all the hopes of the common people (elated with the view of once again having a share of power) by making Claudius emperor, yet such bold proofs of the general love and desire of liberty, could never be forgotten by the old man, whose former scenes of life and natural temper, combined to make the distinguishing part of his character to be distrust and timidity, nibil equequant timidus ac diffidens fuit. Suet. Claud. sec. 35.

It was therefore natural for him to use every art to endeavour to perfuade the people their liberty was as great under an Augustus, as under magistrates in a republic of their own chusing. With this view, beyond all doubt, the medal with Libertas Augusta was struck.

Hertfordshire, Aug. 1761 N.

A differtation concerning the antiquity &c. of the poems of Oslian, the son of Fingal; lately collected and translated from the Galic language into English, by Mr. MACPHERSON.

In a discourse prefixed to that work.

I Nquiries into the antiquities of nations afford more pleafure

than any real advantage to man-The ingenious may form fystems of history on probabilities and a few facts; but at a great distance of time, their accounts must be vague and uncertain. The infancy of states and kingdoms is as destitute of great events, as of the means of transmitting them to poflerity. The arts of polithed life, by which alone facts can be preferved with certainty, are the production of a well-formed community. It is then historians begin to write, and public transactions to be worthy remembrance. The actions of former times are left in obscurity, or magnified by uncertain traditions. Hence it is that we find fo much of the marvellous in the origin of every nation; posterity being always ready to believe any thing, however fabulous, that reflects honour on their ancestors. Greeks and Romans were remarkable for this weakness. They swallowed the most absurd fables concerning the high antiquities of their respective nations. Good historians, however, rose very early amongst them, and transmitted, with lustre, their great actions to posterity. It is to them that they owe that unrivalled fame they now enjoy, while the great actions of other nations are involved in fables, or loft in obfcurity. The Celtic nations afford a striking instance of this kind. They, though once the masters of Europe, from the mouth of the river Oby, in Russia, to Cape Finistere, the western point of Gallicia in Spain*, are very little mentioned in history. They trusted their fame to tradition and the fongs of their bards, which, by the viciflitude of Their ancient language is the only monument that remains of them; and the traces of it being found in places fo widely diffant of each other, ferves only to shew the extent of their ancient power, but throws very little light on their history.

Of all the Celtic nations, that which possessed old Gaul is the most renowned; not perhaps on account of worth superior to the rest, but for their wars with a people who had historians to transmit the fame of their enemies, as well as their own, to posterity. Britain was first peopled by them, according to the testimony of the best authors *; its fituation in respect to Gaul makes the opinion probable; but what puts it beyond all dispute, is that the fame customs and language prevailed among the inhabitants of both in the days of Julius Cæsar †.

The colony from Gaul possessed themselves, at first, of that part of Britain which was next to their own country; and spreading northward, by degrees, as they increased in numbers, peopled the whole Some adventurers passing over from those parts of Britain that are within fight of Ireland, were the founders of the Irish nation: which is a more probable flory than the idle fables of Milesian and Gallician colonies ||. Diodorus Siculus mentions it as a thing well known in his time, that the inhabitants of Ireland were originally Britons; and his testimony is unquestionable, when we consider, that, for many ages, the language and customs of both nations were the fame.

Tacitus was of opinion, that the ancient Caledonians were of German extract. By the language and customs which always prevailed in the North of Scotland, and which are undoubtedly Celtic, one would be tempted to differ in opinion from that celebrated writer. The Germans, properly fo called, were not the same with the ancient Celtæ. The manners and customs of the two nations were fimilar; but their language different 4. Germans are the genuine descendants of the ancient Daz, afterwards well known by the name of Daci, and passed originally into Europe by the way of the northern countries, and fettled beyond the Danube, towards the vast regions of Transilvania, Wallachia, and Moldavia; and from thence advanced by degrees into Germany. Celtæ, it is certain, sent many colonies into that country, all of whom retained their own laws, language and customs #; and it is of them, if any colonies came from Germany into Scotland, that the ancient Caledonians were descended.

But whether the Caledonians were a colony of the Celtic Germans, or the fame with the Gauls that first possessed themselves of Britain, is a matter of no moment at this distance of time. Whatever their origin was, we find them very numerous in the time of Julius Agricola, which is a presumption that they were long before settled in the country. The form of their government was a mixture of aristocracy and monarchy, as it was in all the countries where the Druids bore the chief sway. This order of

* Cæf. I. 5. Tac. Agric, l. 1. c. 2. † Cæf. Pom. Mel. Tacitus. | Dio. Sic, l. 5. 4 Strabo, l. 7. | Cæf. l. 6, Liv, l. 5. Tac, de mor. Germ.

men feems to have been formed on the same system with the Dactyli Idai and Curetes of the ancients. Their pretended intercourse with heaven, their magic and divination were the fame. The knowledge of the Druids in natural causes, and the properties of certain things, the fruit of the experiments of ages, gained them a mighty reputation among the people. The efteem of the populace foon increased into a veneration for the order; which a cunning and ambitious tribe of men took care to improve, to fuch a degree, that they, in a manner, ingrossed the management of civil, as well as religious matters. generally allowed that they did not abuse this extraordinary power; the preserving their character of sanctity was fo effential to their influence, that they never broke out into violence or oppression. The chiefs were allowed to execute the laws, but the legislative power was entirely in the hands of the Druids *. It was by their authority that the tribes were united, in times of the greatest danger, under one head. This temporary king, or Vergobretust, was chosen by them, and generally laid down his office at the end of the war. These priests enjoyed long this extraordinary privilege among the Celtic nations, who lay beyond the pale of the Roman empire. It was in the beginning of the fecond century that their power among the Caledonians begun to decline. The poems that celebrate Trathal and Cormac, ancestors to Fingal, are full of particulars concerning the fall of the Druids, which account for the total filence concerning their religion in the poems that are now given to the public.

The continual wars of the Caledonians against the Romans hindered the nobility from initiating themselves, as the custom formerly was, into the order of the Druids. The precepts of their religion were confined to a few, and were not much attended to by a people inured to war. The Vergobretus, or chief magistrate, was chosen without the concurrence of the hierarchy, or continued in his office against their will. Continual power strengthened his interest among the tribes, and enabled him to fend down, as hereditary to his posterity, the office he had only received himself by election.

On occasion of a new war against the King of the World, as the poems emphatically call the Roman emperor, the Druids, to vindicate the honour of the order, began to refume their ancient privilege of chusing the Vergobretus. Garmal, the fon of Tarno, being deputed by them, came to the grandfather of the celebrated Fingal, who was then Vergobretus, and commanded him, in the name of the whole order, to lay down his office. Upon his refulal, a civil war commenced, which foon ended in almost the total extinction of the religious order of the Druids. A few that remained, retired to the dark recesses of their groves, and the caves they had formerly used for their meditations. It is then we find them in the circle of stones, and unheeded by the world, A total difregard for the order, and utter abhorrence of the Druidical rites ensued. Under this cloud of public hate, all that had any knowledge of the religion of the Druids became extinct, and the nation fell into the laft Test degree of ignorance of their rites and ceremonies.

It is no manner of wonder then, that Fingal and his fon Offian make fo little, if any, mention of the Druids, who were the declared enemies to their fuccession in the supreme magistracy. It is a singular case, it must be allowed, that there are no traces of religion in the poems ascribed to Ossian; as the poetical compositions of other nations are fo closely connected with their mythology. It is hard to account for it to those who are not made acquainted with the manner of the old Scottish bards. That race of men carried their notions of martial honour to an extravagant pitch. Any aid given their heroes in battle, was thought to derogate from their fame; and the bards immediately transferred the glory of the action to him who had given that aid.

Had Ossian brought down gods, as often as Homer hath done, to affift his heroes, this poem had not confisted of elogiums on his friends, but of hymns to these superior beings. To this day, those that write in the Galic language feldom mention religion in their profane poetry; and when they professedly write of religion, they never interlard with their compositions, the actions of their heroes. This cuftom alone, even though the religion of the Druids had not been previously extinguished, may, in fome measure, account for Ossian's filence concerning the religion of his own time.

To fay, that a nation is void of all religion, is the fame thing as to fay, that it does not confift of people endued with reafon. The Vol. IV.

traditions of their fathers, and their own observations on the works of nature, together with that superstition which is inherent in the human frame, have, in all ages, raised in the minds of men some idea of a fuperior being. - Hence it is, that in the darkest times, and amongst the most barbarous nations, the very populace themselves had some faint notion, at least, of a divinity. It would be doing injustice to Offian, who, upon no occasion, shews a narrow mind, to think, that he had not opened his conceptions to that primitive and greatest of all truths. But let Offian's religion be what it will, it is certain he had no knowledge of Christianity, as there is not the least allusion to it, or any of its rites, in his poems which absolutely fixes him to an æra prior to the introduction of that religion. The perfecution begun by Dioclefian, in the year 303, is the most probable time in which the first dawning of Christianity in the north of Britain can be fixed. - The hue mane and mild character of Constantius Chlorus, who commanded then in Britain, induced the perfecuted Christians to take refuge under him. Some of them, through a zeal to propagate their tenets, or through fear, went beyond the pale of the Roman empire, and fettled among the Caledonians; who were the more ready to hearken to their doctrines, as the religion of the Druids had been exploded fo long before.

These missionaries, either thro' choice, or to give more weight to the dectrine they advanced; took possession of the cells and groves of the Druids; and it was from this retited life they had the name of

Culdees*, which in the language of the country fignified Sequestered perlons. It was with one of the Culdees that Offian, in his extreme old age, is faid to have disputed concerning the Christian religion. This dispute is still extant, and is couched in verse, according to the custom of the times. The extreme ignorance on the part of Offian, of the Christian tenets, shews, that that religion had only been lately introduced, as it is not easy to conceive, how one of the first rank could be totally unacquainted with a religion that had been known for any time in the country. The difpute bears the genuine marks of antiquity. The obsolete phrases and expressions peculiar to the times, prove it to be no forgery. If Oslian then lived at the introduction of Christianity, as by all appearance he did, his epoch will be the latter end of the third, and beginning of the fourth century. What puts this point beyond difpute, is the allusion in his poems to the history of the times.

The exploits of Fingal against Caracul §, the son of the King of the World, are among the first brave actions of his youth. A complete poem, which relates to this subject, is printed in this collection.

In the year 210, the emperor Severus, after returning from his expeditions against the Caledonians, at York fell into the tedious illness of which he afterwards died. The Caledonians and Maiatæ, refuming courage from his indisposition, took arms in order to recover the possessions they had lost. The enraged emperor commanded his army to march into their coun-

try, and to destroy it with fire and sword, His orders were but ill executed, for his son, Caracalla, was at the head of the army, and his thoughts were entirely taken up with the hopes of his father's death, and with schemes to supplant his brother Geta. He scarcely had entered the enemy's country, when news was brought him that Severus was dead. A sudden peace was patched up with the Caledonians, and, as it appears from Dion Cassus, the country they had lost to Severus was restored to them.

The Caracul of Fingalis no other than Caracalla, who, as the fon of Severus, the emperor of Rome, whose dominions were extended almost over the known world, was not without reason called in the poems of Oslian, the Son of the King of the World, The space of time between 211, the year Severus died, and the beginning of the fourth century, is not fo great, but Oslian the son of Fingal, might have feen the Christians whom the persecution under Dioclesian had driven beyond the pale of the Roman empire.

mentations on the death of his beloved fon Ofcar, mentions among his great actions, a battle which he he fought against Caros ||, king of ships, on the banks of the winding Carun. It is more than probable, that the Caros mentioned here, is the same with the noted usurper Carausius, who assumed the purple in the year 287, and seizing on

Oslian, in one of his many la-

Britain, defeated the emperor Maximian Herculius, in feveral naval engagements, which gives propriety to his being called in Offian's poems,

^{*} Culdich. § Carac'huil, terrible eye. | Car-avon, Winding river.

the King of Ships. The winding Carun is that small river retaining still the name of Carron, and runs in the neighbourhood of Agricola's wall, which Caraufius repaired to obstruct the incursions of the Caledonians. Several other passages in the poems allude to the wars of the Romans; but the two just mentioned clearly fix the epoch of Fingal to the third century; and this account agrees exactly with the Irish histories, which place the death of Fingal, the fon of Comhal, in the year 283, and that of Oscar and their own celebrated Cairbre, in the year 296.

Some people may imagine, that the allufions to the Roman history might have been industriously inferted into the poems, to give them the appearance of antiquity. This fraud must then have been committed at least three ages ago, as the passages in which the allusions are made, are alluded to often in the compositions of those times.

Every one knows what a cloud of ignorance and barbarism overforead the north of Europe three hundred years ago. The minds of men, addicted to superstition, contracted a narrowness that destroyed genius. Accordingly we find the compositions of those times trivial and puerile to the last degree. But let it be allowed, that, amidst all the untoward circumstances of the age, a genius might arise, it is not eafy to determine what could induce him to give the honour of his compositions to an age so remote. We find no fact that he has advanced, to favour any defigns which could be entertained by any man who lived in the fifteenth century. But should we suppose a poet, through humour, or for reasons which cannot be feen at this distance of time, would ascribe his own compositions to Ossian, it is next to impossible, that he could impose upon his countrymen, when all of them were so well acquainted with the traditional poems of their ancestors.

The strongest objection to the authenticity of the poems now given to the public under the name of Ossian, is the improbability of their being handed down by tradition through so many centuries. Ages of barbarism, some will say, could not produce poems abounding with the disinterested and generous sentiments so conspicuous in the compositions of Ossian; and could these ages produce them, it is impossible but they must be lost, or altogether corrupted in a long succession of barbarous generations.

These objections naturally suggest themselves to men unacquainted with the ancient state of the northern parts of Britain. The bards, who were an inferior order of the Druids, did not share their bad fortune. They were spared by the victorious king, as it was through their means only he could hope for immortality to his fame. They attended him in the camp, and contributed to establish his power by their fongs. His great actions were magnified, and the populace, who had no ability to examine into his character narrowly, were dazzeled with his fame in the rhymes of the bards. In the mean time, when men affumed fentiments that are rarely to be met with in an age of barbarism. The bards who were originally the disciples of the Druids, had their minds opened; and their ideas enlarged, by being initiated in the learning of that celebrated order.

M z

They could form a perfect hero in their own minds, and ascribe that character to their prince. The inferior chiefs made this ideal charafter the model of their conduct, and by degrees brought their minds to that generous spirit which breathes in all the poetry of the times. The prince, flattered by his bards, and rivalled by his own heroes, who imitated his character as described in the eulogies of his poets, endeavoured to excell his people in merit, as he was above them in station. This emulation continuing, formed at last the geneial character of the nation, happily compounded of what is noble in barbarity, and virtuous and generous in a polifhed people.

When virtue in peace, and bravery in war, are the characteristics of amation, their actions become interesting, and their fame worthy of immortality. A generous spirit is warmed with noble actions, and becomes ambitious of perpetuating them. This is the true fource of that divine inspiration, to which the poets of all ages pretended. When they found their themes inadequate to the warmth of their imaginations, they varnished them over with fables, supplied by their own fancy, or furnished by abfurd traditions. These fables, however ridiculous, had their abettors; posterity either implicitly believed them, or thro'a vanity natural to mankind, pretended that they did. They loved to place the founders of their families in the days of fable, when poetry, without the fear of contradiction, could give what character she pleased of her heroes. It is to this vanity that we owe the preservation of what remain of the works of Offan. His poetical merit made his

heroes famous in a country where heroism was much esteemed and admired. The posterity of these heroes, or those who pretended to be descended from them, heard with pleasure the eulogiums of their ancestors; bards were employed to repeat the poems, and to record the connection of their patrons with chiefs fo renowned. Every chief in process of time had a bard in his family, and the office became at last hereditary. By the fuccession of these bards, the poems concerning the ancestors of the family were handed down from generation to generation; they were repeated to the whole clan on folemn occasions, and always alluded to in the new compositions of the bards. This custom came down near to our times; and after the bards were discontinued, a great number in a clan retained by memory, or committed to writing, their compositions, and founded the antiquity of their families on the authority of their poems.

The use of letters was not known in the north of Europe till long after the institution of the bards: the records of the families of their patrons, their own, and more ancient poems were handed down by tradition. Their poetical compofitions were admirably contrived for that purpose, They were a-dapted to music; and the most perfect harmony observed. verse was so connected with those which preceded or followed it, that if one line had been remembered in a stanza, it was almost impossible to forget the rest. The cadences tollowed in fo natural a gradation, and the words were so adapted to the common turn of the voice, after it is raised to a certain kev,

that it was almost impossible, from a similarity of sound, to ubstitute one word for another. This excellence is peculiar to the Celtic tongue; and is perhaps to be met with in no other language. Nor does this choice of words clog the sense or weaken the expression. The numerous slections of consonants, and variation in declension, make

the language very copious. The descendants of the Celtæ. who inhabited Britain and its isles, were not fingular in this method of preferving the most precious monuments of their nation. The ancient laws of the Greeks were couched in verse, and handed down by tradition. The Spartans, thro' a long habit, became fo fond of this custom, that they would never allow their laws to be committed to writing. The actions of great men, and the eulogiums of kings and heroes were preferred in the fame manner. All the historical monuments of the old Germans* were comprehended in their ancient fongs; which were either hymns to their gods, or elegies in praise of their heroes, and were intended to perpetuate the great events in their nation, which were carefully interwoven with them &. This species of composition was not committed to writing, but delivered by oral tradition. The care they took to have the poems taught to their children, the uninterrupted custom of repeating them upon certain occasions, and the happy measure of the verse, served to preferve them for a long time uncorrupted. This oral chronicle of the Germans was not forgot in the eighth century, and it probably

would have remained to this day, had not learning, which thinks every thing, that is not committed to writing, fabulous, been introduced. It was from poetical traditions that Garcillasso composed his account of the Yncas of Peru. The Peruvians had loft all other monuments of their history, and it was from ancient poems which his mother, a princess of the blood of the Yncas, taught him in his youth, that he collected the materials of his history. If other nations then, that had been often over-run by enemies, and had fent abroad and received colonies, could, for many ages, preserve, by oral tradition, their laws and histories uncorrupted, it is much more probable that the ancient Scots, a people so free of intermixture with foreigners, and fo.ftrongly attached to the memory of their ancestors, had the works of their bards handed down with great purity.

It will feem strange to some, that poems admired for many centuries in one part of this kingdom should be hitherto unknown in the other; and that the British, who have carefully traced out the works of genius in other nations, should so long remain strangers to their own. This, in a great measure, is to be imputed to those who understood both languages, and never attempted a translation. They, from being acquainted but with detached pieces, or from a modefty, which perhaps the prefent translator ought, in prudence, to have followed, defpaired of making the compositions of their bards agreeable to an Engglish reader. The manner of those compositions is so different from

^{*} Tacitus de mor. Germ. § Abbe de la Bleterie Remarques sur la Germaine. M 3

other poems, and the ideas so confined to the most early state of society, that it was thought they had not enough of variety to please a

polished age.

This was long the opinion of the translator of the following collection; and though he admired the poems, in the original, very early, and gathered part of them from tradition for his own amusement, yet he never had the fmallest hopes of feeing them in an English dress, He was sensible that the strength and manner of both languages were very different, and that it was next to impossible to translate the Galic poetry into any thing of to-Ierable English verse; a prose translation he could never think of, as it must necessarily fall short of the majesty of an original. It was a gentleman, who has himself made a figure in the poetical world, that gave him the first hint concerning a literal profe translation. tried it at his defire, and the fpecimen was approved. Other gentlemen were earnest in exhorting him to bring more to the light, and it is to their uncommon zeal that the world owes the Galic poems, if they have any merit.

It was at first intended to make a general collection of all the ancient pieces of genius to be found in the Galic language; but the translator had his reasons for confining himself to the remains of the works of Ossian. The action of the poem that stands the first, was not the greatest or most celebrated of the exploits of Fingal. His wars were very numerous, and each of them afforded a theme which employed the genius of his son, But, excepting the present poem, those pieces are irrecoverably lost, and

there only remain a few fragments in the hands of the translator. Tradition has still preserved, in many places, the story of the poems, and many now living have heard them, in their youth, repeated.

The complete work, now printed, would, in a short time, have shared the fate of the rest. The genius of the Highlanders has fuffered a great change within these few years. The communication with the rest of the island is open. and the introduction of trade and manufactures has destroyed that leifure which was formerly dedicated to hearing and repeating the poems of ancient times. have now learned to leave their mountains, and feek their fortunes in a milder climate; and though a certain amor patriæ may fometimes bring them back, they have, during their absence, imbibed enough of foreign manners to despise the customs of their ancestors. Bards have been long disused, and the fpirit of genealogy has greatly fubfided. Men begin to be less devoted to their chiefs, and confangulnity is not fo much regarded. When property is established, the human mind confines its views to the pleasure it procures. It does not go back to antiquity, or look forward to succeeding ages. The cares of life increase, and the actions of other times no longer amuse. Hence it is, that the tafte for their ancient poetry is at a low ebb among the Highlanders. They have not, however, thrown off the good qualities of their ancestors. Hospitality still subsists, and an uncommon civility to strangers, Friendship is inviolable, and revenge less blindly followed than formerly.

To fay any thing, concerning the poetical merit of the poems, would be an anticipation on the judgment of the public. The poem which stands first in the collection is truly epic. The characters are strongly marked, and the fentiments breathe heroism. The subject of it is an invasion of Ireland, by Swaran, king of Lochlin, which is the name of Scandinavia in the Galic language. Cuchullin, general of the Irish tribes in the minority of Cormac, king of Ireland, upon intelligence of the invalion, affembled his forces near Tura, a castle on the coast of Ulster. The poem opens with the landing of Swaran, councils are held, battles fought, and Cuchullin is, at last, totally defeated. In the mean time, Fingal, king of Scotland, whose aid was follicited before the enemy landed, arrived and expelled them from the country. This war, which continued but fix days and as many nights, is, including the epifodes, the whole story of the poem. The scene is the heath of Lena near a mountain called Cromleach in Ulster.

All that can be faid of the translation, is, that it is fiteral, and that simplicity is studied. The arrangement of the words in the original is imitated, and the inversions of the style observed. As the translator claims no merit from his version, he hopes for the indulgence of the public where he fails. He wishes that the imperfect semblance he draws, may not prejudice the world against an original, which contains what is beautiful in simplicity, and grand in the sublime.

Some account of the marks on coin, called Mint marks, or privy marks; and likewise of the trial, called the trial of the Pix, made from time to time by a jury of goldsmiths, as a check on the officers of the Mint; extracted from the table of English silver coins, published by the late ingenious Martin Folkes Esq.

S in speaking of the money of this reign in particular [queen Elizabeth's I have had frequent occasion to mention the Mint marks, or privy marks, as they have been usually called in the Mint, it may be necessary to say a word of the nature and use of those marks. It may, therefore, be observed, that it hath been usual from old time to oblige the masters and workers of the Mint, in the indentures made with them, 'to make a privy mark in all the money that they made, as well of gold as of filver, fo that another time they might know, if need were, and witte which moneys of gold and filver among other of the fame moneys, were of their own making, and which not.' And whereas, after every trial of the Pix at Westminster, the masters and workers of the mint, having there proved their moneys to be lawful and good, were immediately intitled to receive their quietus under the great feal, and to be discharged from all fuits or actions concerning those moneys, it was then usual for the faid mafters and workers to change the privy mark before used for another, that so the moneys from which they were not yet discharged, might be distinguished from those for which they had already received their quietus; which new mark they then continued to stamp upon all their moneys, until another trial of the Pix gave them also their quietus concerning those.

The Pix is a firong box with three locks, whose keys are respectively kept by the warden, master, and

M 4 comp-

comptroller of the Mint: and in which are deposited, sealed up in feveral parcels, certain pieces taken at random out of every journey, as it is called, that is, out of every 15 poundsweight of gold, or 60 pounds weight of filver, before the same is delivered to the proprietors. And this Pix is, from time to time, by the king's command, opened at Westminster, in the presence of the lord chancellor, the lords of the council, the lords commissioners of the treasury, the justices of the feveral benches, and the barons of the exchequer: before whom a trial is made, by a jury of goldsmiths impannelled and fworn for that purpose, of the collective weights of certain parcels of the feveral pieces of gold and filver taken at random from those contained in the Pix; after which those parcels being severally melted, affays are then made of the bullion of gold and filver fo produced, by the melting certain fmall quantities of the same against equal weights taken from the respective trial pieces of gold and filver, that are deposited and kept in the exchequer for that use. This is called the trial of the Pix, the report made by the jury upon that trial is called the verdict of the Pix for that time; and the indented trial pieces just above-mentioned, are certain plates of standard gold, and flandard filver, made with the greatest care, and delivered in upon oath, from time to time as there is occasion, by a jury of the most able and experienced goldfmiths, fummoned by virtue of a warrant from the lords of the treasury, to the wardens of the mystery of goldfmiths of the city of London, for that purpose; and which plates being so delivered in, are divided each, at this time, into feven parts

by indentures, one of which parts is kept in his majesty's court of exchequer at Westminster, another by the faid company of goldsmiths, and two more by the officers of his majesty's mint in the Tower; the remaining three being for the use of the mint, &c. in Scotland. Pix has fometimes been tried every year, or even oftener, but fometimes not more than once in feveral years: and from hence is understood how it comes to pass that, among the pieces that are dated as well as marked, three or more different dates are fometimes found upon pieces impressed with the same mark, and again that different marks are found upon pieces bearing the same date. These marks are first observable upon the coins of king Edw. III. the words above quoted concerning those marks, are from the indentures made with the lord Hastings, master and worker to king Edward IV. and the marks themselves continued to be stamped very conspicuously upon the moneys, till the coinage by the mill and screw was introduced and settled after the Restoration. in the year 1662: fince which time the moneys being made with far greater regularity and exactness than before, these marks have either been totally laid afide, or fuch only have been used; as are of a more fecret nature, and only known to the officers and engravers concerned in the coinage: and indeed the constant practice that has ever fince prevailed, of dating all the feveral pieces, has rendered all fuch marks of much less consequence than be-

The following account of some superstitious opinions and prastices still substitute in many parts of France,

besides the entertainment it may give our readers, by their similarity with many, which unhappily are not obliterated among us, will afford a collateral indication that, at least, a part of the inhabitants of the two countries are originated from the same people.

Fairies, who were imagined to be women of an order superior to human nature, yet subject to wants, passions, accidents, and even death; sprightly and benevolent, while young and handsome; morose, peevish, and malignant, if ugly, or in the decline of their beauty; fond of appearing in white, whence they are often called the White Ladies.

Concerning these imaginary beings, no less a person than Jervaise of Tilleberry, Marshal of the kingdom of Arles, who lived in the beginning of the 13th century, writes thus, in a work inscribed to the emperor Otho IV. " It has been afferted by persons of unexceptionable credit, that Fairies used to chuse themselves gallants from among men, and rewarded their attachment with an affluence of all worldly goods; but if they married, or boasted of a fairy's favours, they as feverely imarted for fuch indifferetion.". The like tales still go current in Languedoc, and throughout the whole province there is not a village without fome ancient feat or cavern which had the honour of being a fairy's residence; or, at least, fome spring, where a fairy used to bathe. This idea of fairies has a near affinity with that of the Greeks and Romans, concerning the nymphs of the woods, mountains, springs; and an ancient scholiast on Theocritus fays, the nymphs are demons which appear on the mountains

- THE STATE

in the figure of women; and what is furprizing, the Arabs, and other Orientals have their Ginn and Peri, of whom they entertain the like notions.

2. The dread of the Dracs, fupposed to be malicious, or at least tricksome demons; but, which is very rare, if one of them happens to take a fancy to a man or woman, they are fure to be the better for it. They are still faid to lay gold cups and rings on the furface over pits. in rivers, as a bait to draw in women and children; though their usual dwelling be some old empty house, whence they make excursions in human form, invisible or visible, as best suits their purpose. The country folks shudder at the very name of the Drac; some are positive they have feen him; for happy, indeed, is that village, in which there is not a house, execrated as the lurking place of this tremendous

3. Further, it is a received cuftom in Lower Languedoc not to marry in the month of May, as both the parties infallibly die within a fhort time; to avoid this misfortune, matters are made up in April, or deferred till June. This fancy is derived from the Romans, who, in May, celebrated the feltival of Lemures, or Ghosis of the Dead; during which time, the temples were shut up, and marriages intermitted, as fatal,

Fana tamen veteres illis clausere diebus, Ut nunc serali tempore operta

Ut nunc ferali tempore aperta

Nec viduæ tædis eadem, nec virginis

Tempora: quæ nupfit non diuturna fuit.

Hac

Hac quoque de causa, si te proverbia tangunt,

Mense malas Maio nubere vulgus Ov. Fastor, l. v.

This custom subfisted at Rome in the time of Plutarch, who, in his Roman Questions, fays: Few or no marriages are known in the month of May; they stay till Juns.

4. The worship of springs and ponds: we learn from Seneca, that the Romans worshipped hot springs, and ponds, and lakes; especially, when in a very high or dark

place.

Concerning the like usage among the Gauls, Gregory of Tours gives us the following narrative: "On a mountain in Gevaudan, called Helanus, was a lake, whither the neighbourhood annually reforted, and, by way of offerings, threw in fluffs, entire fleeces, cheefes, wax, loaves, and the like, every one according to his ability; this was accompanied with great feaftings for three days, till at length a pious bishop, building a church on the brink of the lake, by his powerful remonstrances and exhortations. turned that Pagan ceremony into Christian devotion." Something analogous to this is still observed in the country of Foix, where, on a high mountain, called Thabor, is a very deep lake, and close by it a church, which, on the 24th of August, the inhabitants of the adjacent places made it a duty to affemble at, as those of Gevaudan used at the lake of mount Helanus.

The people of the country of Foix, indeed, flock to the masses which, on that day, are faid both in the church and at an altar which stands in the open air: but, it is very probable, the scope of this institution. like that on mount Helanus, was only to fanctify a remnant of Paganism, which it was not easy to abolish. Thus, on the conversion of the English to Christianity, Gregory the Great allowed them to hold their usual meetings at certain times of the year round their temples, which had been confecrated as churches, to make arbours, hold religious feasts as before, and slay the oxen, which used to be facrificed to idols, provided it was, now, with no other meaning than to eat them; the reason given by that pope for fuch toleration, must be allowed very wife; nam duris mentibus simul omnia abscindere impossibile esse non dubium est, i. e. with rude and infatuated minds, there is no retrenching every thing at once.

5. Three superstitious presages, the ringing of the ears, Sudden starts of the eye-lids, and Ineezing. These Aufonius terms the tria omina, and as they are now received in most parts of Europe, so they passed current among the wife Greeks and Romans. The tinnitus aurium, or tingling of the ears, was thought to intimate to the person who felt it. that fomebody was talking of him; thus, the Lady in Aristenetus writing to her lover fays; When I think of my dearest, my ears tingle, a sure fign that I am also in your thoughts. Pliny hift. nat. lib. xxviii. cap. 2. has these words: Quin et absentes tinnitu aurium præsentire sermones de se receptum est: on this chimera is founded the following ancient epigram:

Garrula quid totis resonat mibi noctibus auris?

Nescio quem dicis nunc meminisse mihi.

Hic

Hic quis sit quæris? Resonant tibi noctibus aures

Et resonant totis. Delia te loquitur.

Further, if the right ear tingled, it denoted commendation and praise; if the left, blame and obloquy.

The fubfultus palpebrarum, or a flart of the eye-lids, the Greeks and Romans imagined to prefage good luck when in the right eye, and in the left, misfortune: accordingly, the enamoured fwain, in Theocritus, cries out in a rapture, Oh I fhall fee her! my right eye flarted! and a flave in Plautus, barely on this happy omen, warrants his mafter that he shall raise the money he stood in need of.

Unde dicam nescio,
Nist quia futurum est, ita supercisium
Salit, Pseud. A. 1. s. 1.

This infatuation still prevails; and in Languedoc such startings in the eye-lids are called le rat; at Paris, la petite souris, i. e. the little mouse; and, among the vulgar, raise joy or fear, according to the eye where

they are felt.

This supersition is still more common in Asia than in Europe. The Mahometans carefully observe all such involuntary starts of the eyelids, lips, &c. and, besides many other books, have one of great note, called Elm al Ekbtelage, written by an eminent Iman, and which treats of the presages deducible from such starts, with prayers to be used according to the parts of the body where the start or convulsion is felt. So true is it, that there is not that absurdity, however gross, which has not its partisans!

The sternutamentum, or sneezing, was among the Greeks and Romans

a fure portent of good or evil, according as the person sneezed towards the right or lest. Plutarch relates, that the priest who officiated at the solemn sacrifice, previous to the sight off Salamin, hearing a sternutation on the right, assured Themistocles of victory; and the meaning of Catullus's epigram every hody knows;

Amor sinister ante Dextram sternuit approbationem.

To the emperor Tiberius, the custom of an ejaculatory prayer for the person who had sneezed, appeared of such moment, that he was displeased if omitted to him, tho on a journey. Car sternutamentis salutamur, says Pliny, H. N. 1. xxviii. c. 2. quod etiam Tiberium Casarem, tristissimum, ut constat, hominum, in wehiculo exegisse tradunt.

Though sternutation be no longer accounted ominous, to bow to a perfon sneezing, and adding a complimental God bless ye! is still an article of good breeding in several parts of Europe, especially among the

middle and lower classes.

6. It is a very common custom in Languedoc, after eating boiled eggs never to fail quashing them, or at least making several holes in the shells, lest, if intire, they should be used for composing charms against those who had eaten the contents; this also obtained among those magnanimous lords of the world, the Romans; for Pliny, speaking of the superstitious practices of his countrymen, to prevent fascination, says: Huc pertinet overum, at exsension, says: Huc pertinet overum, at exsension, says and perforari.

7. One of the ancient superstitions of the Belgians, was, to make

human

An history of Coaches.

human figures of dough, about newyear's day, it being their chief festival; and it appears by the council of Leptines, in the diocese of Cambrai, held 743, that the like cuftom then subsisted: and in Lower Languedoc, during all the Christmas week, they make cakes shaped like men, as presents to children.

8. Nothing is more common in Upper Languedoc, than to hear the commonalty swear by the fire, by the flame of the candle, &c. at Thoulouse, especially, scarce a sentence without per aquest fuec, per aquest lum; if these oaths are more ridiculous than that which Virgil puts in the mouth of Sinon,

Vos æterni ignes, et non violabile westrum Testor Numen, ait,

they may furely be ranked with Socrates's per canem, and Zeno's per

capparim.

Many other like instances of supersition may be added; as, confidence in amulets or charms, the ceremonies on the eve of Midfummer-day, the numberless fascinations practifed in drying up the milk in women and cattle, rendering men impotent, laming horses, bringing a mortality on beafts; the dread of ridiculous presages, as the breaking of a looking-glass, oversetting a falt-feller, burning the fieve, to difcover a theft, faith in dreams, &c. Thus credulity, superstition, and error, are, among the commonalty, maladies of every clime and age, and maladies which the remonstrances of learning and reflection, it is to be feared, will never be able totally to eradicate,

TULIUS CÆSAR found chariots here eighteen hundred years ago; for all wheel-carriages which warriors rode and fought in, are fairly comprehended under that name. This method of fighting in chariots is very ancient; we have it in Homer, and in the book of Exodus, and thenceforward to the books of Kings and Chronicles.

But this way of fighting was inconvenient, and the Saracens, who were once the best soldiers in the world, used horses. Thefe Saracens, it is probable, were descended from the ancient Parthians, who also fought on horseback, and used to fly with an intention to disorder the array of their enemy's battle.

From the Romans and Saracens. the nations of Europe might learn to reject the use of chariots in war (if they had not done it fooner) for almost all the nations of Europe fent great armies against them to re-

cover the Holy Land.

To come back nearer to our own times; coaches returned to England in the days of queen Elizabeth, by the way of France (as our fashion's commonly do) and it is most certain that the judges rode on horseback to Westminster-hall, in termtime, all the reign of king James I. and possibly a good deal later: at the restoration, king Charles II. rode on horseback between his two brothers, the duke of York, and duke of Gloucester; and the whole cavalcade, which was very splendid, and confifted of a great number of persons, was performed on horseback.

We shall add one remarkable fact

con-

concerning the increase of coaches among us. Our present number of hackney-coaches, which ply in the streets, is eight hundred, besides a great many stages, that do not run twenty miles off. We are told how these matters stood an hundred years ago by Mr. Rushworth, a writer of great reputation, and much gravity.

He fays the king and council published a proclamation against them, which he prints in his collections, alledging that they raised the price of provender against the king, nobility, and gentry; and then he proceeds to inform us, that they were about twenty in number, and did not ply in the streets, but kept at their inns till they were fent for, which bespeaks a vast alteration! for .we are credibly informed, that even in the city of Dublin (which is not more than a third part of what London was an hundred years ago) there are two hundred licensed hackney-coaches.

Since I am upon this subject, it may be necessary to observe, that under proper regulations, they are of excellent use in a great rich city. They affist the dispatch of business, are beneficial to the health of those who use them, and contribute not a little to keep up that breed of strong hours sit for service, with which this land is stored, and is able, in time of war, to surnish her own armies, or in time of peace, to sell to other nations.

It is observable (upon Mr. Rushworth's story above-mentioned) that human foresight is very short; for it is highly probable that provender was dearer here an hundred years ago, in proportion to the scarcity of money, than it is at this day: we are sure the fact is so with respect to corn; for a large market is always supplied. Ten thousand acres of

land extraordinary, laid out for meadows, are more than enough to answer the increase of horses in London; and the greatness of the quantity of hay, makes the price more regular and uniform, unless a season of extraordinary barrenness should happen.

Of the origin of Cards. Translated from the French.

BOUT the year 1390, cards were invented to divert Charles the fixth, then king of France, who was fallen into a melancholy difpofition.

That they were not in use before, appears highly probable. 1st, Because no cards are to be feen in any painting, sculpture, tapestry, &c. more ancient than the preceding period, but are represented in many works of ingenuity, fince that age. 2dly, No prohibitions relative to cards, by the king's edicts, are mentioned, although some few years before, a most severe one was published, forbidding, by name, all manner of sports and passimes, in order that the subjects might exercise themfelves in shooting with bows and arrows, and be in a condition to oppose the English. Now it is not to be presumed, that so luring a game as cards would have been omitted in the enumeration, had they been in use.

3dly, In all the ecclefiaftical canons, prior to the faid time, there occurs no mention of cards; altho' twenty years after that date, cardplaying was interdicted the clergy, by a Gallican fynod. About the the fame time is found in the account book of the king's cofferer, the following charge; "Paid for a

pack

pack of painted leaves bought for the king's amusement, three livres." Printing and stamping being then not discovered, the cards were painted, which made them so dear. Thence in the above synodical canons, they are called pagellæ picæ, painted little leaves.

4thly, About 30 years after this, came a severe edict against cards in France; and another by Emanuel, duke of Savoy; only permitting the ladies this pastime, pro spinulis,

for pins and needles.

Of the design of Cards.

The inventor proposed by the figures of the four suits, or colours, as the French call them, to represent the four states, or classes of men

in the kingdom,

By the Cœurs (Hearts) are meant, the Gens de Chœur, choir men, or ecclefiaftics; and therefore the Spaniards, who certainly received the use of cards from the French, have copas or chalices, instead of hearts.

The nobility, or prime military part of the kingdom, are represented by the ends or points of lances or pikes, and our ignorance of the meaning or resemblance of the figure induced us to call them spades. The Spaniards have espadas (swords) in lieu of pikes, which is of similar

By diamonds, are defigned the order of citizens, merchants, and tradefmen, carreaux (fquare flones, tiles, or the like). The Spaniards have a coin, dineros, which answers to it; and the Dutch call the French word carreaux, fie-

the form.

import.

Treffe, the trefoil leaf, or clover grafs, (corruptly called clubs) alludes to the husbandmen and pea-

neen, stones and diamonds from

fants. How this fuit came to be called Clubs I cannot explain, unless, borrowing the game from the Spaniards, who have bastos (staves or clubs) instead of the trefoil, we gave the Spanish fignification to the French figure.

The history of the four kings, which the French in drollery sometimes call the cards, is David, Alexander, Cæsar, and Charles (which names were then, and still are, on the French cards.) These respectable names represent the four celebrated monarchies of the Jews, Greeks, Romans, and Franks under Charlemaigne.

By the queens are intended Argine, Esther, Judith, and Pallas (names retained on the French cards) typical of birth, piety, fortitude and wisdom, the qualifications residing in each person. Argine is an anagram for Regina, queen by descent.

By the knaves were defigned the fervants to knights; (for knave, originally, meant only fervant; and in an old translation of the bible. St. Paul is called the knave of Christ) but French pages and valets, now indiscriminately used by various orders of persons, were formerly only allowed to persons of quality, esquires (Escuiers) shield or armour bearers.

Others fancy that the knights themselves were designed by those cards, because Hogier and Lahire, two names on the French cards, were famous knights at the time cards were supposed to be invented.

An account of the celebration of the May-Games, and the reasons of their suppression,

T was usual, on the 1st of May, for all the citizens, who were able,

able, to divert themselves in the woods and meadows with Maygames, diversions not confined to the lower class, but equally the entertainment of persons of the highest rank; a remarkable instance of which is inferted in Hall's Chronicle, under the year 1515, when that author observes, that king Henry VIII. and queen Catharine, accompanied by many lords and ladies, rode a maying from Greenwich to the high ground of Shooter's-hill, where, as they passed along, they faw a company of 200 tall yeomen, all cloathed in green, with green hoods and bows and arrows. One, who was their chieftain, was called Robin Hood, and defired the king and all his company to flay and fee his men shoot; to which the king agreeing, he whistled, and all the two hundred discharged their arrows at once. which they repeated on his whistling again. Their arrows had fomething placed in the heads of them that made them whistle as they flew, and all together, made a loud and very uncommon noise, at which the king and queen were greatly delighted. The gentleman who assumed the character of Robin Hood then defired the king and queen, with their retinue, to enter the green wood, where, in arbours made with boughs intermixed with flowers, they were plentifully ferved with venison and wine, by Robin Hood and his men.

About two years after an event happened, which occasioned the epithet of Evil to be added to this day of rejoicing. The citizens being extremely exasperated at the encouragement given to foreigners, a priest, named Bell, was persuaded to preach against them at the Spital;

and, in a very inflaming fermon, he incited the people to oppose all strangers; this occasioned frequent quarrels in the streets, for which some Englishmen were committed

to prison.

Suddenly a rumour arose, that on May-day all the foreigners would be affaffinated, and several strangers fled; this coming to the knowledge of the king's council, cardinal Wolfey fent for the lord mayor and feveral of the city council, told them what he had heard, and exhorted them to preserve the peace. Upon this affair a court of common council was assembled at Guildhall, on the evening before May-day, in which it was refolved to order every man to shut up his doors, and keep his servants at home; and this advice being immediately communicated to the cardinal, met with his

approbation.

Upon this every alderman fent to inform his ward, that no man should ftir out of his house after nine o' clock, but keep his doors shut, and his servants within till nine in the morning. This order had not been long given, when one of the aldermen, returning from his ward, obferved two young men at play in Cheapfide, and many others looking at them, He would have fent them to the Compter, but they were foon rescued, and the cry raised of "Prentices! Prentices! Clubs! Clubs !" Instantly the people arose; by eleven o'clock they amounted to fix or feven hundred; and, the croud ffill increasing, they rescued from Newgate and the Compter the prifoners committed for abusing the foreigners; while the mayor and sheriffs, who were present, made proclamation in the king's name; but.

but, instead of obeying it, they broke open the houses of many Frenchmen and other foreigners, and continued plundering them till three in the morning, when, beginning to disperse, the mayor and his attendants took 300 of them, and committed them to the feveral prisons. While this riot lasted, the lieutenant of the Tower discharged several pieces of ordnance against the city, but without doing much mischief; and about five in the morning feveral of the nobility marched thither, with all the forces they could affemble.

On the 4th of May the lord mayor, the duke of Norfolk, the earl of Surry, and others, fat upon the trial of the offenders at Guildhall, the duke of Norfolk entering the city with 1300 men. That day feveral were indicted, and on the next 13 were fentenced to be hanged, drawn, and quartered; for the execution of whom ten gallowies were fet up in feveral parts of the city, upon wheels, to be removed from firect to fireet, and from door to door.

On the 7th of May feveral others were found guilty, and received the fame fentence as the former, and foon after were drawn upon hurdles to the standard in Cheapside; but, when one was executed, and the rest about to be turned off, a respite came, and they were remanded back

to prison.

After this, the foldiers who had kept watch in the city were withdrawn, which making the citizens flatter themselves that the king's displeasure against them was not so great as they had imagined, the lord mayor, recorder, and several aldermen, went in mourning gowns to wait upon the king at Greenwich, when, having attended for some

time at the privy chamber-door, his majefly, with feveral of the nobility. came forth; upon which, all of them falling upon their knees, the recorder, in the name of the rest, in the most humble and submissive terms, begged that he would have mercy on them for their negligence, and compassion on the offenders, whom he represented as a small number of light persons. His majesty let them know that he was really difpleafed, and that they ought to wail and be forry for it: for, as they had not attempted to fight with those whom they pretended were fo small a number of light persons, they must have winked at the matter; he therefore ordered them to repair to the lord chancellor, who would give them an answer. Upon which they retired, deeply mortified.

Being informed that the king was to be at Westminster-hail on the 22d of May, they resolved to repair this ther, which they did with the confent of cardinal Wolfey, lord highchancellor. The king fat at the upper end of Westminster-hall, under a cloth of state, with the cardinal and feveral of the nobility; and the lord mayor, aldermen, recorder, and feveral of the common council attended; the prisoners, who then amounted to about 400, were brought in their shirts, bound together with cords, and with halters about their necks, and among these were eleven women. The cardinal having sharply rebuked the mayor. aldermen, and commonalty for their negligence, told the prisoners, that, for their offences against the laws of the realm, and against his majesty's crown an I dignity, they had deferved death; upon which they all fet up a piteous cry, of "Mercy, gracious " lord, mercy l" which fo moved the the king, that, at the earnest intreaty of the lords, he pronounced them pardoned; upon which, giving a great shout, they threw up their halters towards the top of the hall, trying, "God save the king!" After this affair, the May games were not so commonly used as before.

Historical remarks on drefs. Prefixed to a collection of the dreffes of different nations, ancient and modern.

HE origin of dress, consider-ed merely as a covering for the body, is too generally known to need a differtation: but that covering which was produced jointly by weakness and guilt, to defend the wearer from the inclemency of the weather, and to conceal those parts which the loss of innocence had made shameful, is but a very inconfiderable part of what has been long included under the name of drefs. To trace the modern dress back to the fimplicity of the first skins and leaves and feathers that were worn by mankind in the primitive ages, if it were possible, would be almost endless; the fashion has been often changed, while the materials remained the fame; the materials have been different as they were gradually produced by fuccessive arts that converted a raw hide into leather, the wool of the sheep into cloth; the web of the worm into filk, and flax and cotton into linen of various kinds. One garment has also been added to another, and ofnaments have been multiplied upon ornaments with a variety almost infinite, produced by the caprices of human vanity, or the new neceffities to which man rendered himself subject by those many in-. Vol. IV.

ventions which took place after he ceased to be as God had created him, upright.

Some bounds however have been put to the licentiousness of fancy in forming and changing the drefs, by various prohibitions and ordonnances after men had been formed into civil fociety: by fome it was intended to keep up a visible distinction between the different clasfes of people, as noble or mean, ecclefiaftical or lay, magistrate or private persons; the defign of others was to diffinguish the two fexes, and fome to prohibit many expenfive superfluities, which were at once productive of poverty, dependance; and effeminacy; some of these regulation's still subsist, and the fexes have by a kind of common confent been distinguished at all times, and in all civilized countries. by some difference in their dress. At present indeed the Europeans are so much at liberty to follow their own fancy in the figure and materials of their drefs, that the habit is become a kind of index to the mind, and the character is in fome particulars as eafily discovered by a man's dress as by his converfation. Of the dreffes of Europe in general it may be observed that they are now gothic; that of the men is military, for the garments are all short, and the dress is confidered as incomplete without a weapon. So that even the physician, who spends the day in going from the chamber of one fick perfon to another, is not completely dressed without a sword. The old Civic habits were long, and are still used on particular occasions. The merchant and trader when he appears as a citizen wears a gown and hood, and there are long garments

peculiar to the professors of physick and law, to the great officers of state, and the peers of every denomination: but all these characters, except upon public occasions, wear the short coat and sword, which is the military dress, that the inroads of the Goths, whose trade was war, made

general As to the dresses of the women, they have never been military, and therefore have never been short; but befides the alterations that convenience and caprice have introduced in the female habit, there are feveral which have had a more latent and less innocent cause. The drefs of women has been long confidered as a decoration of beauty, and an incitement to defire; and in this view it has been the object of much thought, ingenuity, and folicitude; but it does not appear that those who intended to multiply or fecure their conquests by drefs, always knew how best to exert that power which the choice of their dress put into their hands. When the British lady thinks sit to dress fo as to discover the whole breast, the British gentleman soon looks upon it with as much indifference, as the naked Indians look upon all the rest; but if she covers it with a handkerchief, and contrives this covering fo that it shall accidentally discover what it appears intended to hide, the glimple that is thus cafually given, immediately and forcibly feizes the imagination, and every motion is watched in hopes that it will be repeated; so if by any accident a lady discover half her leg, the fancy is instantly alarmed, though when the actress appears in breeches and discovers the whole, the is the object of indifference, if not of disgust: for the same rea-

fon the figure of a naked Venus produces less effect than that of a dressed figure with the petticoat raised so as to discover the garter. It follows therefore, that if the dreffes most immodestly, who dresses so as most to excite licentious desires, she does not dress most immodestly who uncovers most of her person, but fhe who covers it so that it may be accidentally feen. And upon this principle it was that the Grecian legislator, when he observed that many of the youth lived unmarried, directed the women to wear long garments which covered the whole person from the shoulders to the feet, instead of discovering all the breaft and half the leg; and ordered that the robe should be cut in flashes from the hip to the knee, so that when they flood or fat still, the two fides of the opening should fall together, but should by dividing. when they walked or used any other motion, cafually discover the parts which at other times were concealed.

Many changes of female drefs. that may be traced in this collection, will be found to proceed from unskilful attempts to allure, by discovering more and more of the person, and from the disappointment which succeeded the experiment, and at last induced a sudden transition to a close dress, by which the whole person was covered. As to the changes of habit, which were the effects of mere caprice and wantonnels of fancy, it is impossible to trace them in other countries, and difficult in our own: the following particulars, however, may ferve to gratify the curious, and excite them to a more critical examination.

Party-coloured coats were first worn in England in the time of Henry I. chaplets or wreaths of artificial flowers in the time of Edward III. hoods and fhort coats without sleeves, called taberts, in the time of Henry IV. hats in the time of Henry VII. ruffs in the reign of Edward VI, and it is faid that they were first invented by a Spanish or Italian lady of quality to hide a wen which grew on her neck. Wrought caps or bonnets were first used here in the time of queen Elizabeth. Judge Finch, in the time of James I. introduced the band. French hoods, bibs, and gorgets, were laid aside by the queen of Charles I. and the commode or tower was introduced in 1687. Shoes of the present fashion were

first worn in 1633. Breeches were introduced instead of trunk hose in 1654, and perukes were first worn soon after the restoration.

As to the stage dresses, it is only necessary to remark, that they are at once elegant and characteristic: and among many other regulations of more importance, for which the public is obliged to the genius and the judgment of the present manáger of our principal theatre, is that of the dreffes, which are no longer the heterogeneous and abfurd mixtures of foreign and ancient modes, which formerly debased our tragedies, by representing a Roman general in a full bottomed peruke; and the fovereign of an Eastern empire in trunk hofe.

Literary and Miscellaneous Essays.

An Essay on Augury.

From Stillingfleet's calendar of Flora]

Mr. Stillingfleet, that hufbandry was in part regulated by the blowing of plants, and the coming or going of birds; and most probably it had been in use long before his time, as astronomy was then in its infancy; but when artificial calendars came into vogue, the natural calendar seems to have been totally neglected; for I find no traces of it after his time, whether for good and sufficient reasons I

pretend not to determine.

I shall make no further mention at present of the use of plants in directing the husbandman, but take this opportunity of making a digression about birds, in relation to their prognostic nature. Henceforward then, i.e. from the time of Hesiod, they seem to have been looked upon as no longer capable of directing the hufbandman in his rural affairs, but they did not, however, lose their influence and dignity; nay, on the contrary, they feem to have gained daily a more than ordinary, and even wonderful authority, till at last no affair of confequence, either of private or public concern, was undertaken without confulting them. were looked upon as the interpreters of the gods, and those who were qualified to understand their oracles were held among the chief men in the Greek and Roman states, and became the affesfors of kings,

and even of Jupiter himself. However absurd such an institution as a a college of Augurs may appear in our eyes, yet, like all other extravagant institutions, it had in part its origin from nature. When men confidered the wonderful migration of birds, how they disappeared at once, and appeared again at flated times, and could give no guess where they went, it was almost natural to suppose, that they retired fomewhere out of the sphere of this earth, and perhaps approached the ætherial regions, where they might converse with the gods, and thence be enabled to predict events. This. I fay, was almost natural for a fuperstitious people to imagine, at least to believe, as soon as some impostor was impudent enough to affert it. Add to this, that the difposition in some birds to imitate the human voice must contribute much to the confirmation of fuch a doctrine. This institution of Augury feem's to have been much more ancient than that of Aruspicy; for we find many instances of the former in Homer, but not a fingle one of the latter that I know of; though frequent mention is made of facrifices in that author. From the whole of what I have observed, I should be apt to think, that natural Augury gave rife to religious Augury, and this to Aruspicy, as the mind of man makes a very easy transition from a little truth to a great deal of error.

A passage in Aristophanes gave me the hint for what I have been

faying.

faying. In the Comedy of the Birds, he makes one of them fay thus: "The greatest blessings which can happen to you mortals are derived from us; first, we shew you the feasons, viz. Spring, Winter, Autumn. The crane points out the time for fowing, when she flies with her warning notes into Ægypt; she bids the sailor hang up his rudder and take his rest, and every prudent man provide himself with winter garments. Next the kite appearing, proclaims another feason, viz. when it is time to sheer your sheep. After that the fwallow informs you when it is time to put on fummer cloaths. We are to you, adds the chorus, Ammon, Dodona, Apollo; for after confulting us you undertake every thing; merchandize, purchases, marriages, &c." Now it feems not improbable, that the fame transition was made in the speculations of men, which appears in the poet's words, and that they were easily induced to think, that the surprising foresight of birds, as to the time of migration, indicated fomething of a divine nature in them; which opinion Virgil, as an Epicurean, thinks fit to enter his protest against; when he fays,

> Haud equidem credo quia fit divinitus illis Ingenium.

But to return to Aristophanes. The first part of the chorus, from whence the afore-cited passage is taken, seems with all its wildness to contain the fabulous cant, which the augurs made use of in order to account for their impudent impositions on mankind. It sets out

with a cosmogony, and says, that in the beginning were Chaos and Night, and Erebus and Tartarus. That there was neither water, nor air, nor sky; that Night laid an egg, from whence, after a time, Love arose. That Love, in con unction with Erebus, produced a third kind, and that they were the first of the immortal race, &c.

Linnæus's Dream.

INN Æ US, whose fame has fpread throughout all Europe, had spent many days in examining and classing those wonderful plants which he had collected from the craggy mountains of Norway. He admired their beauty and structure, but knew not their use; nor was he able accurately to determine what place they held in the vegetable creation. He faw much was to be known, and lamented his ignorance; -- whilft the world was admiring him as a prodigy and father of science; - nor could he forbear bitterly bewailing the shortness of life, which puts a stop to philosophical enquiries, and renders it almost impossible to attain even the smallest degree of perfection, in any one branch of know-66 Alas (said he) why is man's existence circumscribed within fuch narrow bounds; and why, furrounded as he is with the glorious works of God, is he permitted to know so little of them? Scarce are we born into the world, scarce do we acquire skill to perceive what is most worthy our notice, before we are fnatched away, and hurried to the grave, leaving our undertakings unfinished, and in the hands

of those who either have not skill to. carry them on, or chuse some other

pursuits."

His thoughts distressed him, but still he retained that humble acquiescence to the will of the supreme being, which is ever inseparable from a truly philosophical mind: --- he knew that whatever the Author of nature appointed was certainly right and good. Humbled therefore, but not difcontented or repining, he retired to rest, and in the visions of the

night was instructed.

He fancied himself busied in fearching for fome extraordinary plants which he had long defired to be possessed of, and that he had wandered infenfibly to one of the most delightful spots in all Norway. It was the brow of an high mountain: --- the vast ocean was before him, on which appeared with swelling fails, a large fleet, passing to convey the products of the north to the more pleasing regions of the fouth; and on the other part, through a vale bounded on each fide by craggy rocks, was feen the adjacent country, which the warm feafon, just begun, had clad in all its verdure. Beyond a river that bent its course through rich pastures filled with cattle, appeared to the right a large and populous town, over which the rifing ground exhibited to the view, corn-fields, and all the variety of a well-watered country: --- and to the left a thick wood, through a large opening whereof (formed by nature) was feen the ruins of an ancient castle, heretofore the feat of gothic valour. Linnæus's attention to his pursuit was for a while suspended; and he ftopt to furvey alternately thefe

pleafing scenes. In the mean time. the fun fetting in full glory beneath the waves, caused the horizon to exhibit the brightest colours of the rainbow, and these gradually fading, the flarry concave of heaven began to be enlightened by the rifing moon. But foon the scene was changed, the whole fky became veiled with thick clouds, and a distant roaring proclaimed the approach of a dreadful storm. Already the rain descended in vast torrents, the heavens blazed with lightning, and the rocks refounded wirh loud claps of thunder.

Linnæus, filled with terror, was feeking where to shelter himself, when a voice from a cave, (whence there fuddenly iffued a gleam of light) bade him approach, and confider what he faw. With trembling he obeyed, and entered a spacious cavern, adorned on all fides with pointed crystals, which had been formed by water distilling from the rock, and which reflecting the light that proceeded from a golden lamp hanging in the midft, made it as bright as day. Here he found a venerable old man, in a loose robe of purple ornamented with ermine, who had before him a large concave mirrour, and in his hand a golden rod; he, feemed calm and ferene, and approached Linnæus with a smile of complacency that distipated all his fears. " Behold (faid he) thy fincerest friend, who has defired thy happiness, and long fought to discover himself to thee, I would gladly always abide with thee, but the state of things in this world forbids it; and I can only use favourable opportunities of conversing with thee: at such times I would make thee partaker

of

of my riches, and they will continue for ever. —— Seeft thou this mirrour? observe attentively what it

representeth to thee." Having thus spoke, before Linnæus could reply, he waved his wand, and immediately there appeared a garden that had been lately planted: the trees were covered with a bright green, and began to fhoot forth their various blooms on every part, and to fill the air with fragrant sweets. But suddenly there came forth those who had the care of the plantation, and stripped them of all their boughs and verdure, leaving only the bare and unadorned trunks, which instead of the pleasant scene that before presented itself to the view, afforded only a difgustful and barren prospect. Soon, however, there were grafted on these, fresh branches of all kinds :--- and again, they fprung to a more delightful verdure, and produced more fragrant bloffoms, and in the end the finest fruits, and went on increasing in beauty, strength, and usefulness.

Linnæus was filled with admiration, and began diligently to obferve their various kinds, that he might know to what claffes they belonged, when the venerable old man interrupted his speculations, and thus addressed himself to him.

"Know that no evil is permitted but for good, and that the shortness of life which thou lamenteds, is consistent with the designs of a wise and gracious God, the tender Father of all created beings. Thou sawest the plants beautiful and pleafant to the sight, and it perhaps displeased thee that they were so soon stripped of their glory, and prevented from attaining that perfection to which they seemed to be

tending: but thou sawest also, that thereby they became in the end more beautiful, and instead of continuing useless objects, only pleafing to the fight, yielded the finest and most delicious fruits. So it is with man. — His days are short, during which he exists in an imperfect state on earth, and he is quickly removed from thence, to flourish in that more exalted flation for which he was created. In this world he begins to exert the powers of his mind, and to enquire after knowledge, and having obtained fome fmall portion of wildom, to promife himself a great increase, and to form plans of much improvement, and of perfection in what he has undertaken; but being designed for pursuits of a still nobler kind, he has a period put to his existence and progress here he is (like the plants thou fawest) deprived of his first beauty and lustre, in ... order to be exalted to a more glorious state, and to be endued with higher faculties, that shall be grafted on his human nature, and by the affiftance of them he shall attain. to the utmost his foul can defire.

It must not be revealed to mantoo clearly what are the glories of that exalted state, lest he should be unwilling to remain his appointed time in this, and rushing immaturely into it, should fail in the defired end; but he is permitted to have some faint glimpses to quicken his defires, and his endeavours to fit himself for it. What happiness must there be in a state, wherein man shall have before him a prospect of existence to all eternity. without meeting with any obstacle to put a frop to his pursuits? wherein he shall have leifure tho-

N 4. gate

roughly to contemplate and inveftigate all the ways and works of God, and to gain a perfect knowledge thereof, observing accurately every thing that exists, and learning its place, its order and design?

What enjoyment in a state, wherein he may be permitted to learn the history of this world, through which he shall have passed, and of all its revolutions; of the actions and ways of men, and of the dealings of God with them ! - wherein he may learn the history of other worlds, visible and invisible, and the scheme of Divine Providence with regard to the whole! and reflecting thereon, may become acquainted with all the attributes of the Deity; and being filled with unfeigned love and adoration, may draw near to the Most High, and fee him as he is !"

· Linnæus was in raptures at these words: he no longer lamented his condition: he became fuddenly contented with the shortness of his days, and even wished to arrive at the end of them: - but conscious how much attention and care it required to reach that defire. able period in such a manner as to have well-grounded hopes of enjoying the state of happiness he fo earnestly wished for, he addressed himself to the sage, to beg his direction and inflruction. Venerable monitor, (he cried) teach me, O teach me how to live, so that I may attain an happy end. -- But fuch was the fervour and folicitude of his mind, that he awoke, and lo! that which he had feen and heard, was but a dream:

Avarice and Glory, an history. By the the king of Prussia. — By the

Shepherd his Majesty means himself, Philosophe de Sans Souci, p. 68.

HE mifer, my dear d'Argens, is chiefly his own enemy, but the ambitious man is the enemy of the human race. He strides forward to vice with impunity, and even his virtues degenerate into faults. The mifer and the ambitious are both equally self-interested; but, while one destroys only a cottage, the other, perhaps, over-

turns an empire.

Avarice and Glory once made a journey together to this world, in order to try how mankind were difposed to receive them. Heroes, citizens, priefts, and lords, immediately lifted beneath their standards, and received their favours with gratitude and rapture. Travelling, however, into a more remote part of the country, they by accident fet up at the cottage of a fimple shepherd, whose whole posfessions were his flock, and all his folicitude the next day's subfishence. His birth was but humble, yet his natural endowments were great. His fense was refined, his heart fensible of love and pity, and, poor as he was, he still preserved an honest ardour for liberty and re-Here, with his favourite Sylvana, his flock, his crook, and his cottage, he lived unknown, and unknowing a world that could only instruct him in deceit and falsehood.

Our two travellers no fooner beheld him, than they were struck with his felicity. "How insupportable is it, cried Glory, thus to be a spectator of pleasures which we have no share in producing. Shall we, who are adored here below, tamely continue spectators of

because

a man who thus flights our favours, because as yet unexperienced in their delights: no, rather let us attempt to feduce him from his wife pursuit of tranquility, and teach him to reverence our power," Thus faying, they both, the better to disguise themselves, assumed the dress of shepherds, and accosted the ruftic in terms the most inviting. "Dear shepherd, how do I pity, cries Glory, your poor simplicity; to see fach talents buried in unambitious retirement, certainly might create even the compaffion of the gods. Leave, pr'ythee leave a folitude deffined only for ignorance and flupidity; it is doubly to die, to die without applause. You have virtues, and those ought to appear, not thus lie hid with ungrateful obstinacy. Fortune calls, and Glory invites thee. I promise you a certainty of fuccess: you have only to chuse, whether to become an author, a minister of state, or a general; in either capacity, be affured of finding respect, riches, and immortality."

At so unaccustomed an invitation, the shepherd seemed incapable of determining. He hefitated for fome time between ambition and content, till at length the former prevailed, and he became, in some measure, a convert. Avarice now came in to fix him entirely, and willing to make him completely the flave of both, thus continued the conversation. "Yes, simple swain, be convinced of your ignorance; learn from me, in what true happiness confists. You are in indigence, and you miscall your poverty temperance. What! shall a man, formed for the most important concerns, like you, exhaust a precious life, only in ogling his mistress, playing upon his pipe, or

shearing his sheep. While the rest of mankind, bleffed with affluence, confecrate all their hours to rapture; improved with art, shall you remain in a cottage, perhaps shud-dering at the winter breeze? Alas! little dost thou know of the pleafures attending the great. What fumptuous palaces they live in; how every time they leave them feems a triumphal procession; how every word they pronounce is ecchoed with applause: without fortune, what is life but mifery? what is virtue but sullen satisfaction?-Money, money, is the grand mover of the universe; without it life is inlipid, and talents contemptible."

The unhappy shepherd was no longer able to refift fuch powerful persuasions; his mistress, his flock, are at once banished from his thoughts, or contemptible in his His rural retreat becomes tasteless, and ambition fills up every chasm in his breast: In vain did this faithful partner of all his pleafures and cares follicit his stay; in vain expose the numberless dangers he must necessarily encounter; nothing could perfuade a youthful mind bent on glory, and whose heart felt every passion in extreme. However, uncertain what course follow, by chance he fixed upon the muses; and he began, by shewing the world fome amazing instances of the fublimity of his genius. He instantly found admission among the men of wit, and he gave lessons to those who were candidates for the public favour. He publish'd criticisms to shew, that some were not born poets, and apologies in vindication of himself. But soon satire attacked him with all its virulence; he found, in every brother wit, a rival, and.

and, in every rival, one ready to depreciate whatever he had written. Soon, therefore, he thought proper to quit this feducing train, that offer beds of rofes, but supply only a couch of thorns.

He next took the field in quality of a foldier. He was foremost in revenging the affronts of his country, and fixing his monarch on the throne; he was foremost in braving every danger, and in mounting every breach: with a few fuccesses more, and a few limbs less, our shepherd would have equalled Cæfar himself; but soon envy began to pluck the hardened laurel from his brow. His conquests were attributed not to his superior skill, but the ignorance of his rivals: his patriotism was judged to proceed from avarice, and his fortitude from

unfeeling affurance.

Again, therefore, the shepherd changes, and, in his own defence, retired to the cabinet from the field. Here, become a thorough-bred minister of state, he copies out conventions, mends treaties, raifes fubsidies, levies, disposes, sells, buys, and loses his own peace, in procuring the peace of Europe; he even, with the industry of a minister, adopts his vices, and becomes flow, timid, suspicious, and austere. Drunk with power, and involved in fystem, he fees, confults, and likes none but himself. He is no longer the simple fhepherd, whose thoughts were all honest, and who spoke nothing but what he thought; he now is taught only to speak what he never intends to perform. His faults difgusted some, his few remaining virtues more: at length, however, his system fails, all his projects are blown up; what was the cause of misfortune, was attributed to corruption and ignorance; he is arraigned by the people, and scarcely escapes being condemned to suffer an ignominious death. Now too late, he finds the folly of having attended to the voice of avarice, or the call of ambition; he slies back to his long-forsaken cottage, again assumes the rustic robe of innocence and simplicity; and, in the arms of his faithful Sylvana, passed the remainder of his life in innocence, happiness, and peace.

On the qualifications requifite in a commentator upon the boly scriptures.

SIR, Book of fo much importance as the Bible, which contains a revelation from the most high God of every thing interesting and important to human creatures, ought to be read with the greatest reverence, and handled with the greatest caution: But to fit down as a commentator upon this facred book, and to profess one's felf a public expositor of it, as it is one of the most arduous, fo is it one of the most folemn undertakings. Great are the abilities, and many are the qualifications necessary for this purpose. No man should presume upon it, without a perfect critical knowledge of the languages in which the fcriptures are written, without a competent understanding of the history and antiquities, the genius and polity of the Jewish nation, without an acquaintance with the connected profane history, the manners and cuftoms of ancient times. It is also absolutely necessary, that a commentator should understand the whole analogy of faith, as well as be a complete master of all the controversies.

troversies, ancient and modern, with the tenets of the feveral fects and heresies; without a competent skill in which he can never be able to elucidate those texts, which are applied in the support of those several opinions. Besides these qualifications, there is one, which all writers on the subject have spoken of as indispensably requisite, that is, a pious and devout frame of mind; a spirit like that, with which the scriptures are written; without this, accompanied by a holy, fedate, and contemplative life, all the wifest and best of christians have agreed, that no man is qualified to expound the oracles of God. - Serious application, continued labour, long experience, much study, folid judgment, united with the qualifications abovementioned, might lead us to hope for valuable fruits in a commenta-

These, Sir, are some of the things requifite, and which, indeed, must be found in every man, who defires his attempts upon the bible to fucceed. How great then must be the indignation of every sensible man, and how fincere the concern of every true Christian, to see this, most venerable of all books, hackneyed through the hands of bookfellers, and retailed daily, not for the great ends of piety, virtue, and knowledge, but with the most mercenary and felfish views .- Some there are, with grief I speak it, who dare to introduce into the world the oracles of truth with a lie in their mouths, with feigned names and false titles: Others, who think it enough, if, from the former labours of able and worthy men, they plunder without conscience, and without gratitude patch up their sheet, gain their scanty guinea, and dine! while others, with unblushing hypocrify, pretend a zeal for the Lord, and a concern for the falvation of precious fouls; when it is notoriously known, that they are only the tools of bookfellers, and draw the hireling pen as if the instruments of scheming trade! while, without breach of charity, it may be faid of all, that they are eminently deficient in those leading qualifications which are necessary to constitute a commentator on the holy scriptures:—this—translations of which how can they have the arrogance to propole to correct, who, I will venture to affirm, many of them cannot even read one of the languages at least in which those scriptures were written.

Thus much, fir, I thought due from me as an honest man, and a well-wisher to Christianity, in order to undeceive the ignorant, but wellmeaning; to put a check, if possible, to this scandalous traffick; to throw a proper contempt upon the low and mercenary dealers in it, injurious as it is to the cause of true religion and virtue: while at the fame time, I would be as forward, and would exhort all within my fphere to be fo, in promoting the labours of any man of known learning, known abilities, known experience, and known piety; but till fuch a one shall appear amongst us, let us be content with those many useful and excellent comments we already have upon the fcriptures, nor be forward to encourage those who handle God's word only for hire, and steal honey from the hives of others, to supply their own deficiences. As I know not any reason why I should conceal my name, where the word of God, Truth,

and Religion, are fo much concerned, I readily subscribe it, as ready, if necessary, to make good what I have advanced.

I am. fir. Surry, Aug. Your humble fervant, PETER ALDREGE. 1. 1761.

Some remarks on the modern manner of preaching.

T is allowed on all hands, that our English divines receive a more liberal education, and improve that education by frequent fludy, more than any others of this reverend profession in Europe. In general also, it may be observed, that a greater degree of gentility is affixed to the character of a student in England than elsewhere, by which means our clergy have an opportunity of feeing better company while young, and of fooner wearing off those prejudices, which they are apt to imbibe even in the best regulated universities, and which may be fullly termed the vulgar errors of the literary republic.

Yet with all these advantages it is very obvious, that the clergy are no where so little thought of, by the populace, as here; and though our divines are foremost, with respect to abilities, yet they are found last in the effects of their ministry; the vulgar, in general, appearing no way impressed with a fense of religious duty. I am not for complaining of the depravity of the times, or for endeavouring to paint a prospect more gloomy than in nature; but certain it is, no person who has travelled will contradict me, when I aver, that the lower orders of mankind in other countries testify on every occasion the profoundest awe

of religion, while in England they are scarcely awakened into a sense of its duties, even in circumstances of the greatest distress.

This dissolute and fearless conduct foreigners are apt to attribute to climate and constitution; may not the vulgar, being pretty much neglected in our exhortations from the pulpit, be a conspiring cause? Our divines feldom floop to their mean capacities, and they who want instruction most, find least in our religious affemblies.

Whatever may become of the higher orders of mankind, who are generally possessed of collateral motives to virtue, the vulgar should be particularly regarded, whose behaviour in civil life, is totally hinged upon their hopes and fears. Those who constitute the basis of the great fabrick of fociety, should be particularly regarded; for in policy, as in architecture, ruin is most fatal when it begins from the bottom.

Men of real fense and understanding, prefer a prudent mediocrity to a precarious popularity; and, fearing to overdo their duty, leave it half undone. Their discourses from the pulpit are generally dry, methodical, and unaffecting; delivered with the most insipid calmness, infomuch, that should the peaceful preacher lift his head over the cushion, which alone he feems to address, he might discover his audience, instead of being awakened into remorfe, actually fleeping over his methodical and laboured composition.

This method of preaching is, however, by some called an address to reason, and not to the passions; this is stilled the making of converts from conviction; but such are indifferently acquainted with human nature, who are not fenfible, that men feldom reason about their debaucheries till they are committed; reason is but a weak antagonist when headlong passion dictates; in all such cases we should arm one passion against another; it is with the human mind as in nature, from the mixture of two opposites the result is most frequently neutral tranquility. Those who attempt to reason us out of our follies, begin at the wrong end, since the attempt naturally presupposes us capable of reason; but to be made capable of this, is one great point of the cure.

There are but few talents requifite to become a popular preacher, for the people are eafily pleased if they perceive any endeavours in the orator to please them; the meanest qualifications will work this effect, if the preacher fincerely fets about it. Perhaps little, very little more is required, than fincerity and affurance; and a becoming fincerity is always certain of producing a becoming affurance. Si vis me flere, dolendum est primum, tibi ipsi, is so trite a quotation, that it almost demands an apology to repeat it; yet tho? all allow the justice of the remark, how few do we find put it in practice; our orators with the most faulty bashfulness, seem impressed rather with an awe of their audience, than with a just respect for the truths they are about to deliver; they of all professions seem the most bashful, who have the greatest right to glory in their commission.

The French preachers generally assume all that dignity, which becomes men who are ambassadors from Christ; the English divines, like erroneous envoys, seem more follicitous not to offend the court to which they are sent, than to drive home the interests of their employer.

The bishop of Massillon, in the first fermon he ever preached, found the whole audience, upon his getting into the pulpit, in a disposition no way favourable to his intentions; their nods, whispers, or drowly behaviour, shewed him that there was no great profit to be expected from his fowing in a foil fo improper: however, he foon changed the difposition of his audience by his manner of beginning: " If, fays he, a cause, the most important that could be conceived, were to be tried at the bar before qualified judges; if this cause interested ourselves in particular; if the eyes of the whole kingdom were fixed upon the event; if the most eminent council were employed on both fides, and if we had heard from our infancy of this yet undetermined trial, would you not all fit with due attention, and warm expectation to the pleadings on each fide? Would not all your hopes and fears be hinged upon the final decision? And yet, let me tell you, you have this moment a cause of much greater importance before you, a cause where not one nation but all the world are spectators, tried not before a fallible tribunal, but the aweful throne of heaven. where not your temporal and transitory interests are the subject of debate, but your eternal happiness or mifery, where the cause is still undetermined, but, perhaps, the very moment I am speaking, may fix the irrecoverable decree, that shall last for ever; and yet, notwithstanding all this, you can hardly fit with patience to hear the tidings of your own falvation; I plead the cause of heaven, and yet I am scarcely attended to, &c." The stile, the abruptness of a beginning like this in the closet would appear absurd, but in the pulpit it is attended with the most lasting impressions; that ftyle, which in the closet might justly be called flimfy, feems the true mode of eloquence here. I never read a fine composition under the title of a fermon, that I do not think the author has miscalled his piece, for the talents to be used in writing well, intirely differ from those of speaking well. The qualifications for speaking, as has been already observed, are easily acquired; they are accomplishments which may be taken up by every candidate who will be at the pains of stooping. Impressed with a sense of the truths he is about to deliver, a preacher difregards the applause or the contempt of his audience, and he infentibly assumes a just and manly sincerity. With this talent alone we see what crouds are drawn around enthufiafts. even destitute of common sense; what numbers converted to Chriflianity. Folly may fometimes fet an example for wisdom to practise, and our regular divines may borrow instruction from even Methodists, who go their circuits, and preach prizes among the populace. Even Whitfield may be placed as a model to some of our young divines; let them join to their own good fense his earnest manner of delivery.

It will be perhaps objected, that by confining the excellencies of a preacher to proper affurance, earnefinefs, and openness of stile, I make the qualifications too trifling for estimation: there will be something called oratory brought up on this occasion; action, attitude, grace, elocution, may be repeated as absolately necessary to compleat the character; but let us not be deceived, common sense is seldom fwayed by fine tones, mufical periods, just attitudes, or the display of a white handkerchief; oratorial behaviour, except in very able hands indeed, generally finks into aukward and paltry affectation.

It muit be observed, however, that these rules are calculated only for him who would instruct the vulgar, who stand in most need of instruction; to address philosophers, and to obtain the character of a polite preacher among the polite, a much more useless, though more fought-for character, requires a diffetent method of proceeding. All I shall observe on this head is, to entreat the polemic divine, in his controversy with the Deists, to act rather offensively than to defend; to push home the grounds of his belief, and the impracticability of theirs, rather than to spend time in folving the objections of every opponent. It is ten to one, fays a late writer on the Art of War, but that the affailant who attacks the enemy in his trenches, is always victorious.

Yet upon the whole, our clergy might employ themselves more to the benefit of fociety, by declining all controversy, than by exhibiting even the profoundest skill in polemic disputes; their contests with each other often turn on speculative trifles, and their disputes with the Deifts are almost at an end, fince they can have no more than victory. and that they are already possessed of, as their antagonists have been driven into a confession of the necesfity of revelation, or an open avowal of atheism. To continue the difpute longer would only endanger it; the sceptic is ever expert, at puzzling a debate which he finds himselt unable to continue, " and like like an olympic boxer, generally renity, are the best preservers of life, fights best when undermost." renity, are the best preservers of life, and health; so that, take a man as

The dying advice of a late eminent Prelate, concerning the nature and advantages of true religion.

Will conclude with that which is the most important of all things, and which alone will carry every thing else along with it; which is to recommend, in the most solemn and ferious manner, the study and practice of religion, to all forts of men, as that which is both the light of the world, and the falt of the Nothing does so open our faculties, and compose and direct the whole man, as an inward fense of God, of his authority over us, of the laws he hath fet us, of his eye ever upon us, of his hearing our prayers, affishing our endeavours, watching over our concerns, and of his being to judge and reward or punish us, in another state, according to what we shall do in this. Nothing will give a man fuch a detestation of fin, and such a fense of the goodness of God, and our obligations to holiness, as a right understanding, and a firm belief of the Christian Religion; nothing can give a man fo calm a peace within, and fuch a firm fecurity against all fears and dangers without, as the belief of a kind and wife Providence, and of a future state. An integrity of heart gives a man courage, and a confidence that cannot be shaken. A man is sure, that by living according to the rules of religion, he becomes the wifest, the best, and happiest creature, that he is capable of being. Honest industry, the employing his time well, and a constant sobriety, an undefiled purity and chastity, with a quiet ferenity, are the best preservers of life, and health; so that, take a man as a single individual, Religion is his guard, his perfection, his beauty, and his glory; this will make him the light of the world, shining brightly, and enlightening many round about him.

Thus, religion, if truly received, and fincerely adhered to, would prove the greatest of all blessings to a nation. But, by Religion, Funderstand something more, than the receiving some doctrines, though ever fo true, or the professing them, and engaging to support them, not without zeal and eagerness. What fignify the best doctrines, if men do not live fuitable to them; if they have not a due influence upon their thoughts, their principles, and their lives? Men of bad lives, with found opinions, are felf-condemned, and lie under a highly aggravated guilt; nor will the heat of any party. arifing out of interest, and managed with fury and violence, compensate for the ill lives of such falle pretenders to zeal, while they are a difgrace to that which they profess, and feem so hot for. By Religion, I do not mean an outward compliance with forms and customs, in going to church, to prayers, to fermons, and to facraments, with an external show of devotion; or even with fome ininward forced good thoughts, in which many fatisfy themselves, while these have no visible effect on their lives, nor any inward force to fubdue and rectify their appetites, passions, and secret designs. Those customary performances, how good and useful soever when well understood and rightly directed, are of little value when men rest on them, and think that because they do them, they have therefore acquitted themselves of their duty, though

they continue still proud, covetous, full of deceit, envy, and malice. Even secret prayer (the most effectual means) is designed for a higher end; which is to possess our minds with such a constant and present sense of divine truths, as may make these live in us, and govern us, and to draw down such assistance as may exalt and satisfy our natures.

So that by Religion, I mean fuch a sense of divine truth as enters into a man, and becomes a foring of a new nature within him; reforming his thoughts and defigns, purifying his heart, fanctifying him, and governing his whole deportment, his words as well as his actions; convincing him that it is not enough not to be scandaloully vicious, or to be innocent in his conversation, but that he must be entirely, uniformly, and constantly pure and virtuous, animating him with zeal to be still better and better, more eminently good, and exemplary; using prayers and all outward devotions, as solemn acts testifying what he is inwardly and at the heart, and as methods inflituted by God, to be still advancing in the use of them further and further, into a more refined and spiritual sense of divine matters. This is true Religion, which is the perfection of human nature, and the joy and delight of every one, that feels it active and strong within him. 'Tis true, this is not arrived at all at once, and it will have an unhappy allay hanging long even about a good man. But as those ill mixtures are the perpetual grief of his foul, so it is his chief care to watch over and to mortify them. He will be in a continual progress, still gaining ground upon himself; and as he attains to a degree of purity, he will find a flame of life and joy

growing upon him. Of this I write with the greater concern and emotion, because I have felt this the true, and indeed the only joy, which runs through man's heart and life; it is that which has been for many years my greatest support ? I rejoice daily in it; I feel from it the earnest of that supreme joy which I pant and long for : I am fure there is nothing elfe can afford any true and complete happiness. I have (confidering my fphere) feen a great deal of all that is shining or tempting in this world; the pleasures of sense I did soon nauseate; intrigues of state and the conduct of affairs, have fomething in them that is more specious, and I was for some years deeply immerfed in these; but still with hopes of reforming the world, and of making matikind wifer and better; but I have found, that what is crooked cannot be made straight: I acquainted myfelf with knowledge and learning, and that in a great variety, and with more compass than depth; but though wisdom excelleth folly as much as light doth darkness, yet, as it is a fore travail, it is so very defective, that what is wanting to complete it can never be acquired. I have feen that two is better than one, and that a threefold cord is not eafily broken, and have therefore cultivated friendship with much zeal and difinterested tenderness: but I have found this also vanity and vexation of spirit, though it be of the best and noble fort. So that, upon great and long experience; I could enlarge upon the Preacher's text, "All is vanity;" but I must conclude with him, "Fear God and keep his commandments, for this is the all of man," the whole both of his duty and of his happing

ness. I do, therefore, end all, in the words of David, of the truth of which, upon great experience and long observation, I am so fully asfured, that I leave these as my last words to posterity; " Come, ye children, hearken unto me : I will teach you the fear of the Lord. What man is he that defireth life, and loveth many days, that he may fee good? Keep thy tongue from evil and do good; feek peace and purfue it. The eyes of the Lord are upon the righteous, and his ears are open to their cry. The face of the Lord is against them that do evil, to cut off the remembrance of them from the earth. The righteous cry and the Lord heareth, and delivereth them out of all their troubles. The Lord is nigh unto them that are of a broken heart, and faveth fuch as are of a contrite spirit."

On the attention due to the poor, and the best method of providing for them.

SIR,

A T a time when happiness and prosperity crown our nation, when a king, universally and justly beloved, fills our throne; when public spirit and charity remarkably flourish, and men seem well disposed to remedy evils and encourage improvements; any hints tending to the public welfare will, we doubt not, be acceptable, and will meet with all the regard and attention which may seem due to their importance.

The case of the poor of the nation in general, but of the metropolis especially, has long and often been the object of serious specula-

VOL. IV.

tion; their evils are many and grievous, and every wife and good man must wish to alleviate these evils; for, though poor and needy, they are fellow-creatures and fellow-christians, made of the same blood, and heirs of the fame glory? nay, and in a political light, it certainly merits our most attentive confideration how best to provide for the lower, but most useful members of the fociety: for owe we not to them all the eafe and elegance of superior life? owe we not to the painful hand of industry and labour all the comforts and conveniences of more elevated flations? Surely then it is but justice, I will call it humanity, to take care, that when age or infirmities, when afflictions and troubles come upon them, and incapacitate them from their daily toil, furely it is but common justice to take care that they be as well provided for as their case and circumstances will admit.

Happily for them, and much to the credit of our times, many comfortable provisions are made, for their temporary misfortunes in our public hospitals: but whether the provision for them in our public workhouses is comfortable, I imagine, will fcarcely be questioned. This is the object, to which indeed the public attention has been turned, and which deferves the utmost attention: indeed private as well as public interest, calls upon us to consider it; for parish-rates are grown to fuch an exorbitant height, that families feel them very fenfibly; and if we were to hear the fum, which throughout the kingdom is collected for the poor, we should stand amazed, and wonder how it could possibly be expended. and the poor be ill provided for.

OYe

Yet they are ill provided for: the allowance, in many cases, is not sufficient to support life; and there are some workhouses, which, confcious of this, suffer their poor to go out and beg; but with sufficient economy, they abridge them of part of their weekly stipend, in consideration of this scandalous liberty.

It is much to be wished, that fome method could be fixed upon, to remedy these evils; to employ the poor properly; to support them decently; wholly to remove the opprobrious nuitance of common beggars from our streets; and to reduce the poor's rates at the same time: so large a part of which, furely, there can be no need, for inserior and mercenary officers to embezzle, and spend in eating and drinking.

I do not by any means pretend, -I am not of sufficient understanding - nor date I, by any means presume I am not of sufficient authority - to offer to the public schemes or plans for the effecting for desirable and noble an end. Let me only hope, that fome great and good men will take the matter into their hands; and, even in my little circle, I could point out many equal to the undertaking, and to whose distinguished virtues, such an attempt would add dignity. The bleffing of the poor and needy, and the reverence of all thinking perfons amongst us, would attend them; their country would honour them; and, what is chief of all, their God would crown and reward them.

But though to hope and to wish, is all that men in lower stations can ado; yet I will beg leave to propose an example to the public eye,

of a poor-house, which I have lately vifited, which gave me high fatisfaction, and which occasioned the present reflections. It is called the House of Industry, and is built on a large and open common, in the parish of Nacton, about three or four miles from Ipswich. The building is commodious, and perfectly adapted to the scheme. It is defigned for the poor of the hundreds of Colneis and Carlford, in the county of Suffolk; and the house well answers to its name. We came to it just as they had finished their dinner; and were pleafed and furprized at the cleanness and sweetness of the house, equal to that of any private family, though, I think, the inhabitants then much exceeded an hundred. The poor men, women and children, according to their different abilities, are constantly and regularly employed; chiefly in hempen works, and in fpinning, according to the direction of the managers. I examined all their stores, and found their provisions, in general, of the best forts; they brew, bake, &c. all within themselves, and have separate rooms for their flock of corn, flour, and the like, as also for their manufactories; all neat and regular, as can be conceived. It was pleasing and affecting to see little children, who could scarce speak, plying their reels, or performing their talks, with an affiduity that could scarce be expected. And the universal cleanliness in men, women, and children, gave us high fatisfaction.

The master of the house reads prayers morning and evening to the whole family, and on Sunday a clergyman performs duty in the place. I should have added, that at a proper distance from the house is an infirmary for the infectious difeased, and an apothecary's shop in the house, which a regular apo-

thecary attends.

The whole is under the direction and government of the gentlemen, clergy, &c. within the hundreds, who hold a committee at the house every Monday, and to whose good care and management the house does high honour. The industry which every able inhabitant is obliged to exert, has much diminished the number of lazy and troublefome poor in the feveral parishes within their hundreds; the worthy and deferving poor are comfortably and fufficiently provided for; no beggars are feen or allowed within the diffrict, and very large favings must necessarily be made in the poor's rates throughout the parishes.

Now if upon the plan of this House of Industry, others were erected throughout the several counties, and according to the populousness of the districts, might not happy effects be produced? and does not this seem a ready and reasonable method to provide for the poor

with propriety?

Your's, &c.

W.D.

Thoughts on various subjects. By Str Hildebrand Jacob.

t. HE chief reason, perhaps, why coxcombs are so odious to us, is because we cannot help looking upon them as pretenders to what, we believe, we have a better title to: for could a man get rid of the vanity within himself, he would hardly be offended at the appearance of it in other

people.

2. Fortune rarely grants us any bleffing, without taking fome other away at the fame time; fo that when the is in good humour with us, the feems rather to exchange her favours with us, than to multiply them upon us.

 The most certain rule to be very fincere in the advice we give, is to make the case our own, as

much as we can.

4. Fools are oftentimes not for much contemned for their flupidity, as for being held incapable of judg-

ing of our own merits.

5. It is fcarce in Fortune's power to make a coxcomb unhappy: his good opinion of himfelf will support him in most conditions. Is it not a reproach to philosophy, that vanity can answer so well the same end?

6. It is an established maxim in the world, that friendship cannot continue long but between such as have pretty near an equality in their conditions, which necessarily renders friendship of little use, or, at best, but a meer traffick.

7. Ceremony is the affectation of good breeding, as cunning is the

ape of wisdom.

8. The world's contempt for fome fort of people, ferves only to reconcile them the better to them-felves.

g. The favourites of great men may be compared to those bright clouds, which the sun has raised and shines upon, and which must fall down again upon the earth, out of which they were drawn, as soon as he withdraws his beass.

10. The most subtile flatterer has

his parafite.

O 2 in It

It: It is not always so much the wholfomeness of advice, as the manner in which it is given, which makes it acceptable.

12. It is our fate to be feldom fenfible, that we have been in a good condition of life, before we are obliged to change it for a worfe.

13. Hospitality is rarely found but in such plentiful countries, where the inhabitants have commonly more than they know well

what to do withal.

14. We may fay to ourselves concerning our passions, what a certain general faid to his foldiers upon discovering the enemy, " There they are, lads! if we do not fell them, they will fell us."

15. No man pays more homage to his own wit, than he who is not afraid of facrificing his interest to a

home jest.

16. Pride towards proud men is

a kind of virtue.

17. The freedom which our women enjoy in these northern nations, may be owing to no better motive than our want of fuch strong passions for them, as men in warmer climates are subject to. their liberty is less, mankind are observed to be greater slaves to beauty, which here, like the fun in those countries, appears unobstructed every day, without having fo much notice taken of it. But with them, like the fame glorious planet amongst us, it comes rarely forth, and is more admired, though generally discovered but through the cloud of a veil.

18. The furest way to get rid of a worthless fellow, is to confer an

obligation upon him.

19. That man who will needs instruct his wife in lewdness, or irreligion, may be faid to foment a civil war in his own dominions.

20. Whenever a poet attempts to turn historian, he is under no fmall temptation of deviating from that plain, unbiassed truth, which makes no less the foul of history, than fable, and agreeable fiction, do that of poetry: their provinces are fo very different, that they should never be suffered to pass each others bounds.

21. Man is really incapable of making any promises, but such as are conditional, the constancy of his mind and inclinations being no more in his own disposal, than the continuation of his life, or fortune. The utmost fincerity he can truly boast of, is to mean what he says, when he declares it.

22. One of the most important fecrets in writing is, to fay just

enough, and no more.

On the duty of clemency to brutes.

SIR,

HE wanton cruelty frequently exercised upon brutes is a crime which I believe many commit without confidering either the misery it produces, or the guilt it incurs; and many more who in fits of causeless or capricious displeasure intend to inflict the mifery, have yet no fenfe that they incur guilt.

To suppose that mankind in general would as frequently ill treat the creatures which God has put into their power for their use and fervice, after they are convinced that by so doing they offend him and bring guilt upon themselves, as before, is to suppose what every man would resent as a disgrace to

his species, and an insult upon himfelf; yet the moral obligation of kumanity to brutes has not, as I remember, been infifted upon from our pulpits fo forcibly, or fo frequently, as the importance of the duty requires. I was therefore extremely pleased to see the substance of two fermons, preached on a Shrove-Sunday, lately published, with a view to inculcate the duty of clemency to brutes in general, and in particular to discourage that species of cruelty, which is annually practifed, to the diffrace of our country, and our species, the throw-

ing at cocks.

The author proves that cruelty to brutes is finful, by feveral quotations from scripture, and a series of just reasoning upon them, particularly from his text, A righteous man regardeth the life of his beaft; which implies, that he who regards not the welfare of the creatures beneath him, is not righteous but wicked. The attention of that Being, whose tender mercies are over all his works, to the irrational part of the fenfitive creation, appears from the following precepts: Thou shalt not seeth a kid in his mother's milk, Ex. xxxiv. Thou shalt not kill a cow, or an ewe, and her young on the same day, Lev. xxii. If a bird's nest chance to be before thee, and the dam sitting upon the young, thou shalt not take the dam with the young, Deut. xxii. Thou shalt not muzzle the mouth of the ox when he treadeth out the corn, Deut. xxvi. It appears too, from the fame diwine revelation, that of the bounty of nature great part is intended for the subfishence and accommodation of brutes as well as of men. are told that 'God fends the springs which run among the hills into the

vallies to give drink to every beaft of the field, and that the wild affes may quench their thirst; that the fowls of heaven may have a habitation in the trees nourished by their moisture, and delight themselves with finging among the branches." We are told also, that 'when God watereth the hills from his chambers, it is done to cause grass to grow for the cattle, as well as corn, wine and oil for the fervice of man.' The tender care of the divine Being over the brute creation is also evident from his expostulation with Jonah, 'Should not I fpare Nineveh, that great city, in which there are more than fix fcore thousand persons that cannot discern their right hand from their left hand, und also much cattle.' Can it then be supposed that man may innocently mangle and torture the beings for whom God opens the fountains of the hills, compresses the clouds of heaven into rain, cloaths the fields with verdure, and the forest with shade! If we are enjoined to be merciful as our Father in heaven is merciful, mere negligence of the welfare of those animals for whom he careth, is not blameless; what guilt then must he contract who counterworks the benevolence of his maker, and, with all the insolence of derision, and the baseness of ingratitude, inslicts mifery in sport, and hears the groans which he extorts from nature, with laughter and merriment! That we are permitted to take the lives of animals is true, but it is as much for their fakes as for ours. If God had not appointed our lives to be fullained by animal food, the animal which we kill to eat, would never have lived at all. This very ordination, therefore, is an argument of the divine goodness, not to man only, but in general. For it is manifest, if the very food we eat is capable of happiness, and is actually happy till we eat it, that there is just so much more happiness produced upon the whole, than if our food confisted wholly of things infensible; the happiness of the creatures we eat, feems therefore, to be the very condition upon which we are allowed to eat them; and nothing can be more ridiculously abfurd, than to infer from our right to kill them for food, that we have a right to torture them for the most diabolical purpose, the pleasure of doing mischief, and contemplating

misery.

As our divines feem to have left the duty of general humanity, and, indeed, every duty of which neither God nor man is immediately the object, to moral writers, and transferred it from divinity to polite literature, this author expresses an honest and benevolent wish, that Some person, whom providence has bleffed with riches, would found an annual lecture on the duty of clemency to brutes, and appoint an handsome falary for the preacher, upon condition that he should publish a certain number of copies of his fermon within a limited time; this, however, will be less necesfary if our clergy should take the hint, and make it a subject of their discourses upon proper occasions, particularly at Shrove-tide, when the most inhuman and infamous practice of throwing at cocks usually takes place, notwithstanding the laws by which it may be restrained. arifing from the negligence of those who should enforce them, and their inattention to the enormity of the crime.

The folly of being dissatisfied with the times we live in.

IT is aftonishing that the world should continue so bad, and even grow worse and worse every day, when every individual in it has an infallible receipt to reform

and improve it,

The person out of place, and who confequently wants to be in place, does not wonder that things go so ill, when people of a certain rank and character, of a certain age, dignity, and experience in bufiness, are not called upon to fleer the public vessel; and when, on the contrary, it is left to the conduct of new and unexperienced men. It was not fo formerly, when certain people (exactly like himself) were culled out to carry on the arduous affairs of the kingdom. does not fay this from a defire of being, or a regret of not being, employed; but from a hearty and fincere affection for his dear country. Every body knows that he does not value nor want any employment, and that he despises the profits of one. But be that as it will, it is certain, that merit is not confidered in these days.

The sublime author, who chuses to write in an unglazed garret, for the benefit of the air, laments grievously the neglect of literary merit. It was not so formerly; there were then your Dorsets and your Halisaxes, who were at once poets and patrons; who elicited merit out of its modest obscurity, and rewarded it with civil employments. This is the true way of giving lustre to a government. Augustus and Meccanas, who he believes were as wise as some folks, practifed this method, and owed

their

their glory to it. But where are now the patrons of letters? For his part, he declares, that he only writes for amusement, and not for interest.

The unpreferred doctor of divinity, with a prominent cheft, and large fluttering fearf, laments the deluge of vice, prophaneness, and immorality, that overwhelms and differences the prefent age. But how should it be otherwise, when favour is the only road to preferment, inflead of found learning. As for the bishops, he will say nothing of them; but that, considering their revenues, he thinks they might afford to labour harder in the vine-

vard than they do.

The veteran officer, who favs that he has had all his bones broken, though perhaps he has never ferved at all, bewails the decay of the true regular art of war. But how should it be otherwise, when boys are put at the head of armies! Wolfe took Louisbourg and Quebec, contrary to all the found rules of war; and, strictly speaking, he looks upon their taking, as blunders, and as null and void in themselves. compares Amherst and Wolfe to boys who rob orchards; and who do not take ladders and baskets with them. but most irregularly climb over the walls, and fwarm up the trees, and carry off the fruit; not without manifest danger of their lives,

There is an inferior fort of repairers of wrongs, and reformers of abuses, who swarm in clubs and coffee-houses, and are properly haberdashers of small wares. These gentlemen inveigh with great acrimony against the degeneracy of the times, and all those abuses in which they would, and cannot be sharers. The pilferings of clerks in offices, the combination of tradefmen, the want of police in the streets, and a thousand other irregularities; for every one of which, if they were but consulted, authorized, and, above all, employed and paid, they have infallible nostrums. But these are not times to hope for reformation, when people think only of their own interest.

For my own part, Sir, I admit that there are abuses which every honest man must wish were corrected, but at the same time I confess that I have no specific remedy to offer for their cure. By all I have read, both in facred and prophane history, crimes and abuses have been co-æval with human nature; their modes only have varied in different ages of the world, and perhaps there never was a period fince the creation, when crimes and vices were less atrocious and shocking than in the present age. Manners, now polished and softened, have improved morals. Self-interest was always the ruling passion of all mankind; the old way of gratifying it was by murdering and poisoning; the new fashion is by deceit; and I confess that I would rather be deceived than affaffinated or poisoned.

I will conclude with one word of advice to these unmerciful censurers of the present times, from the statemenders at St. James's, down to the reformers of abuses in clubs and costee-houses, which, I hope, may mitigate their just grief for the degeneracy of the present times. Let them begin at home, examine their own hearts, and root out from thence, if they can, the passions of self-love, pride, envy, hatred, and malice, the true and secret motives of their censure; and when they have brought that about, they will

04

fee things in a very different light, take the world as it is, and drink their wine, their coffee, their punch, or their ale, with infinitely more comfort than they do at prefent.

Character of the English. From the SCHEMER.

must we impute this unsteady behaviour, that in no one article of their lives or manners are the English directed by the principles of reason? It is because not one in a thoufand acts upon any principle at

With hearts of republicans, they pen the flattery of flaves; with inward grumbling and discontent, they raise supplies for half the powers of Europe; and yet with fuch a bale attention to private interest, that near a fifth part is squandered in lotteries and brokerage. In the same day, they will greedily attend to the bitterest invectives again their allies, and spoil all the furniture of their diningrooms with clay candlesticks and farthing lights, in honour of their victories. With a gloomy fullenness, they put on the falhions of their volatile neighbours; and at the fame time universally condemn and practife the fopperies of France. Without any true and honest regard to their country, without any real public spirit, they are brave even to rashness, and courageous beyond the example of the firmest patriots. The least turn of affairs, the most trivial loss, will make them fearful of an enemy whom they daily deride and despise. In private life, they are faucy without imperioufness, generous without kindness, fevere without hard-heartedness; in trifles tenacious; in friendships, blind and undiscerning; but little connected by the ties of blood, and oftentimes more willing to oblige a ffranger, than a relation: they are fincere without civility, and without unkindness morose. In religion, with little or no communion or fellowship, they profess to be members of one church. They believe in Christ, and yet neglect his institutions. They acknowledge also two facraments in their church; that of baptism they look upon as necessary, more because it gives them a name, than for any other reason; and therefore the sponsors will give security for the infant, without knowing or attending to the questions they are asked, or ever after examining the conduct and behaviour of the child committed to their charge. The other facrament, the Lord's supper, is supposed very rightly to be a fervice which no one should engage in, that is not serious in his duty; and for this reason, not one in fifty ever goes near the communion-table; and by this behaviour confesses to the world, that he is very unwilling to repent, or enter into a new course of life: so that he would be thought a Christian, without performing the fervices of the church of Christ. By this I mean only those who are really churchmen; for take the whole kingdom throughout, any one Sunday in the year, and you will find twenty at church, fifteen at different schism shops, and the rest of the hundred in ale-houses, counting-houses, parties of pleasure, or following the domestic occupations of the families they belong to.

I conceive this to be no partial estimate of the manners of the En-

glish;

glifh; and now we must examine, whence comes this hydra-headed evil, which thus universally sprouts forth in every member of the com-

munity.

One popular author has referred it to effeminacy; but we must acknowledge him biaffed in his opinion, because the evil still continues, though that cause hath in many instances ceased. Another of less note attributes it to fear; but that cause is not sufficiently general to be the main spring of such various actions. No, the basis of all the inconfiltencies of this undisciplined, unprincipled, unenlightened hation, is a false appetite for liberty; which has, through an unreasonable pursuit, degenerated into licentiousness.

Ye are in all things, O Britons, a licentious people! Ye act upon that noble principle, which your mafter Satan established, when his resolute wit discovered subjection to his Maker was servile and disgraceful.

Ye say, ye are loyal subjects: and yet the greatest courtiers among ye are the greatest republicans, nor will the greatest in your tribes refuse, in the same hour, to sing songs of triumph in honour of your fovereign, and utter the indecent ribbaldries of difgusted traitors. What fervile submission do ye expect from those members who are to represent you; and how well pleased ye are to level all authority, unto the dirt, even as low as yourselves. Ye say, ye have a value for your country, and yet how few there are among you that would not facrifice it to party or profit! How gay and loyal are the appearance of your tradefmen, yet inwardly how debased by fringgling, how cankered with debts! Public Rocks, and private

loans, have filled near half your cities with idle gentlemen of pleafure, chiefly enlisted in the service of licentiousness. The retailed fcraps of difunited literature, which are jumbled together in every periodical paper, have made all the kingdom learned in every science; this teaches the mind to wander in uncertainty, and calls off the application which every individual should bestow folely upon his own business, into frivolous excursions on the furface and foum of learning. Drefs, fashion, and affectation, have put all upon an equality; fo that it is difficult to tell the milliner from her ladyship, my lord from the groom, or his grace in Pall-mall from the tallow-chandler at Wapping.

Nor is there to be found any alteration of this general plan in private families, or domestic life: children making a flavery of dependance and obedience; and, taking advantage of the law of their country, renouncing the authority of their parents, as foon as they are able to crawl alone; wives in breeches; husbands abroad; fervants in ruffles; and the whole house anarchy and confusion. Nay, to fuch a pitch of impudence are those mean hirelings arrived who drudge in the party-coloured badge of submission, that they will spit in the cup of their master's friend if he be not liberal to excess; give him water for wine; and turn him out of doors as though they were letting out a pickpocket or a thief.

But in religion the scene is still worse and worse; there licentiousness breaks out into swarms of indigested sectaries, who will lop off a branch from the mother trunk because a single leaf is saded or sickly; such as are offended because I

wear

wear a coat whose surface refracts the rays of the sun more obliquely than they fancy is agreeable to the

faith of a christian.

Nor is this the blackest picture of your licentious behaviour, ye have these among ye who call themselves men of fense and reason. You. gentlemen, are free agents; you love a freedom and liberty of thought, and therefore you will ridicule the scriptures, and try its sacred doctrines by the test of mummery and laughter: the next thing you fet about, will be to try your Maker in the fame scales, and to put up the Creator of this universal frame as the laughing flock of wits and buffoons. This is a glorious liberty indeed! and this you call the freedom of the will, and the noble faculty of a discerning reason.

I hope, my pupils, you will not think me tedious: The fubicct I have in hand is of consequence, and requires fome thought and recollection. I know, indeed, you are most of you great adversaries to any thing prolik; every subject, every undertaking, must now be done in an hurry, or your licentious spirits rife into ferment, and boil with hasty indignation. A sermon defigned to promote the falvation of your fouls, if it last half an hour, tires and fatigues you to death. An expedition, if it go not against wind and tide, in spite of sickness and climate, is considered as lost, de feated, and overthrown. A peace, if it be not made just at the time ye would have it, feems to be protracted, in order to enslave you, and reduce you to beggary and rags; and we allo, merry citizens, join in the common humour of impatiency; and, if ye can't find contractors, like bottle-conjurors, to promise you miracles, and a bridge in five years time, grow desperate for want of your play-thing; and storm at the dilatory mason for not covering, with the utmost dispatch, that profusion of bad Latin which ye have just sense enough to wish buried in the earth. But, alas! ye are all aground: no carpenter nor mason, now can be found in the world, mad-headed enough to bind himself to the execution of impossibilities; is this not then licentiousness?

But now for the scheme to remedy this evil. In the first place, as to your religion.-Make it not the tool of faction: continue not in error because it is the fashion of your friends; nor too nicely and rigoroufly infift upon trifles, and neglect the effentials of brotherly love, charity, faith, hope, and humility. Remember, an open hand makes not charity without an open heart; and that stubbornness is the very opposite of an humble mind. Judge not vainly of your own persuasion; and if you are in a private station, remember it is your buliness to reform at home, nor fet about reforming others till you have brought yourfelf up to the true christian standard: and observe this general rule, that all authority is derived from God, whether civil or pastoral. Therefore he that fets up for a teacher or governor upon his own foundation, advances his claim upon the fame principle which Satan urged against the dominion of the Almighty. As to teachers; indulge not ticklish ears, gape not, like the Athenians, after novelties every day, and be not given to change, except where you find doctrines offered to you that are inconfistent with the gospel of your master. Set not your clergy, like prizefighters,

fighters, to contend in ale-houses for your pulpits; nor wear out, by perpetual elections and oppositions, that harmony and love which is the very cement of christianity, Exercise not your religion by starts and fits, but daily, universally, and confistently; and encourage not those writers, or writings, which manifestly tend only to abuse the most facred ordinances of God.

Do not, in politics, blindly follow any party to extreme; be not basely servile, nor licentiously saucy. Know and acknowledge that 'subordination is the necessary cement of a state: For if all parts are alike, they cannot be framed into different uses and members. Have more fense and prudence than to talk of matters which you do not understand; rather gladly suffer, than hurt the public faith; for however specious that argument may appear, that home is to be first confulted, yet ought the faith of the nation to be kept facred and inviolable. But in these things, as private men, ye have no concern. If you profess yourselves to be patriots, remember, you may do more good by a difpassionate choice of a worthy honest member to represent you, than by learned harangues for seven years on continental measures ever a dish of coffee or a bottle of port. Be careful of your choice of a good man; and when you have got him, be not ready to hear the idle tale of every fool against him; for politics, in private, take a cast from the relater, and are variously represented according to the various interests of mankind. Look upon your fovereign with reverence, and be not desirous of diminishing the dignity of his person or crown. When your nobility will give you

an opportunity, by a proper exertion of their talents, honour them as the noble descendents of an illustrious race, and pay them the due distinction which their birth and quality demand. Scorn not to be obliged, nor fret at an honest dependence. Your maxim is, that all mankind are free, and therefore you fet up for independency. My maxim is, that all mankind are bound by one common link, bound to aid and affift one another, and therefore I will receive with thanks, and, if possible, repay with generofity. Good offices to one another are the common traffick of mankind; being connected through necessity, we practife the duties of love, friendship and humanity. In private life, be affable; know your place, your condition, your expences, and your income: put not the yearly profits of a precarious trade upon the fame footing with the rents of an estate, or the statutable interest of a certain capital stock; for this also leads to a licentious equality. Remember that excellent christian rule, What soewer ye would that men should do unto you, even do so unto them. Attend feriously each man to his own business, so ye will attain fuch perfection and knowledge, and those who deal with you will be led to put an entire confidence in your abilities; and let none of you expect more from man than nature, time, or the universal principles of things will permit.

Thus would I have you, my countrymen, inwardly distinguished; and as to outward distinctions, I could also wish them more certain and general. The flourishing trade and circumstances of the middling people in this kingdom have put all distinctions of this kind entirely

afide,

afide, yet I could wish that riches alone might not be the outward diftinction beteen man and man.

On the extraordinary cleverness of the Moderns.

T Have often been of opinion, that I should our language ever become what the Greek and Latin are now, and any of our news papers (which by the way is not very probable) have the good fortune to escape the rage of time, and be perused a millennium or two hence; the reader will not be a little furprized, in conning over the advertisements, to find the amazing perfection to which all things have been brought here, towards the middle of the eighteenth century. Indeed, in this respect the ancients were but mere novices to us; and notwithstanding the veneration which many still pretend to retain for antiquity, I will undertake to make it appear evident to every one who has his fenses about him, that neither in the reigns of Augustus or Trajan, put together, were there half the number of clever fellows existing, as are in the single reign of George III. My proofs for this shall be drawn from the aforesaid advertifements, in which we find complete histories, complete bodies of architecture, complete husbandries, complete cookeries, complete justices of the peace, complete militiamen, and complete rat-catchers. Let any man now only compare thefe, and the innumerable other complete things which this age has produced, with the pandects, digefts, and anthologs of old, and he will most certainly own, at the very first fight, that the fages of Greece and Rome, (though complete fellows enough

too in their way) yet were, by no means, half so complete as the present sages of Great Britain. Nor is our ingenuity confined to the theory only, for in practice we shall be found equally eminent. Every disease has its never-failing, infallible, grand specific, or universal remedy for all ages; and down from the great Dr. Rock, the powerful restorer of broken constitutions, to the fagacious Mr. Tobit Earle, who, with equal fuccess, presides over smoaky chimnies, we find them all ready to engage their honour for the efficacy of their respective performances. In short, whether the point be to kill time, or destroy fleas, we have the most infallible receipts always at hand for either: and the bookfellers, who, it must be allowed, of all the modern fages that this kingdom has produced, best understand their own interest. feem fo thoroughly to have confidered the strict union there is between the foul and body, that the fame shop which sells pills to purge melancholy, now furnishes us also with a fafe and speedy remedy for almost every kind of distemper. Should it be objected, indeed, hereafter, by any ill-natured critic, who repining at the inferiority of his own times, may have the confidence to tell his readers, that these were merely devices to catch the unwary; and, in fupport of his objection, produce the bills of mortality inferted in the very same papers; I make no doubt but some able commentator will arise, who, with much force of argument and display of literature. shall prove that the said bills of mortality, were only registers of fuch as, like the critic, had no confidence in these advertisements, and therefore quitted this life for an early

early grave; that our church-yards and other depositaries of the dead, were but so many fields of battle, or at least catacombs of those who had been flain in war; and that all who availed themselves of the proffered prescriptions lived to a vast old age, when, like Tithonius, they were at last wore away to grasshoppers, and hung up in balkets for the confolation of the furviving relations. In confirmation too of this, I would have every advertising empiric of the least eminence, provide himself with a number of wicker-baskets, made of the toughest materials, and having labels of the same affixed to them, containing the names of the feveral persons who had been endowed with longevity by the help of their medicines; these to be sufpended in their laboratories: and as willow or offer may be supposed to be equally durable with bread or packthread, which we all know to have been found entire in the ruins of Herculaneum; we may as reafonably conclude, that these baskets will, one day or other, fall into the hands of some judicious collector of a distantage, who will consider them as incontestible remains of our unrivalled proficiency in the art of healing, and, accordingly, give them a place among the most venerable reliques of antiquity. Nor need these leaders of the faculty be in the least apprehensive of any disgrace that may accrue to them from the above practice, even though should be found out hereafter that there had never been such Anthropotettiges or human-grashoppers existing, as those pretended to have been hung up in their baskets; for in this, they have the example of Alexander the Great, to quote, by way of precedent, who, though undoubtedly as much a proficient in

the art of healing as themselves, yet, is well known to have made use of a like artifice, to induce posterity to think more highly of his performances. Their brother doctors too, the country farriers, have already shewn them the way, by nailing to their shops, the hoofs, horns, &c. of innumerable animals, which were never so much as let blood by them.

Having thus, Sir, given you my thoughts on the wonderful perfection to which all things are at prefent arrived; I shall, in my next, point out the cause to which this perfection is owing; and in the

mean time, remain, Sir,

Your very humble fervant, DRMOCRITUS MINOR.

On the country manners of the present age. From the Genius.

Ergo ubi me in montes et in arcem ex urbe removi, suitant de Quid prius illustrem ?——— Hon.

T this season of annual migration, (as a great writer folemnly stiles it) when the noble lord and the knight of the shire, go down to their feveral feats, to fupport their interest in the country; when the lawyer takes his circuit : when the right reverend diocesan. appoints his visitation; and when the humble out-rider, aftride his faddle-bags, goes his rounds for fresh orders, to dealers and chapmen in the country; -in a word, when business or pleasure carry thousands out of town, it is no wonder that one or the other should have transported the Genius almost two hundred miles beyond the limits of the bills of mortality. I could oblige the reader with a curious detail of my journey and adventures: I could tell him, that my publisher furnished me with one horse, and my printer with another, together with his devil in livery, for an attendant: But these and many other curious particulars must be deferred to some future opportunity, that in the mean time I may have leisure to communicate some few observations made en passant, on my fellow-subjects resident in the country.

Notwithstanding the encomiums on a rural life, fown fo thick in the writings of poets and philosophers, we do not, in this degenerate age, think ourselves sure to breathe the pure air of innocence and ancient fimplicity, the minute we have got out of the smoke of London; we do not perceive a gradual declension of vice at every mile-stone, or discover morality upon every hay-cock. The clown who works at plough and cart, nay even the tender of sheep, for whom we have so much respect in pastoral and romance, excite our veneration little more than a link-boy or a hackney-coachman. The very milk-maid, with her pail on her head, engages our esteem no more than her fellow-labourers, who carry the yoke about our ftreets: and fo little do we expect to find the manners of the golden age prevail among our ruftics, that we see, without remorse or surprise, fome bumkin Phillis condemned to the gallows for the murder of her baftard child, or a refractory Damon committed to the house of correction, fet in the stocks, or fent abroad for a foldier.

But though we have furmounted these prejudices, perhaps westill retain some antiquated ideas of the manners of the country, scarce less remote from those which at present reign there, than even the manners of Arcadia. We are apt to take it for granted, that there yet remains among them, a strong leaven of that roughness and rufficity, which was follong confidered as their distingnishing characteristick. It is scarce half a century ago, fince the inhabitants of the diftant counties were regarded as a species, almost as different from those of the metropolis, as the natives of the Cape of Good Hope. Their manners, as well as dialect, were entirely provincial; and their dress no more refembling the habit of the town, than the Turkish or Chinese. But time, which has inclosed commons, and ploughed up heaths, has likewife cultivated the minds, and improved the behaviour of the ladies and gentlemen of the country. We are no longer encountered with hearty flaps on the back, or pressed to make a breakfast on cold meat and strong beer \$ and in the course of a tour of Great Britain you will not meet with a high crowned hat, or a pair of red stockings. Politeness and taste seem to have driven away the horrid spectres of rudeness and barbarity, that haunted the old mansion-house and its purlieus, and to have established their feats in the country.

It is certainly to the intercourse between the town and country, of late so much more frequent, that this extraordinary change must be imputed. Every traveller, that goes down to Cumberland, or Cornwall, carries in some sort the town along with him, and inevitably leaves some tincture of it behind him: and every visit, which an honest rustic pays to London, insensibly siles off some of the rust of the country. Formerly indeed, when that the reads were dark, and

the

the ruays nurre mire, as Milton expresses it in one of his sonnets, a journey into the country was confidered almost as great an undertaking as a voyage to the Indies. The old family coach was fure to be stowed, according to Vanbrugh's admirable description of it, with all forts of luggage and provisions; and perhaps in the course of the journey, a whole village, together with their teams, were called in aid to dig the heavy vehicle out of the clay, and to drag it to the next place of wretched accommodation, which the road afforded. Thus they travelled, like the caravan over the deferts of Arabia, with every disagreeable circumstance of tediousness and inconvenience. But now, the amendments of the roads, with the many other improvements of travelling, have, in a manner, opened a new communication between the feveral parts of our island. The people venture forth, and find themselves enabled to traverse the country with ease and expedition. Stage-coaches, machines, flys, and post-chaises are ready to transport paffengers, to and fro, between the metropolis and the most distant parts of the kingdom. The lover now can almost literally annihilate time and space, and be with his mistress, before the dreams of his arrival. Even a troop of geele and turkles may be driven from the country to town in a shorter time, than a nobleman and his family could have taken the journey heretofore; and the gamester offers to bet, that he can go from London to Edinburgh in 12 hours. In short, the manners, fashions, amusements, vices, and follies of the metropolis, now make their way to the remotest corners of the land, as readily and speedily,

along the turnpike-road, as, of old. Milton's Sin and Death, by means of their marvellous bridge over the Chaos, from the infernal regions to our world.

The effects of this easy communication, have almost daily grown more and more vifible. The feveral great cities, and we might add many poor country towns, feem to he univerfally inspired with an ambition of becoming the little Londons of the part of the kingdom wherein they are fituated: the notions of splendour, luxury, and amusement, that prevail in town. are eagerly adopted; the various changes of the fashion exactly copied; and the whole manner of life studiously imitated. The country ladies are as much devoted to the card-table, as the rest of the fex in London; and being equally tired of making puddings and tarts, or working screens and carpets, they too have their routs, and crowd as many of their neighbours as they can get together, into their apartments: they too, have their balls and concerts by subscription: their theatres, their mall, and fometimes their rural Ranelagh, or Vauxhall. The reading female hires her novels from fome country circulating library, which confifts of about an hundred volumes; and the merchant, or opulent hardware man, has his villa three or four miles distant from the great town where he carries on his business. The nobleman and country 'squire, no longer affect an old-fashioned hospitality, or suffer the locusts of the country to eat them up, while they keep open-house, and dispense victuals and horns of beer, like the ancient convents, to all comers; but more fashionably display the elegance of their taste, by making genteel entertainments: the same French cooks are employed, the same wines are drank, the same gaming practifed, the same hours kept, and the same course of life pursued in the country as in town. The force of this illustrious example influences the whole country; and every male and semale wishes to think and speak, to eat and drink, and dress, and live, after the manner of people of quality in London.

There is no popular subject of fatire, on which the modern common-places of wit and ridicule have been exhausted with more success, than on that of a mere cockney affecting the pleasures of the country. The dufty house close to the road fide, the half acre of garden, the canal no bigger than a wash-handbason, &c. have all been marked out with much humour and justice; but after all, it is not unnatural for a tradefman, who is continually pent up in the close streets and alleys of a populous city, to wish for fresh air, or to attempt to indulge a leifure hour in some rural · occupation: and he who prevails on himself to give up the enjoyments which nature has thrown into our laps in the country, for a poor imitation of the follies of the town, is infinitely more ridiculous. Lycurgus passed a law in Sparta to prevent the importation of foreign vanities, and not only expressly forbad the continuance of strangers in the city, for fear of their corrupting the people, but for the same reasons would not permit his own people to travel. Frequent intercourfe will undoubtedly produce fimilarity of manners; but the prefent communication between the various quarters of our islands, are fo far from being to be lamented, that it is only to be wished and recommended, that they may produce real refinements and improvements of a valuable nature. At the fame time let it be confidered by our country gentlemen and ladies, that no benefit can arise from changing one fet of follies for another; and that the vices of the town never appear fo truly ridiculous, or fo thoroughly contemptible, as when they are aukwardly practifed in the country.

A prophety by Monsieur Voltaire.

Geneva, 1761.

IN those days there will appear 1 in France a very extraordinary person *, come from the banks of a lake. He will fay unto the people, I am possessed by the dæmon of enthuliasm; I have received from heaven the gift of inconfiftency; and the multitude shall run after him, and many shall believe in him: and he shall fay unto them, ye are all villains and rascals; your women are all prostitutes; and I am come to live amongst you; and he will take advantage of the natural lenity of this country, to abuse the people: And he will add, all the men are virtuous in the country where I was born, and I will not flay in the country where I was born; and he will maintain, that the sciences and the arts must necessarily corrupt our morals, and he will treat of all forts of sciences and arts; and he will maintain, that the theatre is a fource

^{*} Monsieur Rousseau, Author of the New Eloisa.

of proflitution and corruption, and by another, and this good man, he will compose operas and plays. He will publish, that there is no virtue but among the favages, tho' he never was among them; he will advise mankind to go stark naked, and he will wear laced cloaths when given him. He will employ his time in copying French music, and he will tell you there is no French music. He will tell you, that it is impossible to preserve your morals, if you read romances; and he will compose a romance, and in this romance shall be seen vice in deeds, and virtue in words, and the actors in it shall be mad with love and with philosophy; and in this romance we shall learn how to seduce a young girl philosophically; and the disciple shall lose all shame and all modefty: and the shall practife folly, and raise maxims with her master, and she shall be the first to give him a kiss on the lips, and she shall invite him to lie with her, and he shall actually lie with her; and the thall become pregnant with metaphyficks; and his love letters shall be philosophical homilies. And he shall get drunk with an English nobleman, who shall insult him, and he shall challenge him to fight, and his miftress, who hath lost the honour of her own fex, shall decide with regard to that of men; and she shall teach her mafter, who taught her every thing, that he ought not to fight. And he shall go to Paris, where he shall be introduced to fome ladies of pleasure; and he shall get drunk like a foot, and shall lie with these women of the town; and he shall write an account of this adventure to his mistress, and she shall thank him for it. The man who shall marry his mistress, shall know that the is loved to distraction VOL. IV.

notwithstanding shall be an Atheist, and immediately after the marriage, his wife shall find herself happy, and she shall write to her lover, that if the were again at liberty, the would wed her husband rather than him. And the philosopher shall have a mind to kill himself, and shall compose a long differtation to prove that a lover ought always to kill himself when he has lost his mistress: and her husband shall prove to him, that it is not worth his while; and he shall not kill himself. Then he shall set out to make the tour of the world, in order to allow time for the children of his mistress to grow up, and that he may get to Switzerland time enough to be their preceptor, and to teach them virtue, as he had done their mother. And he shall see nothing in the tour of the world, and he shall return to Europe, and when he shall be arrived there, they shall still love one another with transport, and they shall squeeze each other's hands, and weep. And this fine lover being in a boat alone with his mistress, shall have a mind to throw her into the water, and himself along with her; and all this they shall call philofophy and virtue, and they shall talk fo much of philosophy and virtue, that nobody shall know what philosophy and virtue is. And the mistress of the philosopher shall have a few trees, and a rivulet in her garden, and the shall call that her elyfium: and nobody shall be able to comprehend what that elyfium is; and every day the thall feed fparrows in her garden; and she shall watch her domesticks, both males and females, to prevent their playing the same foolish prank that she herself had played; and she fhall

shall sup in the midst of her harvest people; and she shall cut hemp with them, having her lover at her fide; and the philosopher shall be defirous of cutting hemp the day after, and the day after that, and all the days of his life; and the shall be a pedant in every word the fays, and all the rest of her sex shall becontemptible in her eyes; and she shall die, and before the dies, the thall preach according to custom; and the shall talk incessantly, till her strength fail her, and she shall dress herself out like a coquette, and die like a faint.

The author of this book, like those empericks, who make wounds on purpose, in order to shew the wirtue of their balfams, poisons our fouls for the glory of curing them; and this poison will act violently on the understanding, and on the heart, and the antidote will operate only on the understanding, and the poifon will triumph, and he will boast of having opened a gulph, and he will think he faves himself from all blame, by crying, wee be to the young girls who shall fall into it ; I have warned them against it in my preface; and young girls never read a preface; and he will fay by way of excuse for his having written a book which inspires vice, that he lives in an age, wherein it is impoffible to be good; and to justify himfelf; he will flander the whole world, and threaten with his contempt all those who do not like his book; and every body shall wonder how, with a foul fo pure and virtuous, be could compose a book which is so much the reverse; and many who believed in him shall believe in him no more.

Character of a mighty good kind of man.

HE good qualities of a mighty good kind of man (if he has any) are of the negative kind, He does very little harm; but you never find him do any good. He is very decent in appearance, and takes care to have all the externals of fense and virtue : but you never perceive the heart concerned in any word, thought, or action. Not many love him, tho? very few think ill of him: to him every body is his "Dear Sir," though he cares not a farthing for any one but himself. If he writes to you, though you have but the flightest acquaintance with him, he begins with " Dear Sir," and ends with " I am, good fir, your ever fincere and affectionate friend. and most obedient humble servant." You may generally find him in company with older perfons than himself, but always with richer. He does not talk much; but he has a "Yes," or a "True, Sir," or "You observe very right, Sir," for every word that is faid : which. with the old gentry, that love to hear themselves talk, makes him pals for a mighty sensible and discerning, as well as mighty good kind of man. It is so familiar to him to be agreeable, and he has got fuch a habit of affenting to every thing advanced in company, that he does it without the trouble of thinking what he is about. I have known fuch an one, after having approved an observation made by one of the company, affent with " What you fay is very just," to an opposite fentiment from another; and I have frequently made him contradict himself five times in a minute. As the

the weather is a principal and favourite topic of a mighty good kind of man, you may make him agree, that it is very hot, very cold, very cloudy, a fine fun-shine, or it rains, fnows, hails, or freezes, all in the fame hour. The wind may be high, or not blow at all; it may be east, west, north, or south, southeast and by east, or in any point in the compass, or any point not in the compass, just as you please. This, in a stage coach, makes him a mighty agreeable companion, as well as a mighty good kind of man. He is so civil and well-bred, that he would keep you standing half an hour uncovered in the rain, rather than step into your chariot before you; and the dinner is in danger of growing coldy if you attempt to place him at the upper end of the table. He would not fuffer a glass of wine to approach his lips, till he had drank the health of half the company, and would fooner rife hungry from table, than not drink the other half before dinner is over, lest he should offend any by his neglect. He never forgets to hob or nob with the lady of the family, and by no means omits to toast her fire-fide. He is fure to take notice of little mafter and miss, when they appear after dinner, and is very assiduous to win their little hearts by almonds and raifins, which he never fails to carry about him for that purpole. This is fure of recommending him to mamma's esteem; and he is not only a mighty good kind of man, but the is certain he would make a mighty good husband.

No man is half so happy in his friendships. Almost every one he names is a friend of his, and every friend is a mighty good kind of man.

I had the honour of walking lately with one of these good creatures, from the Royal-Exchange to Piccadilly; and I believe he pulled off his hat to every third person we met, with a " How do you do, my dear fir? Though I found he hardly knew the names of five of these intimate acquaintances. I was highly entertained with the greeting between my companion, and another mighty good kind of man, that we met in the Strand. You would have thought they were brothers; that had not feen one another for many years, by their mutual expressions of joy at meeting. They both talked together; not with a design of opposing each other, but through eagerness to approve what each other faid. I caught them frequently crying "Yes," together, and " Very true," " You are very right, my dear fir;2 and, at last, having exhausted their favourite topic of what news and the weather, they concluded, with each begging to have the vast pleasure of an agreeable evening with the other very foon; but parted without naming either time or place.

I remember at Westminster, a mighty good kind of boy, though he was generally hated by his schoolfellows, was the darling of the dame where he boarded, as by his means she knew who did all the mischief in the house. He always finished his exercise before he went to play: you could never find a false concord in his prose, or a false quantity in his verse: and he made huge amends for the want of fense and spirit in his compositions, by having very few grammatical errors. If you could not call him a scholar, you must allow he took

P 2

great

great pains not to appear a dunce. At the university he never failed attending his tutor's lectures, was confant at prayers night and morning, never missed pates, or the hall at meal-time, was regular in his academical exercises, and took pride in appearing on all occasions with masters of arts; and he was happy beyond measure, in being acquainted with some of the heads of the houses, who were glad through him to know what passed among the under graduates. Though he was not reckoned by the college to be a Newton, a Locke, or a Bacon, he was univerfally efteemed by the fenior part, to be a mighty good kind of young man; and this even, placid turn of mind has fince recommended him to no small preferment in the church.

. We may observe, when these mighty good kind of young men come . into the world, their attention to appearances and externals, beyond which the generality of people feldom examine, procures them a much better subsistence, and a more reputable fituation in life, than ever their abilities or their merit could otherwise entitle them to. Though they are feldom advanced very high, yet if fuch a one is in orders, he gets a tolerable living, or is appointed tutor to a dunce of quality, or is made companion to him on his travels; and then, on his return, he is a mighty polite, as well as a mighty good kind of man. If he is to be a lawyer, his being fuch a mighty good kind of man, will make the attornies supply him with special pleading, or bills and answers to draw, as he is fufficiently qualified by his flow genius to be a drayhorse of the law. But though he

can never hope to be a chancellor, or an archbishop; yet if he is admitted of the medical college of Warwick-lane, he will have a good chance to be at the top of their profession, as the success of the faculty chiefly depends on old women, fanciful and hysterical young ones, whimsical men, and young children, among the generality of whom nothing recommends a person so much, as his being a mighty good kind of man.

I must own, that a good man and a man of sense, certainly should have every thing that this kind of man has: yet, if he possesses no more, much is wanting to finish and complete his character: many are deceived by French paste: it has the lustre and brilliancy of a real diamond: but the want of hardness, the effential property of this valuable jewel, discovers the counterfeit, and shews it to be of no intrinsic value whatfoever. If the head and the heart are left out in the character of any man, you might as well look for a perfect beauty in a female face without a nose, as to expect to find a valuable man without fenfibility and understanding. But it often happens, that these mighty good kind of men are wolves in sheep's cloathing; and that their want of parts is supplied by an abundance of cunning. and the outward behaviour and deportment calculated to entrap the fhort-fighted and unwary.

Where this is not the case, I cannot help thinking, these kind of men are no better than blanks in the creation: if they are not unjust stewards, they are certainly to be reckoned unprofitable servants. Character of a good fort of woman. From the IDLER.

SIR,

HE uncertainty and defects of language have produced very frequent complaints among the learned; yet there fill remain many words among us undefined, which are very necessary to be rightly understood, and which produce very mischievous mistakes, when they are erroneously interpreted.

I lived in a state of celibacy beyond the usual time. In the hurry first of pleasure, and afterwards of business, I felt no want of a domestick companion; but becoming weary of labour, I soon grew more weary of idleness, and thought it reasonable to follow the custom of life, and to seek some solace of my cares, in female tenderness, and some amusement of my leisure in

female chearfulness.

The choice which has been long delayed is commonly made at last with great caution. My refolution was to keep my passions neutral, and to marry only in compliance with my reason. I drew upon a page of my pocket book, a scheme of all female virtues and vices, with the vices which border upon every virtue, and the virtues which are allied to every vice. I confidered that wit was farcastic, and magnanimity imperious; that avarice was economical, and ignorance obsequious; and having estimated the good and evil of every quality, employed my own diligence, and that of my friends, to find the lady in whom nature and reason had reached that happy mediocrity which is equally remote from exuberance and deficience.

Every woman had her admirers, and her cenfurers, and the expectations which one raifed were by

another quickly depressed: yet there was one in whose favour almost all fuffrages concurred. Miss Gentle was univerfally allowed to be a good fort of auoman. Her fortune was not large, but fo prudently managed, that she wore finer cloaths, and faw more company, than many who were known to be twice as rich. Miss Gentle's visits were every where welcome, and whatever family she favoured with her company, the always left behind her fuch a degree of kindness as recommended her to others; every day extended her acquaintance, and all who knew her, declared that they never met with a better fort of

To Miss Gentle I made my addresses, and was received with great equality of temper. She did not in the days of courtship, assume the privilege of imposing rigorous commands, or resenting slight offences. If I forgot any of her injunctions, I was gently reminded; if I missed the minute of appointment, I was easily forgiven. I foresaw nothing in marriage but a halcyon calm, and longed for the happiness which was to be found in the inseparable fociety of a good fort of auoman.

The jointure was foon fettled by the intervention of friends, and the day came in which Miss Gentle was made mine for ever. The fift month was passed easily enough in receiving and repaying the civilities of our friends. The bride practified with great exactness all the niceties of ceremony, and distributed her notice in the most punctilious proportions to the friends who surrounded us with their happy

auguries.

But the time foon came when we were left to ourselves, and were to receive our pleasures from each

P 3 other

other, and then I began to perceive that I was not formed to be much delighted by a good fort of woman. Her great principle is, that the orders of a family must not be broken. Every hour of the day has its employment inviolably appropriated, nor will any importunity persuade her to walk in the garden, at the time which she has devoted to her needle work, or to fit up flairs in that part of the forenoon, which the has accustomed herfelf to spend in the back parlour. She allows herself to sit half an hour after breakfast, and an hour after dinner; and while I am talking, or reading to her, keeps her eye upon her watch, and when the minute of departure comes, will leave an argument unfinished, or the intrigue of a play unravelled. She once called me to supper when I was watching an eclipse, and fummoned me at another time to bed when I was going to give directions at a fire.

Her conversation is so habitually cautious, that she never talks to me but in general terms, as to one whom it is dangerous to trust. For discriminations of character she has no names; all whom she mentions are bonest men and agreeable women. She timiles not by sensation but by practice. Her laughter is never excited but by a joke, and her notion of a joke is not very delicate. The repetition of a good joke does not weaken its effect; if she has laughed

once, the will laugh again.

She is an enemy to nothing but ill-nature and pride, but she has frequent reason to lament that they are so frequent in the world. All who are not equally pleased with the good and bad, with the elegant and gross, with the witty and the dull, all who distinguish excellence from defect, she considers as ill-

natured; and she condemns as proud all who repress impertinence or quell presumption, or expect respect from any other eminence than that of fortune, to which she is always

willing to pay homage.

There are none whom she openly hates; for if once she suffers, or believes herself to suffer, any contempt or insult, she never dismisses it from her mind, but takes all opportunities to tell how easily she can forgive. There are none whom she loves much better than others; for when any of her acquaintance decline in the opinion of the world, she always finds it inconvenient to visit them; her affection continues unaltered, but it is impossible to be intimate with the whole town.

She daily exercises her benevolence by pitying every misfortune that happens to every family within her circle of notice; the is in hourly terrors left one should catch cold in the rain, and another be frighted by the high wind. Her charity she shews by lamenting that so many poor wretches should languish in the streets, and by wondering what the great can think on that they do so little good with such large estates.

Her house is elegant, and her table dainty, though the has little tathe of elegance, and is wholly free from vicious luxury; but the comforts herself that no-body can say that her house is dirty, or that her dishes are not well dress.

This, Mr. idler, I have foundby long experience to be the character of a good fort of Woman, which I have fent you for the information of those by whom a good fort of woman and a good woman, may happen to be used as equivalent terms, and who may suffer by the mittake like yours, &c.

TIM WARNER.
POETRY.

POETRY.

The concluding copy of the Oxford Verses on the death of his late, and accession of his present Majesty. Written by Mr. WARTON, Poetry Prefessor of that University.

To Mr. SECRETARY PITT.

The tears that science sheds on glory's grave? So pure the vows which classic duty pays To bless another Brun/wick's rising rays!——O Pitt! if chosen strains have pow'r to steal Thy watchful breast awhile from Britain's weal; If votive verse, from sacred Iss sent, Might hope to charm thy manly mind, intent On patriot plans which ancient freedom drew, Awhile with fond attention deign to view This ample wreath, which all th' affembled Nine With skill united have conspir'd to twine.

Yes, guide and guardian of thy country's cause! Thy conscious heart shall hail with just applause The duteous muse, whose haste officious brings Her blameless offering to the shrine of kings: Thy tongue well tutor'd in historic lore, Can speak her office and her use of yore: For fuch the tribute of ingenuous praise Her harp dispens'd in Græcia's golden days; Such were the palms, in isles of old renown, She cull'd to deck the guiltless monarch's crown; When virtuous Pindar told with Tufcan gore How scepter'd Hiero stain'd Sicilia's shore, Or to mild Theron's raptur'd eye disclos'd Bright vales where spirits of the brave repos'd: Yet still beneath the throne, unbrib'd she sate, The decent hand maid, not the flave of frate; Pleas'd in the radiance of the regal name To blend the luftre of her country's fame: For, taught like ours, she dar'd with prudent pride, Obedience from dependence to divide: Though princes claim'd her tributary lays, With truth severe she temper'd partial praise; Conscious she kept her native dignity, Bold as her flights, and as her numbers free.

And fure if e'er the Muse indulg'd her strains, With just regard, to grace heroic reigns, Where could her glance a theme of triumph own So dear to fame as GEORGE's trophied throne? At whose firm base, thy stedfast soul aspires To wake a mighty nation's ancient fires: Aspires to baffle faction's specious claim, Rouze England's rage, and give her thunder aim. Once more the main her conquering banners sweep, Again her commerce darkens all the deep. Thy fix'd resolve renews each fair decree, That made, that kept of yore, thy country free. Call'd by thy voice, nor deaf to war's alarms, Its willing youth the rural empire arms: Again the Lords of Albion's cultur'd plains March the firm leaders of their faithful swains : As erst stout archers, from the farm or fold, Flam'd in the van of many a baron bold. Nor thine the pomp of indolent debate, The war of words, the fophistries of state; Nor frigid caution checks thy free defign, Nor stops thy stream of eloquence divine: For thine the privilege, on few bestow'd, To feel, to think, to speak for public good. In vain corruption calls her venal tribes; One common cause, one common end prescribes ; Nor fear nor fraud, or spares or screens, the foe, But spirit prompts, and valour strikes the blow. O PITT, while Honour points thy liberal plan, And o'er the Minister exalts the Man. Is congenial, greets thy faithful fway. Nor scorns to bid a statesman grace her lay. For Science still is justly fond to blend, With thine, her practice, principles, and end. "Tis not for Her, by false connections drawn, At splendid Slavery's fordid shrine to fawn; Each native effort of the feeling breaft To friends, to foes, in servile fear, supprest: 'Tis not for Her to purchase or pursue The phantom favours of the cringing crew; More useful toils her studious hours engage, And fairer lessons fill her spotless page: Beneath ambition, but above difgrace, With nobler arts she forms the rising race: With happier tasks, and less refin'd pretence, In elder times the woo'd Munificence To rear her arched roofs in regal guise, And lift her temples nearer to the fkies;

Princes and prelates stretch'd the focial band, To form, diffuse, and fix her high command: From kings the claim'd, yet fcorn'd to feek the prize, From kings, like GEORGE, benignant, just, and wife. Lo, this her genuine lore. - Nor thou refuse This humble present of no partial Muse From that calm bower, which nurs'd thy thoughtful youth In the pure precepts of Athenian truth: Where first the form of British liberty Beam'd in full radiance on thy musing eye: That form, whose mien sublime, with equal awe, In the same shade unblemish'd Somers saw: Where once (for well she lov'd the friendly grove Which every classic Grace had learn'd to rove) Her whispers wak'd sage Harrington to feign The bleffings of her visionary reign; That reign, which now no more an empty theme, Adorns philosophy's ideal dream, But crowns at last, beneath a George's smile, In full reality this favour'd isle.

TRUTH AT COURT. By a Reverend Dean.

YOW fie upon't! quoth FLATTERY, These are bad times indeed for me, Spurn'd by the man, and in the place, Where least I thought to meet disgrace: And yet I faid the finest things, "Thou young, but righteous, best of kings, Thou, who --- "Abrupt he turn'd away, And with an air, as who should say "Go shew that gentleman the door, And never let me see him more." Shock'd I withdrew --- when, to enhance My shame, I straightway saw advance, And take my very place, forfooth, That strange old-fashion'd fellow, TRUTH. O! how it griev'd my heart to fee The diff'rence made 'twixt him and me! I of each fanguine hope bereav'd, He with a gracious smile receiv'd: And yet—(or greatly I mistake) The monarch blush'd whene'er he spake; For he, though in a plainer way, Said ev'ry thing I meant to fay.

The Patriot King, or George the Third.

Three Georges now. for Britain's welfare born,
The latest times our annals will adorn.
The first, tho' view'd with Party's envious eyes,
Contending factions own, was good and wise.
Thro' a long reign, brave, mild, and just approv'd,
We stile the Second George — the Well-belov'd.
Behold a youth now mounts the British throne,
Whom every royal virtue calls her own!—
Proceed, great Prince, a Patriot King compleat,
And George the Third henceforth be George the Great.

ODE for the NEW YEAR, 1761, performed before his Majesty. Written by William Whitehead, Esq; Poet-Laureat.

> Strophe. TILL must the Muse, indignant, hear The clanging trump, the rattling car, And usher in each opening year With groans of death, and founds of war ? O'er bleeding millions, realms opprest, The tuneful mourner finks distress'd, Or breathes but notes of woe: And cannot Gallia learn to melt, Nor feel, what Britain long has felt For her infulting foe? Amidst her native rocks secure, Her floating bulwarks hovering round, What can the fea-girt realm endure, What dread, through all her wat'ry bound? Great queen of ocean, the defies All but the Power who rules the skies, And bids the florms engage: Inferior foes are dash'd and lost, As breaks the white wave on her coaft, Consum'd in idle rage. For alien forrows heaves her gen'rous breaft, She proffers peace to ease a rival's pain, Her crouded ports, her fields in plenty dreft, Bless the glad merchant, and th' industrious swain. Do blooming youths in battle fall? True to their fame the funeral urn we raise And thousands, at the glorious call, Aspire to equal praise.

Antistrophe.

Thee, Glory, thee through climes unknown Th' adventurous chief with zeal pursues,

And fame brings back from ev'ry zone Fresh subjects for the British Muse.

Tremendous as th' ill omen'd bird

To frighted France, thy voice was heard From Minden's echoing towers:

O'er Biscay's roar thy voice prevail'd: And at thy word the rocks we scal'd,

And Canada is ours.

O potent queen of ev'ry breaft,

Which aims at praise by virtuous deeds,

Where'er thy influence shines confest The heroacts, th' event succeeds.

But ah, must glory only bear, Bellona like, the vengeful spear?

To fill her mighty mind Must bulwarks fall, and cities slame,

And is her amplest field of fame The miseries of mankind?

On ruins pil'd, on ruins must she rise,

And lend her rays to gild her fatal throne: Must the mild power who melts in vernal skies,

By thunders only make his godhead known?

No, be the omen far away,

From yonder pregnant cloud a kinder gleam,

Tho' faintly struggling into day,

Portends a happier theme.

Épode.

And who is he, of regale mien, Reclin'd on Albion's golden fleece,

Whose polish'd brow, and eye serene, Proclaim him elder-born of peace?

Another George! ye winds convey

Th' auspicious name from pole to pole:

Thames, catch the found, and tell the subject sea Beneath whose sway its waters roll,

The hoary monarch of the deep, Who footh'd its murmurs with a father's care, Doth now eternal fabbath keep,

And leaves his trident to his blooming heir.

O, if the Muse aright divine,

Fair Peace shall bless his opening reign, And through it's splendid progress shine With every art to orace her train.

With every art to grace her train. The wreaths, so late by glory won, Shall weave their foilage round his throne,

9350 K

'Till kings abash'd, shall tremble to be foes, And Albion's dreaded strength secure the world's repose.

ODE for his Majesty's BIRTH-DAY, June 4, 1761, performed before his Majesty.

Written by William Whitehead, Esq; Poet-Laureat.

Strophe.

Yas at the nectar'd feast of Jove,
When fair Alcmena's son,
His destin'd course on earth had run
And claim'd the thrones above,
Around their king, in deep debate,
Conven'd, the heavenly synod sate,
And meditated boons resin'd
To grace the friend of human kind:

And meditated boons refin'd To grace the friend of human kind: When lo, to mark th' advancing God, Propitious Hermes stretch'd his rod,

The roofs with music rung! For, from amidst the circling choir, Apollo struck th' alarming lyre,

And thus the Muses sung, "What boon divine would heav'n bestow?

"Ye gods unbend the studious brow,
"The fruitless search give o'er,

"Whilst we the just reward assign, Let Hercules with Hebe join,

"And Youth unite with Power!"
Antifrophe.

O facred Truth in emblem dreft!—
Again the Muses sing,
Again in Britain's blooming king

Alcides stands confest,
By temp'rance nurs'd, and early taught
To shun the smooth fallacious draught
Which sparkles high in Circe's bowl;
To same each Hydra of the soul,
Each lurking pest, which mocks its birth,

And ties its spirit down to earth

Immers'd in mortal coil:

His choice was that feverer road
Which leads to Virtue's calm abode,
And well repays the toil.

In vain ye tempt, ye fpecious harms, Ye flow'ry wiles, ye flatt'ring charms, That breathe from yonder bower:

And

And Heav'n the just reward assigns,
For Hercules with Hebe joins,
And YOUTH unites with POWER.

Epode.

O call'd by Heaven to fill that aweful throne, Where Edward, Henry, William, George have shone, (Where love with rev'rence, laws with power agree, And 'tis each subject's birthright to be free)

The fairest wreaths already won,
Are but a prelude to the whole:
Thy arduous task is now begun,
And, starting from a nobler goal,
Heroes and kings of ages past
Are thy compeers: extended high
The trump of same expects the blast,
The radiant lists before thee lie,
The field is time, the prize eternity!
Beyond example's bounded light,
'Tis time to urge thy daring slight,
And heights untry'd explore:
O think what thou alone can'st give,

What bleffings Britain may receive
When Youth unites with Power!

An epistle to a friend, on the expected arrival of the Queen,

TES—every hopeful fon of rhyme Will furely feize this happy time, Vault up on Pegasus's back, Now grown an academic hack, And fing the beauties of a queen, (Whom, by the bye, he has not feen) Will swear her eyes are black as jet, Her teeth are pearls in coral fet; Will tell us that the rofe has lent Her cheeks its bloom, her lips its fcent; That Philomel breaks off her fong, And liftens to her fweeter tongue; That Venus and the Graces join'd To form this Phænix of her kind; And Pallas undertook to store Her mind with wifdom's choicest lore: Thus form'd; Jove issues a decree That George's confort she shall be; Then Cupid (for what match is made By poets without Cupid's aid?) Picks out the swiftest of his darts, And pierces inflant both their hearts.

Your fearful profe-men here might doubt. How best to bring this match about. For winds and waves are ill-bred things, And little care for queens and kings: But as the Gods affembled fland. And wait each vouthful bard's command. All fancy'd dangers they deride. Of boist'rous winds, and swelling tide: Neptune is call'd to wait upon her, And fea nymphs are her maids of honour: Whilst we instead of Eastern gales. With vows and praises fill the fails, And when, with due poetic care. They fafely land the royal fair. They catch the happy simile, Of Venus rising from the sea. Soon as she moves, the hill and vale, Responsive, tell the joyful tale: And wonder holds the enraptured throng To fee the goddess pass along. The bowing forests all adore her, And flow'rs spontaneous spring before her, Where you and I all day might travel, And meet with nought but fand and gravel; But poets have a piercing eye, And many pretty things can fpy, Which neither you nor I can fee, But then the fault's in you and me. The king aftonish'd must appear, And find that fame has wrong'd his dear ; Then Hymen, like a bishop, stands, To join the lovers plighted hands; Apollo and the Muses wait, The nuptial fong to celebrate; But I, who rarely spend my time, In paying court or spinning rhyme; Who cannot from the high abodes. Call down, at will, a troop of gods, Must, in a plain prosaic way, The wishes of my foul convey. May Heav'n our monarch's choice approve, May he be bleft with mutual love, And be as happy with his queen, As with my Chloe I have been: When wandering through the beechen grove, She fweetly fmil'd and talk'd of love! And oh! that he might live to fee A fon as wife, and good as he;

And may his confort grace the throne With virtues equal to his own! Our courtly bards will needs be telling, That she's like Venus or like Helen : I wish that she may prove as fair As Egremont and Pembroke are: For tho' by fages 'tis confest, That beauty's but a toy at best: Yet 'tis, methinks, in married life, A pretty douceur with a wife: And may the minutes as they fly. Strengthen still the nuptial tye. While hand in hand thro' life they go. Till love shall into friendship grow; For tho' these bleffings rarely wait On regal pomp and tinfel'd flate, Yet happiness is virtue's lot, Alike in palace and in cot: 'Tis true, the grave affairs of state, With little folks have little weight; Yet I confess my patriot heart In Britain's welfare bears its part; With transport glows at George's name, And triumphs in its country's fame: With hourly pleasure I can sit And talk of Granby, Hawke, and Pitt; And whilst I praise the good and brave, Disdain the coward and the knave. At growth of taxes others fret, And shudder at the nation's debt: I ne'er the fancied ills bemoan, No debts diffurb me but my own. What! tho' our coffers fink, our trade Repairs the breach which war has made: And if expences now run high, Our minds mult with our means comply; Thus far my politics extend, And here my warmest wishes end, May merit flourish, faction cease, And I and Europe live in peace!

Humility exalted; or, the glorious transformation. A little Persian fable, poetically paraphrased from the Spectator. (Vol. 4. Numb. 239.)

- Nobilitas fola est atque unica Virtus.

Juv.

Virtue is Beauty.

Dr. Young.

NE cloudy day a drop of rain, (As he hung hovering o'er the main) Cry'd out with innate modesty, What can I add, O flood, to thee? When once upon thy furface tofs'd, In thy immensity I'm lost; Of no importance to thy wave; I feem, at last, to meet my grave. O! why should love, all-good, all-wife, The least of all his creatures prize? Why should his blessings downwards fly On fuch a worthless form as I? With pleasure Jove his ear inclin'd To one so humble, so resign'd; True merit claims his high regard, And feldom loses its reward. This modest, unambitious drop Soon by an oyster's swallowed up; Content within its shell he lies, And there to heav'n erects his eyes; To Jove directs his daily pray'r, And thanks the godhead for his care. His praises, incense like, arise, And, as they mount, perfume the skies. Pleas'd with thy pray'rs and with thy praise, I'll now, faid Jove, thy fortune raise. Henceforth become (so Heav'n sees good) A pearl of the first magnitude. And thus transform'd with speed resort To fair Britannia's splendid court: There all thy radiant lustre spread Around my fav'rite Charlotte's head: Tell her 'twas I, Jove, fent thee down To fland conspicuous on her crown: Since well, I know, in her esteem, Virtue's the brightest diadem.

D. B.

VERSES

VERSES on the King's marriage, taken from the Oxford and Cambridge collections presented to his majesty on that occasion.

By Mr. SPENCE. From the Oxford Collection. T length the gallant navy from afar Rifes in prospect, with expanded wings Improving the kind gale, so long delay'd; And wings in pompous pride her eafy way To Albion's shore, charg'd with the precious freight Of England's dearest hopes, and George's love. Not so desir'd, nor with such treasure fraught, Arrives the wealthy convoy, from the coast Of Ceylon or Golconda; laden deep With spicy drugs, barbaric gems, and gold. Nor he who circled in his daring course The globe entire, old Ocean's utmost round, Brought back fo rich a prize, though with the spoils Of proud Iberia loaded he return'd; Or captive in his halfers when he drag'd The vanquish'd Gallic fleets; as now he brings. More welcome, from Germania's friendly shore. Hail, kindred regions, dear parental foil, Saxonian plains! where deep Vifurgis flows, Where Leina's doubly-honour'd waters glide, .Where mighty Albis draws his humid train! England to you with grateful homage pays Filial obeyfance meet: to you she owes Her name, her tribes, her generous race; to you Her first, her latest blessings. Forth from you Issu'd our fires, old Woden's high-born fons; Great Woden deemed a god, with uncouth rites By his rude offspring worship'd: they their course Adventurous steer'd to these alluring shores. First Hengist, valiant chief; nor yet less wise Than valiant: he the Cantian wold obtain'd, His new domain; yielded by focial league, Or won by fair Rowena's conquering charms, Next Ella, Cerdic, and th' intrepid race Of Anglians from Eydora's northern ffream, Pour'd in their numerous hosts: nor British prowess, Nor Merlin's spells, nor Arthur's puissant sword Hight Caliburn, fam'd in romantic tale, Could long withstand th' impetuous onset bold Of our great fires in battle. Soon they rais'd On Britain's ruins, feven imperial thrones; Seven thrones conjoin'd at length in Cerdic's race: From whose high source the stream of regal blood,

Through the long line of English monarchs, flows

Vol. IV.

Down to th' illustrious house of Lunenbourg, From ancient Brunswic nam'd, (Brunswic, the seat Primeval of Saxonian chieftans old)

To George, great heir of Anglo-Saxon Kings. And thou, Saxonia's brightest ornament Erewhile, now England's boaft, and highest pride, Welcome to these congenial shores; to this Ambiguous land, another Saxony. See thine own people, thy compatriot tribes. With heart-felt joy, and zealous loud acclaim, Thy bleft arrival hail. Tho' fever'd long From their original foil, on foreign flock Tho' grafted, not degenerate: still within Works the wild vigour of the parent root. Rough, hardy, brave; by force intractable, Or lawless rule; patient of equal sway; With civil freedom tempering regal pow'r. Be this thy better country; nor regret Thy natal plains, tho' dear: here thou shalt find What largely shall o'erpay the loss. Lo! here Thy parent, brother, friend, all charities Compriz'd in one, thy confort, with fond wish Expects thee; scepter'd George, with every grace Adorn'd; yet more renown'd for virtue's praise, Faith, honour, in green years wisdom mature; True majesty with aweful goodness crown'd. He shall assuage thy grief: his thoughtful breast, Studious of England's glory and Europe's weal, Thou in return shalt sooth; with tender smiles, Endearing blandishment, and equal love. Nor shall, heav'n's gift, fruit of the genial bed Be wanting; pledge of public happiness Secure; dear fource of long domestic joys. Here thou shalt reign a second Caroline; Diffusing from the throne a milder ray, Soft beauty's unexpressive influence sweet. Prompt to relieve th' opprest; to wipe away The widow's tears; to call forth modest worth : To cherish drooping virtue: patroness Of science and of arts; friend to the Muse, Of every grateful Muse the favourite theme.

Hail, forrain lady, dearest dread! accept Ev'n now this homage of th' officious muse, That on the verge extreme of Albion's cliff With gratulation thy first steps prevents, Tho' mean, yet ardent; and salutes thine ear With kindred accents in Teutonic lays.

> JOSEPH SPENCE, M. A. Regius Professor of Modern History.

To the QUEEN.

By Mr. WARTON. From the Oxford Collection.

HEN first the kingdom to thy virtues due Rose from the billowy deep in distant view; When Albion's isles, old Ocean's peerless pride; Tower'd in imperial state above the tide; What bright ideas of the new domain

Form'd the fair prospect of thy promis'd reign!

And well with conscious joy thy breast might beat

That Albien was addired thy proced fair.

That Albion was ordain'd thy regal feat: Lo! this the land where freedom's facred rage, Has glow'd untam'd, thro' many a martial agé. Here patriot Alfred, stain'd with Danish blood, Rear'd on one base the king's, the people's good: Here Henry's archers fram'd the stubborn bow That laid Alanzon's haughty helmet low; Here wak'd the flame that still superior brayes The proudest threats of Gaul's ambitious slaves: Here chivalry, stern school of valour old, Her noblest feats of knightly fame enroll'd; Heroic champions heard the clarion's call, And throng'd the board in Edward's banner'd hall a While chiefs, like George, approv'd in worth alone, Unlock'd chaste beauty's adamantine zone. Lo! the fam'd isle, which hails thy chosen sway, What fertile fields her temperate suns display; Where property fecures the conscious swain, And guards, while plenty gives, the golden grain : Hence ripe with stores her villages abound, Her airy downs with scatter'd sheep resound; Fresh are her pastures with unceasing rills, And future navies crown her darksome hills. To bear her formidable glory far, Behold her opulence of hoarded war! See, from her ports a thousand banners stream, On every coast her vengeful lightnings gleam ! Meantime, remote from ruin's armed hand, In peaceful majesty her cities stand; Whose splendid domes, and tradeful streets declare; Their firmest fort, a king's parental care.

And O! bleft Queen, if e'er the magick pow'rs Of warbled truth have won thy musing hours; Here poesy, from aweful days of yore, Has pour'd her genuine gifts of raptur'd lore. Mid oaken bow'rs, with holy verdure wreath'd, In druid-songs her solemn spirit breath'd;

2.2

While cunning bards, at ancient banquets, fung Of paynim foes defy'd, and trophies hung, Here Spenfer tun'd his mystic minstrelfy, And dres'd in fairy robes a queen like thee. Here, boldly mark'd with ev'ry living hue Nature's unbounded portrait Shakespear drew; But chief, the dreadful group of human woes 'The daring artist's tragic pencil chose; Explor'd the pangs that rend the royal breast, Those wounds that lurk beneath the tissu'd vest! Lo! this the land, whence Milton's Muse of sire High foar'd to steal from heav'n a feraph's lyre; And told the golden ties of wedded love In facred Eden's aramanthine grove.

Thine too, majestic bride, the favour'd clime, Where Science fits enshrin'd in roofs sublime-O mark how green her wood of ancient bays O'er Isis' marge in many a chaplet strays! Thither, if haply some distinguish'd flower Of these mix'd blooms from that ambrofial bower, Might catch thy glance, and, rich in nature's hue, Entwine thy diadem with honour due; If feemly gifts the train of Phæbus pay, To deck imperial Hymen's festive day; Thither thyself shall haste, and mildly deign To tread with nymph-like step the conscious plain: Pleas'd in the Muse's nook, with decent pride, To throw the scepter'd pall of state aside, Nor from the shade shall George be long away, Which claims Charlotta's love, and courts her stay.

These are Britannia's praises. Deign to trace,
With rapt resection freedom's favourite race!
But tho' the generous isle, in arts and arms,
Thus stands supreme, in nature's choicest charms;
Though George and conquest guard her sea-girt throne,
One happier blessing still she calls her own;
And, proud a fresh increase of same to view,
Crowns all her glory by possessing you.

THOMAS WARTON, M. A. Fellow of Trinity-College, Professor of Poetry.

By the Hon. JOHN GREY. From the Cambridge Collection.

I.

WHILE o'er Germania's ravaged plains, Stern desolation ruthless reigns; While, as she darts her redd'ning eye, Death gives his keenest shafts to sly: The gifts of plenty and repose
Safe on her cliffs Britannia knows:
Her valleys spread their verdant vest;
Her sields in richest robes are drest;
No hostile hoof her laurel'd walks invades
Or frights their Sisters from their peaceful shades.

If fee the God, whom Venus bore
To Bacchus on Iliffus' fhore:
In yellow folds his mantle plays;
His torch fends forth a brighter blaze.
He waves his hand: I feel, he cries,
Such transports in my bosom rise,
As when I wreath'd the myrtle twine
To bottle he brows of Caroline:

Or when in Clifden's bow'rs to Fred'ric's arms I gave the treasure of Augusta's charms.

III

Ye nymphs, who arts of conquest try, Who bend the neck, who roll the eye, See Charlotte win with grace and ease, And please without a wish to please! Ye purple tyrants, slaves to love, From fair to fair who sated rove, What is the boast of Beauty, say! That spark time's wing soon wasts away.

Go! from a British monarch learn to place Your bliss on virtue's adamantine base.

IV.

Hail happy union! the presage
Of glories down from age to age.
Yes; as thro' time I dart my sight,
Successive Georges spring to light;
Patriots, by lessons and by laws
To aid expiring freedom's cause;
Warriors, by many a daring blow
To check each vain presumptions of

To check each vain presumptuous soe;
Till vaunting Gaul a mightier power shall own,
And Spain's proud genius bow to Brunswic's throne.

The Honourable JOHN GREY, of Queen's College, Third Son of the Right Honourable the Earl of STAMFORD.

By Mr. GANDY. From the Cambridge Collection.

We've seen the blissful isles and golden age;

Adorn'd,

Adorn'd, appear'd the visionary theme, With fabled beauties, caught from fancy's dream. Yet now the bright original behold; These the blest isles, and this the age of gold! Our ancient bards thus doubly claim the bays; And join the prophet's to the poet's praise. For Albion's fons unnumbered bleffings rife; No patriot prayer indulgent heav'n denies. She ask'd a monarch, virtuous, wife and great; And George arose to steer the helm of state: She ask'd a queen the diadem to share; Heav'n gave a Charlotte to Britannia's prayer. O! may kind heav'n still more propitious prove, And smooth the rugged path of state with love: Give Britain princes, who shall dare aspire To emulate the glories of their fire: Affert their birth, their title, lineage, name, The first in virtue, as the first in fame!

Are there who now the Stoic art employ,
Nor feel th' expansive force of generous joy?
The wretch who pines beneath oppressive woe,
Forbids the groan to rife, the tear to flow:
Steals from himself, nor feels his pain awhile;
And his pale cheek glows with a patriot smile.
Hark! the firm voice of joy pervades the air;
And the pleas'd echo greets the royal pair.
Tho' breath'd with loyal warmth, my slender song
Is drown'd 'midst patriot shouts shom ev'ry tongue:
Thus drops the dew upon old Ocean's side;
Seems to be lost, yet swells the rising tide.

What form divine bursts on my ravish'd fight, Circled in beams of mild and steady light, Girt with a virgin zone her robes of purest white?

"O'er thee, bleit isle, heaven's purest gifts are shower'd; "On thee, its best, its choicest blessings pour'd.

"In George's breast are mark'd my legends fair;
"Harcourt's and Hayter's labours fix'd them there.
"Such the firm basis — See the structure prove

* Religion, freedom, loyalty and love.

"The fofter virtues of the female heart

"In Charlotte's gentle bosom claim a part.

Thus both in virtue's facred bands are twin'd;
The monarch leads; yet she is scarce behind.

Live, happy pair, thus bleffing and thus bleft!
Own one supreme, and leave to him the rest."
Thus Virtue speaks—ensues a folemn pause:

Now shouts the gen'ral voice with loud applause;

or Live

"Live, happy pair, thus bleffing and thus bleft!
"Own one fupreme, and leave to him the reft."
No more we fing you in our humble lays;
For the best eulogy is virtue's praise.

JOHN GANDY, A. B. of Sidney Sussex Colleges

Ferses occasioned by the theatric champion's performance at Covent-garden.

N art equestrian on a late occasion,
Two mighty men did share great admiration:
The one with armour girt, by bold advancing;
T'other, in civil garb, by backward prancing.
But greater far's thy praise, O peerless wight!
That in thy prowess, both their feats unite.
Backwards and forwards thou dost guide thy horse,
With D—m—k's stately port, and T——'s rigid force,
The power of nature could no further go;
To make a third she join'd the former two.

On Mr. Pitt's resigning the seals.

E'er yet in vain did heav'n its omens fend, Some dreadful ills unufual figns portend! When Pitt refign'd, a nation's tears will own, * Then fell the noblest jewel in the crown. Walton, Oct. 15.

R. BROWNE.

Prologue to the Tempest; acted at Hinchinbroke, near Huntingdon, Dec. 16, 1760. Spoken by Lord Palmerston.

SHOULD fome harsh censor blame theatric joys,
And cry, "this acting spoils our forward boys,"
Should prudes exclaim, "shame on our modern ways,
No girls of mine shall see those filthy plays."
Let them be taught that passimes such as these
Did oft amuse our grave foresathers' days.
Virtue to teach was oft their pleasing task,
In mystic pageantry, or moral masque.
To bid the heart with joys imagin'd glow,
Or melt with sympathy of mimic woe.
No blushing sire then saw his son advance
In antic dress, to form the public dance.

No

Alluding to the largest jewel falling out of the king's crown at the core-

No mother fear'd her daughter's tender age, Or thought the devil haunted ev'ry stage. But if these old examples fail to move, Nobler and nearer shall our toils approve. To Britain's court we boldly lift an eye, And claim a monarch once our flage ally. With generous maxims of a Portius' part, He form'd to virtue's rules his youthful heart. To him the actor's rules were fully known, And the stage taught the graces of the throne. Our less ambitious labours humbly chuse, The milder beauties of the comic Muse. Our guiltless aim the moments to beguile, And move, as reason prompts, th' approving smile. Our modest stage no looser shows shall stain, Nor ribbald words your decent ears profane, But forms, by Shakespear's glowing pencil wrought The genuine fruits of his creative thought, Present the image of a mighty mind, Bound by no limits, to no rules confin'd. To-night his pow'rful magic claims your eyes, And bids the visionary scenes arise. Oh may your breafts the pleafing influence warm, And hide our failings by the poet's charm, And taught by Nature's and her Shakespear's laws. Grant us your honest, your unforc'd applause.

Epilogue, Spoken by Miss Courtney, Niece to Lord Sandwich. In the Character of Aviel.

You fear no danger from a female fpright;
Light airy beings, ready, quick and gay,
Like jugler's balls, now there, and then away;
Humble, obedient, without noise or strife,
Uncommon qualities—ev'n in a wise.
But why, you'll say, so eager to be free?
Why such a hank'ring after liberty?
This indicates a roving inclination
To be disgusted at your situation.
What could one do, confin'd in desert iste?
But one young man within a thousand mile;
He too shot thro' and thro' by Cupid's dart,
Poor foul, I pity'd him with all my heart.
No creature esse but such as Caliban.
Catch me again, then, master if you can!

{

Prologue to the comedy of All in the Wrong, acted at Drury-Lane during the fummer months of the present year 1761.

Written and Spoken by Mr. Foote.

O-night be it known to box, gall'ries, and pit, Will be open'd the original warehouse for wit, The new manufacture, Foote and Co. undertakers, Play, opera, pantomime, farce,—by the makers. We scorn, like our brethren, our fortunes to owe To Shakespear and Southern, to Otway and Rowe: Tho' our judgment may err; yet our justice is shown, For we promise to mangle no works but our own; And moreover on this you may firmly rely, If we can't make you laugh, that we won't make you cry. For our monarch, who knew we were mirth-loving fouls, Has lock'd up his light'ning, his daggers and bowls; Refolv'd that in buskins no heroes should stalk, He has shut us quite out of the tragedy walk. No blood, no blank verse, in short we're undone, Unless you're contented with frolic and fun. If tir'd of her round in the Ranelagh mill, There should be one semale inclin'd to sit still: If blind to the beauties, or fick of the squall, A party should not chuse to catch cold at Vaux-hall: If at Sadler's fweet Wells, the wine should be thick, The cheefecakes be four, or Mifs Wilkinson fick: If the fume of the pipes should prove pow'rful in June, Or the tumblers be lame, or the bells out of tune; We hope you will call at our warehouse in Drufy, We've a curious affortment of goods, I affure you, Domestic and soreign, indeed all kinds of wares, English cloths, Irish linens, and French Pet-enl'airs;

If for want of good custom or losses in trade,
The poetical partners should bankrupts be made;
If from dealings too large, we plunge deeply in debt,
And a whereas comes out in the Muse's Gazette,
We'll on you our assigns for certificates call,
Tho' insolvents we're hones, and give up our all.

Epilogue to Edgar and Emmeline. Written by Mr. Garrick. Spokens
by Mrs. Yates.

LD times, old fashions, and the fairies gone; Let us return, good folks, to fixty-one To this bleft time, ye fair, of female glory, When pleasures unforbidden lie before ye! No sprites to fright ye now, no guardian elves; Your wife directors are - your own dear felves -And every fair one feels, from old to young, While these your guides—you never can do wrong. Weak were the fex of yore—their pleasures few— How much more wife, more spirited are you? Would any lady Jane, or lady Mary, Ere they did this or that, confult a fairy? Would they permit this faucy pigmy crew, For each fmall flip, to pinch 'em black and blue? Well may you shudder—for with all your charms, Were this the case—good heav'n, what necks and arms! Thus did they ferve our grandames heretofore-The very thought must make us moderns fore! Did their poor hearts for cards or dancing beat, These elves rais'd blisters on their hands and feet: Tho' Loo the game, and fiddles play'd most sweetly-They could not squeeze dear Pam, nor foot Moll Peately. Were wives with husbands but a little wilful, Were they at that same Loo a little skilful; Did they with pretty fellows laugh or sport — Wear ruffs too fmall, or petticoats too fhort: Did they, no matter how, disturb their cloaths; Or, over lillied, add a little rose!— These spiteful fairies rattled round their beds. And put strange frightful nonsense in their heads! Nay, while the husband snor'd, and prudent aunt, Had the fond wife but met the dear gallant. 'Tho' lock'd the door, and all as still as night-Pop thro' the key-hole whips the fairy sprite, Trips round the room-"my husband!"-madam cries-"The devil! --- where!" the frighted beau replies,

Jumpa

For the YEAR 1761.

Jumps thro' the window—fhe calls out in vain, He, cur'd of love—and cool'd with drenching rain, Swears—"d-m-n him if he'll e'er intrigue again!" These were their tricks of old.—But all allow, No childish sears disturb our fair ones now.—

Ladies, for all this trifling, 'twould be best To keep a little fairy in your breast:
Not one that should with moderate passions war,
But just to tweak you — when you go too far.

Prologue and Epilogue to the Andria of Terence, performed lately with appropriate by the young gentlemen of Westminster-School.

PROLOGUS.

LTER jam solitis abiit sine lusibus annus, Et lepidi in scenis obticuere sales: Scilicet, extincto tam charo rege, quis esse Aut ludo poterat, lætitiæve locus! Nunc intermissam repetit comcedia scenam, Dum nihil est, quod non omina fausta ferat; Dum Geôrgi auspiciis studiisque virilibus aucta, Læta foris res est Anglica, læta domi. Quæque oris magni advolvit commercia ponti, Fert etiam laurus quælibet aura novas, Felices! queis rex, populi ut mereatur amorem, Usque docet, populum quam studiosus amet; Qui, melius quo fint leges pietasque tuendæ; Quod jubet, exemplo comprobat ipfe suo. Et ne quid desit, conjux en regia, tanto Annis, ingenio, moribus apta viro! Dî faciant fimili felices prole parentes, Quæ sceptra hæc olim gestet honore pari. Sic sua libertas, sic patria jura, sidesque Gentibus his nulla stent violanda manu.

EPILOGUS,

CRITO loquitur.

Ongum iter emensi, jam tandem huc venimus omnes
Ipse uxor, soboles, hei mihi! tota domus.
Nempe coronandus rex est; pompæque superbæ
Haud parvum accedit regia nupta decus.
Visendi studio, puerique uxorque fatigant;
Ni cedam, nostro sub lare nulla quies.

Viso loca, inquiro pretium - quis credéret? Eheu! Quisque locus bis sex constitit aureolis. Dein tentanda via est per mille pericula, turbam Dum luctans abigo hoc fuste, abigorque simul. Territat hinc, obstans prætenta cuspide, miles; Hinc, urgens fremitu & calce, minatur equus. Passim se agglomerat densato examine vulgus; Turba frequens summas vestit ubique domos, Longa illic fixos tenet expectatio; pauci Evigilant, plures opprimit alta quies. Jam lente procerum procedit lucidus ordo Sub noctem haud adeo lucidus ordo redit. Quo strepitu interea resonant, quo compita plausu! Dum grata exultat patria rege suo. Confundor totus vario discrimine scenæ; Splendore & tanto mens oculique stupent. Pompa quidem augusta est. Votis tamen omnibus oro, Me vivo, ut nulla sit reditura die.

Fragments of Celtic poetry, from Olaus Verelius, a German writer; literally translated.

The daughter comes by midnight to the tomb of her deceased father, and thus begins her solemn incantation over his grave.

Hervor. A Wake, Angantyr, Her-vor the only daughter of thee and Suafu doth awake thee. Give me out of thy tomb the hardened fword which the dwarfs made for Suafurlama. Hervardur, Hiorvardur, Herani, and Angantyr, with helmet, and coat of mail, and a sharp sword, with shield and accoutrements, and bloody spear. wake you all, under the roots of Are the fons of Andgrim, who delighted in mischief, now become dust and ashes? Can none of Eyvor's fons now speak with me out of the habitations of the dead! Harvardur, Hiorvardur! fo may you all be within your tombs, as a thing that is hanged up to putrify among infects, unless you deliver me the fword which the dwarfs made * * * and the glorious

Angantyr. Daughter Hervor, full of spells to raise the dead, why dost thou call fo? Wilt thou run on to thy own mischief? Thou art mad and out of thy fenses, who art defperately resolved to waken the dead. I was not buried either by thy father or other friends. Two which lived after me got the fword Tirfing, one of whom is now possessor thereof.

Herver. Thou dost not tell the truth: fo let Odin hide thee in the tomb, as thou hast Tirsin by thee. Art thou unwilling, Angantyr, to give an inheritance to thy only child?

Angantyr. I will tell thee, Hervor, what will come to pass: this Tirfing will; if thou don't believe me, deftroy almost all thy off-spring, Thou shalt have a fon, who after-

wards

wards must possess Tirling, and many think that he will be called Heidreck by the people.

Herwor. I do by enchantments cause, that the dead shall never enjoy rest unless Angantyr deliver me

Tirfing * * * *.

Angantyr. Young maid, I say thou art of manlike courage, who dost rove about by night to tombs with spear engraven with magical spells, with helmet, and coat of mail before the door of our hall.

Hervor. I took thee for a brave man, before I found out your hall. Give me out of the tomb the workmanship of the dwarfs, which divides all coats of mail; it is not good for thee to hide it.

Angantyr. This death of Hialmar lies under my shoulders, it is all wrapt up in fire; I know no maid in any country that dares this

sword take in hand.

Hervor. I shall keep, and take in my hand, the sharp sword, if I may obtain it. I do not think that fire will burn which plays about the

fight of deceased men.

Angantyr. O conceited Hervor, thou art mad. Rather than thou in a moment shouldst fall into the fire, I will give the fword out of the tomb, young maid; and not hide it

Hervor. Thou didft well, thou off-spring of heroes, that thou didst fend me the fword out of the tomb. I am now better pleased, O Prince, to have it, than if I had got all Norway.

Angantyr. False woman, dost not understand that thou speakest foolishly of that in which thou dost rejoice; for Tirsing shall, if thou wilt believe me, maid, deftroy all thy off fpring.

Herwor. I must go to my seamen, here I have no mind to stay longer. Little do I care, O royal friend, what my fons hereafter quarrel a-

bout

Angantyr. Take and keep Hialmar's bane, which thou shalt long have and enjoy: touch but the edges of it, there is poison in both of them; it is a most cruel devour-

Hervor. I shall keep, and take in hand, the sharp sword, which thou hast let me have: I do not fear, O flain father, what my fons hereafter

may quarrel about.

Angantyr. Farewell, daughter, I do quickly give thee twelve men's deaths, if thou can'ft believe with might and courage, even all the goods, which Andgrym's fons left behind them.

Hervor. Dwell all of you fafe in the tomb, I must be gone, and hasten hence, for I seem to be in the midft of a place where fire burns round about me.

Verses on Henry I. wrote immediately after his death. The author unknown.

YNG Henry is dead, bewty of the world!
For whome is great dole: Goddes now maken rowm for theyr kinde brother For he is fole. Mercurius in speeche, Marce in battayle, In harte strong Appóllo, Jupiter in hest, egall with Saturn And enemie to Cupido! King he was of right! And man of most myght! And glorious in rayninge! And, when he left his crowne, Then fell honour down! For misse of such a king # Normandy than gan lowre, For loffe of their floure, And fang wel a way! England made mone, And Scotland did grone,

For to see that day!

VERSES written on the gates of Bologna in Italy, much admired by travellers, and others who have by chance met with them:

SI tibi pulchræ domus, si splendida mensa, quid inde? Si species auri, argenti quoque massa, quid inde? Si tibi sponsa decens, si sit generosa; quid inde? Si tibi sunt nati, si prædia magna, quid inde? Si sueris pulcher, fortis, divesve; quid inde? Si doceas alios qualibet arte; quid inde? Si longus servorum inserviat ordo; quid inde? Si saveat mundus, si prospera cuncta; quid inde? Si Prior, aut Abbas, si Dux, si Papa, quid inde? Si felix annos regnes per mille; quid inde? Si rota Fortunæ se tollit ad astra; quid inde? Tam citò, tamque cito sugiunt hæc, ut nibil indes Sola manet Virtus, nos gloriscabimur inde. Ergo Deo pare, bene nam tibi proventt inde.

What, if the flatelieft buildings were thy own? What, if the choicest fruits thy table crown?

If

If thou haft heaps on heaps of gold in store, And each succeeding year still adding more? What, if thou had'ft the fairest, kindest wife, To be the fweet companion of thy life? If thou art bless'd with fons, a large estate And all around magnificent and great; What, if thou'rt comely, valiant, rich and strong, And teachest others in each art, each tongue; If thou hast numerous servants at command, All things in store, and ready to thy hand; If thou wert king, commander of a nation Full thousand happy years without vexation; If fortune rais'd thee to the highest strain Of grandeur, wealth, and dignity. What then? Soon, very foon, all ends and comes to nought, Virtue alone's the greatest glory sought: Obey th' Almighty's will, from hence arise All happiness within, in this all glory lies.

* Quod fecisse voles, in tempore quo morieris Id facias juvenis dum corpore sanus habueris. Lex ea sit vitæ regula sirma tuæ.

On Miss Frampton, who was buried in the Abbey-church at Bath, an hundred years since, wrote by Mr. Dryden.

DELOW this marble monument is laid, All that heav'n wants of this celestial maid; Preserve, O sacred tomb! thy trust consign'd, The mould was made on purpose for the mind. And she would lose if at the latter day, One atom could be mix'd with other clay. Such were the features of her heav'nly face, Her limbs were form'd with fuch furprizing grace, So faultless was the frame, as if the whole Had been an emanation of the foul, Which her own inward fymmetry reveal'd, And, like a picture shone, in glass conceal'd; Or, like the fun eclips'd with shaded light, Too piercing else to be sustain'd by sight, Each thought was visible that rul'd within, As thro' a crystal case the figur'd hours are seen. And heav'n did this transparent vale provide, Because she had no guilty thoughts to hide. All white, a virgin faint, the fought the skies, For marriage, though it fullies not, it dies.

High tho' her wit, yet humble was her mind, As if she could not, or she would not find How much her worth transcended all her kind. Yet she had learn'd so much of heav'n below, That when arriv'd, she scarce had more to know; But only to refresh the former hint, And read her Maker in a fairer print. So pious, that she had no time to spare For human thoughts, but feem'd confin'd to pray'r. Yet, in such charities the pass'd the day, 'Twas wond'rous how she found an hour to pray. A foul fo calm, it knew not ebbs or flows, Which passion could but curl, not discompose, A female foftness with a manly mind, A daughter duteous, and a fifter kind, In fickness patient, and in death resign'd.

Under the busto of Comus; in a beaufet, at Lord Melcombe's at Hammersmith.

Written by his Lordship.

E. August, 1750.

WHILE rofy wreaths the goblet deck, Thus Comus spoke, or seem'd to speak "This place for focial hours defign'd, May care and business never find. Come, every Muse, without restraint Let genius prompt, and fancy paint; Let wit and mirth, with friendly strife, Chase the dull gloom that saddens life: True wit, that firm to virtue's cause, Respects religion and the laws; True mirth, that chearfulness supplies To modest ears and decent eyes; Let these indulge their liveliest fallies, Both fcorn the canker'd help of malice; True to their country, and their friend, Both fcorn to flatter or offend."

VIRTUE AND FAME.

To the Countess of Egremont. By Lord Lyt -- n.

VIRTUE and Fame, the other day, Happen'd to cross each other's way,

Said

Said Virtue! Hark ye, madam Fame, Your ladyship is much to blame; Jove bids you always wait on me, And yet your face I seldom see, The Paphian queen employs your trumpet, And bids it praise some handsome strumpet; Or, thund'ring thro' the ranks of war, Ambition ties you to her car.

Saith Fame, "Dear madam, I protest I never find myself so blest As when I humbly wait behind you; But 'tis so mighty hard to find you! In such obscure retreats you lark! To seek you is an endless work."

Well, answer'd Virtue, I allow
Your pleas But hear, and mark me now.
I know (without offence to others)
I know the best of wives and mothers;
Who never pass'd an useless day
In scandal, gossiping, or play:
Whose modest wit, chastis'd by sense,
Is lively chearful innocence;
Whose heart nor envy knows, nor spite,
Whose duty is her sole delight;
Nor rul'd by whim, nor slave to fashion,
Her parents' joy, her husband's passion."

Fame fmil'd, and answer'd, "On my life, This is some country parson's wife, Who never saw the court nor town, Whose face is homely as her gown; Who banquets upon eggs and bacon" "No, madam, no—you're much mistaken—I beg you'll let me set you right—"Tis one with every beauty bright; Adorn'd with ev'ry polish'd art That rank or fortune can impart; "Tis the most celebrated toast That Britain's spacious isse can boast; "Tis princely Petworth's noble dame; "Tis EGREMONT—Go, tell it, Fame!"

Addition extempore, by Earl H.

AME heard with pleasure—strait reply'd,
"First on my roll stands Wyndham's bride.

Her modest praise the world around;
Vol. IV.

ANNUAL REGISTER

But notes were wanting——Can'ft thou find A Muse to fing her face, her mind?
Believe me, I can name but one,
A friend of your's——'tis LYTTELTON."

Lord L -- 's letter to Earl H ---, occasioned by the foregoing verses.

My LORD,

242

Thousand thanks to your lordship for your addition to my verses. It you can write such extempore, it is well for other poets, that you chose to be a lord chancellor, rather than a laureat. They explain to me a vision I had the night before.

Methought I faw before my feet, With countenance ferene and sweet, The Muse, who in my youthful days Had oft inspir'd my careless lays. She smil'd, and faid, "Once more I fee My fugitive returns to me; Long had I loft you from my bower, You fcorn'd to own my gentle power; With me no more your genius sported, The grave historic Muse you courted; Or, rais'd from earth, with straining eyes, Pursu'd Urania through the skies; But now, to my forfaken track, Fair EGREMONT has brought you back ; Nor blush, by her and Virtue led, That foft, that pleafing path to tread; For there, beneath to-morrow's ray, Ev'n Wisdom's self shall deign to play. Lo! to my flow'ry groves and fprings Her fav'rite son the goddess brings, The council's and the senate's guide: Law's oracle, the nation's pride: He comes, he joys with thee to join, In finging WYNDHAM's charms divine To thine he adds his nobler lays, E'en thee, my friend, he deigns to praise. Enjoy that praise, nor envy PITT. His fame with burgess or with cit; For fure one line from such a bard, Virtue would think her best reward."

To a noble Lord on his late poetical compositions.

AYS one of the Muses detach'd from the rest,
To one of their bards, which they all lov'd the best;
"With joy we have seen, on the counters, your wit,
With grief, have beheld your late sur upon P—tt:
Unenvy'd, let him, then, enjoy all his boxes;
Unrival'd, sing thou, all thy beautiful doxies:
Parnassus's freedom rewardeth thy lays,
Which, see! I have brought, in a basket of bays."

On a noble Law; er's addition to the above noble Lord's poem on a Lady.

Music! ever thought of power divine,
Own beauty's power still greater far than thine:
'Tis true, of thee thus once a poet spoke,
"Music has charms to bend the knotted oak,"
But beauty's charms in Egremonta's praise,
Law's knottier language turns to tuneful lays.

On the above Lord's reply, to the noble lawyer's addition, under the fiction of a dream.

WHEN Homer nods, he only nods: it feems
Our modern Homer when he nods, he dreams.

Under a cast of the Venus de Medicis, at the Leasowes.

----Semi-reducta Venus.

To Venus, Venus here retir'd My fober vows I pay;
Not her on Paphian plains admir'd.:
The bold, the pert, the gay!

Not her, whose amorous leer prevail'd To bribe the Phrygian boy; Not her, who clad in armour fail'd To fave disafterous Troy.

HI. Fresh-

III.

Fresh-rising from the soamy tide,
She every bosom warms;
While half withdrawn she seems to hide,
And half, reveals her charms.
IV.

Learn hence, ye boastful sons of taste, Who plan the rural shade;
Learn hence, to shun the vicious waste
Of pomp, at large display'd.

Let sweet concealment's magic art Your mazy bounds invest; And while the fight unveils a part, Let fancy paint the rest.

Let coy Referve with cost unite
To grace your wood or field;
No rays obtrusive pall the fight,
In aught you paint, or build.

And far be driv'n the fumptuous glare-Of gold from British groves! And far, the meretricious air Of China's vain alcoves!

'Tis bashful beauty ever twines
The most coercive chain;
'Tis she, that sovereign rule declines,
Who best deserves to reign.

Verses occasioned by an incident, at the seat of William Shenstone, Esq; By. Mr. R. Dodsley.

"IT OW shall I fix my wand'ring eye? where find The fource of this inchantment? dwells it in The woods? or moves there not a magic wand O'er the translucent waters? fure, unseen, Some favouring power directs the happy lines. That sketch these beauties; swells the rising hills, And scoops the dales to nature's finest forms, Vague, undetermin'd, infinite; untaught. By line or compass, yet supremely fair?"

So spake Philenor, as with raptur'd gaze. He travers'd Damon's farm. From distant plains He sought his friend's abode: Nor had the fame.

Of that new-form'd Arcadia reach'd his ear.

And thus the youth, as o'er each hill and dale, Thro' lawn or thicket, he pursues his way:

"What is it gilds the verdure of these meads With hues more bright, than fancy paints the flowers Of paradife? What Naiad's guiding hand Leads thro' the broider'd vale thefe lucid rills. That, murmuring as they flow, bear melody Along their banks; and, thro' the vocal shades, Improve the music of the warbling choir? What penfive Dryad rais'd von folemn grove, Where minds contemplative, at close of day Retiring, muse o'er Nature's various works, Her wonders ven'rate, or her sweets enjoy? What room for doubt? Some rural deity Prefiding scatters o'er th' unequal lawns, In beauteous wildness, you fair spreading trees; And, mixing woods and waters, hills and dales, And herds and bleating flocks, domestic fowl, And those that swim the lake, sees rising ground More pleasing landscapes than in 'Compe's vale Penéus water'd. Yes, some sylvan god Spreads wide the varied prospect; waves the woods, Lifts the proud hills, and clears the shining lakes; While, from the congregated waters pour'd, The bursting torrent tumbles down the Reep In foaming fury; wild, irregular, Fierce, interrupted; cross'd with rocks and roots And interwoven trees; 'till now abforb'd An opening cavern all its rage entombs. So vanish human glories; such the pomp Of fwelling warriors, of ambitious kings, Who fret and strut their hour upon the stage Of busy life, and then are heard no more!

'Tis fascination all!—And lo! the spells,
The powerful incantations, magic verse
Inscrib'd on every tree, alcove, or urn!—
Spells, incantations? ah, my tuneful friend!
Thine are the numbers! thine the wonderous work!
Yes, great magician, now I read thee right,
And lightly weigh all forcery, but thine.
Nor Naiad's leading step condusts the rill;
Nor sylvan god presiding skirts the lawn,
In beauteons wildness, with fair-spreading trees;
Nor magic wand has circumscrib'd the scene.
'Tis thine own tase, thy genius that preside;
Nor needs there other deity, nor needs
More potent spells than they."—No more the youth;

For lo! his Damon, o'er the tufted lawn Advancing, leads him to the focial dome. The Leafowes, 1755.

To William Shenstone, Esq: The production of half an hour's leisure.

August 30, 1761.

HEALTH to the bard, in Leasowes happy groves,
Health and sweet converse with the Muse he loves!
The lowliest vot'ry of the tuneful nine,
With trembling hand, attempts her artless line,
In numbers such as untaught Nature brings,
As slow spontaneous, like thy native springs.
But ah! what airy forms around me rise,

The ruffet mountain glows with richer dyes! In circling dance a pigmy crowd appear, And hark! an infant-voice falutes my ear.

"Mortal, thy aim we know, thy task approve, His merit honour, and his genius love; For Us what verdant carpets has he spread, Where nightly we our mystic mazes tread! For Us each shady grove and rural seat, His falling streams, and slowing numbers sweet. Didst thou not mark amid the winding dell, What tuneful verse adorns the root-wove cell? There ev'ry Fairy of our sprightly train Resorts, to bless the woodland, and the plain; There as we move unbidden splendors glow, The green turf brightens, and the flowrets blow. There oft with thought sublime we bless the swain, Nor we inspire, nor he attends in vain.

Go, simple rhymer, bear this message true, The truths that Fairies dictate none shall rue.

Say to the bard, in Leasowes happy grove,
Whom Dryads honour, and whom Fairies love—
Content thyself no longer that thy lays,
By others foster'd, lend to others praise;
No longer to the fav'ring world refuse
The welcome treasures of thy polish'd Muse;
Collect the slowers that own thy valu'd name,
Unite the spoil, and give the wreath to Fame.
Ne'er can thy morals, taste, or verse engage
More solid same, than in this happier age;
When sense, when virtue's cherish'd by the throne,
And each illustrious privilege their own.
Tho' modest be thy gentle Muse, I ween,
O, lead her, blushing, from the daisy'd green,
A sit attendant on Britannia's queen!"

Ye sportive elves, as faithful I relate
Th' entrusted mandates of your fairy state,
Visit these wilds again with nightly care,
So shall my kine, of all the herd, repair,
In healthy plight, to sill the copious pail;
My sheep he penn'd, with fasety, in the dale;
My poultry sear no robber in the roost;
My linen more than common whiteness boast;
Let order, peace, and housewis'ry be mine:
Shenstone! be taste, and fame, and fortune thine!

COTSWOULDIA.

To Mr. S. upon his desiring her to paint his character. Dec. 13. 1760.

By Miss Loggin.

THO' you flatter my genius, and praise what I write, Sure this whimfical talk was impos'd out of spite. Because this poor head, with much scratching and thinking, Made some idle reflections on raking and drinking; To clip my weak wings --- with malicious intention ---You present me a theme that defies all invention. Your picture! Lord bless me! Where can one begin? To speak truth, were insipid; to lie, were a fin. You might think me in love, should I paint your perfections; Should I sketch out your faults, you might make-worse objections. Should I blend in one piece of superlative merit, Good-nature with wit, condescension with spirit; Should, with modesty, ease and politeness be join'd; Unlimited freedom, with manners refin'd; Courage, tenderness, honour, enthron'd in one heart; With frankness, reserve; and with honesty, art: With these glaring good qualities plac'd in full view, Do you think any foul would believe it was you? Why then turn t'other fide, fays Ill-nature, and find him, In some few modish faults, leave his sex all behind him. For levity, flattery, and so forth, he's fam'd____ Pr'ythee, peace, fool; and let no such trifles be nam'd: If his failings be fuch, time will certainly cure 'em, And the ladies—till then—will with pleasure endure 'em.

To a Lady.

IN disappointments not unskill'd,
My mind in fearch of pleasure roves;
R 4. Sind and Dankerson of A.

With

With hopes of happiness beguil'd, Tow'rds ev'ry fond amusement moves, But fond amusements——all are vain, The wish'd-for happiness to gain.

Free from ambition's reftless fire,
My humble foul could dwell at ease;
Nor can the thirst of gold inspire
A wish injurious to my peace.
Honour and wealth in vain allure

A heart contented to be poor.

Not the whole world with all its charms,
Could my regardless mind entice;
Beauty alone my heart disarms,
Proof to the other baits of vice.
Yet here, a lovely Myra's name
Inspires me with the purest flame.

Pleasures in these soft colours drest, Attract my unexperienc'd eyes; Until within my youthful breast Warm expectations quickly rise, And with delusive hopes controul Each wish of my unwary soul.

Thus, while on earthly blifs, my mind Is fix'd with fancied joy clate; Soon all my hopes I fadly find Dash'd by some sudden turn of fate. Thus all my hopes, I find, are vain; I only rise to fall again.

No more, fond youth, direct thy aim At what thou ne'er must truly know. A love so pure, heav'n only claims, Unrival'd by the joys below. There thou wilt find—what here thou'lt mis, A lasting portion and substantial bliss.

....

The Answer. By a Lady.

HE tender friendship still has charms,
The soothing tear and plaintive sigh;
Grateful and generous those alarms
That swell my heart when thou art nigh.

Then cease, Vill'roy, such gentle care, Nor seek thy Myra's life to save; Rather send forth thy pious pray'r, To take her peaceful to the grave. II.

There fafely shelter'd in the tomb, Secure from all the storms of fate. She'll wait you in a world to come, Where love and friendship know no date.

Accept; my Vill'roy, the last Muse Which shall transpire your Mira's pen; Don't her last anxious gift resuse, But take her praise, thou best of men.

Like mine, thy vows, beyond the grave, With truth unwearied, must extend. To all things lost beyond retrieve, With facred force of patience bend.

Wrote to an admirable Lady under misfortunes and undeserv'd confinement.

O meet affliction with a fcorn divine,
Befits, oh! P—l, a foul like thine;
Calm to encounter calumny and pain,
While fix'd in confcious virtue you remain.
So much in fentiments your mind transcends,
That few have fentiments to be your friends.
Amidft that few—oh let the Mute be plac'd,
In fortune humble, but refin'd in tafte.
I fee your worth, your merit I adore,
And court your smile—when fortune smiles no more.

Can there be anguish where such sweetness dwells, Where Phœbus visits our sequester'd cells: Where fense, and worth, and elegance can chuse, To kill one moment with the fuff'ring Muse. Let this to reptiles be the scourge of vice, While you enrich it, 'tis a paradife. Permit this tribute, when the hand of fate Shall waft my spirit to its wish'd-for state: When persecution with an iron rod, Frees me from man, and gives me to my God. Let this convince th' abject of human race, I honour dignity, and scorn the base. Not all the glitt'ring mammon of Peru Could force these lays that Nature gives to you. And when your bard, unbidden, I commence, I raise one monument to prove my sense.

An Ode to Solitude.

H! Solitude! Celestial maid!
Wrap me in thy sequester'd shade,
And all my soul employ!
From folly, ignorance, and strife,
From all the giddy whirls of life!
And loud unmeaning joy!

While in the statesman's glowing dream, Fancy pourtrays the high-wrought scheme,

And plans a future fame; What, is the phantom he pursues!

Alas! an empty name!
To him, the grove no pleasure yields,
Nor mossy bank, nor verdant fields,

Nor daify-painted lawns; In vain th' ambrofial gale invites, In vain all Nature sheds delights,

Her genuine charms he fcorns! Pleasure allures the giddy throng, The gay, the vain, the fair, and young,

All bend before her shrine! She spreads around delusive snares, The borrow'd garb of bliss she wears,

And tempts in form divine! Fashion with wild tyrannic sway, Directs the business of the day,

And reigns without controul; The beaus, and sparkling belles confess, She animates the modes of dress,

And chains the willing foul! Can these, the slaves of fashion's pow'r, Enjoy the silent, tranquil hour,

And bloom with nature's glow?
Or, to the votaries of fense

Can Solitude her sweets dispense,
And happiness bestow?
How wretched that unfurnish'd mind,
Which to each vain pursuit inclin'd,

Is ever bent to roam!
Oh! be that restless state abhor'd,
Seek not for happiness abroad,

She's only found at home!

Ye sages, who with anxious care, Rov'd thro' the fleeting tracks of air,

A vacuum to find ; where Wifer had ye employ'd your skill,

With folid fense, and worth to fill,

The vacuum of the mind! Let choice, not wrinkled spleen, engage The mind, to quit the world's gay flage,

Where folly's scenes are play'd; Sour discontent, and pining care, Attaint the fragance of the air,

Disturb the filent shade. Not wounded by misfortune's dart. I feek to eafe the rankling fmart

Of thorny-fest'ring woe; But far remote from crowds and noife. To reap fair virtue's placed joys;

In wisdom's soil they grow. I ask not pageant pomp, nor wealth, For bleft with competence and health,

'Twere folly to be great! May I thro' life ferenely slide. As you clear streams, which filent glide,

Nor quit this lov'd retreat. Beneath this leafy arch reclin'd,

I taste more true content of mind, Than frolic mirth can give;

Here to the buly world unknown, I feel each blissful hour my own,

And learn the art to live! While turning Nature's volume o'er, Fresh beauties rise, unseen before.

To strike th' astonish'd soul ! Our mental harmony improves, To mark each planet how it moves,

How all in order roll! From Nature's fix'd, unerring laws, I'm lifted to th' Eternal Caufe,

Which moves this lifeless clod! This wond'rous frame, this vast design, Proclaims the workmanship divine,

The architect, a God! Oh! facred blifs! thy paths to trace, And happiest they of human race,

To whom this pow'r is given. Each day, in some delightful shade. By Contemplation's fost ring aid, To plume the foul for heaven! Wrote on a tomb stone, where is laid the skull of a man.

X7 HY start! The case is yours, or will be soon, Some years perhaps, --- perhaps another moon. Life in its utmost span is but a breath, And they who longest dream, must wake in death. Like you I once thought ev'ry blifs fecure, And gold of every ill the certain cure; Till steep'd in forrows and besieg'd with pain, Too late I found all earthly riches vain. Difease with scorn threw back the fordid fee, And Death still answer'd, What is gold to me? Fame, titles, honours next I vainly fought, 'And foels obsequious nurs'd the childish thought. Circled with brib'd applause and purchas'd praise, I built on endless grandeur endless days; But Death awak'd me from a dream of pride, And laid a prouder beggar by my fide. Pleasure I courted and obey'd my taste, The banquet smil'd, and smil'd the gay repast. A loathsome carcase was my constant care, And worlds were ranfack'd but for me to share, Go on, vain man, in luxury be firm, Yet know I feasted, but to feast a worm. Already fure less terrible I feem, And you like me can own that life's a dream, Whether that dream may boast the longest date. Farewel, remember lest you wake too late.

Wrote on another tomb stone where is laid the skull of a weman.

LUSH not, ye fair, to own me, but he wife,
Nor turn from fad mortality your eyes.
Fame fays, and Fame alone---can tell how true,
I once was lovely, and belov'd like you.
Where are my vot'ries --- where my flatt'rers now?
Gone with the fubject of each lover's vow.
Adieu the rofes red, and lillies white,
Adieu those eyes, which made the darkness light.
No more alas! that coral lip is feen,
Nor longer breathes the fragrant gale between.
Turn from your mirror, and behold in me,
At once what thousands can't, or dare not fee.

Unvarnish'd

Unvarnish'd I the real truth impart,
Nor here am plac'd but to direct the heart.
Survey me well --- ye fair ones, and believe,
The grave may terrify --- but can't deceive.
On beauty's fragil base no more depend,
Here youth and pleasure, age and sorrow end;
Here drops the mask --- here shuts the sinal scene,
Nor differs grave threescore, from gay sisteen.
All press alike to that same goal, the tomb,
Where wrinkled Laura smiles at Chloe's bloom.
When coxcombs slatter, and when sools adore
Learn here the lesson to be vain no more.
Yet virtue still against decay can arm,
And even lend mortality a charm.

Upon a child of two years old crying.

Poor little Charlotte dies!
And has no way the truth to prove,
But fighs and watry eyes.
Her tongue's too young fuch grief to tell,
As fwells her tender breaft;
'Twou'd pose those on Parnassus dwell,
To have 'em all exprest.
Yet the least birds in tuneful notes,
'Their forrows do repeat,
In warblings from melodious throats,
More moving than the great.

SONG, by a Lady.

Reflection that makes mortals wife,
Gives me the greatest pain;
The doubts that in my breast arise,
Of meeting thee again.
Absence, for ever foe to love,
The thought distracts my mind:
Lest you a fairer nymph approve,
And she like me be kind.

Then to my humble cott retir'd,
To fearch and with for peace,
No more with mortal charms I'm fir'd,
But wait my kind releafe.

Secluded

Secluded far from human fight. Attend my fleecy care, But till my eyes are feal'd in night, Thou shalt, partake my pray'r.

My cottage on a rifing ground, Near to a friendly shade, A ruin shall my prospect bound, With greens that never fade. Some murm'ring brooks within my view, That not too lifeless flow, Whilst I the paths of truth pursue,

Both time and chance will shew. IV.

But if thou bring'ft thy heart again, Untainted and fincere, I'll laugh at all my present pain, And banish every fear. Then like a ship the tempest tost, I'll bless the friendly shore, Forget the dangers that are past, But venture out no more.

SONG, surote to a Lady.

7 HEN the nymphs were contending for beauty and fame, F air Sylvia stood foremost in right of her claim, When to crown the high transports dear conquest excites. At court she was envy'd and toasted at White's.

But how shall I whisper this fair one's sad case? A cruel disease has spoil'd her sweet face; Her vermillion is chang'd to a dull fettled red, And all the gay graces of beauty are fled.

Yet take heed all ye fair how you triumph in vain, For Sylvia, tho' alter'd from pretty to plain, Is now more engaging fince reason took place, Than when she posses'd the perfections of face.

Convinc'd she no more can coquet it and teaze, Instead of tormenting --- she studies to please; Makes truth and discretion the guides of her life, And tho' spoil'd for a toast, she's well form'd for a wife. A copy of verses, on seeing a boy walk on stilts, by.

Eaving the grammar, for his play, Forgetful of the rod: Tott'ring on stilts, through mire, and dirt, The school boy stroles abroad, Why does this innocent delight Provoke the pedant's spleen; Look round the world, thou fool and fee The use of this machine. The tricking statesman, prop'd by these, His, virtues boafts aloud; And on his guilded stilts, sublime, Steps o'er the murmuring crowd. Through fields of blood, the general stalks, And Fame fits on his hilt; The fword, or gun, at length bestows, An honourable stilt. When quite deferted by the Muse, The finking fonneteer, Hammers in vain a thoughtless verse, To please Belinda's ear: The mighty void of wit he stops With a successful chime: On stilts poetic rises quick, And leans upon his rhime. With well dissembled anguish, see ! The canting rafcal beg, And by a counterfeit gain more Than by a real leg. Yet on the boys instructive sport, Is this contrivance built: The fource from whence his gains arise, What is it, but a stilt? Corinna fair, of stature low, Yet, this defect supplies, By heels, like stilts, which may affist The conquest of her eyes. See! in his fecond childhood faint, The old man walks with pain; On crutches imitates his stilts, And acts the boy again.

So well concerted is this art,
It fuits with all conditions:
Heroes, and ladies, beggars, bards,
And boys, and politicians.
Long, through the various course of life,
Each artist walks unhurt,
Till death, at last, kicks up his stilts;
And lays him in the dirt.

The Rainbow. A Fable.

- Nimium ne crede Colori. - VIRG.

N age there was, some authors teach, When all things were endued with speech, Nor plant, nor bird, nor fish, nor brute, Nor thing inanimate was mute; Their converse taught—or these men lie, Better than books, morality.

One grain more faith afford me now; It asks but one more grain, I vow, Speech on mere visions to bestow.

Then you'll believe, that truth I tell, That what I now relate befell.

Calm was the day, the fky was clear, Save that a light cloud here and there, Floating amid the azure plain, Promis'd some gentle showers of rain: Tho' Men are faithless, Clouds are true, As by the fequel foon I'll shew. Sol from the zenith now departed. Eastward his rays obliquely darted, The clouds, late glories of the day, By western winds are borne away, 'Till to the east each vapour blown, In lucid show'rs came gently down. Now full oppos'd to Phæbus rays, Iris her vivid tints displays; A wat'ry mirror spread below, To her own eyes her beauties shew. I scarce can think Narcissus eyed Reflected beauty with fuch pride; Or modern belle for birth-night dress'd. Raptures so exquisite express'd, Some time enamour'd o'er the lake. She hung, then ---- thus she spake.

Say, in Creation's ample bound, Where can there such a form be found? How fine that curve! How bright those rays! Oh I could here for ever gaze ! See, fee, resplendent circles rife, Each above each, of various dyes! Mark that first ring of sanguine light! Beam'd ever ruby half fo bright? Or can the flaming topaz vie With that next stream of golden dye? Where was that em'rald ever feen Whose rays could rival yonder green? Or where's that faphire's azure hue, Can emulate it's neighb'ring blue? See! purple terminates my bow, Boast amethysts so bright a glow?"

Thus to each charm she gave its due, Nay more — but that is — entre nous, Exhaustless seem'd the copious theme, For where's the end of felf-efteem? She finding still for praise pretence, From vanity drew eloquence: When in the midst of her career, Behold her glories disappear. See her late boafted tints decay: And vanish, into air away, Like spectres at th' approach of day. On things too transient hangs their fate, For them to hope a lasting date, The fallen rain has clear'd the skies, And lo! the short-lived phantom dies. My application's brief and plain, Beauty's the Rainbow, Youth's the Rain,

EUGENIO.

GR

On the Seahorse, with the astronomers on beard, being attacked by a French frigate.

ARS, inform'd that some wights with inquisitive eye, Defign'd into Venus's motions to pry, Dispatch'd a bold warrior from Lewis's fleet, The caitiffs to feize, and their purpose defeat; But Neptune strait sent a Seahorse to their aid, And fafe o'er the ocean his fay'rites convey'd. VOL. IV.

CRITO.

Lines from Mr. G-k to a Nobleman, who asked him if he did not intend being in Parliament.

ORE than content with what my labours gain,
Of public favour though a little vain;
Yet not so vain my mind, so madly bent,
To wish to play the fool in parliament;
In each dramatic unity to err;
Mistaking time and place and character!
Were it my fate to quit the mimic art,
I'd "frut, and fret," no more in any part;
No more in public scenes would I engage,
Or wear the cap and mask on any stage.

EPITAPH on Admiral Boscawen.

S T O.P and behold! Where lies (Once a stable pillar of the state) Admiral EDWARD BOSCAWEN. Who died January the 10th, 1761. In the fiftieth year of his age; Equally in the luftre of renown As in the meridian of life. His birth, tho' noble, His titles, tho' illustrious, Were but incidental additions to his greatness; Be these therefore the lesser theme of heralds, Whilst the annals of adverse nations, If they faithfully record, What our own history, Proud to adorn her page, Must perpetuate; Shall even to late posterity convey, With what ardent zeal, With what successful valour. He ferved his country, And taught her foes to dread Her naval power. Alfo. What an inflexible attachment to merif Flourishing beneath his happy auspices, What an assemblage

Of

Of

Intrepidity, humanity and justice, United

> To form his character, And render him

At once beloved and envied.
Yet know, infidious Gaul!

Eternal enemy of this our isle!

Howe'er our grief

May feem to give thee present exulation; Yet even after death,

Boscawen's triumphs
Shall to succeeding ages stan

Shall to fucceeding ages fland.

A fair example,

And rouse the active sons of Britain, Like him.

To dart the terror of their thunders On Gallic perfidy!

So shall the conquests which his deeds inspired,

Indelibly transmit his virtues,

(A blaze of martial glory)

Far beyond

The mural epitaph,

The local and perishable monuments
Of brass or stone.

EPITAPH on the late Mr. Richardson, Author of Pamela, Sir Charles Grandison., &c.

> IF ever warm benevolence was dear, If ever wisdom gain'd esteem sincere, Or genuine fancy deep attention won,

Approach with awe the duft--- of Richardson.

What tho' his Muse, thro' distant regions known,
Might scorn the tribute of this humble stone;
Yet pleasing to his gentle shade, must prove
The meanest pledge of friendship, and of love:
For oft will these, from venal throngs exil'd;

And oft will *Innocence*, of aspect mild, And white-rob'd *Chastity*, with streaming eyes Frequent the cloister where their patron lies.

This, reader, learn; and learn from one, whose woe Bids her wild verse in artless accents flow: For, could she frame her numbers to commend The husband, father, citizen and friend; How would her Muse display, in equal strain

The critic's judgment, and the writer's vein?

Ah,

Ah, no! expect not from the chiffel'd flone
The praifes, graven on our hearts alone.
There shall his fame a lasting shrine acquire:
And ever shall his moving page inspire
Pure truth, fixt honour, virtue's pleasing lore;
While taste, and science crown this savour'd shore.

On the death of JOHN RICH, Esq;

Accept this latest tribute at my hand.

SHAKE SPEARE

HE scene is clos'd--Life's play is done—
And pleasantry expires with Lun;
Who well perform'd, with various art,
The mimick, and the moral part.
His action just, correct his plan,
Whether as Harlequin, or man,
Hear, criticks, hear! and spare your jest,
Life's but a motley-garb at best;
He wore it long with grace and ease,
And ev'ry gesture taught to please;
Where (some few patch work foibles seen
Scatter'd around--blue---yellow---green---)
His constant virtue's radiant hue
O'er all superiorshone to view.
The lively vein of repartee,

As magick-sword, was smart and free; Like that, for harmless mirth design'd, It struck, but left no pain behind.

The masque of oddity, he wore, Endear'd the hidden beauties more. When thrown aside, the shade was clear'd, The real countenance appear'd. Where human kindness, candour fair, And truth the native features were. With moral eye his labours scan, And in the actor read the man. How few, like him, could change with ease, From shape to shape, and all should please! Think on the num rous hours of sport We fpent with him in Fancy's court! What ev'nings of supreme delight! They're past --- they're clos'd in endless night. --- For gratitude, for virtue's cause, Crown his last exit with applause,

Let him not want the lasting praise, (That noble meed of well-spent days!) While, this his mortal dress laid by With ready grace, and decency, Now changing on a nobler plan, To blissful saint from worthy man, He makes, on you celestial shore, One easy transformation more.

The rife of tea.

Hink not the fair deceiv'd by poet's lays Cupid in floth inglorious melts his days; Think not enchain'd on Chloe's breast he lies, Or bathes himself in Delia's languid eyes; Now here, now there, the wanton wanderer roves, O'er Belgia's waters, or Italia's groves; Now foothes the hearts of Gallia's filken fwains, Now fires the tawny youth on Java's plains. As o'er luxurious China's fields he sails, Upborn by lovers fighs, and balmy gales, Deep in the bosom of a fragrant glade, Where pines flow-moving form'd a dancing shade, Where Zephyr stole the rose's rich perfume, And wakeful almonds shook their snowy bloom, Crown'd with rough thickets rose a moss-grown cave, Whose tinkling sides pour down a sparkling wave: Unwilling to defert its native groves, The ling'ring stream in flow'ry lab'rinths roves; The god of love feeds his infatiate fight, Slow wave his loofe wings, and retard his flight. But fay, what foft confusion seiz'd thy breast,

But fay, what foft confusion seiz'd thy breast, What heaving sighs thy instant slame confest, When Thea broke from Morpheus' dewey arms, Rose from the grot, and blaz'd in all her charms? Its swelling orb no hoop enormous spread, Like magic sphere to guard the tim'rous maid; No torturing stays the yielding waist consin'd, A bliss for lovers arms alone design'd; Her hair, by no malicious art repress'd, Play'd in the wind, and wanton'd o'er her breast. Jove grew a swan to press the Spartan fair, What form to taste those charms would Cupid wear?

Quick thro' the founding grove the god descends, Quick at her feet a fighing suppliant bends. Can youth be deaf when Syren passion sues? Or how can beauty fly, when love pursues? No more he feeks the Cyprian's smoaking fanes, Or fips rich nectar in celestial plains; In Thea's heart a slame more pleasing glows, And from her lips more luscious nectar flows. Venus indiginant saw her power decay, And rush'd impetuous through the realms of day: Thus dost thou guard thy once-lov'd parent's throne? Shall then the rebel-power my power disown? See! where the satal cause of my disgrace (Each hateful beauty glowing in her face) Insulting slands!—There let her fixt remain, Nor be the anger of a goddess vain.

To kneel to fue she strove, unhappy maid! In vain, her stiffening knees refuse their aid: Her arms she lifts with pain, in wild surprize She starts to see a verdant branch arise: O love! she try'd to say, thy Thea aid, Her ruddy lips the envious leaves invade: Yet then, just finking from his tortur'd view, Her swimming eyes languish'd a last adieu. Venus triumphant, with a fcornful smile, Points to the tree, and feeks the Cyprian ifle. He mark'd the goddess with indignant eyes, And grief and rage, alternate tyrants, rile. Then fighing o'er the vegetable fair, Yet still, he said, thou claim'st thy Cupid's care! Her arts no more shall Cytherea prove, But own my Thea aids the cause of love. To the free isle, I'll give thy rites divine, To nymphs, whose charms alone can equal thine. For thee the toiling fons of Ind' shall drain The honey'd sponge, which swells the leafy cane; The gentle Naiads to thy shrine shall bring The limpid treasures of the crystal spring; Thy verdant bloom shall stain the glowing stream, Diffuling fragrance in the quivering fleam; Around thy painted altars brittle pride, Shall dimpled smiles, and sleek-brow'd health preside; Whilst white-rob'd nymphs display each milder grace, The morning dream just glowing on each face. With joy I see, in ages yet unborn, Thy votarists the British isle adorn. With joy I see enamour'd youths despise 'The goblet's luftre for the fair one's eyes: Till rofy Bacchus shall his wreaths resign, · And Love and Thea triumph o'er the vine.

EPIGRAM.

On a report of the king of Spain's marrying Madame Victoire, a princess of France.

HO' Frenchmen may promife him Madame Victoire,
He'll find it a trick and a cheat,
An union with France, upon this or that score,
Will wed him to Madame — Defeat.

The following epigram was made by a Hessian officer upon Marshal Broglio's being so near taken on the 10th of July, 1761, reconnoitring, and losing his spying-glass, which Prince Ferdinand immediately returned. The affair of the 16th of the same month at Fellinghausen is well known.

Le Maréchal de Broglio, dit la Gazette, Ce fameux héros, favori des cieux, Le dixieme perdit fes lunettes, Et le seizieme ses yeux.

In the Gazette we're told,
That Broglio the bold,
His speciacles lost by surprize;
But when to our cost,
Fellinghausen was lost,
Twas found that be wanted his eyes.

Advice from a Matron to a young Lady concerning wedlock.

RE you read this, then you'll suppose,
That some new listed lover,
Thro' means of poetry hath chose
His passion to discover.
No, fair one, I'm a matron grave,
Whom time and care hath wasted,
Who would thy youth from sorrow save,
Which I in wedlock tasted.
Thy tender air, thy chearful mien,
Thy temper so alluring,
Thy form for conquest well design'd,
Gives torments past enduring;
And lovers, full of hopes and fears,
Surround thy beauties daily,

Whilft

Whilst yet, regardless of thy cares, Thy moments pass on gayly. Then pass them, charmer, gaylier on, A maiden whilst you tarry; For, troth, your golden days are gone, The moment that you marry. In courtship we are all divine, And vows and prayers ensnare us; Darts, flames, and tears adorn our shrines, And artfully men woo us. Then who'd the darling power forego, Which ignorance has given; To ease them of eternal woe Must we resign our heav'n? No, marriage lets the vizard fall, Then cease they to adore us: The goddess finks to housewife Moll, And they reign tyrants o'er us. Then let no man impression make Upon thy heart fo tender, Or play the fool for pity's fake, Thy quiet to furrender. Lead apes in hell! there's no fuch thing, Those tales are made to fool us, Though there we had better hold a ftring, Than here let monkies rule us.

The applause bestowed on the Rosciad, will, we imagine, render the following extracts from it agreeable. They are such, we presume, as show that the author unites the judgment of a critic with the fire and fancy of a poet.

Character of Mrs. Cibber.

With rival excellence of love and rage,
Mistress of each foft heart, with matchless skill,
To turn and wind the passions as she will;
To melt the heart with sympathetic woe,
Awake the sigh, and teach the tear to slow;
To put on frenzy's wild distracted glare,
And freeze the soul with horror and despair;
With just desert enroll'd in endless fame,
Conscious of worth superior, C-bb-r came.
When poor Alicia's madding brains are rack'd,
And strongly imag'd griefs her mind distract;

Struck

For the YEAR 1761.

Struck with her grief, I catch the madness too!
My brain turns round, the headless trunk I view!
The roof cracks, shakes, and falls!—New horrors rife,
And reason buried in the ruin lies.

Nobly disdainful of each slavish art, She makes her first attack upon the heart: Pleas'd with the summons, it receives her laws, And all is silence, sympathy, applause.

But when, by fond ambition drawn afide, Giddy with praife, and puff d with female pride, She quits the tragic scene, and, in pretence To comic merit, breaks down nature's sence; I scarcely can believe my ears or eyes, Or find out C-bb-r through the dark disguise.

Mrs. Pritchard, from the Same.

PRITCHARD, by nature for the ftage defign'd, In person graceful, and in sense resin'd; Her art as much as nature's friend became, Her voice as free from blemish as her same. Who knows so well in majesty to please, Attemper'd with the graceful charms of ease?

When Congreve's favour'd pantomime to grace,
She comes a captive queen of Moorish race;
When love, hate, jealousy, despair and rage,
With wildest tumults in her breast engage;
Still equal to herself is Zara seen;
Her passions are the passions of a queen.

When she to murther whets the tim'rous thane, I feel ambition rush through ev'ry vein; Persuasion hangs upon her daring tongue, My heart grows sint, and ev'ry nerve's new strung.

In comedy——" Nay, there," cries critic, hold, Pritchard's for comedy too fat and old. Who can, with patience, bear the grey coquette, Or force a laugh with over-grown Julett? Her speech, look, action, humour, all are just, But then her age and figure give disgust."

Are foibles then, and graces of the mind, In real life, to fize or age confin'd?

Do spirits flow, and is good-breeding plac'd. In any set circumference of waist?

As we grow old, doth affectation cease, Or gives not age new vigour to caprice? If in originals these things appear, Why should we bar them in the copy here?

The nice punctilio-mongers of this age,
The grand minute reformers of the stage,
Slaves to propriety of ev'ry kind,
Some standard-measure for each part should find;
Which, when the best of actors shall exceed,
Let it devolve to one of smaller breed.

All actors too upon the back should bear Certificate of tirth;—time, when;—place, where. For he a can critics rightly fix their worth, Unless they know the minute of their birth? An audience too, deceiv'd, may find, too late, That they have clapp'd an actor out of date.

Figure. I own, at first may give offence,
And harshly strike the eye's too curious sense:
But when perfections of the mind break forth,
Flamour's chaste sallies, judgment's solid worth;
When the pure genuine stame, by nature taught,
Springs into sense, and ev'ry action's thought;
Before such merit, all objections sly;
Pritchard's genteel, and Garrick six feet high.

Oft have I, Pritchard, feen thy wond'rous skill, Confess'd thee great, but find thee greater still. That worth, which shone in scatter'd rays before, Collected now breaks forth with double pow'r. The Jealous Wife—On that thy trophies raise,

Inferior only to the author's praise.

Mr. 2-n, from the same.

N, from afar, lur'd by the fcent of fame, A flage Leviathan put in his claim.
Pupil of Betterton and Booth. Alone,
Sullen he walk'd, and deem'd the chair his own.
For how should moderns, mushrooms of the cay,
Who ne'er those masters knew, know how to play?

Grey-bearded vet'rans, who, with partial training. Extol the times when they themselves were young; Who, having lost all relish for the stage, See not their own defects, but lash the age, Receiv'd with joyful murmurs of applause, Their darling chief, and lin'd his fav'rite cause.

Far be it from the candid Muse to tread Insuling o'er the ashes of the dead.
But just to living merit, she maintains,
And dares the test, whilst Garrick's genius reigns:
Ancients, in vain, endeavour to excel,
Happily prais'd if they could act as well.

I

But, though prescription's force we disallow, Nor to antiquity submissive bow; Though we deny imaginary grace, Founded on accidents of time and place; Yet real worth of ev'ry growth shall bear Due praise, nor must we, Q—n, forget thee there.

His words bore sterling weight, nervous and strong; In manly tides of sense they roll'd along. Happy in art, he chiesly had pretence To keep up numbers, yet not forfeit sense; No actor ever greater heights could reach

In all the labour'd artifice of speech.

Speech! Is that all? And shall an actor sound An universal same on partial ground? Farrots themselves speak properly by rote, And, in six months, my dog shall howl by note. I laugh at those who, when the stage they tread, Neglect the heart to compliment the head; With shrict propriety their care's confin'd To weigh out words, while passion helts behind, To syllable-dissectors they appeal, Allow them accent, cadence—fools may feel; But, spite of all the criticising elves, Those who would make us feel, must feel themselves.

His eyes, in gloomy focket taught to roll, Proclaim'd the fullen habit of his foul. Heavy and phlegmatic he trod the stage, Too proud for tenderness, too dull for rage.

When Hector's lovely widow shines in tears, Or Rowe's gay rake dependent virtue jeers; With the same cast of features he is seen To chide the libertine and court the queen.

From the tame scene which without passion flows, With just desert his reputation rose. Nor less he pleas'd, when, on some surly plan, He was, at once, the actor, and the man.

In Brute he shone unequall'd: all agree
Garrick's not half so great a brute as he.
'When Cato's labour'd scenes are brought to view,
With equal praise the actor labour'd too,
For still you'll find, trace passions to their root,
Small diff'rence 'twixt the Stoic and the Brute.

In fancied scenes, as in life's real plan, He could not, for a moment, fink the man. In whate'er cast his character was laid, Self still, like oil, upon the surface play'd. Nature, in spite of all his skill, crept in: Horatio, Dorax, Falstass,—till was Q—n.

Mr. Sh-r-d-n, from the Same.

EXT follows Sh-r-d-n.—A doubtful name,
As yet unfettled in the rank of fame.
This, fondly lavish in his praises grown,
Gives him all merit; that allows him none.
Between them both, we'll steer the middle course,
Nor, loving praise, rob judgment of her force.

Just his conceptions, natural and great:
His feelings strong, his words enforc'd with weight.
Was speech-fam'd Q——n himself to hear him speak,
Envy would drive the colour from his cheek:
But step-dame Nature, niggard of her grace,
Deny'd the social pow'rs of voice and face.

Fix'd in one frame of features, glare of eye, Passions like chaos, in confusion lie: In vain the wonders of his skill are try'd To form distinction nature hath deny'd.

His voice no touch of harmony admits, Irregularly deep and shrill by sits: The two extremes appear, like man and wife, Coupled together for the sake of strife.

His action's always strong, but sometimes such. That candour must declare he acts too much. Why must impatience fall three paces back? Why paces three return to the attack? Why is the right leg too forbid to stir, Unless in motion semicircular? Why must the hero with the nailor vie, And hurl the close-clench'd sist at nose or eye?

In Royal John, with Philip angry grown,
I thought he would have knock'd poor D-v--s down,
Inhuman tyrant! was it not a shame,
To fright a king so harmless and so tame?

But, spite of all defects, his glories rise;
And art, by judgment form'd, with nature vies.
Behold him found the depth of Hubert's soul,
Whilst in his own contending passions roll.
View the whole scene, with critic judgment scan,
And then——deny him merit if you can.
Where he falls short, 'tis Nature's fault alone,
Where he succeeds, the Merit's all his own.

Mr. Garrick, from the Same.

A S T Garrick came—Behind him a throng train Of fnarling critics, ignorant as vain.

One finds out,—"He's of stature somewhat low,—Your heroe always should be tall you know.— True nat'ral greatness all confists in height." Produce your voucher, critic.—"Serjeant Kite."

Another can't forgive the paltry arts
By which he makes his way to shallow hearts;
Mere pieces of finesse, traps for applause.

"Avant unnat'ral start, affected pause.

For me, by nature form'd to judge with phlegm, I can't acquit by wholefale, nor condemn. The best things carried to excess are wrong: The start may be too frequent, pause too long. But only us'd in proper time and place, Severest judgment must allow them grace.

If bunglers, form'd on imitation's plan, and the Just in the way that monkies mimic man; Their copied scene with mangled arts disgrace, And pause and start with the same vacant sace; We join the critic laugh; those tricks we scorn, Which spoil the scenes they mean them to adorn.

But when, from nature's pure and genuine source, These strokes of acting flow with gen rous force: When in the seatures all the soul's pourtray'd, And passions, such as Garrick's, are display'd; To me they seem from quickest feelings caught: Each start is nature; and each pause is thought.

When reason yields to passion's wild alarms, And the whole state of man is up in arms; What, but a critic, could condemn the play'r For pausing here, when cool sense pauses there? Whilst, working from the heart, the fire I trace, And mark it strongly staming to the face; Whilst, in each sound, I hear the very man; I can't catch words, and pity those who can.

Let wits, like spiders, from the tortur'd brain
Fine-draw the critic-web with curious pain;
The gods,—a kindness I with thanks must pay,
Have form'd me of a coarser kind of clay;
Nor stung with envy, nor with spleen diseas'd,
A poor dull creature, still with nature pleas'd;
Hence to thy praises, Garrick, I agree,
And, pleas'd with nature, must be pleas'd with thee.

Now

Now might I tell how filence reign'd throughout, And deep attention hush'd the rabble rout; How ev'ry claimant, tortur'd with desire, Was pale as asses, or as red as fire: But, loose to same, the Muse more simply acts, Rejects all flourish, and relates mere facts.

The judges, as the fev'ral parties came, With temper heard, with judgment weigh'd each claim,

And in their sentence happily agreed,

In name of both, great Shakespear thus decreed:

"If manly sense; if nature link'd with art;

If thorough knowledge of the human heart;

If pow'rs of acting, vast and unconfin'd;

If fewest faults with greatest beauties join'd;

If frong expression, and strange pow'rs, which lie

Within the magic circle of the eye:

And which possess of well as his can show,

And which no face so well as his can shew;
Deserve the pref'rence; — Garrick take the chair;
Nor quit it — 'till thou place an equal there.

The songs of Selma*. From the original of Ossian the son of Fingali

Quis talia fando Temperet a lacrimis?

VIRGIL:

AIR light! that, breaking through the clouds of day,
Dartest along the west thy silver ray;
Whose radiant locks around their glory spread,
As o'er the hills thou rear'st thy glittering head;
Bright evening star! what sees thy sparkling eye?
What spirits glide their mouldering bodies nigh?
The storm is o'er; and now the murmuring sound,
Of distant torrents creeps along the ground;

* This poem fixes the antiquity of a custom, which is well known to have prevailed afterwards, in the north of Scotland, and in Ireland. The bards, at an annual feest, provided by the king or chief, repeated their poems, and such of them as were thought, by him, worthy of being preserved, were carefully taught to their children, in order to have them transmitted to posterity.—It was one of those occasions that afforded the subject of the present poem to Ossan.—It is called in the original, the songs of Selma, which title it was thought proper to adopt in the translation.

The poem is entirely lyric, and has great variety of verification. The address to the evening flar, with which it opens, has in the original all the harmony that numbers could give it; flowing down with all that tranquility and softness, which the scene described naturally inspires.—Three of the songs, which are introduced in this piece, were published among the fragments of ancient poetry,

printed last year. See them in our last Volume.

Around

Around the rocks the lashing billows cling;
And drowly beetles rife on feeble wing:
Across the plain I hear their humming flight;
But what, bright beam! is feen by thine all-piercing fight?——
Ha! thou dost hasten smiling to the west;
In Ocean's wat'ry bed to take thy rest.
With open arms its waves thy form embrace,
Bathe thy bright locks, and hide thy lovely face.
Farewel, thou filent harbinger of night!—
Thine aid's supplied by Ossian's mental fight.——

I see, I feel, the light arise, 'That opes the bard's all-feeing eyes .-And now, on Lora's rifing ground, My friends departed gather round; As when they met in former days, To hear and fing the fongs of praise. Lo! Fingal like a watry cloud, Around him fee! his warriors croud, And bards, to whom did once belong The strength and sweetness of the song. There Ullin's locks of filver gray, And Ryno, comely as the day: Alpin *, with tuneful voice; and there The fongstress sweet, Minona fair; On whose so-softly plaintive tongue Enraptur'd chiefs attentive hung.

Alas! my friends! if these my friends I see, How chang'd your faded forms appear to me! How chang'd indeed! since when, at Fingal's call, Our songs were heard in Selma's echoing hall; When o'er the sessive board and jovial shell, Our harps were strung of mighty deeds to tell, Of heroes slain, and tales of maidens' wrongs; Our friendly contest whose the noblest songs. 'Twas there Minona †, then a beauteous maid, Whose blushing cheeks her modest fears betray'd,

* Alpin is from the same root with Albion, or rather Albin, the ancient name of Britain; Alp, high Inland, or country. The present name of our island has its original in the Celtic tongue; so that those who derived it from any other, betrayed their ignorance of the ancient language of our country.—Breac't in, variegated island, so called from the face of the country, from the natives painting themselves, or from their party-coloured cloaths.

† Offian introduces Minona, not in the ideal fcene of his own mind, which he had defcribed; but at the annual feast of Selma, where the bards repeated

their works before Fingal.

With locks expos'd to every gust of wind,
And tearful eye, that spoke her anxious mind,
Stood forth, the tale of haples love to sing;
To sooth the soul of Morven's mighty king.
The feast forgot, the chiefs no more rejoice;
But mournful listen to her plaintive voice.
For well they knew where Salgar's || corse was laid,
And Colma's & tomb, the snow-white-bosom'd maid.
Hard was her lot, fair virgin! all alone,
On mountain wilds to vent her fruitless moan;
To chide her lover's absence, as unkind,
And waste her voice of music in the wind:
With tears of death, in anguish, to deplore
Her fallen friends, who rise, alas! no more.

Her fad complaint the fair Minona fung, In words that drop'd from Colma's tuneful tongue.

C O L: M ,: A.

'Tis night; and, on the hill of ftorms
Alone doth Colma stray; 1 sould fine
While round her shriek fantastic forms
Of ghosts, that hate the day. The hidles

O'er rocks the torrent roars amain,
The whirlwind's voice is high:
To fave her from the wind and rain,
No friendly shelter nigh!

Rife, moon! kind stars! appear a while,

And guide me to the place;

Where rests my love, o'ercome with toil,

And wearied with the chace.

Some light! direct me, helpless maid!

Where, fitting on the ground, helded!

His bow unstrung is near him laid, and His panting dogs around.

Else by the rock, the stream beside,

I here must sit me down;

While howls the wind, and roars the tide,

My lover's call to drown.

Sealg-'er, a hunter.

Sul-math, a woman with fine hair.

Ah! why, my Salgar! this delay?
Where stray thy ling'ring feet?
Didst thou not promise in the day
Thy love at night to meet?

Here is the rock, and here the tree,
Thine own appointed spot;
Thy promise canst thou break with me?
And is my love forgot?

For thee I'd dare my brother's pride; My father's house would fly; For thee forsake my mother's side; With thee to live and die.

Be hush'd, ye winds! how loud ye brawl! Stream! stand a moment still, Perhaps my love may hear me call, Upon the neighbouring hill.

Ho! Salgar! Salgar! mend thy pace;
To Colma hafte away.
'Tis I, and this th' appointed place:
Ah! wherefore this delay?

Kind moon! thou giv'st a friendly light; And lo! the glassy stream, And the grey rocks, through dusky night Resect thy filver beam.

Yet I descry not Salgar's form:

No dogs before him run.

Shall I not perish by the storm,

Before to-morrow's sun?

But what behold I, on the heath?

My love! my brother! laid

O fpeak, my friends! nor hold your breath,

T' affright a trembling maid.

They answer not—they sleep—they're dead—Alas! the horrid fight—Here lie their angry swords, still red
And bleeding from the fight.

Ah! wherefore lies, by Salgar flain, My brother, bleeding here? Vol. IV. Why Salgar murder'd, on the plain, By one to me fo near?

Friends of my choice! how lov'd were both!

Who now your fame shall raise?

Who sing my lover's plighted troth;

My brother's fong of praise?

Of thoulands lovely, Salgar's face Was loveliest to the fight: Renown'd my brother for the chace, And terrible in fight.

Sons of my love! fpeak, once again—
Ah no!—to death a prey,
Silent they are, and must remain;
For cold their breasts of clay.

But are their fleeting spirits fled Across the plain so soon? Or shun the shadows of the dead The glimpses of the moon?

Speak, where on rock, or mountain grave, Still clash your souls of fire, Or reconcil'd, in some dark cave Your peaceful ghosts retire.

Ah! where her friends shall Colma sind?

Hark—No—they're silent still—

No muttering answer brings the wind;

No whisper o'er the hill.

Fearless, yet over-whelm'd with grief,
I fit all night in tears;
Hopeless of comfort or relief,
When morning light appears.

Yet, raise, ye friends of these, the dead;
On this sad spot their tomb;
But close not up their narrow bed,
Till hapless Colma come.

For why behind them should we stay,
Whose life is now a dream?
Together here our corses lay,
Beside the murmuring stream.

So shall my shivering ghost be seen, Lamenting o'er the flain; As homeward hies the hunter keen, Benighted on the plain.

Yet shall he, fearless, pass along. And lend his listening ear: For fweet, though fad, shall be my fong, For friends I lov'd fo dear.

This Colma's plaint; and thus with music's tongue, The fweetly blushing maid of Torman fung, The foft Minona; while her fluttering breast Bespoke an heart with tender grief oppress'd; The fympathetic forrow catch'd around, And heroes dropp'd their tears upon the ground.

Next Ullin came and touch'd the founding string, And Alpin's well-known fong flood up to fing: That fong the tuneful bard to Ryno fung, When Ryno liv'd to hear his tuneful tongue: Heard now no more! for, in their lowly bed, Both rest in silence, slumbering with the dead. But ere they fell, as Ullin took his way, Home from the chace, he heard, and caught, the lay. All fad, they fung behind the rolling stream; Morar, the first of men, their mournful theme. Morar, whole foul with Fingal's might compare, Whose sword, like Oscar's sword, a meteor in the air. But ah! he fell; his fire, bent down with years, And blooming fifter shedding fruitless tears, Minona fair; who now for look the throng, Her heart too full to lift to Ullin's fong. So, when the shower-presaging winds are loud, The moon retires behind the western cloud.

To raise the song, did I in concert join; Mixing the founds of Ullin's harp with mine.

The following letter is inserted at the request of a correspondent to whom we are under obligations.

To the Author of the Annual Register.

SIR, HE fable of the rainbow fent to you some time since,

and which I suppose will be inferted in your next Register, was written by John Norris, Esq; lately deceased, student in the temple, fellow of Caius college in Cambridge, and only fon of Anthony

Norris, Esq: of Barton in the coun-

ty of Norfolk.

He was a young gentleman, who, with an elegant taste for the polite arts, had penetrated far into the abstruse sciences. When he took his degree of bachelor of arts he was amongst the first on whom the university conferred its honours for their mathematical knowledge, and was second to none in desert. He last year obtained the middle bachelors prize for the best composition in Latin prose, and the sable of the Rainbow was one of his sirst productions in English verse.

By a happy and uncommon union of fo extensive a genius, with intense application, at the age of 24 he had justly acquired fame to himself, was an ornament to the societies to which he belonged, and an honour to his family. And with every accomplishment which could make him agreeable to his acquaintance, having blended every quality which would have rendered him useful to mankind, his death is not only a private loss, but a public calamity. I am, Sir, yours,

S. C.

An Account of Books for 1761.

* Fingal, an ancient epic poem, in fix books, together with several other poems, composed by Ossian the son of Fingal; translated from the Galic language, by James Macpherson.

ROM the publication of these extraordinary poems, the ingenious editor has a double claim to literary applause. One, as having with equal industry and taste recovered from the obscurity of barbarism, the rust of sifteen hundred years, and the last breath of a dying language, these inestimable relicks of the genuine spirit of poetry: and the other, for prefenting them to the world in an English translation, whose expresfive fingularity evidently retains the majestick air, and native simplicity of a fublime original, The venerable author, and his elegant translator, thus have mutually conferred immortality on each other.

The poem, which stands first in order as well as merit in the collection, is named from the principal hero of it, Fingal. This celebrated chief, influenced by the courage and generofity for eminent in his character, leads his warriors from the Highlands of Scotland, and among them his fon Offian the poet, to aid the infant king of Ireland, whole dominions, then under the guardianship of Cuchullin, were invaded by Swaran king of Scandinavia; the most terrible warrior of his time, and the very reverse of Fingal in every thing but personal valour. Immediately before the arrival of Fingal, the forces commanded by Cuchullin are defeated near Tura on the coast of Uster. And whilst this gallant leader, regardless of his own fafety, takes every measure which bravery or despair can fuggest to repel his enemy, the ships of Fingal are descryed, and

* The differention prefix'd to these poems, is, for its curious matter, inferted in another part of this work.

call

call off Swaran from the pursuit. Sensibly affected by his defeat, and too generous to feek a share in Fingal's glory, Cuchullin retires to a wood; and leaves the conquest of Swaran to the better fortune and superior prowess of his friend. This is foon accomplished; Swaran in a personal engagement with Fingal is overcome, and made prisoner, but is shortly after restored to his liberty; and subdued more by the noble behaviour than the arms of his conqueror, this fullen hero, and his magnanimous opponents, return after a campaign of fix days to

their respective countries.

This, with the intervening epifodes, is the subject of the poem; and has the appearance of a real history written by one who was an eye-witness to, and a principal actor in that expedition. As fuch it is confidered by the editor. and in this view we read it with the greater satisfaction, whilst we found ourselves captivated without fiction, by all the charms of an agreeable romance. But the credibility, and even the possibility of the story as here related, is called in question by doctor Warner; who as an Englishman unbiassed to Ireland, and as an historian now compiling the history of that country, professes himself an impartial, and in some measure an able judge on this occasion. According to him, " unless the writers of Irish affairs through feveral fucceeding ages have agreed to impose on posterity, Cuchullin lived two hundred and fifty years before Fingal," These heroes, with Offian, Gaul, &c. were absolutely of that nation. But Swaran is not once mentioned

in their writings, " nor could his invasion have happened under the reign of an infant king, because by the established law of succession in that kingdom minor could be advanced to no the royal dignity. It is therefore, he fays, extremely probable, that the poems in their original composition were fables finely imagined, and inimitably executed by an old Irish bard; but were afterwards changed and mutilated by some Caledonian, or else originally composed by him with a design to give the honour of the heroes to his own country. He thinks them the production of an Irish bard, because among other reafons, the heroes are evidently Irish, and he supposes the Caledonians would have as little fcrupled to steal the poem, as they did the heroes. But he fuspends his judgment on this last article, till a translation of this, or fome fuch poem now preparing for the press in Dublin from an authentic manuscript, shall better illustrate this doubtful matter." But leaving it to those who regard it as a point of national honour, to contest, as they will, the birth-place of their Celtic Homer, and the heroes whom he celebrates; if this were confidered merely as a modern composition, it were no more hurt at this distance of time by the anachronism between Cuchullin and Fingal than the Aneid was by that of Dido, who did not exist till near two centuries and an half after Æneas. As it stands, however, it must be confessed that if this error be clearly made out, the error and the poem together must

T 3

find fome other father besides Offian the fon of Fingal. He who bore so distinguished a rank in that expedition, could not, furely, without the least necessity for it, have brought a man to life who was dead two hundred and fifty years before. We received such uncommon pleasure from the perufal of this performance, and thought it so valuable an acquisition to English poetry, that we should be very glad if neither this, nor any thing else in the work, had given reason to doubt its being, at least in its present form, the genuine offspring of him to whom it is ascribed. But the total silence of the poem with regard to the groffer parts of the druidical religion, and the retaining what was most pure and poetic, such as the notion of spirits here so happily introduced, with fome circumstances in the allusions and formation of the poem itself, induce a suspicion of more art than simplicity in the poet. But as these circumstances furnish arguments rather specious than conclusive against the genuineness of the work. we proceed with greater farisfaction to those which tend strongly to decide in favour of its antiquity.

Whether this poem, and the smaller ones which accompany it, were composed by the real or some siditious. Offian, they have that primitive air, which, were we not informed they can't at the utmost be more than fifteen centuries old, would naturally incline us to fix their date in the earliest period of society. The stille so consonant to the ideas, the ideas so agreeable to the simple manners of remote ages, and both of a cast so different from the modern modes of expression

and thinking; hunting the fubfistence, and war the occupation of this pristine people, the favage groffnels of their vices, and the wild fublimity of their virtues; the extravagant heroism of the principal characters, that spirit of hospitality which invited the stranger by feven different ways; their tokens of submission by delivering the spoule and dog; their superstitious notions fo beautifully poetic; the feast of shells; the fignal of battle by firiking the fhield; the fongs of the bards which make fo many interesting episodes; all thele, whilst they give us a striking picture of the manners, the customs, the superstitions of the times; while they affect us with all that is pathetic, and elevate with all that is fublime; thefe, we think, are impressed with such genuine, fuch peculiar, fuch original marks of antiquity, as feem utterly beyond the reach of any modern invention.

From a view of these circumstances, and of those on the other hand which argue against the genumeness of the poems; we incline to think them, or rather the greater part of their expressions and ideas, the production of Offian whose name they so often mention. It is probable, that in his moments of inspiration, when, as he expresses it, " the light of the fong rose upon his foul," he composed the feveral parts of which the larger poem confifts, and among them the story of Cuchullin, in separate pieces; but that in an age more enlightened, when the value of an epic composition was better underflood, fome other bard collected the scattered fragments, and without attending either to chronolo-

gical

gical exactness, or to historical truth, united such of them as he imagined related to, or did not feem inconfistent with the same subject, into one intire poem, which he moulded and embellished in whatever manner best suited his fancy; but still left the honour of it to him, whom tradition had always celebrated as the original author. Whether the ingenious editor has contributed to its further improvement, can only be determined by the very few who are qualified to examine into the merit of the poem in its native language. The translation, he tells us, is literal; and we easily believe, a person of his taste would chuse to leave as he found what he deemed a fine original. We also as readily agree, " it would be a very uncommon " instance of self-denial, to disown " the performance were it really of " his composition." Had it been written by him, he might by inferting other names in the place of Cuchullin and Swaran, have eafily obviated those * objections which he forefaw would arise to to the truth of the story from the Irish history and traditions. In a word, if the intrinsic evidence refulting from the peculiarity of the work can receive any weight from the testimony of gentlemen whose judgment can only be exceeded by their candour, and to whom most of the heroes mentioned in the poem, were well known long before its publication, many of the expressions and ideas of which it confifts, are, in their manner, particular only to the language from which

they are faid to be translated, and are really Irish in an English dress. Be it therefore the production of whom it will, we subscribe in the main to its antiquity. The circumstances which look another way, we imagine are the interpolations of some secondary bard. from which it would be extreamly hard to conclude against the general originalness of the performance. The works of Homer are not esteemed a tittle the less original from what they are supposed to have fuffered in the hands of those, who joined together his loofe and unconnected pieces, and prefented them to the world in their present:

But whilft the uncommon meri of Fingal, as the extraordinary production of uncultivated genius is univerfally admitted, 'its degree of perfection, as an epic poem, feems not to be fo well established. Some infift it has not only the fuperior parts, but even the very minutiæ so essential to this exalted species of poetry; while others hold it defective in the most capital articles, the fable, the manners and characters. The fable, because the subject of the poem is supposed to be a real history; invention, the greatest excellence in compositions of this kind, is therefore (they fay,) confessedly wanting. For Aristotle observes, " that if the works of Herodotus " were turned into verse, they " would nevertheless compose but an history in that state, as well " as they do in profe." It feems then, that those gentlemen who

^{*} See his differtation.

have questioned its historical veracity, have done the poem a fingular fervice, by removing in some measure this weighty objection, But we cannot enter so far into the fpirit of the epopæia as to perceive, how it now becomes in the least degree better as a fable (which that it is, is so warmly afferted) than it was before as the genuine narrative of a military expedition. The Iliad is founded on an incontestible event, the slege of Troy. The incidents, the characters, the manners and the imagery of this fublime composition, we owe however to the creative imagination of the poet. And though the story of this invasion may not be fabulous, yet furely in the ma-nagement of it, much is due to the invention, as well as to the grand conceptions of the writer. In the first battle we every moment expect to fee Swaran engaged arm to arm with Cuchullin; we are alarmed for the event: " night however conceals the chiefs in her clouds, and ends the terrible fight." Again they are at the point of affailing each other, again our expectations are raised, and again the dreadful confequence of fuch a conflict is prevented by the appearance of Fingal's fleet. Gaul, a distinguished hero, and Swaran meet, the shield of Gaus is cleft in twain; but "Fingal rears his voice, and Swaran stops in the midst of his course." Thus by incidents much more natural than the intervention of a goddels, are these favourite heroes infinatched from destruction, and the prowels of Swaran is raifed to the highest pitch, that this Hector of the peem may shine forth a conquest worthy the arm of Fingal.

All this bears testimony rather to the admirable invention, than to the historical truth of the poet. And probably the poem is no more an history of that invasion on which it is grounded, than the Iliad is an history of the siege of Troy. Besides, diversified as it is with so many beautiful episodes, there is the less reason to charge it with any want of invention.

With regard to the manners, that they are forcibly described, has, been already observed. But that the poem is comparatively defective in point of character, we in fome measure confess. The characters in general are neither fo variously nor so strongly mark'd as those of Homer. But is this the fault of Offian, or of the age in which he lived? An age of artless simplicity, when self-taught genius wanted every aid to arrive at a knowledge of those complicated operations and windings of the mind, which in a more enlarged and better improved state of fociety constitute the distinguishing marks of character. In those days all their views were directed to military glory; all their knowledge flowed from the fongs of their bards; and the subject of all those songs was the heroic atchievements of their ancestors. Thus cherished and trained up in what became at last a kind of fecond nature, it is no wonder that in so short a work, and where the personages are so few, there seems to prevail that fameness of character. which should so naturally and univerfally refult from the ruling passion. One advantage indeed it has, it is a further indication that the work is genuine. We are however very far from thinking

that fome of the principal characters are not equally well delineated and fustained. Swaran is dark, fullen, and inflexible; Cuchullin is distinguished by a sensibility exquisitely delicate. Connal is cool and prudent; Gaul discovers all the ardour of youthful intrepidity; and in the fingle character of Fingal, all the qualities are united, which can make us either love the man or admire the hero; " in peace he is the gale of fpring; in war, the mountain florm." Here let it be observed in favour of poetry, that at a time and among a people involved in the profoundest ignorance, we find these illustrious barbarians fo more than humanized by the fongs of their bards, that the noble spirit and elevated fentiments, which they fo eminently display, would do honour to the regular education, and elegant manners of the most polished age.

From what has been faid, it is plain we think very highly of this performance. Yet we are not fo partial to it, as to put it in competition with the more confummate work of the father of epic poetry. A work which for its fuperior excellence was, at its first appearance in the world, deemed rather a divine, than human composition! A work, from the due confideration of which. are deduced those rules, that constitute to this very hour the standard of epic perfection! To make a comparison therefore between Fingal and the Iliad, were to make Homer himself the judge between Homer and Offian. Many striking resemblances there are however between them; fo many indeed, as to induce a suspicion among ferupulous critics, that Offian understood the Grecian as

well as the Gaulic language; and, which is more extraordinary, there may be some reason to think, he was not wholly unacquainted with our modern Milton. But this only infers, that with great geniuses, fimilar grand occasions will often excite the like fublime conceptions, and call forth the same enthusiastic expressions. Hence, in many beautiful instances which the elegant translator has pointed out, our Celtic poet feems to have caught the Mæonian inspiration. His fimiles, like those of Homer, and fome in the facred writings, though not minutely exact, yet feldom fail wonderfully to heighten whatever they are defigned to illustrate. And if in the allusions with which the poem abounds, the images of trees, rocks, waves, florms, beams of fire, and the great luminaries of heaven feem too often repeated; it is because they are at once the most obvious to an unenlightened genius, and the grandest objects in nature.

On the whole, the imperfections of this poem, which will not bear the test of critical examination, are naturally accounted for by the disadvantages of an ignorant and barbarous age. And instead of feeking in the works of Offian for the hitherto unequalled merit of Homer or Virgit; we should rather ask, whether in Oslian's circumfiances the greater of the two could have produced a more exquifite composition? But if we owe his imperfections to the times in which he lived, we are also not a little indebted to them, for the numberless beauties by which our author is peculiarly distinguished. Among these, are that native simplicity, that wild luxuriance, that

romantic air, so striking, so deferiptive, and fo happily adapted to this fublime species of writing. To the manners of the times, may be likewise ascribed the frequent intervention of the fofter fex, whose tragical loves furnish those affecting epifodes, which blended with the heroic flory of the work at large, form fuch a rare and irrefiftible union of the pathetic and the terrible. Indeed both its defects and excellencies speak loudly in favour of its antiquity; its defects, as the natural refult of barbarism; its excellencies, as the efforts of a great genius, which like light bursting from darkness, shine the brighter for the night of ignorance through which they blaze. But if notwithstanding these marks of antique genuineness, which add fo much weight to the editor's affertion, this extraordinary piece fhould prove, after all, a modern composition; then would its faults admit of little extenuation, its beauties fink in that peculiar value which they derive from primitive fimplicity; and the poem, however well imagined, and happily executed, and with all the merit of a fine original, be nevertheless esteemed but as a grand imposture, carred who ha

From the curiofity which fo uncommon a production must naturally have excited, it is probable that the merit of it is already very well known to most of our readers. To those who have not yet perufed it, the following fpecimen will recommend it much more strongly than any thing we ean add, to what has been already faid in its favour. It is a description of the battle between Swaran and Cuchullin, which we give not as the best, but as the first that occurs in the work.

" As rushes a stream * of foam from the dark shady steep of Cromla; when the thunder is rolling above, and dark-brown night on half the hill. So fierce, fo vaft, and so terrible rushed on the sons of Erin. The chief like a whale of ocean, whom all his billows follow, poured valour forth as a stream, rolling his might along the fhore ...

The fons of Lochlin heard the noise as the found of a winter-Aream. Swaran Aruck his boffy shield, and called the son of Arno. What murmur rolls along the hill like the gathered flies of evening? The fons of Innis-fail descend, or ruftling winds + roar in the diftant wood. Such is the noise of

VIRGIL.

† As when the hollow rocks retain The found of bluftering wind.

MILTON.

Gormal before the white tops of my waves arise. O son of Arno, ascend the hill, and view the dark face of the heath.

He went, and trembling, fwift His eyes rolled wildly round. His heart beat high against his fide. His words were faulter-

ing, broken, flow.

Rife, fon of ocean, rife chief of the dark-brown shields. I see the dark, the mountain-stream of the battle. The deep-moving strength of the fons of Erin. The car, the car of battle comes, like the flame of death; the rapid car of Cuchullin, the noble fon of Semo. 'It bends behind like a wave near a rock; like the golden mist of the heath. Its sides are emboffed with ftones, and fparkle like the fea round the boat of night. Of polished yew is its beam, and its feat of the smoothest bone. The fides are replenished with fpears; and the bottom is the foot-stool of heroes. Before the right fide of the car is feen the fnorting horse. The high-maned, broad-breafted, proud, high-leaping frong fleed of the hill. Loud and resounding is his hoof; the foreading of his mane above is is like that stream of smoke on the heath. Bright are the fides of the steed, and his name is Sulin-Sifadda.

Before the left fide of the car is feen the fnorting horse. The thin-maned, high-headed, ftronghoofed, fleet, bounded fon of the hill: his name is Dufronnal among the stormy sons of the sword. A thousand thongs bind the car

on high. Hard polished bits shine in a wreath of feam. Thin thongs bright-fludded with gems, bend on the stately necks of the steeds. -The fleeds that like wreaths of mist fly over the streamy vales. The wildness of deer is in their course, the strength of the eagle descending on her prey. Their noise is like the blast of winter on the fides of the fnow-headed Gormal.

Within the car is feen the chief: the strong stormy son of the sword; the hero's name is Cuchullin, fon of Semo king of shells. His red cheek is like my polished yew. The look of his blue-rolling eye is wide beneath the dark arch of his brow. His hair flies from his head like a flame, as bending forward he wields the spear. Fly, king of ocean, fly; he comes, like a florm, along the ftreamy

When did I fly, replied the king, from the battle of many spears? When did I fly, fon of Arno, chief of the little foul? I met the fform of Gormal when the foam of my waves was high; I met the fform of the clouds, and shall I fly from a hero? Were it Fingal himself my foul should not darken before him. -Rife to the battle, my thoufands; pour round me like the echoing main. Gather round the bright steel of your king; strong as the rocks of my land; that meet the florm with joy, and firetch their dark woods to the wind. Post igna

As autumn's * dark florms pour from two echoing hills, towards

^{*} The reader may compare this passage with a similar one in Homer, Iliad. 4. V. 446.

each other approached the heroes.—As two dark streams from high rocks meet, and mix and roar on the plain; loud, rough and dark in battle meet Lochlin and Innisfail. Chief mixed his strokes with chief, and man with man; steel, clanging, sounding on steel, helmets are cieft on high. Blood bursts and smoaks around.—Strings murmur on the polished yews. Darts rush along the the sky. Spears fall like the circles of light that gild the stormy sace of the night.

As the troubled noise of the ocean when roll the waves on high; as the last peal of the thunder of heaven, such is the noise of battle. Though Cormac's hundred bards were there to give the war to song; seeble were the voices of a hundred bards to send the deaths to suture times. For many were the salls of the heroes; and wide poured the blood of the valiant.

Mourn, ye fons of the fong, the

death of the noble Sithallin. Let the fighs of Fiona rife on the dark heaths of her lovely Ardan.—They fell, like two hinds of the defart, by the hands of the mighty Swaran; when, in the midst of thousands he roared; like the shrill spirit of a storm, that sits dim, on the clouds of Gormal, and enjoys the death of the mariner.

Nor flept thy hand by thy fide, chief of the ifle of mist &; many were the deaths of thine arm. Cuchullin, thou fon of Semo. His fword was like the beam of heaven when it pierces the fons of the vale; when the people are blafted and fall, and all the hills are burning around. Dufronnal + fnorted over the bodies of heroes; and Sifadda || bathed his hoof in blood. The battle lay behind them as groves overturned on the defart of Cromla; when the blaft has passed the heath laden with the spirits of night.

Weep

Now shield with shield, with helmet helmet clos'd, To armour armour, lance to lance oppos'd, Host against host, with shadowy squadrons drew, The sounding darts in iron tempests slew; With streaming blood the slipp'ry fields are dy'd, And slaughther'd heroes swell the dreadful tide

POPE.

Statius has very happily imitated Homer.

Jam clypeus clypeis, umbone repellitur umbo, Ense minax ensis, pede pes, & cuspide cuspis, &c.

Arms on armour crashing, bray'd Horrible discord, and the madding wheels Of brazen chariots rag'd, &c.

MILTON.

* Sithallin fignifies a handfome man,-Fiona, a fair maid;-and Ardan,

§ The isle of Sky; not improperly called the isle of mist, as its high hills, which catch the clouds from the western ocean, occasion almost continual rains.

+ One of Cuchullin's horses. Dubhstron gheal.

| Sith-fadda, i. e. long ftride.

Weep on the rocks of roaring winds. O maid of Inistore 1, bend thy fair head over the waves, thou fairer then the ghost of the hills; when it moves in a fun-beam at noon over the filence of Morven. He is fallen! thy youth is low; pale beneath the fword of Cuchullin. No more shall valour raise the youth to match the blood of kings. Trenar, lovely Trenar died, thou maid of Inistore. His gray dogs are howling at home, and see his passing ghost, His bow is in the hall unstrung, No found is in the heath of his hinds.

As roll a thousand waves to the rocks, fo Swaran's hoft came on; as meets a rock a thousand waves, fo Inisfail met Swaran. Death raises all his voices round, and mixes with the found of shields .-Each hero is a pillar of darkness, and the fword a beam of fire in his hand. The field echoes from wing to wing, as a hundred hammers that rise by turns on the red fon of the furnace. Who are these on Lena's heath that are fo gloomy and dark? Who are these like two clouds *, and their fwords like lightning above them? The little hills are troubled around, and the rocks tremble with all their moss. Who is it but Ocean's fon

and the car-borne chief of Erin? Many are the anxious eyes of their friends, as they fee them dim on the heath. Now night conceals the chiefs in her clouds, and ends the terrible fight. " the 'Stage alise

As most of the smaller pieces in this collection were taken notice of in the last year's Register under the title of Fragments of ancient-poetry, it is unnecessary to dwell particularly upon them here. They are either tragical or warlike, and admirable in their kind. In one of them is an address to the Sun, which we think remarkably fine .-- The reader is to know that our poet, like Homer and Milton, was at this time utice Though t ormee's build

"O thou that rollest above +. round as the shield of my fathers! Whence are thy beams, O fun ! thy everlasting light? Thou comest forth, in thy aweful beauty, and the stars hide themselves in the sky; the moon, cold and pale, finks in the western wave. But thou thyfelf movest alone: who can be a companion of thy course! The oaks of the mountains fall; the mountains themselves decay with years; the ocean shrinks and grows again: the moon herself is lost in heaven; but thou art for ever the fame; rejoicing in the bright-

I The maid of Inistore was the daughter of Gorlo king of Inistore or Orkney islands. Trenar was brother to the king of Inicon, supposed to be one of the islands of Shetland. The Orkneys and Shetland were at that time subject to the king of Lochlin. We find that the dogs of Trenar are sensible at home of the death of their master, the very instant he is killed.—It was the opinion of the times, that the fouls of heroes went immediately after death to the hills of their country, and the fcenes they frequented the most happy time of their life. It was thought too that dogs and horses saw the ghosts of the deceased.

* As when two black clouds

With heaven's artillery fraught, come rattling on

Over the Caspian. † This passage is something similar to Satan's address to the Sun, in the fourth book of Paradife loft.

ness of thy course. When the world is dark with tempest; when thunder rolls, and lightning flies: thou lookest in thy beauty, from the clouds, and laughest at the florm. But to Offian, thou lookest in vain: for he beholds thy beams no more; whether thy yellow hair flows on the eastern clouds, or thou tremblest at the gates of the west. But thou art perhaps, like me, for a feason, and thy years will have an end. Thou shalt sleep in thy clouds, careless of the voice of the morning. Exult then, O fun, in the strength of thy youth. Age is dark and unlovely; it is like the glimmering light of the moon *. when it fhines through broken clouds, and the mist is on the hills; the blaft of north is on the plain, the traveller shrinks in the midst of his journey."

The death of Abel, attempted from the German of Gessner, by Mrs. Collyer.

HE great applause this work has met with, intitles it to a place in our Register. It is a poetical performance, not written in measure. Mrs. Collyer's translation, we think, does justice to her original. To use the words of her preface.

"The subject is the death of ABEL, which is the most remarkable event recorded in sacred his.

tory from the fall to the delage. The poet has had the art to interest us in the distresses of our first parents, and their immediate defeedants, by the lively and affecting manner in which he manages the passions, and by the graces and truth he throws into his paintings, while he describes the simple manners of the first inhabitants of the earth."

Mr. Gessner has laid his scene in fuch remote antiquity, as might possibly have encouraged some writers to have taken great liberties, but he has been very cautious. In the fimple age, he deferibes, ambition could have nothing to feed. upon. But that other bane of fociety, envy, may find room in the humblest and most simple cottage, and this Mr. Gessner has chofen for the acting principle, which produces the catastrophe, Abel's death. Perhaps had the character of Cain appeared a little more artfully a mixed character, we had still been more interested in the flory, but whatever else may be objected to it, it must be allowed, that Mr. Gessner has great imagination. If the fable should not interest, at least his descriptions. his hymns and all those parts. which leave room for fancy to difplay itself, may engage the reader's attention. We must not omit to mention, that the German

O thou that with furpaffing glory crown'd, Looks from thy fole dominion like the god Of this new world; at whose fight all the stars Hide their diminish'd heads, to thee I call, But with no friendly voice, and add thy name O sun?

Quale per incertam lunam sub luce maligna
Est iter in struis; ubi coelum condidit umbra

Jupiter, & rebus nox abstulit atra colorem.
Thus wander travellers in woods by night,
By the moon's doubtful, and malignant light:
When Jove in dusky clouds involves the skies,
And the faint crescent shoots by fits before their eyes.

VIRG.

DRYD.

has read our Milton with great attention, so that Anameleck's escape from hell to tempt man, will be more admired by strangers to our language, than it can be by those who have read Milton. Nor is that by many the only one instance in which he stands indebted to the English poet. The reader will himself observe it throughout the whole work. He begins his work thus.

Henceforth repose in silence, thou fost pipe, no more I render thee vocal, no more I chant the fimple manners of the ruftic swain. Fain would I raise my voice to bolder strains, and in harmonious lays rehearse the adventures of our primeval parents after their dieadful Fain would I celebrate him who, facrific'd by a brother's fury, his dust first mingled with the earth. Come thou noble enthusiasm that warm'st and fillest the mind of the rapt poet, who during the filent hours of night contemplates in the gloom of the thick grove, or at the fide of a clear stream, glimmering with the moon's pale lamp: when feiz'd by a divine transport, imagination takes her flight, and with bold wing traverfing the regions of created substances, penetrates into the distant empire of possibilities, discovering with clear view the marvelous that captivates, and the beautiful that enchants. Loaded with treasure, she returns to arrange and confiruct her various materials. Taught by reason to chuse and reject, she, with a wife occonomy, admits only what forms harmonious 'relations. Delightful employment! Laudable constancy! I honour the bard, who, to excite fentiments of virtue in the yielding heart, watches the nocturnal fong of the grashopper, till the rifing of the morning

ftar. Posterity will crown the urn of a poet who confecrates his talents to virtue and to innocence: his name shall not be forgot : his reputation shall bloom with unfading verdure, while the trophies of the proud conqueror shall moulder in the dust, and the superb mausoleum of the tyrant shall stand unknown in the midst of a desert, where human feet have made no path. Few, 'tis true, who have ventur'd on these noble subjects have received from nature the gift of finging well; but the attempt is laudable: to it I confecrate all my moments of leifure, and all my folitary walks."

Abel's first appearance is an act of

devotion.

"Retire, O fleep, from every eye. Fly ye hovering dreams to the shades of night. Where are now the shades of night? They have fled to the caves of the rocks; they wait us in the thick grove; we shall find them there, and be refresh'd by their coolness during the fultry heat of noon. See where the new-born day first wakes the eagle; where on the glittering fummits of the rocks, and the shining sides of the mountains, the exhalations afcend and mix with the pure air of the morning, as the smoke of burntofferings arise from the altar. Thus nature celebrates the returning light, and pays to nature's God the facrifice of grateful praise. Praise him all things that exist; praise him whose wisdom and goodness produc'd and preserves all. Ye fpringing flowers, exhale the fweets he gave you in his praise. winged inhabitants of the grove, pour forth the warbling of your little throats to him who gave you voice and melody; while the majestic lion pays him honour with the terrors of his mouth, and the ca-

verns of the rocks refound his praise. Praise God, O my soul! praise God the Creator and Preserver. Let the voice of man reach thy throne, O Lord, before that of thy other creatures: in the grey twilight, at the dawn of the morning, while the birds and beafts yet fleep, may my folitary fong find acceptance, and invite the reviving creation to praise thee.theCreator andPreserver. How magnificent are thy works, O God, wisdom and goodness are stamp'd on all. Wherever I turn my eyes, I perceive the traces of thy bounty; each sense is transported, and conveys their infinite beauties to my ravished mind. O God! weak and frail as I am, fain would I attempt What induc'd thee, thy praise. Maker Omnipotent! for ever happy in thyfelf, to call from nothing this gay creation? What induc'd thee, thou Self-existent, to form man out of the dust, and to give him the breath of life? It was thine Thou gavest infinite goodness. him being that thou mightest confer on him happiness. O smiling morn! in thee I fee a lively image of the work of the great Creator, when the fun disperses the vapours of the earth, and drives night before his steps, all nature revives with renewed lustre. The Almighty spoke; darkness fled and silence heard his voice: he commanded, and miriads of living creatures emerg'd from the teeming earth, flutter'd in the air with variegated plumage, and render'd the aftonish'd woods vocal with the praises of the beneficent Creator. Earth again hears the voice of her Almighty Maker: the heaving clods rife in innumerable shapes, and burst into life and motion. The new-form'd horse bounds o'er the verdant turf, and neighing

shakes his mane: while the strong lion, impatient to free himfelf from the cumbrous earth, attempts his first roaring. A hill teems with life; it moves; it bursts, and from it stalks the huge unwieldly elephant. These are thy works, O thou Omnipotent! Each morn thou call'st thy creatures from sleep, the image of nonexistence; they awake furrounded by thy bounties, and join unanimous to chant thy praise. The time will come, when thy praise shall resound from every corner of the peopled earth; when thine altars shall blaze on every hill, and man shall celebrate thy wonderous works from the rifing to the fetting day."

Cain's first appearance is in a gloomy mood, full of ill-will and envy.

" At the same time Cain passing by the fragrant shade, and heard Abel's melodious voice, and had beheld his delighted father tenderly embrace him. At this fight envy fix'd her envenom'd fling in his heart, and he giving a furious look at the bower, cry'd, What figns of joy are here! What fond careffes! I too might fing were my days, like his, spent in idly reclining in the shade, while the flocks were sporting, or cropping the green hera bage: but I am not made for fing-Rugged labour is my inheritance: tho' I turn the glebe; tho' I break the stubborn earth, curst for my father's fin with, barrenness, yet my fatigues meet no fuch fond rewards: did my foft brother but toil, like me, one day beneath the fcorching fun, 'twould spoil his music; he'd trill no songs. - What, more embraces! how I hate this effeminate dalliance! but if that fair youth be pleas'd, no matter what I hate."

After

After the murder and after the curse denounced against Cain.

"Cain stood motionless. Tpair glar'd in his eyes: yet fiercenels was still feen on his bushy brows. The furious winds shook his erect hair. Wild fear, at length, forc'd from his livid and quivering lips these horrid accents. Why has he not annihilated me?-Wherefore not annihilated me? that no traces of me might remain in the creation. Why was I not blafted by his lightnings? Why did not his thunder strike me to the depths of the earth? But his ire referves me for perpetual fufferings-torments without end-Detested by my fellow creatures-all nature abhors me-I abhor myfelf - Already the attendants on guilt haunt me; shame, remorfe, despair. Shut out from human society, banish'd from God, I shall, while on earth, feel the torments of hell -I feel them now. Curs'd be thou, O arm, which so hastily executed the impulses of passion, mayst thou wir ther on my body like the blighted limb of a tree! Curs'd be the hour when a dream from hell deceiv'd me !- and thou infernal fiend, who fuggested it, where art thou now? that I may curse thee ! Art thou return'd to hell? mayst thou there fuffer inceffantly what I now feel! Nothing worse can I wish thee. This is your triumph, ye spirits of darkness! Gaze on, ye devils, and wonder at my mifery !- Spent with agony, he fat down on the trunk of a fallen tree, and remain'd without firength or voice, motionless as the dead. Then starting he cry'd, Ha! what noise is that? it is the voice of murder'd Abel!_he groans-I fee his streaming blood ! O my brother! my brother!' in pity to my inexpressible anguish, cease to VOL. IV.

haunt me !---He now continu'd fitting in speechless agony, fighs only burfling from his tortur'd heart."

The reader may expect an inflance of the pathetic, when the wives of Cain and Abel meet Adam and Eve after the murder.

Cain's wife fays, "O my father! fpeak—speak, I conjure thee—Why this horror on thy countenance?—No answer!—O my tortur'd heart!—Where—say where, O my father!—fay, Omy mother! where is Cain

my husband?

Eve reply'd, O my child! who knows where, purfu'd by divine vengeance-Ah my God !- the unhappy-but what do I say ?-I tremble to speak it-he he- ah me, unhappy mother! Horriddetestable ideas, tear not thus my wretched bosom! Ah miserable parent that I am! why-he-Ah my mother! interrupted Mahala, spare me not,- spare me not, I conjure thee, O my mother! On me-on me let the tempest fall I am already crush'd; already torn by frightful apprehensions. Cain-O heavens! Cain has-Kill'd him! cry'd Eve. Ah Mahala! Ah Thirza! Cain kill'd him! Her excessive grief then took from her the power of fpeech.

Mahala was ftruck mute with terror. Her immoveable eyes shed no tears. The cold sweat trickled down her pale face, and her trembling lips were discolour'd. At length fine cry'd out in agony, He kill Abel !- Cain my husband, kill his brother !-- Where art thou fratricide? where? Where, Oh where has thy guilt purfu'd thee? Has the thunder of God aveng'd thy brother?-Dost thou cease to exist -- Where art thou, most miferable? To what country of despair art thou fled, follow'd by the curso curse of God? Thus rav'd Mahala,

tearing her hair.

Barbarous fratricide! vile murderer! exclaim'd Thirza: how couldst thou kill so kind a brother; who, doubtlefs, when expiring under the mortal blow given by thy cruel hand; regarded thee with eyes full of love?-Ah Cain, curstcurst be-O my sister! O Thirza! cry'dMahala, interrupting her, curfe him not; he is thy brother !- he is my husband! Rather let us implore for him the mercies of God. I am fure, when falling in his blood, the holy victim of his fury cast on him an eye of compassion, and I doubt not but now intercedes for him before the eternal throne. Let our prayers ascend from the dust, and join those of the happy, O curfe him not, Thirza-curfe not thy brother."

The poet ends his work with an

affecting scene: 9

"Curse me not, O Mahala! I come to deplore before thee my misery and my guilt:—then I sty far from thee for ever. I will hide me in the desarts. Curs'd of God, follow'd by his wrath, I sty. Oh curse me not! curse not thy wretched husband!

Ah Cain! fhe reply'd, penetrated with the tenderest compassion; tho' thou hast kill'd the best of brothers—tho' thou hast heap'd inexpressible miseries on my wretched head, yet I forget not that thou art still my husband. I pity—I weep for thee. Cain answer'd, casting on her a look of tenderness, a look that express'd the bitter anguish of his heart; Fatal moment, when a dream from hell deceiv'd me! these little ones appear'd before me as slaves to the sons of Abel. To save them from misery

and bondage I kill'd him.—Curs'd moment! I murder'd the best of brothers, and the bloody deed will for ever haunt my mind, and still it with infernal horrors. My punishment is eternal. Yet, O Mahala! I would escape thy curses. Curse me not, my dearest wise—Curse me not in my misery. This hour I sty—I quit thee for ever—I quit ye for ever, my beloved children! I sty from ye, curs'd by God and man.

The children lamented round him. They rais'd their innocent hands in agony. Mahala funk on the earth, and reclin'd on her hufband. Receive these tears - receive these expressions of my fincere forgiveness and compassion, she faid, while the wept over him. Doft thou fly, Cain? Doft thou fly to the defart regions? How can I dwell here while thou art folitary and abandon'd! --- while thou art miserable far from me! No, Cain, I fly with thee. How can I fuffer thee to be destitute of all relief in the defarts ! - What cruel inquietudes would torment me! Every breeze I heard would fill me with terror! Perhaps he is now, I should fay to myself-perhaps he is this instant in the agonies of death, without succour in some barren wild. She was filent, and Cain, with a look of aftonishment, cry'd, What do I hear? Is it thou Mahala? is it thou thyself, or does a dream again deceive? It is, it is my dear, my virtuous wife! Thy words, Mahala,—thy confolating words have foften'd my despair. Thou dost not hate me!__thou doft not curfe me! It is enough. No, thou courageous, thou affectionate wife! thou shalt never share in the punishment due to my horrid crime. Thou

shalt

Thalt not fuffer for me the chastifements of heaven. Remain in this abode fanctify'd by virtue, where dwelleth the Divine Benediction. I will not render thee miserable. Forget me, Mahala-forget thy wretched husband... Abandon'd by God, I shall wander without place of rest; but mayst thou be happy !mayst thou be blest! No Cain, if thou art miserable, I cannot here be happy, reply'd Mahala. I fly with thee-with thee I wander-I will be desolate with thee-I go with thee to the defart regions. Our children shall go with us. I will there share thy misery—I will try to assuage it - I will mix my tears of compassion, with thy tears of penitence.- I will kneel by thy fide. -My prayers shall ascend to Heaven with thine. Our children prostrate round us, shall join their voices with ours. God will not disdain the penitent sinner. I sly with thee, Cain-Without ceafing we will pray without ceafing we will mourn before God, till a ray of his grace illumins thy benighted foul, and justifies our confidence in his mercy. Hope in God, Cain. He will hear the prayer of the penitent finner.

O thou! cry'd Cain, by what name shall I call thee? Thou art to me as a gracious angel! A beam of Divine consolation has darted into the obscurity of my soul! O Mahala! O my wife! now I dare embrace thee. Oh that I could make thee sensible of what I feel! but words cannot express my gratitude—cannot express the tender emotions of my heart. At these words he press'd her to his breast; then suddenly quitting her he embrac'd his children; but soon return'd to

his wife, and again clasp'd her to

Now, this tender mother, this heroic wife, footh'd her infants, and wip'd away their tears. She took her youngest child to her breast, another little one held by the hand of his father, while Eliel and Josiah, full of life and gaiety, tripp'd before them. They left their cottage. Mahala with weeping eyes beheld the dwelling of her parents, and of Thirza. Be bleft, be bleft, faid fhe, O desolate family whom I abandon! Soon will I return from the place of our habitation, to supplicate your bleffings for me--for my dear, my penitent husband. I will folicit for him a pardon. She now wept as irrefolute, when inflantly exhalations, more balfamic than are breath'd from all the flowers of fpring, furrounded the fugitives, and the voice of an invisible angel from over their heads, faid, Goog generous wife, I will, in a dream, inform thy tender mother of thy heroic courage. I will tell her, thou art gone with thy penitent hulband to implore mercy for him, from the Sovereign Judge.

They now walk'd by the light of the nocturnal star. They lost sight of the dwellings, and advanc'd into the defart regions, where had never been imprinted the foot of man."

The private life of the Romans. Translated from the French of Monsteur D'Arnay. Dodsley.

has chosen a subject rather of curiosity than of any real importance, but, it must be consessed, a subject of no inelegant curiosity. One cannot but be interested in every thing that regards a people,

who make fo confiderable a figure in history as the Romans do. various forms of government through which they passed, the great men who appeared upon the stage during each of these forms, the causes which produced their greatness and their ruin, are an inexhaustible fund of instruction to the general and the flatefman, and possibly the work before us will not therefore please us the less, as it is a kind of lesser history, which does not shew us the warrior or the statesman, or if we do meet them, it is not in the aifumed character of great men, but in their private capacity, as men with their robes of state thrown off. in their domestic enjoyments and private occupations. The author himfelf has not always condescended to support what he advances by any citation, but the translator has taken pains to justify him by many useful quotations, which make amends for fome inaccuracies in the translation. It will not perhaps be less pleasing in the fmaller than in the greater history, to observe the progress these people made from the lowest simplicity, to fuch an extravagant profufion of magnificence, as far, very far, exceeds all the attempts made by the richest and most oftentatious of modern princes. Speaking of the early times, he fays,

"The Romans, in the first and happy ages of the republic, (I speak of those in the easiest circumstances,) were all labourers, and all the la-

bourers were foldiers.

In time of peace, the greatest part faw the city only every nine days. They came thither only to provide themselves with necessaries, and to examine whether they should approve or reject fuch regulations as the magistrates caused to be posted up at the Capitol and at the Forum, three days successively before they presented them to be confirmed.

The Romans were near four hundred and fixty years, without knowing any other division of the day than morning, noon, and night. The laws of the twelve tables even mention only fun-rise and sunfet; it was not till some years afterwards that an officer of the consultation of the Romans then diffinguished only in sine weather, and by the height of the sun.

It was during the first Punic war that the first dial was exposed to public view at Rome, and placed upon a column of the tribunal of harangues. Marcus Valerius Messala brought it from Sicily after the taking of Catana, thirty years after Papirius, the year of Rome four hundred and seventy-seven.

Although this dial, drawn for the meridian of Catana, which was different from that of Rome, could not flow the hours justly; yet, as imperfect as it was, the Romans conformed to it for the space of ninety-nine years, and to how was

These forts of clocks were of use only in the day, and in clear weather. Scipio Nasica, sive years after, in the year of Rome sive hundred and ninety-sive, first brought into use, and placed under cover a water-clock, which shewed the hours equally by day and night. There were twelve in the day, and as many in the night, without distinction of seasons.

So that in fummer the hours of the day were longer, and in winter

* This is what was called promulgare per trinum nundinum.

The first began at sur-rise; the fixth at mid-day; and the twelfth at sur-set; from thence began the first hour of the night, of which the fixth was at mid-night, and the twelfth at sun-rise.

Under the emperors; they began to perceive that this distribution was not convenient. By little and little, they introduced the manner of counting the twenty-four hours, from mid-night to mid-night. It appears, that this custom had already obtained in the reign of Adrian. All the world knows, that it is generally received in Europe, except in Italy, where they reckon the day from fun-fet to fun fet, and the whole twenty-four hours successively.

They employed the first hour of the day in the most essential duties of religion. The temples were open to all the world, and even often lighted before day, for the most early. The worship they there paid the gods, consisted in adoring and invoking them by public and private prayers; in offering facrifices, incense, and persumes; and in hymns, which the youth of both sexes, and of the first families, sung morning and evening to their praise, to the found of instruments.

Yet they gave not to the gods alone these first hours of the morning; they also employed them in paying those reciprocal duties, received and authorised in the world. At Rome, as elsewhere, the little paid their court to the great, the people to the magistrates, and the magistrates to the rich.

To consider only the ordinary life of a citizen, it appears, that the greatest number employed the morning in the temples, the palaces of the great, in the forum, at the bar,

and in folliciting their affairs; and that they deftined the reft of the day to vifits and affemblies, to the walks and baths, to feafing and pleafures, to the care of health and exercises; amongst others, to that of the hand-ball and tennis.

The whole concluded about the eighth or ninth hour, that is, about three in the afternoon; and then every one repaired in haste to the public or private baths. It was natural that there should be more liberty in the private baths, where each was left to his own fancy but, for the public baths, they were opened by ringing of a bell always at the same hour; and those who came too late, ran the risk of bathing in cold water."

He comes then to those times of magnificence, when the acts of private persons outshone any thing done by princes in our times.

"It was not till the year of Rome 441, that they brought water thither for the first time, by means of an aqueduct, built under the direction of the censor Appius Claudius, from whom that water was called Aqua Appia. Its source was eight miles from Rome, in the territory of Tusculum, now Frescati. Till that time, the Romans were contented with the water they drew from the Tiber, and from wells, from the sound in the city, and those they found in the neighbourhood.

The number of aqueducts increased asterwards. Agrippa, while he was ædile under Augustus, not only re-established the ancient aqueducts, which had fallen to decay, but built also a new one, to which he gave the name of Aqua Julia, it was fifteen miles in extent. To facilitate the use of the waters which

he brought to the city, he made feven hundred basons, an hundred and five fountains, one hundred and thirty reservoirs; and all these works were adorned with columns and statues; a destination much more suitable, says Pliny, for those master-pieces of art, than being inclosed in the gardens and country-houses of private people.

These aqueducts were built of brick, running under ground, or raised upon arches. They brought the water to Rome in pipes of cast metal, or lead, from the distance of thirty, forty, and sixty miles or more. These waters were collected in re-

fervoirs called castella."

He then gives an account of their

"The first thing that presented itself in these baths, was a great bason, called natatio and piscina, which took up all the north fide; in which they could not only bathe. but even fwim very commodiously. Sometimes these great basons were to be met with in the baths of private persons, as in those of Cicero and the younger Pliny. The rich and the great had baths at home, and often very superb, commonly placed near the dining-room; because it was the custom to bathe before the repair, and even to offer it to friends and strangers who were invited.

The edifices of the baths in the thermæ were commonly exposed to the south, and had a very extensive front the middle part was occupied by the stove-room, or by a great furnace of mason-work, called by pocausum, which had to the right and left an apartment of four rooms, uniform on both sides, and disposed so as they could easily

pass from one to the other. These rooms, called in general balnearia, were the stove, the hot bath, the cold bath, and the steam bath.

These baths formed so many vast and superb halls. That of the hot bath was as large again as the others, because of the great concourse of people who frequented it, and the long stay they made in it. The roofs of these halls were supported by pillars of marble, the pavement was mosaic. The walls, lined also with marble, were embellished with master-pieces of painting and sculpture: the galleries, the porticoes, the apartments which served for the wardrobe. Those for rubbing and perfuming; even the places where they kept the oils and perfumes, were equally adorned. Statues, pictures, and the precious metals, were lavished in these sumptuous edifices.

The veffels and utenfils were anfwerable to that magnificence. The baths were of marble, oriental granite, and porphyry; some were fixed, some moveable. Amongst these last there were some made on purpose to be suspended, in which they joined the pleasure of bathing to that of being balanced, and as it were, rocked by an easy motion.

If we go back to the first ages of Rome, we shall find that the Romans lived mostly upon roots and milk, or upon a very coarse kind of pottage, called pulmentum, which served them for bread, and that they eat flesh only upon extraordinary occasions.

The time of dinner, as regular as that of supper, was about the fixth hour of the day, or noon. Suetonius relates, that the emperor Claudius took so much delight

10

in the combats of the gladiators with wild beafts, that he took his place in the morning, and remained

there at noon.

The hour of supper was between the ninth and tenth hour of the day; or, as we should fay, between three and four in the afternoon. Sometimes it was followed by a kind of collation, called comessatio. The place where it was ferved up was anciently in atrio, that is to fay, in a vestibule, open in some fort, and exposed to the view of all the world. Besides that the fervice was there easier, a more private part of the house might have encouraged licentiousness and debauchery. In the fummer feafon, they fometimes supped under a fycamore, or fome other shady

The tables of the Romans were at first only of common and ordinary wood, square, and with sour feet; they afterwards had them round and oval, supported upon one foot, artfully wrought and sculptured, sincered with the roots of the box and citron tree, with ivory and shells, plates of gold and silver, and precious stones; they were uncovered, and at every course they took care to wipe them with a spunge. It was not till the time of the emperors that the Romans

began to cover them with cloths: they had of them striped with gold

and purple.

In the first ages they eat, feated upon fimple benches, after the example of Homer's heroes; or, as Varro expresses it, after the examples of the Lacedæmonians and the Cretans. In time, they took up the custom of lying upon little beds at their meals; that custom they had from Asia. The ladies did not at first think it consistent with their modesty to adopt that novelty: they long kept up the ancient manner. as more conformable to the modesty of the fex. Valerius Maximus tells us, that in the folemn feasts which they offered to the gods and goddesses, those divinities were pleased to submit to human customs; that Jupiter was laid upon a bed, Juno and Minerva feated upon chairs +; but from the time of the first Cæfars, till the year 320 of the Christian æra, the women followed the custom of the men, and like them lay along at table.

As for young people, who had not yet taken the viril robe, they kept them a long time under the ancient discipline. They seated them at table, on the edge of the bed of their nearest relations.

They lay along upon these beds, with the upper part of the U 4 body

⁺ In great dangers, or after some happy event, they ordained solemn feasts for the gods, to implore their assistance, or by way of thanksgiving. They called that ceremony ledisternium, from lectos sternere. Priests called Septemviri Epulones, presided at these feasts, and directed them. They placed a round table in the temples, seats and beds covered with tapethry, and cushions, on which they put the statues of the gods and goddesses who were invited to the feast; and they were supposed to partake of it, though it was the Septemviri Epulones who had all the advantage of it. The beds on which were the statues of the gods, were called pulvinaria, and the seats of the goddesses these feasts the name of sellisernia, or soldessessia. A plague which was severely felt in Rome the year 356th of the city, gave rise to that ceremony, which in after times was frequently observed.

body a little raised, and supported by cushions, and the lower part stretched at length upon the bed behind the back of the next in order. They leaned upon the left elbow, and made use of the right hand. He who was second, had his head opposite to the breast of the suits. If he wanted to speak to him, especially if the thing was to be fecret, he was obliged to lean upon his bosom; and in conversation, he who spake sat almost upright, with his back supported by cushions.

A piece of cloth was hung above the table, to prevent the guess from being incommoded with

dust, or other filth.

Before they placed themselves at table, they took off their shoes, and left them at the bed-seet, that the rich stuffs they were covered with might not be spoiled with dust and mire. Thus, they took their places bare-stooted, or with a kind of slippers, and resumed their shoes when they rose from table. Plautus says, in one of his comedies, Good, I find myself better, take of the stuff of my shoes, give me some some side. Quick, give me my shoes, and hatte to remove the table."

each having his own cover, they distributed among them bills of fare, then they placed cups before them.

These cups were brought from a buffet loaded with other veilels

of gold and filver, still more valuable for the fineness of the work than for the materials themselves. On that of Crassus were seen vessels of filver which cost him for the fashion at the rate of six thousand sesterces the pound weight. Amongst them were two goblets particularly remarkable, the work of Mentor, a celebrated artist, for which he had paid one hundred thousand sesterces.*

When they went to sup with any one, a slave bore the napkin, and took care to carry it back, but not empty; they put into it some pieces of the entertainment. It was not even unusual, in the middle of the meal, to send something to a wise, a relation, a neighbour, or a friend.

They always began by libations, which confided in pouring out a little wine upon the table in honour of the gods, and were accompanied with fome prayers.

They placed little images upon the table +, besides which they put the salt; by that they thought to confectate the table. They looked upon salt as a sacred thing. If it was forgot, or happened to be overturaed, the table was profaned, and they thought, that some missortune was threatened: a super-stition which the Romans derived from the Greeks, and which many people keep up at this day, as well as that other of dreading the number thirteen at table,

The

the Reman pound was only twelve ounces, as it is at this day; fix shouland festerces made about 750 livres; and one hundred thouland sesterces ab 500 livres.

Moreury. They esteemed these gods the native presidents of the table, Gavii menja prasides, and called them spirropetal, that is to say, gods of the table. It was for them especially that the librations were made.

The feafls usually confisted of three courses, comprehending the deffert. They began with eggs,

and finished with fruit.

I have faid, that the Roman feafts were of three courses. The first was composed of fresh eggs, asparagus, olives, oysters, sallads, &c. Like us they boiled their asparagus very lightly; we learn this little particularity from a common saying of Augustus. When that emperor wanted to have an affair dispatched quickly, "You must," said he, "take no more time about it than "would boil asparagus, asparaga "citius."

The fecond course comprehended the ragouts and roast meats, amongst which they always mingled some dishes of fish; a favourite food of the Romans, and without which they reckoned no good cheer.

For the third, they served up fruits and confections, and all those delicacies which the Greeks called
periamala and the Latins Dulciaria and Bellaria. The custom was,
to serve it upon another table; so
Virgil calls it, Mensa grata secunda
dona.

In the times that immediately followed the re-establishment of the republic, it was the custom at feasts,

to fing the praises of great men, accompanied with the flute and the lyre; but the Romans had no sooner conquered the Asiatics, than bussions, farce-players, female nuficians, and dancers, and pantomimes, came into fashion, and there was no good feast without all that train.

In the interval of the courses, and after the seast, they played at dice, already in use in the times of the republic; for although gaming was prohibited by the Roman laws, except during the Saturnalia*, that prohibition was not always re-

garded.

The supper was commonly sollowed by an extraordinary regale, called comessatio, from the word nou because the ancient Romans, who dwelt more willingly in the country than in the city, regaled each other there in their turns. Sometimes, even after having supped in one place, they repaired to another; and it happened but too often, that they passed whole nights in debauchery and drunkenness.

Lastly, the guests taking leave of their hosts, received presents, called apophereta, present of the state of

The Romans, in the early times, lay upon firaw, or upon leaves, having no covering but the

* The intention of this feast was, to represent the equality which reigned in the time of Saturn among men living under the laws of nature, without difference of condition. The power of matters over their slaves was sulpended. They eat together. The slaves had full freedom of speech. The masters took pleafure in changing condition and habit with them. The statue of Saturn, tied all the rest of the year with fillets of woollen, probably in memory of the captivity he had been reduced to by the Titans and by Jupiter, was unloosed during his serst, either to signify his deliverance, or to represent the liberty which reigned in the golden age, and that which they enjoyed during the Saturnatia. These were days of feathing and rejoicing. The Romans quitted the toga, and appeared in public in the dress made use of at table. They sent presents to each other. Games of chance, forbid at all other times, were then allowed. The senate and the bar were vacant, and the schools shut up. They thought it omiaous to begin a war, and punish criminals, in a time consecrated to pleasures.

Ikins

skins of animals, which also served

them for mattreffes.

But afterwards they not only employed mattreffes, and the finest down, but the frames of them were adorned with figures in relief or inlaid. They had them of ivory, and even of massy filver, with coverings of purple, heightened with gold. These beds, made much like our couches, or day beds, without curtains or canopies, but with a back which went on one side from head to foot, were so high that they ascended them by several steps.

The toga, which was the first habit they wore, appears to have been a robe, round and ample, open before as far as the girdle, and without sleeves. It enveloped the whole body: they fastened it upon the left shoulder, leaving the right arm and shoulder at liberty. The measure of it was not fixed, it varied as well as the fineness of the stuff, according to the fortune, rank, or

taste for finery of the wearer.

They had toge of different nds. That which they called kinds. picta, or palmata, was interwoven with purple and gold, imboffed and embroidered with leaves representing palms. The generals of armies wore these when they entered Rome in triumph. The toga called trabea, was of purple striped with fearlet and white; it had been the habit of the kings; it was that of the Roman knights the day of their general review, yearly on the Ides of July. The prætexta was edged with a binding of purple; it was the robe of the magistrates and the principals among the priests.

Young people of rank wore it with a golden ball hung to a collar. At the age of twelve years they quitted the infantine habit, which

was a party-coloured mantle, called alicata chlamys, to take the robe pratexta. Girls wore it till they were married, and youths till they took the viril robe, fo called because it was the habit worn by men full grown. It was white, and without ornament.

The day on which they assumed this dress, was a day of featting and rejoicing in the family. The father of the young man gave a feast for his relations, and friends, and all his family; at the end of the repast they took off the robe prætexta, and the golden ball, which they consecrated to the gods Lares, and clothed him with the toga virilis. After which the father, accompanied with his friends and relations, and followed by all the domestics, led his son to the Capitol, to do homage to the gods on his entering on the flower of man's age, by offering facrifices and prayers.

From thence the young man, attended by the fame train, was conducted to the forum, to make his

entry into the world.

They called that ceremony tirocinium, noviciate, and those for whom it was performed tirones, novices.

The men as well as the women, wore a tunic under the toga, with this difference, that the tunic of the men went no lower than the knees, and that of the women to the heels; it had also sleeves, which they only were allowed to wear.

They fastened the tunic more or less with a girdle, to keep it tight, or to tuck it up. These girdles were different, according to the time of life, and served also for purses to keep the money they carried about them.

In time of peace, and in the city, they did not commonly wear a fword, or any arms. The emperors themselves conformed to that custom.

In the early ages, the Romans suffered their hair and beard to grow, contenting themselves with clipping them from time to time; but they afterwards resumed that of shaving.

In place of flockings the Romans wrapped their legs in bands of fluff; neither did they commonly wear breeches; only with the military habit, or in their exercises, or mounting on horseback, they put

on a fort of drawers.

The Roman ladies dressed always in their hair; there was no difference but in the manner of arranging it. In the early ages, on the contrary, they never went out uncovered with a veil, but that mode went out with the simplicity of manners.

The fashion of dressing the head was at that time infinitely various; it kept pace with the inconstancy of the ladies, and of the mode. They stuck in their hair bodkins, loaded with pearls; they knotted them with little chains and rings of gold, with purple, or white ribands, enriched with precious stones, and they wore rich ear-rings of gold and pearls.

The Roman ladies were extremely careful of their teeth; most part washed them with water, others made use of a composition which came from Spain, into which there entered urine. They cleansed them with little brushes, and tooth-picks; they had some of silver; those of the wood of the lentisk were regarded as the best.

In time their tunics multiplied; it became the fashion to wear three. Taste soon formed the difference between them; the first was a simple shift; the second, a kind of rochet; and the third, having insensibly received more folds, and grown more voluminous, formed, by the help of the ornaments of which it was found capable, a woman's dress, called stola, which banished the toga, or, at least, left the use of it to the men, and to courtezans.

The consent of the father was neceffary, they did not require the mother's, tho' it was ask'd out of decency. They then proceeded to the contract. It was accompanied with ceremonies, at which the priests and the augurs affifted. They agreed upon the portion, and other conditions, of which a deed was drawn and executed in the presence of witnesses, who fet their feal to it. They broke a straw as in other contracts, which was called stipulation, from stipula, a a straw. The bridegroom made presents to his bride in money, trinkets, &c. and gave her a ring for a pledge of the friendship which was to unite them*. Both of them gave presents to those who had negotiated or favoured their marriage. The

em-

^{*} This ring was called annulus sponfalitius, genialis, or pronubus. In the time of Pliny, it was only of iron, and plain; it was afterwards of gold. The wife was accoustomed to put it on the fourth finger of the left hand, because she believed there was a vein there which went to the heart. There were some also of basis.

emperors regulated, that these prefents should be proportioned to the portion. Lastly, the father, or the nearest relation of the bride, gave a feast.

They never made a marriage without having first taken the aufpices, and without having offered facrifices to the gods, especially to Juno, who presided over matrimonial engagements and marriages. They took the gall out of the animals that they facrificed, alluding to the kindness which ought to reign in marriage.

was celebrated in three ways, diffinguished by the names of confarreatio, coemtio, et usus; confarreation, mutual purchase, and usage. The first was the most ancient. Romulus, had established it. A priest in presence of ten witnesses, pronouncing certain, words, offered in facrifice to the gods, a cake made of falt, water, and wheat-flour, called far: the bride and bridegroom eat of it, to fignify by that the union that ought to bind them. That manner of celebrating marriage, gave the wives a right of sharing in the particular facrifices, attached to the family of their husbands, and even to their goods, if they died intestate, and without children; if they left any, the wives were equal with them. Children born of these muriages, were preferred for the dignity of the priest of Jupiter.

The mutual purchase was a kind of imaginary bargain, that the bride and bridegroom contracted, by the form of giving each other fome pieces of money. This way of marrying substituted longer than that of confarreation, which, according to Tacitus, was no longer practised in the time of Tiberius. According to some authors, it was accompanied with the same ceremonies, and gave the same right to the wives,

That which they called usage, had place, when a woman, with consent of her parents, or her guardians, had cohabited a whole year with a man, with a view of being married to him: she then became his lawful wife without any other ceremony: it even appears, that she had the same rights as the others."

After a pretty full account of these two customs of adoption and divorce, our author proceeds to the Roman education.

The custom of the great at Rome was, to keep even in their houses, some philosopher, or other learned Grecian, giving him liberty to keep open school for the young nobility, who came thither to be taught with their children.

Whatever might harden the body, increase its frength, give nimbleness and agility, form them for war, and give dexterity in arms, made a part of education, as well as politeness and address.

After having gone through the studies of childhood, the young people were made to take the viril robe.

They then put them under the fpecial protection of some senator,

brass and copper, with the figure of a key, to fignify that the husband, in giving that ring to his wife, delivered her the keys of his house, of which it was her bufiness to take care. Some of them have been found with these inscriptions or devices, Bonani vitani. Ano te, Ama me, I wish you a happy life. Hove you. Love me.

The History of England, from the invasion of Julius Casar to the acception of Henry VII. In two vols. By David Hume. Printed for A. Millar. Landson

UR writers had commonly fo ill fucceeded in history, the Italians and even the French had so long continued our acknowledged superiors, that it was almost feared that the British genius, which had so happily displayed itself in every other kind of writing, and had gained the prize in most, yet could not enter the lists in this. The historical work Mr. Hume first published, discharged our country from

this opprobrium:

This very ingenious and elegant writer is certainly a very profound thinker. The idea of the growth, as I may call it, of our prefent constitution seems to be the principle of the whole work compleated by the part now published, which is written in the same bold masterly manner as the two formerly published; and though in point of time it precedes them, is possibly, in reason, but a consequence of the other two; and the three parts, we imagine, may with propriety enough be read in the order the ingenious author has chosen to publish them.

It is natural that the line which is always kept to its utmost length, must break at last; and probably in its recoil hurt them who endeavour to keep it at full stretch; and so it fared with the Stuarts, who, we imagine with this ingenious author, erred not so much in extending the prerogative, as in not having had fagacity enough to see that they had fallen in the times, when, from the opinions and fashions of the age, it behoved them to slacken and remit of the authority exercised by their predecessors.

The fecond work, which appeared, certainly shewed that the Tudors had not left it in the power of any other family to carry the prerogative higher than they had done. They left it to their successors, adorned and supported with every fanction, which custom, and which, in many cases, legal institution could

give it. Jamiz

The third part feems to evince that this pitch, which the prerogative had attained, was not the effect of the abilities, or the violence of this or that family, so much as the

natural course of things.

If the periods of the history first published interested our passions more, the curiofity of the learned will be more gratified in that now before us. It will be curious to obferve from what a strange chaos of liberty and tyranny, of anarchy and order, the constitution, we are now bleffed with, has at length arifen: in his appendixes is much curious matter of some things, as the odd fines paid the crown for protection to great men in palpable infuffices, which the author might think did not fuit the dignity of history, and has therefore thrown them into an appendix. Yet with deference to fo learned and fenfible a writer, we think fome matters, as the history of the Wittongmot, might in his hands have appeared to advantage in the text, and have relieved the

reader

reader in a period, where the recidemand some argumentative or difcustive matter to engage the attention, and so perhaps might the orioin of the feudal law.

No man perhaps has come nearer to that fo requisite and fo rare a quality in an historian of unprejudiced partiality. As a strong instance of this, as well as a specimen of our author's fine writing, we infert the dispute of Henry II. with

Thomas a Becket.

" Becket waited not till Henry should commence those projects as gainst the ecclesiastical power, which, he knew, had been formed by that prince: he was himfelf the aggreffor; and endeavoured to over-awe the king by the intrepity and boldness of his enterprizes. He summoned the earl of Clare to furrender the barony of Tunbridge, which, ever fince the conquest, had remained in the family of that nobleman, but which, as it had formerly belonged to the fee of Canterbury, the primate pretended his predeceffors were prohibited by the canons to alienate. The earl of Clare; befides the lufte which he derived from the greatness of his own birth, and the extent of his possessions, was allied to all the chief families in the kingdom; his fifter, who was a celebrated beauty, had farther extended his credit among the nobility, and was even supposed to have gained the king's affections; and Becket could not better discover. than by attacking fo powerful an interest, his resolution to maintain with vigour the rights, real or pretended, of his fee.

William de Eynsford, a military tenant of the crown, was patron of a living, which belonged to a

manor that held of the archbishop of tal of uninteresting facts seems to Canterbury; and Becket, without regard to William's right, prefented, on a new and illegal pretext, one Laurence to that living, who was violently expelled by Eynsford. The primate making himself, as was usual in spiritual courts, both judge and party, iffued out, in a fummary manner, the sentence of excommunication against Eynsford, who complained to the king, that he, who held in capite of the crown, should, contrary to the practice established by the Conqueror, and maintained ever fince by his fuccessors, be subjected to that terrible fentence, without the previous confent of the fovereign. Henry, who had now broke off all personal intercourse with Becket, fent him, by a meffenger, his orders to absolve Eyns. ford; but received for answer, that it belonged not to the king to inform him whom he should absolve and whom excommunicate: and it was not till after many remonstrances and menaces, that Becket, though with the worst grace imaginable, was induced to comply with the royal mandate.

> Henry, tho' he found himfelf thus grievously mistaken in the character of the person whom he had promoted to the primacy, determined not to defift from his former intention of retrenching clerical usurpations. He was entirely mafter of his extensive dominions: the prudence and vigour of his government, attended with perpetual fuccefs, had raifed his character above that of any of his predecessors : the papacy was weakened by a schism, which divided all Europe: and he rightly judged, that, if the present favourable opportunity were neglected, the crown must, from the

prevalent supersition of the people, be in danger of falling into an entire subordination under the mitre.

The union of the civil and ecclefiaftical powers ferves extremely, in every civilized government, to the maintenance of peace and order; and prevents those mutual incroachments, which, as there can be no ultimate judge between them, are often attended with the most dangerous consequences. Whether the supreme magistrate, who unites these powers, receive the appellation of prince or prelate, is not material: the fuperior weight, which temporal interests commonly bear in the apprehensions of men above spiritual, renders the civil part of his character most prevalent; and in time prevents those gross impostures and bigotted persecutions, which, in all false religions, are the chief foundation of clerical authority. But during the progress of ecclesiastical usurpations, the state, by the refistance of the civil magiftrate, is naturally thrown into convulfions, and it behoves the prince, both for his own interest, and for that of the public, to provide in time sufficient barriers against so dangerous and infidious a rival. This precaution had been hitherto much neglected in England, as well as in other catholic countries; and affairs at last seemed to have come to a dangerous crisis; a sovereign of the greatest abilities was now on the throne: a prelate of the most inflexible and intrepid character was possessed of the primacy: the contending powers appeared to be armed with their full force, and it was natural to expect fome extraordinary event to refult from their rencounter.

Among their other inventions to obtain money, the clergy had inculcated the necessity of penance as an atonement for fin; and having again introduced the practice of paying them large fums as a commutation, or species of atonement, for the remission of these penances, the fins of the people, by these means, had become a revenue to the priests; and the king computed that, by this invention alone, they levied more money from his fubjects, than flowed, by all the funds and taxes, into the royal exchequer. That he might ease his subjects of so heavy and arbitrary an imposition, Henry required, that a civil officer of his appointment should be present in all ecclesiastical courts, and should, for the future, give his confent to every composition which was made with finners for their spiritual offences.

The ecclefiaftics in that age, had renounced all immediate subordination to the magistrate: they openly pretended to an exemption, in criminal accusations, from a trial. before courts of justice; and were gradually introducing a like exemption in civil causes: spiritual penalties alone could be inflicted on their offences: and as the clergy had extremely multiplied in England, and many of them were confequently of very low characters, crimes of the deepest dye, murders, robberies, adulteries, rapes, were daily committed with impunity by the ecclefiaftics. It had been found, for instance, by enquiry, that no less than an hundred murders had, fince the king's accession, been perpetrated by men of that profession, who had never been called to an account for these offences; and holy or ders were become a full protection for all enormities, (A) clerk in Worcestershire having debauch-

ed a gentleman's daughter, had, at this time. proceeded to murder the father; and the general indignation against this crime; moved the king to attempt the remedy of an abuse which was become so palpable, and to require that the clerk should be delivered up, and receive condign punishment from the maoistrate. Becket insisted on the privileges of the church; confined the criminal to the bishop's prison, lest he should be seized by the king's officers; maintained that no greater punishment could be inflicted on him than degradation: and when the king demanded, that, immediately after, he was degraded, he should be tried by the civil power, the primate afferted, that it was iniquitous to try a man twice upon the fame accusation, and for the same crime.

Henry, laying hold of so favourable a cause, resolved to push the clergy with regard to all their privileges, which they had raifed to an enormous height, and to determine at once those controversies, which daily multiplied, between the civil and ecclesiastical jurisdictions. He fummoned an affembly of all the prelates of England; and he put to them this concife and decifive queftion, whether or not they were willing to submit to the ancient laws and customs of the kingdom? The bishops unanimously replied, that they were willing, faving their own order; a device by which they thought to elude the present urgency of the king's demand, and yet referve to themselves, on a savourable opportunity, the power of refuming all their past pretensions. king was sensible of the artifice, and was provoked to the highest indig-'nation. He left the affembly, with

visible marks of his displeasure: he required the primate inflantly to furrender the honours and castles of Eye and Berkham: the bishops were terrified, and expected flill farther effects of his resentment. Becket alone was inflexible; and nothing but the interpolition of the pope's legate, Philip, abbot of Eleemofina, who dreaded a breach with fo powerful a prince at fo unseasonable a juncture, could have prevailed on him to retract the faving clause, and give a general and absolute promile of observing the ancient customs.

But Henry was not content with a declaration in these general terms: he resolved, ere it was too late to define expressly those customs, with which he required compliance, and to put a stop to clerical usurpation's before they were fully confolidated, and could plead antiquity, as they already did a facred authority in their favour. The claims of the church were open and visible. After a gradual and infensible progress through many centuries, the mask had at last been taken off, and several ecclefiaftical councils, by their canons, which were pretended to be irrevocable and infallible, had positively defined those privileges and immunities, which gave fuch general offence, and appeared fo dangerous, to the civil magistrate. Henry therefore deemed it necessary to define with the fame precision the limits of 'the civil power; to oppose his legal customs to their divine ordinances; to determine the exact boundaries of the rival jurifdictions; and for this purpose, he fummoned a general council of the nobility and prelates at Clarendon, to whom he fubmitted this great and important question."

An

An historical and critical enquiry into the evidences produced by the earls of Murray and Morton against Mary queen of Scots, with an examination of the Revol Dr. Robertson's dissertation and Mr. Hume's history with respect to that evidence.

F no prince ever fuffered more, than Mary queen of Scots did during her life from the illiberal violence of her subjects, she has the recompence, such as it is, of having always found faithful and zealous friends. And ages after her enemies had fpent their malice, she does not want able champions to defend her character. One piece of her good fortune was referred for this age, when time, experience, and a fuccession of good princes, and most of all the virtues of a king, a native of the country he governs, has united all fects and all parties, religious and civil, in the one wish of continuing the government in him and his family. And Mary's flory, which was a party question, now, that all parties are subsided, may hope as candid an hearing almost as that of Christina of Sweden, or any foreign prince who never yet engaged our passions.

As the seamen observe a swell in the waters, even after the storm is totally subsided, so our passions are not rouzed at present, there still remains a little inclination to this or that opinion. The two respectable names our author uses in his title page, are not more esteemed as good writers than good citizens. They are both men of too enlarged understandings to be actually circumscribed

VOL IV:

in the narrow limits of this or that party; and yet possibly we must so far agree with the author before us, as to suspect that they are not quite indifferent in the question of Mary's guilt or innocence, and have not here perhaps observed that exact impartiality, which we thought one of the valuable and uncommon qualities of these two able and elegant historians.

The difcerning criticism of Mr. Goodall had thrown new light on the letters supposed to have been written by queen Mary to Bothwell; there was fuch apparent reason and so critical a knowledge in Mr. Goodall's decision of this question, that certainly it behoved those, who rejected it, to give good reasons for their so doing, as it would have been an unpardonable inattention to have taken no notice of an opinion fo well supported as that of Mr. Goodall's is. Mr. Hume and Mr. Robertson were neither of them capable of fuch an intention. They both give us their reason for diffenting. The latter gentleman has thought the fubject worthy of a particular and express differtation. The drift of the work now before us is to shew. that the reasons and arguments of the two elegant historians are not conclusive, and to replace the question in that point of view, in which Mr. Goodall thought to have fixed it. But to use our author's own words:

"A late writer, Mr. Walter Goodall, keeper of the advocates library at Edinburgh, who has made it his study to collect innterials for the history of those times, a few years ago, published a critical examination the less

X.

ferent copies of them together, he has very ingeniously shewn that those pretended letters, faid to be written in French by queen Mary to the earl of Bothwel, must be fpurious. His arguments may be reduced to this proposition.

The letters faid to be written in French by the queen, as now extant, have, by all parties, been held for true copies of the originals produced by Morton, and have, down to this time, passed

uncontested as such.

Buchanan, the confident of Murray and Morton, who attended them both at York and London, had the letters in his cuflody, and was so much master of their contents, that he was employed by Murray to show and explain them to the English commissioners at York, and translated the three first of them into Latin.

If then it can be shewn, that, in place of the French being the originals, the Scotch copies are the true originals, and that the French are apparently translations from Buchanan's Latin, the conclusion fairly follows, that these French pretended originals are spurious. This Mr. Goodall has done.

By comparing the letters, as they stand in the three different languages, he has, to a demonfiration, thewn, that, in place of the Scotch and Latin being translated from the French originals, their, last are palpably a version from the Latin, and the Latin agun a vertion from the Scotch. The Scotch is apparently original: the thoughts therein are easily and Sententiously turned, and abound-

ters: by comparing the three dif- ing in phrases and proverbs peculiar to that language .-- These are servilely expressed in the Latin, and fometimes erroneoufly: and, as often as that happens, the French always follows these errors of the Latin. As Mr. Goodall's book is common, I shall not tire my reader with going through his ingenious remarks, I shall only quote two or three examples from the first letter *, and refer to his book for the rest."

> 1. The Scotch fays proverbially. in letter first, " thair's na receipt (meaning a prescription of physic) can ferve agains feit." The Latin has, fo nullam adversus timo-

rem esse medicinam."

And the French is, " qu'il n'y avoit point de remede contre la crainte."

2. Scotch, " ze have fair going to see seik folk." Another pro-

verbial faying.

The Latin translator has here committed no less than two blunders, he mistook the word fair (or sore) for fair, and the word feik for sic, (or such) and has tranflated them both erroneously in the last sense :

Bella bujufmodi hominum vifitatio." And the French copies him thus: " voyla une belle visita-

tion de telles gens."

3. The queen is made to fav. that she was going to seek her rest till to-morrow, "Quhen, (fays she) I fall end my bybill," in place of her bille, (or bill) a word used commonly at that time for any fort of writing. The transcriber, from the resemblance of the two words. made it bybill; the Latin follows him in this absurdity, " ego eo ut

meam quietem inveniam in crastinum, ut tum mea biblia finiam; and the French follows him thus: " je m'en vay pour trouver mon repos juíques au lendemain, que je finisse icy ma bible."

Our author is a clear plain reafoner, His arguments are very strong. On the whole we can scarce refuse our assent to what he says, that there appears, in the Scotch copy of the letter, a fpirit; and so happy a turn of phrase, altogether peculiar to that langauge, and so very different from the languor, baldness of expression, and servility of both the French and Latin copies, that plainly denotes the first to be altogether original in every fense. To shew this, I shall take a few phrases from the first letter only.

" A gentleman of the earl of Lennox came and made his commendatiouns to me." This phrase is still used in the Scotch language, to fignify, he presented his compli-

ments.

"This speech was of bis awin head, without ony commission."
"There is na receipt can serve

againis feir."—A proverb.

"He has ever the teir in his eye. " Fals race---they hae bene at schullis togidder."

"He hes almaist slane me with

his braith."

"Ye have fair going to feik folk."

"He gave me a check in the quick."

" Excuse that thing that fcriblit."

These examples of proverbial fentences and phrases, peculiar to the Scotch language, and to which the French have nothing similar in sufficient to their language.

shew, that this Scotch copy of the letters, is not only the original of the three copies of the letters still extant, but likewise, that it is not a translation at all, but a true original in every fense."

Yet there is a point which strikes us more than perhaps it ought, as neither of the disputants take any notice of it. The point however .

is this.

It is on all hands agreed, that the Latin version is Buchanan's. Now whether we suppose the French or Scotch to be the original, it is equally furprising that Buchanan, whose mother tongue was Scotch, and who was perfect master of the French, should commit the strange abfurd mistakes we see in the Latin.

After having examined the authenticity of the letters, our author endeavours to prove, that the confession of Nicholas Hubert is also a forgery, and then he presses his

opponent very close.

The defect of having some other impartial and unsuspected witnesses to have concurred with Morton, as to the discovery and seizure of the box and letters, and his remarkable shyness in interrogating Dalgleish on this point, have already been observed. But it perhaps will be faid, that, at the time of Dalgleish's trial, this was an oversight which escaped even the sagacity and penetrating genius of Morton, and the whole party. The man was hanged, and he cannot now be called from the grave to answer questions. It is to be observed, however, that, at this very time, December 1568, they had in their custody a very material and living evidence, who had a part in the

letters. The second letter mentions, by name, one Paris, or Nicholas Hubert, a Frenchman, servant of Bothwell, who, it is faid, was the person intrusted to carry the letters from the queen to Bothwell. This man had been kept in close confinement in St. Andrews during all this time *. Now when one fees the remarkable care and attention of the party in collecting every circumstance which they supposed could be matter of proof against the queen, in fupport of their accufation, their penury of proof notwithstanding, and the pinching necessity of supporting the only evidence they had (that of the letters) by the bare and fingle affirmation of Morton himfelf, the queen's accuser, and most inveterate enemy; it is impossible to overlook, without the firongest fuspicion, their omitting to have produced fo very material an evidence as this Frenchman, in person, to have answered to the questions of Mary, or her commissioners, before the English council, and to the part affigned to him in the letters themselves.

Mr. Hume, who has omitted nothing that he thought was evidence against the queen, has been very fensible of this defect of Murray's, in not calling upon Paris, and he endeavours to supply it in a pretty extraordinary manner : On giv-"ing in the letters, (fays he) Mur-" ray fortified this evidence by so fome testimonies of corresponding facts; and he added, some " time after, the dying confession " of Hubert, or French Paris, a fervant of Bothwell, who had " been executed for the king's murder, and who directly charged " the queen with being accessary to " that criminal enterprise +." He afterwards adds: "Ît is in vain at " present to seek for improbabilities " in this confession: it was certainly a regular judicial paper, " given in regularly and judicially, " and ought to have been canvalled " at the time 1." From this account Mr. Hume would make one believe, that that piece of evidence, Paris's confession, had been given in by Murray within a few days after the letters, at least whilst the conferences subfisted; yet nothing can The conferences be more false. broke up, and the earl of Murray and his party got licence from queen Elizabeth to return home to Scotland, in January 1,68-9. Paris. after lying in close prison till August 1569, was then put to death; at which time it is pretended he made these confessions against the queen. But I shall hereafter have occasion more particularly to examine this pretended confession by itself."

And again: "The preceding account of the several steps of the conferences relating to the letters, from the very words of the records themselves, is so very different from, and so contradictory to Mr. Hume's relation, in his late history, that I think it incumbent upon me, in justice to the public, to set down a short abstract of his account, so that upon a comparison, the impartial reader may, from his own eyessight, judge, how far that gentleman has been directed by truth, in his representation of this affair.

When the charge, (fays Mr. Hume) or accufation against Mary was given in, and copies of it transmitted to the bishop of Ross,

lord

lord Herries, and her other commissioners, they absolutely refused to return any answer; and they grounded their filence on very extraordinary reasons: they had orders, they faid, from their mistress, if any thing was advanced that might touch her honour, not to make any defence, as the was a fovereign princess, and could not be subject to any tribunal; and they required, that she should previously be admitted to Elizabeth's presence. They forgot that the conferences were at first begun, and were still continued, with no other view than to clear her from the accusations of her enemies; that Elizabeth had ever pretended to enter into them only as her friend, by her own consent, without assuming any superior jurisdiction over her. —— As the queen of Scots refused to give in any anfwer to Murray's charge, the necesfary consequence seemed to be, that there could be no farther proceedings in the trial *."

If this was a necessary confequence of Mary's refufing to anfwer, (unless in person, Mr. Hume should have added) it may be asked, How came Elizabeth, notwithstanding, to proceed in the trial, in abfence of both Mary and her commissioners? Was not this the height of partiality, in this pretended friend of Mary, to hear her enemies by themselves, or to receive any thing from their hands as sufficient proof against her, upon their word only? And when she did so, ought she not, in common justice, to have communicated the same to Mary? But to go on with this author's

account :

Elizabeth and her ministers defired to have in their hands the proofs of her guilt: — Murray

made no difficulty in producing the proofs of his charge against the queen of Scots, and among the rest. fome love letters and fonnets of her's to Bothwell, wrote all in her own hand, and two promises of marriage to him .- They contained incontestible proofs of Mary's criminal correspondence with Bothwell, of her confent to the king's murder, and of her concurrence in that rape, which Bothwell pretended to commit upon her. Murray fortified this evidence, by fome testimonies of corresponding facts; and he added, some time after, the dying confession of one Hubert, or French Paris, a servant of the earl of Bothwell, who had been executed for the king's murder, and who directly charged the queen with her being accessary to that criminal enterprize +.

Would not any one believe from this account, that Hubert had been hanged before the time here fpoken of by Mr. Hume, and that his confession was produced during the conferences; and yet we have seen that Hubert was alive all the time of the conferences, and no confession from him, nor the least mention of his name made for ten months after they broke up."

And again, "As to the letters, they are afferted to be forged; and that it was notoriously known, that persons about the queen had often been in the practice of forging letters in her name. They had neither date, address, seal, nor subscription. That, as they had only been collated by the queen's accusers, there was no proof that they were of her hand writing. The person (says the bisshop) who was surmised to be the bearer, (Nicholas Hubert, or French

^{*} Hume, vol. 2. p. 496.

[†] Hume, vol. 2. p. 497.

Paris) at the time of his execution, took it upon his death, as he should answer before God, that he never carried any such letter, nor, that the queen was participant, nor of council in the cause †."

The whole transaction of Paris is fo material in this controversy, that we apprehend our reader will not be forry that we lay before him the material parts of the chapter our author has employed wholly upon

this subject:

"Queen Mary, as we have feen, had publickly accused Murray, and afferted in the strongest manner, that the letters were forged by him and his faction; and she undertook to prove this from the letters themfelves, which Mary, in the most earnest manner, begged to have inspection of. This request was denied to her, and, to cut thort the matter; the earl of Murray and his adherents, go off in hafte, with their box and letters to Scotland*. Before their departure, queen Mary complains to queen Elizabeth for " allowing them to depart the realm, not abiding to hear the defence of her innocence, nor the trial and proif of thair detectionn, which was offerit to prove them guilty of the famen crime. 4-To which it was anfwerit, that the earl of Murray has promised ---- to return again when he fould be called for." This was on the 12th of January 1568-9, and within feven months after this, Paris was hanged by Murray at St. Andrews, viz in August that same year 1569.

Now let any impartial person consider well the conduct of Murray in this matter; he himself is publically accused by the queen, as one of the king's murderers; the undertakes to prove the crime against him by fair trial: how does he defend himself against this so public a challenge given him in the face of the world? He denies the charge, but, in the mean time, begs leave to go home. Would innocence have acted in this manner? Let us follow him, however, into Scotland, and trace his behaviour there, where fortune had been fo favourable as to throw into his hands, the only person in the world, who, (if Murray was truly innocent, and the queen guilty) could have cleared him, and fatisfied every mortal of her guilt. This perfon was French Paris, who (if Murray and his letters are to be credited) was the confident of the whole intrigue, between the queen and Bothwell, relating to the king's murder. Could there have happened a more lucky event than this, to a man lying under the load of fo criminal an accusation, as that of being an accomplice in the murder of his fovereign? Let us now fee the method Murray takes to wipe off this foul aspersion, and to avoid all fuspicion of practifing, by the force of torture or promifes, upon a poor, ignorant, friendless creature, then in his hands, to mould him to his purpose. Does he send him to London to be examined before the English council, as his other witneffes; Crawford, and Nelfon, had been? Does he even venture to produce him before his own privy council at Edinburgh, to be interrogated there? Or, lastly, does he bring him to a public trial, in the ordinary form, before the high court of justiciary at Edinburgh, aswas allowed to Dalgleish, and the other fervants of Bothwell? No! as to these last, the experiment had not at all succeeded. In spite of torture, they had, with their dying breath, spoke out the truth, and acquitted the queen*. This man, Paris, was the last card Murray had to play; a new method, therefore, must be followed with respect to him. He was fecreted from public view, was carried to an obscure dungeon in Murray's citadel of St. Andrews; there he was kept hid from all the world, and at last condemned by the earl of Murray himfelf, in a manner no body knows how: and several months after his death, a confession in his name, taken clandestinely, without mentioning any person who was present when it was made by Paris, is privately fent up to London (and given in to Cecil, but at what period no body can tell) accusing the queen in the blackest terms, and extolling the earl of Murray to the kies. And to crown the whole, this precious piece of evidence is kept a profound fecret from the queen and her friends, who as we shall by and by prove, never once faw or heard of this confession."

That it was feen by or known to the queen, our author not unfairly concludes from Lesly's defence of Mary, published in 1560, soon after the execution of Paris: " As for him that ye furmise was the bearer of the letters, and whome you have executed of late for the faid murther, he, at the time of his faid execution, took it upon his death, as he should answere before God, that he never carried any fuch letters, nor that the queene was participant, nor of counfayle in the cause." From the words "the person whom ye surmise was the bearer," it is plain, that neither the queen nor Lefly had either feen or heard of this confession of Paris, which is made to acknowledge this fact, of his being the bearer of the letters, in express terms. Queen Mary's ambaffador thus affirming. in the face of the world, that this man Paris, had, with his dying breath, and in the most solemn marner afferted her innocence, was furely a challenge to her accusers to have refuted the affertion by producing Paris's confession, if genuine, and fit to bear the light. They did it not, however, and the only answer made to this vindication

^{*}The evidence of this is unquestionable, no less than the affirmation of nineteen of the first peers in the kingdom, eight bishops, and eight abbots, present in Scotland at the very time, viz:

[&]quot;The erlis of Huntlie, Argile, Crawfurd, Eginton, Caffils, Rothes, Errol. Lordis, Ogilvie, Fleming, Sommerville, Boyd, Lovingston, Sanquhar, Zester, Herreis, Oliphant, Drummond, Salton, Maxwell.

[&]quot; Bishoppis, Sainct Androis, Dunkeld, Aberdene, Ross, Galloway, Brechin, "Argile, Isliss

[&]quot;Abbotis, Jedburgh, Kinloss, St. Colme, Glenluce, Fern, New-Abbay,

[&]quot;Halywood, Lyndoris." In the instructions and articles to queen Mary's commissioners, signed by the above personages at Dunbarton, the 12th day of September 1563, their words are, mentioning the above convicts, "As was deponir be thame quaha sufferit deid thairfoir; quha declarit at all times, the quene our sovereign to be innecent thairof." Cot. lib. Good. v. 2, p. 3591 of 12 1129 of 1000 and 1000 and 1000 are thaired.

of queen Mary, was an order from queen Elizabeth to suppress the book altogether f, on pretence of its containing some dangerous points, with regard to Mary's title to the crown of England.

In 1571, Buchanan published his famous work, entitled, "A detection of the doings of queen Mary;" a work that reflects ingratitude and dishonour upon his

name.

In this libel against the queen, published both in the Latin and in the Scotch language, nothing is forgot that could ferve to blacken her. The whole intrigue betwixt her and Bothwell, her amours in France as well as in Scotland, repeated attempts to poison the king, and his actual murder at last by her contrivance; all, in short, that malice or calumny could invent to render her odious, is therein fet forth: and, as a voucher or proof of the whole, the famous letters by her to Bothwell are printed at full length. Nay, that nothing may be neglected to give credit to this book, the pre-tended confessions of Dalgleish, Powrie, Hay, and Hepburn, Bothwell's other fervants, are printed along with it, and yet this material confession of Paris, tho' later in date, and more to their purpose, is omitted. That fo precious a piece of scandal might not be confined to Scotland, this book, with the letters, was, at the very fame time printed at London, and dispersed over the kingdom. But what is most furprising, altho' Paris is often mentioned therein, as the confident of the whole scene between the queen and Bothwell, with respect to the king's murder; and that bishop Lesly, in his printed apology for queen Mary, had affirmed in the face of the world, as a fact univerfally known, that Paris, at his execution, had publickly afferted the queen's innocence *; altho' the letters give only some suspicious and dark hints, from which the queen's knowledge of the murder is inferred: whereas Paris's confession of the 10th of August 1569, expresly charges her as the contriver of it, and is the only evidence that does fo; yet in Buchanan's book there is not the least mention made of any fuch confession. Buchanan lived many years after this; his Detection underwent several editions; nay, he wrote his history at large, which was not published for feveral years after this period; and altho' he there again makes mention both of Paris and the letters, yet not one word is faid of any fuch confession made by this person, to the prejudice of the queen.

The differtator fays further, " that Paris's confessions are remarkable for their fimplicity and " naiveté." How can that be, fince the differtator himself owns him to be a foolish talkative fellow? And they abound, continues he, with a number of minute facts and circumstances, which could scarce have entered the imagination of any other man. I shall very readily grant, that many of these facts might really have been true. They do not affect the queen, and might have possibly been told by Paris. But that can noways be an argument that the confessions, as given out in his name several months af-

[†] Ander. v. 1. preface to the defence of queen Mary's honour, p. 4. * Ander. v. 1. part 2. p. 19. Vide p. 126.

ter his death, are genuine. For as we have already observed, the plan of every forger, in such a case, must always be to ground his work upon some certain facts that all the world know to be true, and to interlard these truths with falshoods.

Let us further examine the authenticity of this confession of the 10th

of August.

. The title it bears is in these words: " A Sanctandre, le 10 jour d' " Aoust 1569. Nicholas Howbart " dict Paris, a este interrogue sur " les articles & demands qui s' en-" fuivent, &c. & premierement." Then followed the questions that are put to him, with his answers, all in French: but by what person, or what authority, he was thus queftioned and examined, does not appear. From which it is evident, that that examination and confesfron was not judicial. And what is most furprising, it does not mention any person whatever that was prefent when it was taken. What can we think of so lame a piece of evidence? This examination could not have been made at Paris's trial, otherwise it must have expressly said fo : likewise it must have mentioned the court of justice, and the judge, in whose presence, and by whose authority it was taken.

Let us next compare this examination with the judicial examinations and confessions of Dalgleish, Hay, Hepburn, &c. taken before the high court of justiciary at Edinburgh; we evidently see there the difference betwixt a judicial testimony, and this of Paris's, taken in a clandestine manner, without the authority of a judge, and by no body knows whom.

Dalgleish's examination begins thus: " Apud Edinburgum 26 Junii, an. " dom. 1567. præsentibus comiti-" bus de Mortoun & Athol, præ-" posito de Dundee, & domino de "Grange *."-John Hay's examination begins thus: " Apud Edin-56 burgum 13 die mensis Septembris, an. dom. 1567. in presence of my lord regent, the erles of " Morton and Athol, the lairds of " Lochleven, and Petarow, Mr. "James Magyll, and the justice " clerk+."-John Hepburn's examination thus: " Apud Edinburgum 8 die mensis Decembris, an. " dom. 1567. in presence of my lord regent the erle of Athol, the lord " Lindsay, the laird of Grange, and "the justice clerk †."—And at the end of these depositions is the attestation and subscription at large, of Sir John Ballendan, lord juffice clerk, bearing, that the principal depositions were in the records of the high court of justiciary 1.

What marks then of authencity are about this paper of Paris? Not the smallest, as far as can be seen at this day, excepting the fingle affertion of Hay, Murray's clerk, who, as a notary, attests this paper to be a true copy of an original, figned or marked by Paris himself, and read to him. All the world knows, that a copy of any paper, attested by a notary, requires the folemnity of two reputable witnesses to give faith to the notary's attestation. To this paper, however, tho' of the greatest importance, there are no witnesses. The whole then depends entirely upon the naked affertion of this noted clerk of Murray alone, contradicted, as we have

^{*} Ander. v. 2. p. 173. + Ander. v. 2. p. 177. + Ibid. v. 2. p 183. ‡ Ibid. y. 2. p. 188.

feen, in the most public manner, by all the world, and even tacitly

difavowed by himfelf.

As for the pretended declaration of the 9th of August, since that only charges the earl of Bothwell, and not the queen, with any accession to the murder, it does not fall within my plan, altho' liable to the fame objections with the above pretended confession against the queen; be-Ades, Mr. Goodall has, with very good reason, shewn it likewise to be an imposture *.

Before we conclude, we must again beg leave to take notice of Mr. Hume's arguments in support of this noted piece of evidence of Paris: " It is in vain (fays he) at or present to seek for improbabilities in Nicholas Hubert's dying cones fession, and to magnify the smallest difficulties into a contradiction. It was certainly a regular " judicial paper, given in regularly " and judicially, and ought to have " been canvassed at the time, if the er persons, whom it concerned, had "been affured of their innocence +."

Here we fee a fhort, but very pofitive decision against all and every objection that possibly can be brought against Paris's consession. But upon what does this author ground his sentence? Upon two very plain reasons, first, That the confession was a judicial one, that is, taken in presence, or by authority of a judge And Jecondly, That it was regularly and judicially given in; that must be understood during the time of the conferences before queen Elizabeth and her council, in presence of Mary's commissioners; at which time the ought to have canvassed it, says our author, if she knew her innocence to storage side

That it was not a judicial conferfion, is evident: The paper itself does not bear any fuch mark ; nor does it mention that it was taken in prefence of any person, or by any authority whatfoever; and, by comparing it with the judicial examinations of Dalgleish, Hay, and Hepburn, in page 146, it is apparent, that it is destitute of every formality requisite in a judicial evidence. In what dark corner, then, this strange production was generated, our author may endeavour to find out, if he can.

As to his fecond affertion, that it was regularly and judicially given in, and therefore ought to have been canvassed by Mary during the conferences ; we have already feen: that this likewise is not fact: the conferences broke up in February 1569 Nicholas Hubert was not hanged till August thereafter, and a his dying confession, as Mr. Hume calls it, is only dated the 10th of that month. How then can this gentleman gravely tell us that this confession was judicially given in and ought to have been at that very time canvaffed by queen Mary and her commissioners de Such positive affertions, apparently contrary to fact, are unworthy the character of an historian, and may very justly render his decision, with respect too. evidences of a higher nature, very dubious. In answer then to Mr. Hume: As the queen's accusers did not chuse to produce this material witness, Paris, whom they had alive and in their hands, nor any declaration or confession from him at the critical and proper time for having were it canyassed by the queen, Lappresci hend our author's conclusion may inc fairly be used against himself; that

^{*} Good v. 1. p. 137.

tis in vain at present to support the improbabilities and absurdities in a confession, taken in a clandestine way, no body knows how; and produced after Paris's death, by no body knows whom: and from every appearance destitute of every formality requisite and common to such fort of evidence: for these reasons, I am under no sort of hesitation to give fentence against Nicolas Hubert's confession, as a gross imposture

and forgery." no The fifth chapter is a well drawn fummary of the arguments on both fides, and the fixth is taken up in tracing out the views, defigns, and connections of Murray, Morton, and Lethington That the two last named, were the tools and inftruments of Merray's ambition is apul parents That they were both of them at least privy to the murder is not to be doubted, and as they were, fo it is not easy to suppose Murray their principal could be ignorant of it. But that Bothwell was guilty is not a question. Whether the queen was altogether innocent every man will after all judge for himfelf. That her marriage with Bothwell was imprudent, no one can doubt. Our author, in what we think a masterly manner, brings the several facinora of Murray, Moreton, and Lethington, into one point of view, and makes this his conclusion.

dence, that appears against the joint confederates, Murray, Morton, and Lethington, preceding lord Darnley's murder, in which the earl of Murray is plainly pointed out to have been at the head, and in the direction of the whole conspiracy, until the very period of the king's murder, that he withdrew himself, and soon after left the kingdom,

and the management of the succeeding part of the scheme to his friends Morton and Lethington, who, by their rebellion and imprisonment of the queen, secured for him the regency of the kingdom.

It must still, however, be acknowledged, that all this amounts to no direct proof of Murray's being an actor in the murder of lord Darnley: but when the whole of his conduct, which we have traced. and detected, is confidered, there appears the ftrongest presumptive evidence, of his being accessary to, and in the knowledge of the whole affair. The close, fubtle, and deep part which he was to play in the catastrophe, was to place himself concealed behind the curtain, while the bloody work was a doing, to look through his fingers thairto, and to behold the doings, Jaying nothing to the same f. How faithfully he kept to this plan, we have already flewn. Whoever then shall consider the whole of Marray's conduct, his rebellions, plots, and conspiracies, and that by a constant and invariable profecution of this plan, he at length obtained the full completion of his scheme, by dethroning his sovereign, possessing himself of the reins of government, and by that means having it in his power, to fmother and put out of the way all proof or evidence that might tend to discover his own guilt, with the remarkable caution observed by him, in taking care to withdraw himself from the scene, at the precise time always when the decifive events were ready to fall out, must for these reasons. plainly fee, that the foregoing prefumptive proof against Murray, from circumstances, is the only one which, from the nature of things, can at this day be expected. To this. however,

however, we may add a direct proof of his using false evidence against the queen, in the case of Nicolas Hubert, or French Paris's confesfion, which we have demonstrated to be false, and that the same came directly from the hand of

Murray +. The evidence is much stronger, however, with regard to his two affociatés, Morton and Lethington: the same presumptive proof as against Murray, not only appears against them, but we have likewife a positive proof joined to it, against each of these associates, viz. The mutual retorted accusation of each of them against theother, joined to the act of forfeiture against Lethington, by the regent Lennox, and the indictment, verdict and fentence, past by the peers of the kingdom against Morton, as an accomplice in the king's murder, together with his own confession (as given us by his particular friends in the manner they chose themselves) that he was in the knowledge of the murder. So full and direct is the proof of their guilt.

From all which, it is submitted to the judgment of the reader, whether the conclusions in the two propositions, mentioned in the beginning of this chapter, do not naturally follow, viz. That as it is proved, that the confederates, for taking away the king's life, were Morton and Lethington, the very persons who afterwards brought an accusation against queen Mary for that very crime; therefore she herself could not have been in that confederacy, nor guilty of that crime.

2dly, As it is proved that Murray, Morton, and Lethington had been, from the queen's coming to Scotland, joint confederates in a feries of plots, conspiracies, and rebellions, against her and her hufband, until the very eve of the king's murder: as they had with one voice publickly accused the queen, of that very crime, of which, it is proved, that, at least, Morton and Lethington were themselves accomplices: and, as in support of their accufation, this triumvirate had produced spurious and forged writings; and by all these means had dethroned their fovereign, and possessed themselves of the government: for these reasons, therefore. the three confederates, Murray, Morton, and Lethington, must be. held, one and all of them, as focia. criminis, guilty of the crime of which they had unjuftly accused queen Mary.

† We have already feen that Murray was at St. Andrews at Paris's condemnation and execution; and that the only copy of this fpurious confession is subscribed by Hay, clerk of Murray's council; and we have still extant the instructions by Murray himself to the abbot of Dunsermline, his envoy to the English court, 15th of October 1569, in these words: "And if further proof be required, we have sent with you the depositions of Nicolus Hubert, alias Paris, a Frenchman, one who was present at the committing of the said murder, and of late execute to the death for the same." Good v. 2. p. 38:

We may now judge with what justice Mr. Hume has given sentence in the case of Murray: "That there is not the least presumption to lead us to suspect him as an accomplice in the murder." We need not wonder therefore, that this same judge, who has acquitted Murray of every presumption of guilt,

should give as positive a sentence against the queen.

HISTORY OF THE WAR.

CHAP. I.

PReliminary remarks. Treaty proposed and entered into by the belligerent powers. Mr. Stanley fent to Paris, and Mr. Buffy to London. French machinations in Spain. Difficulties in the negotiation. Design of the campaign in Hesse, and of the expedition to Belleisle. CHAP. II.
